coarse linen, made from the hemp of the country; a species of carpet, used as a covering for the horses; and a coarse cloth, from wool, mixed with the hair of goats and camels, of which they make tents, for the use of the army. Principal town, Kouka.-(Narrative of Travels in Northern and Central Africa, by Denham, Clapperton, and Oudney.)

BORODINO, a vil. Russia, gov. of, and 70 m . W.S.W. Moscow, on a small tributary of the Moskwa. Near this village, an obstinate battle was fought, September 7, 1812, just before Napoleon reached Moscow-the French gaining a costly victory.

BOROFSK, or Borovsk, an anc. tn. Russia, cap. dist. of same name, gov. of, and 49 m . N.N.E. Kalouga, traversed by the Protva. It gives title to a Greck bishop; contains four churches; has important manufactures of sailcloth, one factory employing 250 hands; and, in addition to this staple, carries on a considcrable trade in flax, hemp, leather, \&c. Borofsk is famous for its garlic and onions. In the environs is one of the richest convents in the empire, founded in 1444. Pop. 6000.

BORONGO, or Bolongo. See Broken Islands.
BOROU. Sce Booro.
BOROUGlIBRIDGE, a small market tn. England, co. York, W. Riding, 17 m . N.W. York, in a valley, on the Ure. It has three streets, straight and well kept; and is well supplied with water. The houses are mostly of brick, and tiled or slated. The places of worship are the parish church, a Wesleyan and Independent chapel. There are eight schools, including a national school, and a mechanics' institnte. Boroughbridge returned two members to Parliament from 1553 to the passing of the Reform Act, when it was disfranchised. It has neither trade nor manufactures, the inhabitants being nearly all employed in agricultural labours. The York, Newcastle, and Berwick Railway have a station here. I'op. of chapelry, 1024.-(Local Correspondent.)

BOROVITSCKI-POROQUI, a tn. Russia, cap. dist. of same name, gov. of, and 98 m . E. Novgorod, on the Msta. It owes its additional name, Poroqui [cataracts], to extensive rapids in its vicinity, which, though passed by boats, greatly obstruct the navigation. The worst of the obstructions have been removed, and the trade of the town has increased. Pop. 4000.

BORROWSTOUNNESS, or Bo'кEss, a bor. of barony, seaport, and par. Scotland, co. Linlithgow, r. bank, Frith of Forth. The town is situated on low ground, 17 m . W. by N. Edinburgh ; lat. $56^{\circ} 1^{\prime} \mathrm{N}$.; lon. $3^{\circ} 36^{\prime} \mathrm{W}$. It consists of
two principal streets, and numerous narrow lanes; and has altogether an exceedingly irregular and confused appearance. Its general condition also, as regards cleanliness, \&c., is very indifferent, although somewhat improved in this respect of late years. There are some good houses in the town, but many of an inferior description, and most of them mueh blackened by the smoke of surrounding manufaetories. The town is lighted with gas, but extremely ill supplied with water. The townhouse, though now never used as such, is a large, square, castellated building, with a tower at each corner. There are a parish, a United Presbyterian, and a Free church, all substantial, but plain buildings; and six sehools, several of whieh are taught by females. The parish sehool is the largest, and is (1850) attended by nearly 200 ehildren. There are several religious, benevolent, and provident societies, and a good public library. The working population are mostly employed in a pottery within the town, and in extensive ironworks, and numerous coal mines, in the vicinity. Close by, there are also a chemical work, and a distillery; and a considerable business is done in corn.

The harbour, which is of safe and easy access, is formed by two piers carried out into the frith. It is 240 ft . broad and 563 ft . long, with a depth of water, at spring tides, of from 16 to 20 ft . Registered shipping, in 1847, 5857 tons. The number of vessels that entered the port, in the same year, was 185 ; tonn. 12,390 . About 60 years since, Borrowstounness had eight ships engaged in the whale-fishing; there is now but one. Salt also was manufactured here, and exported to the extent of 37,000 bushels annually, but it has now altogether ceased. Borrowstounness is one of the oldest seaports in Scotland, having been the great emporium of commeree with Holland and the Baltic in the 17 th century.-The Parish is about 4 m . in length and 2 in breadth, and nearly the whole of it arable. The great wall of Antoninus, commonly called Graham's Dyke, traverses it, and is supposed to have terminated hereabouts. Pop. of tn. and par. (1841), 2347, being 462 less than in 1831.-(Local Correspondent.)

BORRIOL, a tn. Spain, Valeneia, prov. of, and 4 m . N.N.W. Castellon-de-la-Plana, at the foot of a steep hill, and in the vicinity of an extensive and fertile plain. It is regularly built; and has a parish church, which, though small, is handsome; a consistorial house, of modern construetion; and several endowed and well-attended sehools. Borriol is of great antiquity, and eontains numerous Roman remains. Pop. 2069.

BORRIS, several small tns., vils., and pars., Ireland:1, Borris-in-Ossory, a market tn. Queen's co., $5 \frac{3}{4} \mathrm{~m}$. E. Roserea; consisting of one long street, of mean appearance; and having a bridewell, dispensary, and small market-house. Pop. 821.-2, Borris-o'-Kane, a small tn. and par., eo. Tipperary, 8 m. N. by W. Nenagh, 11 m. S.W. Birr ; having a church, R. Catholie chapel, and plaees of worship for Wesleyans and Baptists ; several schools, a bridewell, fever hospital, and dispensary. Area of par. 5128 ac . 'op. $3175 .-3$, Borris-o'Leagh, a small tn., co. Tipperary, 5 m. S. W. by S. Templemore; with a dispensary. Iop. 1438.-4, Borrisleagh, par. Tipperary; 11,939 ac. Pop. 3372.-5, Borris or BorrisIdrone, vil. Carlow, 14 m . N. New Ross, on the Borris rivulet; consisting of a single row of houses, extending parallel to the boundary of the demesne of Borris Castle. Here are a R. Catholic chapel, school, fever hospital, and dispensary. Pop. 9500.-6, Borrismore, par. Kilkenny; 1271 ac. Pop. 267.

BORROWDALE, a small dist. England, eo. Cumberland, par. of Crosthwaite, $6 \mathrm{~m} . \mathrm{S}$. Keswiek; chiefly famous for the production of black-lead or wad, as it is provineially called, in great abundance, and of the finest quality. The scenery of the district is extremely beautiful ; and near a lake at the lower extremity of the dale is a salt spring, resembling that of Cheltenham. Pop. 369.

BORROWMEAN ISLES [anc. Insule Cuniculares], situated in a bay of Lake Maggiore, and belonging to Sardinia, in Piedmont, prov. Novara. Their names are Isola Madre, Isola Bella, and Isola Superiore. The first is the largest, contains a fine garden, and has great natural beauty. The seeond is the most celebrated, and is greatly visited on aceount of a vast unfinished palace of Count Borromeo, which occupies one end of it; its fine terraced gardens, rising from the edge of the lake in a pyramidal form, lined with statues, vases, obelisks, and black cypresses; and in which, owing to the extreme mildness of the elinate, not merely the orange,

Vox. I.
citron, myrtle, and pomegranate, but the camphor-tree, sugarcane, and other tropical plants, flourish in the open air. The surface was originally barren slate, and every haudful of mould is artificial. The third island contains a small fishing village.

BORSA, a vil. Hungary, co. Marmaros, on the Viso, 46 m . S.E. Szigeth. It stands at the mouth of the gorge of TaterVolgye, which leads into Bukowina; and in its neighbourhood are mines of argentiferons lead and eopper. Pop. 3478.Several other small places in Hungary have the same name.

BORSOD, a co. Hungary, cirele, this side the Theiss; divided into four dists., Miskolez (containing the cap. of co. of same name) Erlau, Szendrö, and Szent Peter; area, 1043 geo. sq. m. Its surface is partly hilly, partly alluvial ; and the soil, in general extremely fertile, produeing abundant erops of grain and a good deal of wine. On the pastures and morasses, some of which are of great extent, numerous cattle are reared. The forests furnish excellent timber, of various kinds, and abound with game. The rivers, of which the principal are the Theiss, Sago, Hernad, Bodva, Szinyva, and Hezo, teem with fish. The chief mineral is iron, which is worked to a eonsiderable extent, and partly converted into steel. Pop. 216,500.The viblage of Borsod, which gives its name to the county, stands on the Bolva, dist. of, and about 5 m . from Szendrö ; is the property of several noble families; and contains a Reformed chureh, and an old castle.-Two other small places, one in this county and the other in Bacs, have the same name.

BORLSELE, or Bramsale, originally two islands, Holland, prov. Zeeland, but now part of S. Beveland, by means of gradual acquisitions from the river and the sea. Inistory shows that its villages have to sustain a constant struggle to defend what they have taken from the surrounding waters, to whieh they have had more than once to give back what they had attempted to enclose.

BORSTALL, par. Eng. Bucks; 3080 ac. Pop. 252.
BORT, a tn. Franee, dep. Corrèze, 14 m. S.E. Ussel, r. bank, Dordogne, here crossed by an aneient bridge, leading to the principal suburb. It las manufactures of linen, held in ligh estimation throughout the S . of France, tanneries, breweries, and wax bleacheries, with a considerable trade in agricultural prodnce and live stock. Marmontel was a native of Bort. Pop. 1685.

BORTIIWICK [ane. Locherwart], a par. Seotland, eo. Edinburgh, 6 m . in length, and 4 in breadth. The aneient uninhabited eastle of Borthwick, built, in 1430, by the first Lord Borthwiek, in the valley of that name, is one of the finest old structures in Scotland. It was frequently visited by Mary, Queen of Scots, and was the seene of several passages of painful interest in the history of her unlappy eonnection with the infamous Bothwell. Pop. 1617.

BORTIGALI, a vil., isl. Sardinia, prov. Cagliari, pleasantly situated on a hill, in a healthy district, about 40 m. S.E. Sassari. Pop. 2500.

BORTSCHE-BEEK, a small stream, Holland, forming the boundary between Gelderland and Overijssel, between Zutphen and Deventer.

BOSA, a seaport tn., W. coast, isl. Sardinia, division, Cape Sassari, 18 m . S.S.E. Alghero, near the month of the Terno; lat. $40^{\circ} 17^{\prime} \mathrm{N} . ;$ lon. $8^{\circ} 27^{\prime} \mathrm{E}$. The town is built partly on the side of a hill, on the summit of which is an old eastle, now in ruins, and partly in an unhealthy plain. It is surrounded by walls in bad repair, and has a cathedral, and other Gothic churehes; several monasteries, and a theologieal seminary. A bishop, suffragan to the Arehbishop of Sassari, resides here. The port is ineonsiderable, and admits only small vessels. Wine, grain, and cheese, are exported from it, and it is frequented by the Genoese, who come here to fish coral, fine speeimens of which are found on the coast. Pop. 6500.

BOSBURY-with-upleader, par. Eng. Hereford; 5200 ac. Pop. 1137.

BOSCAS'TLE, a small seaport, England, co. Cornwall, 5 m . N.N.W. Camelford, with a commodious quay, and a considerable trade in eorn, slate, and manganese, of whieh last there is a mine in the vicinity. Pop. 807.

BOSCO.-1, A tn. Sardinia, Piedmont, dist. of, and 8 m . S.S E. Alexandria, in the midst of a forest. It possesses a fine library, and is the birthplace of Pope Pius V. Pop. 2680.-2, Two towns, Naples, the one called Bosco Tre

Case, and the other Bosco Reale. They stand at a short distance from each other, at the S. foot of Mount Vesuvius, and contain several churches and convents ; also a royal manufaetory of arms, and a powder-mill. A famous paté is made liere, and good wine and much silk produced in the district. 1'op. of Bosco Tre Case, 2355 ; of Boseo Reale, 5046.

BOSCOMBE, par. Eng. Wilts; 2000 ac. 1'op. 156.
BOSHAM, par. Eng. Sussex ; 3860 ac. Pop. 1091.
BOSHES'TON, par., S. Wales, co. Pembroke. Pop. 225.
BOSJESMANS, or BUsHMEN, a race supposed to have descended, at a remote period, from the Hottentets; and the remnant of which-for they are now nearly extinct-are to be met with chiefly in the Karroos or desert plains lying between the distriet of Clan William and the Orange river, Cape of Good Hope colony. They are of remarkably low stature, olive eolour, small twinkling eyes, thiek projeeting lips, and small depressed nose; altogether, their appearance is singularly repulsive, being at once diminutive and deformed. They have long been a persecuted race, having been shot down like wild beasts by the boors of the colony, who were in the habit of boasting of the numbers they had slain. The miserable remnant of this ill-fated tribe lead a life of great wreteliedness. IIoles seraped in the earth serve them as houses, in whieh no other domestic utensil is found than a wild gourd or ostrich eqg-shell, to carry water. In seasons of seareity they devour all kinds of wild roots, ants, ants' eggs, locusts, snakes, \&c. Their most efficient weapon is the bow and arrow, whieh they use with great dexterity at short distances: the arrow is poisoned, and speedily fatal in its effects. Notwithstanding their most unprepossessing personal appearance, the Bosjesmans are remarkable for vanity, and are at great pains in decorating their figures. Though reekoned the lowest in eivilization of all the inhabitants of S. Africa, they are the only tribe that practise instrumental music and painting.

BOSKOOP, a large vil. Molland, prov. S. Holland, $10 \frac{1}{2}$ m. S.E. Leyden, on the Gouwe, with a handsome Reformed ehurch. Its central position makes it a bustling place, from the perpetual passing of vessels from Amsterdam, Leyden, the Hague, \&c., to Gouda, the Ijssel, Zeeland, Brabant, and other provinces. Boskoop is famed for its butter and becf; also for its nursery-grounds, the timber and fruit-trees, and likewise the strawberries and other small fruit raised here, being much in request. The loeal branches of industry are very various; comprising the manufaeture of agricultural and horticultural implements; also sbipbuilding, tanworks, corn-mills, wooden-shoe making, and, among the poor, the manufacture of sulphur matches, from stalks of hemp. Pop. 1884.

BOSKOWITZ, a tn. and Iordship, Moravia, circle, Brünn. The Town, which is about 22 m. N.N.E. Brünn, is fortified; has a modern palace, belonging to Count Franeis of Dietrichstein, with some fine pictures; a parish church, a synagogue, potash and alum work, and several mills.-The Lomdship, area, 33 geo. sq. m., has a pop. of 10,389 .

BOSNA, a river, Turkey in Europe, prov. Bosnia. It rises in the hilly distriet in the S.W. part of the provinee, flows N., and falls into the Save, in lat. $45^{\circ} 7^{\prime}$ N.; lun. $19^{\circ} 31^{\prime}$ E. ; total course, exelusive of windings, 95 m .

BOSNA-seraï, Seraï, or Serajevo [anc. Tiberiopoliz], a city, Turkey in Europe, cap. prov. Bosnia, situated on the Migliazza, which is here crossed by a handsome stone bridge, 570 m . W.N.W. Constantinople. It is well built, and, although most of the houses are of wood, has a gay and pleasant appearance, from the number of steeples and minarets with which it is embellished. It contains a serai or palace, built by Mahomet II., to which the city owes its name; 100 mosques, great and small ; four ehurehes, three monasteries, two large bazaars, several sehools, baths, and eharitable institutions. It was formerly surrounded with walls, but these are now completely decayed ; and its only remaining defence is a citadel, built on a rocky height at a short distance E. from the town, mounted with cannon. Hosna is the ehief mart in the province, the centre of the commercial relations between Turkey, Dalmatia, Croatia, and S. Germany ; and has, in eonsequence, a considerable trade. The people are industrions, and manufacture arms and utensils of eopper, for the Turkish market; ironware, woollen and worsted stuffs, moroceo leather, horse-hair bags (for holding rice), cottons, \&c. There are also several tanneries in the eity, and, at a short distance from it, several important iron mines; and, on a plain which
stretehes to the W., the baths of Serajevesko. Pop. 60,000; of whieh 40,000 are Turks, 3000 Catholies, and the remainder Greeks and Jews.

BOSNIA [Turkish, Boschniah-Ili], a prov. Turkey in Europe, sometimes extended so as to inelude Turkish Croatia, Herzegovinia, and Bosnia Proper, but more correctly confined to the last, whieh lies between lat. $42^{\circ} 35^{\prime}$ and $45^{\circ} 20^{\prime} \mathrm{N}$., and lon. $17^{\circ} 10^{\prime}$ and $21^{\circ}$ E.; and is bounded, N. by the Save, which separates it from Austria, E. by Servia, S. by Albania and Montenegre, S.W. by IIerzegovinia, and W. by Turkish Croatia; greatest length, from S.E. to N.W., $240 \mathrm{~m} . ;$ average breadth, 65 m. ; area, variously estimated, but probably about 16,000 sq. m. Bosnia is not very regular in shape, but bears some resemblance to a triangle, which has its base on the Save, and gradually narrows to its apex in the S.E. Viewed generally, it may be regarded as a platean, which has its highest elevation in the S., and slopes partly from S. to N., and partly from S.W. to N.E. Its surface is mueh broken by mountains, which have an average helght execeding 6000 ft ., and consist of ramifieations of the Dinaric Alps. The principal range stretches, from N.W. to S.E., along the frontiers of Bosnia, presenting, towards Montenegro and Albania, a lofty mural face of caleareous rocks, apparently of seeondary formation. The same formation, containing the sandstones and slales of the earboniferous system, and also, it is said, beds of coal, is general throughout the country. Valuable minerals, ineluding the precious metals, quicksilver, \&c., abound; but the working of them, for some reasnsi or other, is prohibited, or at least diseountenanced by the Turks. The only metals wrought are iron and lead. The prineipal rivers are, the Verbas, Bosna, whieh gives its name to the provinee, and Drin. They all take their rise in the principal range above mentioned, and proceed, in a course in the main N., to join the r. bank of the Save; thus belonging, in common with it, to the great basin of the Danube. The valleys in whieh these rivers flow are steep, and confined in the S., but gradually widen out in approaehing the N.; still, however, continuing to be too mueh broken and inelined to deserve the name of plains. The only proper plain of Bosnia oceupies the centre of the province, having its greatest length, N.W. to N.E., above 50 m ., with an average breadth of 20 m . It forms an extensive basin enclosed by mountains, and appears formed by the prolongation of their basis. It is not uniformly level, but broken by numerous small protuberances. The strata, as indicated by these, consists of calcareous and schistous roeks; but the surface is covered by a thick bed of yellowish clay, evidently a lacustrine deposit, indicating that the whole basin had once been the bed of a lake. The elimate of Bosnia, considering its latitude, is severe. The warm winds of the S. and S.E. ean scarcely reach it, being intercepted by the mountain ridges in those directions; while the valleys, lying open to the N. and N.W., give free aceess to the eolder winds. In the mountains exceeding 3000 ft ., night frosts begin in the end of September; and, even in the lower grounds, snow begins to fail in the end of October, and often continues on the ground till late in spring. Frost and snow cover the higher plateau till the end of April. Bosnia being, geographically, only a part of the mountain belt which girds the tertiary plains of Hungary, strongly resembles that eountry in its vegetation. The loftiest summits are generally bare, but the descending slopes are densely elad with the oak, beceh, and pine, which aftord excellent timber, and shelter great numbers, both of larger and smaller game, the hunting of which is too often preferred by the inhahitants to more settled employment. The walnut grows at 1500 ft . above the level of the sea. On the lower slopes fruits of various kinds are grown, particularly cherries and prunes, from the latter of which a weak brandy is extensively made. The vine thrives in low and sumy vales, and would grow in many other spots where its eulture is not attempted. The wine made is of indifferent quality; and the inhabitants, probably on good grounds, instead of forcing the culture of grapes, prefer that of prunes, on whieh they can calculate for a surer erop. Pears and apples are of excellent quality; and a good deal of cider, as well as a spissated apple-juice, called pelimes, is made. Mueh of the country is incapable of cultivation, but the great plain and the wider valleys are fertile, and yield good crops of wheat, rye, barley, and oats. In the mountainous districts, a kind of blaek corn (called in Turkish, Arnaout-daresc) is commonly grown. Maize is grown only
in low valleys, particularly those to the N. of Sarajevo; tobacco and hemp on alluvial flats, on the banks of rivers, and haricots, to a great extent, in the great plain. The potato thrives well, and flax is frequently seen in mountain valleys of considerable height. The mountain pastures are excellent, and feed large flocks of sheep and goats. From a mixture of these, milk and excellent cheese, resembling Gruyere, is made. Manufactures are comparatively insignificant. Iron is mined, smelted, and manufactured, to some extent at Voinitza, and good linen cloth is made in the $S$. of the province; as at Ronjai, coarse woollen covers are made in several places, and bear a high name, both for quality and cheapness. To these may be added the Russian leather manufactured, particularly at Sarajevo and Visoka, and earthenware, especially that of Central Bosnia, where the manufacture of a species of yellow vases, extensively used throughout the country, has long had its principal seat. Trade, for which several districts are well situated, is rendered almost impracticable by the state of the roads, and the quantity of wood and debris, which is allowed to choke up and impede the navigation of the rivers. The principal exports are fruit, chicfly prunes, and wax. Bosuia is governed by a Vizir, who has under him two Pashas of one tail, and several Agas. For judicial purposes, it is divided into 64 cadilouks. The people are of Servian extraction, and about two-thirds of them are Mahometans. The remainder profess Christianity. Bosnia, after the irruption of the Sclavonians, Croats, and Servians, into Turkey, passed to different masters, particularly Hungary; and sometimes maintained its existence as an independent State. It ultimately fell under the domination of the Turks, and yields them a reluctant allegiance, which it has repeatedly attempted, and on!y wants a favourable opportunity, to throw otr̃. Pop. 700,000.

BOSPORUS STRAIT, or Cilannel of Constantinople [often incorrectly written Bosphorus; Turkish, Boghaz; Latin, Bosporus Thracius], a narrow passage which connects the Black Sca with the Sea of Marmara, and separates Europe

from Asia; it is about $17 \mathrm{~m} . \mathrm{long}$, and varies in width from a half to $1_{4}^{2} \mathrm{~m}$. A current sets constantly through it from the black Sea, running with great violence and rapidity when the wind is from the N.E., but hardly perceptible when it blows from the opposite quarter, namely, the S.W. The depth of water is considerable, and the navigation safe. At its S . entrance, which is rather more than 1 m . wide, are two
lighthouses, one on either side; that on the right or E. shore is situated on a hilly point of land, about 1 m . to the $\mathrm{S} . \mathrm{W}$. of the ruins of Kavac Serai ; the other, on the left or W. side, stands a little to the S. of the celebrated mosque of St. Sophia. The former light may be seen from a distance of about 5 m ., the latter from about 10 m . On entering the Bosporus from this end, the voyager has the city of Constantinople, the Golden Horn or harbour of Perami, and the suburbs of Galata, Pera, and Tophana, on the left; and on the right, the town of Scutari, in Asiatic Turkey. At the N. entrance of the strait there are also two lighthouses, which exhibit fixed lights on an improved principle, one on either side, with a fortress near each, and a few houses. This entrance is difficult to make by vessels, and the attempt is often attended with the most disastrous consequences, the danger being increased by a false entrance about 15 m . E. from the real one. The scenery along the banks of the channel is extremoly beautiful-magnificent palaces, of which no fewer than 10 are imperial summer residences, and most of them on the Asiatic side, handsome honses and noble gardens being thickly distributed over the face of the country in the vicinity of the strait, on both sides, alternated with picturesque cliffis of jasper, porphyry, and agate. Animals and vegetables of every variety abound in this favoured region. At the narrowest part of the channel, about 8 m . from its S . entrance, occur the two castles or forts, called, respectively, Roumeli Ilissar, and Anadoli llissar; the former on the W. or European side, and the latter on the E. or Asiatic. The Bosporus was, in ancient times, remarkable for its tunny-fislicry, which is still a source of considerable profit to the inliabitants. The rivers, great and small, that fall into the strait, are said to amount to 30 in number. The Bosporus of Constantinople is called the Thracian Bosporus, to distinguish it from the Cimmerian Bosporus, the narrow channel that connects the Sea of Azof with the Biack Sca, now called the Straits of Ycnikalé. By a treaty excented in 1829, between the Russians and the Porte, the navigation of the Bosporus was opened to the merchant ships of all nations.

BOSRA, or Bostra. See buzzila.
BOSSALL, par. Eng. York, N. liding; 8880 ac. P. 1181.
BOSTAN (El), [anc. Comana], a tn. Turkey in Asia, Natolia, pleasantly sitnated on a fine plain, on the Syhoun. A considerable trade in wheat is carricd on here with the Turkomans. The town can be surrounded with water at any time, should the attack of an enemy be threatened. It contains four mosques, one of which is very ancient. El Bostan (Comana) was celebrated in remote times for the worship of Mâ, the Cappadocian Belluna; the population then consisting principally of soothsayers, priests, and slaves belonging to the high-priest.

BOSTON, a seaport, market tn., and bor. England, co. Lincoln, 100 m . N. London, and 28 m. S.E. Lincoln; lat. $53^{\circ} 0^{\prime} \mathrm{N} . ;$ lon. $0^{\circ} 2^{\prime} \mathrm{W} .$, on a plain, on both banks of the Witham. It has two principal streets, called, respectively, High Street and Bargate, one on each side of the river; and a number of smaller strects and lanes, all generally clean, and most of them well paved. There is also a spacious market place ncar the centre of the town. It is lighted with gas, and abundantly supplied with exeellent water, brought from a distance of 14 m . in iron pipes. The houses are almost entirely of brick, there being no stone quarries in the vicinity. An iron bridge over the Witham, of a single arch, $86 \frac{1}{2} \mathrm{ft}$. span, erected at an expense of upwards of $£ 20,000$, connects the two divisions $0: z^{*}$ wards of the town. The church, built in 1309 , is a noble structure, and is the largest parish church without cross aisles in the kingdom; the width of the nave, including the side aisles, being 100 ft ., and the extreme length, 300 ft . The tower, 282 ft . in height, on the plan of that of the cathedral of Antwerp, is surmounted by an elegant octagonal lantern, forming a conspicuous landmark for sailors, being visible at sea from a great distance. The other places of worship are, a chapel of ease, a Baptist, Mcthodist (Wesleyan and Primi tive), Independent, Unitarian, and a R. Catholic chapel. The charitable institutions are very numerous, the funds administered by the charity trustees exceeding $£ 2000$ per annum; a staff of clergy for the parish church are supported out of this fund, and the free grammar-school, founded by the Royal Charter of Philip and Mary; the other schools are, a blne-coat school, for 33 boys and 33 girls; Laughton's school, for 25

## BOSTON

boys, founded in 1707; with one upon Dr. Bell's system, and another on the national plan. There is also a dispensary, a mechanics' institution, permanent library and news'-room (founded in 1799), library of the people, working-man's society, and several subscription book-clubs, but none of great magnitude, or very flourishing. The public edifices not yet noticed are, the guild hall (an ancient structure), the borough jail, the assembly rooms, and the scssion's-house, completed in 1844, at an expense of $£ 15,000$. There are in the town branches of the Stamford and Boston Banking Company and the National Provincial Bank, with two private banks, a cus. tom-house, a pilot office, and a large fish market. On the banks of the Witham are commodious baths, surrounded by ornamental gardens.

Boston can hardly be said to have any manufactures, beyond a few iron-foundries, where a number of steam thrashingmachines, have been lately made; and some shipbuilding, there being two building yards with patent slips, where vessels of 200 tons can be constructed. Its shipping trade, however, is considerable. Up to 1751 , an accumulation of silt in the river greatly impeded the navigation, but the channel has been deepened, and the harbour enlarged, so that vessels of 250 tons can now unload at the quay. The exportation of wool formerly constituted a very extensive portion of its trade ; at present the exports consist chiefly of corn, and other agricultural produce. The principal imports are timber, hemp, tar, and iron, from the Baltic. The number of vessels registercd at the port on December 31, 1847, was 186 ; tonn. 8753. The number of vessels entered during the year ending same date was 1988 ; tonn. 95,370 ;-cleared, 691 ; tonn. 29,629 . As already stated, the principal trade of Boston is in grain, of which 220,000 quarters are, on an average, sold annually. The following Table shows the extent of the trade for five consccutive years:-

It is worthy of note, that Boston, at one period, namely, A.D. 1204, ranked second in mercantile importance among the English seaports, if we may judge from the amount of a tax levied on them; London paid $£ 836$, Boston $£ 780$, Southampton £712, Lynn 1651.-(Madox's Mistory of the Exchequer.)

The healthiness of Boston has been improved, and its general prosperity materially increased, by draining the surrounding fens, which now form a rich tract of nearly $70,000 \mathrm{ac}$. The market-days are Wednesday and Saturday, when an extensive business is done in corn and wool; large quantities of soles and smelts are taken in Boston deeps, and sold in the market. A cattle market is held once a week, sometimes twice; and there are four important annual fairs. Boston received its first chartor of incorporation from Henry VIII. By the Municipal Act of 1835 , the government of the town was vested in a mayor, six aldermen, and 18 councillors, with the usual assistant officers. Petty sessions are held every Friday; the general sessions quarterly; and the county courts monthly. Boston sends two members to the House of Commons. Registered electors (1849), 1206.

The early history of Boston is obscure, but it is believed that the Romans built a fort at the mouth of the Witham. The monastery built by St. Botolph was destroyed by the Danes in 870, but was afterwards rebuilt on the N. side of the site of the present church. Its remains were lately visible in a dwellinghouse called Botolph's Priory, which is now pulled down, and the new sessions house stands on this site. In the Middle Ages, it became a place of considerable commercial importance, second only to the metropolis itself. In 1281, the town suffered much from fire; and in 1285 was greatly injured by an inundation. By 27 Edward III., it was made a staple port for wool, leather, tin, lead, and other commodities; and the Hanseatic merchants who settled in England here established a guild. Boston afterwards suffered by the plague, and by inundations, to which its low sitnation rendered it particularly liable; but the principal canse of its decline was the increasing difficulty of the navigation of the Witham. The channel having been improved, and being now kept clear, the former prosperity of the place has been in some degree restored. John Foxe, the celebrated martyrologist, was a native of the
town. Boston has direct railway communication with London through Peterborough, and with the W., through Lincoln, by means of the Great Northern line, opened in October 1848; and with Hull, by the East Lincolnshire Railway, opened at the same time. Pop. (1841), 14,618.-(ThomIson's History of Boston; Noble's Gaz. of Lincoln; Parliamentary Papers; Local Correspondent.)

BOSTON, a vil. England, co. York, W. Riding, 3 m . S.S.E. Wetherby, in a valley, r. bank, Wharfc. It consists of one principal street; houses generally of stone, and substantially built. The church is a neat structure, with a tower. Boston is chiefly noted for its saline springs, and is nearly altogether supported by the visitors who resort thither to benefit by them. Pop. 1014.-(Local Correspondent.)

BOS'T(ON, a city, U. States, cap. Massachusetts, co. Suffolk, situated principally on a peninsula, 3 m . long, and 1 m . broad, at the W. extremity of Massachusetts Bay; lat. $42^{\circ} 21^{\prime} 24^{\prime \prime}$ N. ; lon. $71^{\circ} 4^{\prime} 30^{\prime \prime}$ W. (n.) ; 210 m . N.E. New

8. Hutkei shill Monument
9. Housc of Industry. 15. Hutker's Hill Monu

York. Boston consists of three parts, Old Boston on the peninsula, S. Boston on the S. side of the liarbour, and E. Boston, built within the last 15 years, situated on an island, and communicating with Old Boston by a steam ferry, which starts every five minutcs from each side. The promontory on which it is built is connected with the mainland by a narrow isthmus, called the 'Neck,' about 1 m . in length. It is well situated for commerce, and is a place of great trade and opulence. In the older parts of the town, the streets are narrow and crooked, the houses small, and constructed of wood; but in the newer portions, the strects are wide and straight, the houses spacions, and many of them built of granite, though the greater part are of brick. This change for the better is gradually pervading the whole city. Communication with the mainland is maintained by six different bridges. The principal public buildings are the state-house, situated on Beacon Ilill, forming a conspicuous object from a distance, and from which one of the finest views in the $U$. States is obtained; Fanenil Hall market, an clegant market-house of granite; Faneuil Hall, in which public mectings are held; the city hall or old state-honse, an old building used for public offices; the Massachusetts hospital, a liandsome granite building, 168 ft . long by 54 wide, with 4 ac . of open ground around it, on the bank of Charles river; the custom-house, a splendid granite building, of Grecian architecture. There
are, besides, nearly one hundred clurches in the city, many of them very handsome structures. Amoug the public places, the Common is the most important. It occupies the S . declivity of Beacon Hill, and contains about 50 ac . On its
W. side is a botanical garden, containing about 25 ac . The literary institutions are also creditable to the intelligence of the citizens. The pnblic libraries contain 70,000 volumes, and are yearly increasing. The library of the Boston Athenæum con-

tains 30,000 , and that of Harvard College, 40,000. There are 30 newspapers published in Boston, eight of which are daily. Besides these, there are a number of magazines and reviews, including the North American Review, a work of Euronean as well as American reputation. Its principal literary societies are, the American academy of arts and sciences, the Massachusetts historical society, and the Boston natural history society, which has a fine cabinet. It contains, likewise, two theatres-the Tremont and the National theatre. The medical branch of Harvard University has its seat in Boston, and schools are numerous, and in general well conducted. There are also a number of religious and charitable societies in the city.

The harbour is esteemed one of the best in the U. States, being spacious, safe, and easily defended. The passage to it is not more than 4 m . wide, with several islands obstructing it, so that the main entrance will scarcely admit two vessels to pass abreast, while 500 may ride at anchor within, with a good depth of water. The outer harbour has about 40 small islands, 15 of which afford excellent pasturage. The wharfs are extensive, commodious, and some of them of great length, with ranges of lofty brick warehouses. The trade of Boston is extensive. The imports consist principally of woollen, cotton, linen, and silk manufactures, sugar, coffee, indigo, hemp, and iron ; and the exports chiefly of fish, and fish oils, salted meat, flour, soap, candles, and ice. In 1852 the total value of the foreign exports of cotton manufacture amounted to $£ 616,019$; and the total forcign imports amounted to $£ 6,797,428$. In the same year the aggregate tonnage of the shipping amounted to 381,088 tons. Three-fourths of the trade between Russia and the U. States, and above half of that with India, passes through Boston. There are, besides, a packet line of large steam-ships between Boston and Great Britain, and other packet lines to every port of importance throughout the U. States. Six different lines of railway connect Boston with various places in the state. A line also communicates with the state of Maine, passing through New Hampshire.

Boston has a history of some interest. It was founded in 1630, by the settlers established at Charlestown, on the shore of Massachusetts Bay. The name was given in compliment to the Rev. John Cotton, a persecuted clergyman from Boston in Lincolnshire. It was here that the revolutionary movement, which terminated in the independence of America, first commenced, several of its most active leaders being natives of the city. Boston was the scene also of hostilities connected with that event. The royalist forces under General Howe, were here blockaded by the American troops under General

Putnam, but the latter were ultimatcly dislodged from their position on Borehester heights, after a serious loss on the part of the British. During this action, usnally named Bunker's Hill, fought in June 1775, Charlestown, a suburb of the city, and the scene of action, was set on fire by the latter, and entirely consumed. A month afterwards, Boston was invested by Washington, and the British Gencral event ually (March 1776), compelled to evacuate the town. The city is governed by a mayor, eight aldermen, and a common council of 48 members. The well-known philosopher, Benjamin Franklin, was a native of Boston, having been born there on January 17, 1706. Pop. (1840), 93,383; (1850), 136,881.

BOSWELL'S (ST.), a par. Scotland, co. Roxburgh, on the Tweed, chiefly noted for the great annual fair held on 18th July, for sheep, horses, cattle, wool, linen cloth, and various other articles; area, 2600 ac. Pop. 348.

BOSWORTH (Husnands), par. Eng. Leicester ; 3870 ac . Pop. 953.

BOSWORTH MARKET, a market tn. and par. England, co. Leicester. The town is agreeably situate on an eminence, in a fertile district, 11 m . W. by S. Leicester; has a parish church, a handsome edifice, in the perpendicular style, with a tower surmounted by an elegant spire, and chapels for Independents and Baptists; a well-endowed free grammarschool, in which the celebrated lexico, rapher, Dr. Samuel Johnson, was once usher. The manufacture of worsted stockings employs many persons in the town and neighbourhood. The battle of Bosworth, between Richard III. and the Earl oî Richmond, afterwards Henry VII., and the closing scene of the long-protracted struggle between the houses of York and Lancaster, was fought (1458) on an extensive moor $3 \mathrm{~m} . \mathrm{S} . \mathrm{E}$. the town. Area of par. 7220 ac. Pop. 2539.

BOSZORMENY, two places, Hungary:-1, A municipal tn., co. Bihar, 12 m. W.N.W. Grosswardein. Pop. 17,000. -2 , A free tn., co. Szaboltz, 12 m. N.N.W. Debreczin, containing a Reformed and a Greek church. Pop. 14,660.

BOSZRA, Bozrah, or Bosra [the Bostra of the Greeks], a tn. Syria, 80 m. N.E. Jerusalem, anciently of great importance, now, for the most part, a heap of ruins; some of which, however, are magnificent, and mark the height from which the prostrate city has fallen. Amongst these are the great mosque, a triumphal arch, a castle of great strength, built by the Saracens ; and a vast reservoir for water ; besides numerous pillars, and other ruins of the most elaborate workmanship. The courses of the streets and alleys are almost wholly obliterated, and the few inhabitants that now remain are lost in the labyrinths of shattered edifices and crumbling walls, with
which they are surrounded. The vicinity was at one time celebrated for its vineyards; but they have long since wholly lisappeared. After the establishment of Christianity, it was an archbishop's see, with 19 bishoprics under its jurisdiction. Boszra is mentioned in several places in Scripture.

BO'TAFOGO, a considerable vil. Brazil, prov. of, and about 4 m . S. W. Rio de Janeiro, on a bay of same name, communicating with the Bay of Rio de Janciro. This village, which is rapidly increasing in size, is composed of fine country honses, ranged in a semicirele round the N. margin of the bay.

BOTANY BAY, a bay, New S. Wales, co. Cumberland, and so called by Captain Cook, the first discoverer of Australia, on account of its profuse vegetation. It is eapacions and safe, with an entrance about 1 m . wide, but afterwards enlarging to 3 m . Good anchorage is found in from 4 to 7 fathoms water, but both on the N. and S. side, and in the bottom of the bay, flats extend to a great distance from the shore, laving only 4 or 5 ft . of water on them. The anchorage on the E. side, too, contiguous to the entrance of the bay, is exposed to heavy seas, from the E. winds. Cook landed here on lis first voyage, in 1770, and took possession of the country in the name of his sovereign, calling it New S. Wales. Eight years afterwards, Government having resolved on founding a penal settlement in the S. hemisphere, sent out Governor Phillip, to establish such a settlement in Botany Bay. Finding it to possess the disadvantages above enumerated, the Governor proceeded to Port Jackson, a few miles further N., and there planted the new colony, founding, at the same time, the now large and populous town of Sydney.

BOTANY ISLAND, S. Pacific Ocean, off the S.E. extremity of New Caledonia ; lat. $22^{\circ} 27^{\prime}$ S.; lon. $167^{\circ} 1^{\prime}$ E. (r.)

BOTEL TOBAGO (Great and Little), two small islands, China Sea, off S.E. coast, isl. Formosa, from which they are distant about 45 m . The largest is in lat. $21^{\circ} 59^{\prime} \mathrm{N}$.; lon. $121^{\circ} 38^{\prime}$ E.; the smaller, in lat. $21^{\circ} 56^{\prime} 30^{\prime \prime} \mathrm{N}$. The former is 3 or 4 m . in extent, of eonsiderable elevation, and the higher part crowned with trees. It is well inhabited, having several large villages on the $S$. portion. The latter, or Little Botel, which is about 2 or $2 \frac{1}{2} \mathrm{~m}$. to the S. E. of Great Botel, is also of considerable height, with some bushes on it.

BOTESDALE, or Botolpu's-dale, a tn. England, co. Suffolk, 13 m. N.N.E. Bury St. Edmund's, in a dale; and consisting of one street, nearly 1 m . long; houses, chiefly of brick. It contains a chapel of ease, belonging to the established church, a Baptist and Wesleyan Methodist chapels, and a free grammar-school, founded by Sir Nieholas Bacon, father of the celcbrated Chaneellor Bacon. Pop. 633.- (Local Correpondent.)

ROTHAL.L, par. Eng. Northumberland; 8200 ac. P. 800.
BOTIAAMSALL, par. Eng. Notts; 1630 ac. Pop. 325.
BOTHENHAMPTON, par. Eng. Dorset; 600ac. P.533.
BOTHNIA (Gulf or), [Swedish, Botten Wiken], the N. portion of the Baltic Sea, beyond the Aland Isles, between Sweden and Russian Finland. Length, from N. to S., 400 m .; extreme breadth, 136 m . Its depth is very various, round the small islands 4 fathoms, and elsewhere 20 to 50 . It has fewer shoals than other parts of the Baltic, and its harbours are better. It receives a great uumber of considerable streams from Sweden, and several small ones from Russia. On its shores are the towns of $\AA$ bo, Torncå, Hernösand, \&c.

BOTIINIA, Botn, or Boten, a territory, N. Europe, both sides of the gulf to which it gives its name. It was composed of the provinces of E. and W. Bothnia, both of which once formed a portion of Sweden; but the former now belongs to Russia, as well as a small part of the latter. E. Bothnia, or Uster-Botn, is now comprised in Pussian Finland (which see). W. Bothnia, or Wester-Botn, is now comprised in the two Swedish län or counties of Uıneả and Piteå.

BOTHWELL, a par. Scotland, co. Lanark, with vil. of same name. The parisir, extreme length, about 8 m ., extreme breadth, 4 m ., is rich in coal. In a picturesque hollow at the S.E. end of the village, through which runs the Clyde, is Bothwell Bridge, now much altered and improved, but originally of great antiquity, which gave name to the battle fought there between the Covenanters and the royal troops, under the Duke of Monmouth, on June 22, 1679, when the former were defeated. The ancient castle of Bothwell, a
magnificent ruin, once a stronghold of the Douglasses, is situated on the summit of a steep bank, sloping down to the Clyde, and, surrounded by fine woods, and extensive pleasure grounds, forms an exceedingly interesting and striking object. Joanna Baillie, the celebrated authoress, daughter of the Rev. James Baillie, at one time minister of the parish, was born in Bothwell manse.-The village consists ehiefly of a row of houses on either side the road from Glasgow to Hamilton, about 8 m . S.E. the former, and $2 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. the latter. The houses are of stone, mostly of respectable, some of neat appearance; the latter is more especially the characteristic of various recent erections, built to accommodate the increase of summer visitants since the opening of the Clydesdale Junction Railway, which has a station about a mile from Bothwell. Besides the parish church, there is here a Free chureh, and some schools. Pop. of par. (1841), 11,175.

BO'TLEY, par. Eng. Itants; 3090 ac. Pop. 904.
BOTOUSCHANI, or Botroschany, a vil. Moldavia; carries on a considerable trade with Germany in wine, cattle, wool, honey, wax, and tobacco. Pop. 4500.

BOTRIPHNIE, par. Scot. Banff; length, $4 \frac{1}{2} \mathrm{~m}$. ; breadth, 3 m. Pop. 714.

13OTTISHAM, par. Eng. Cambridge; 4700 ac. P. 1497.
BOTTWNOG, par., N. Wales, Carnarvon. Pop. 191.
BOTUSFLEMING, par. Eng.Cornwall; 1290 ac. P. 250.
BOTZEN [Italian, Bol:ano], a tn. Austria, Tyrol, gov. of, and 54 m . S. Innsbruek, at the conflucnce of the Talfer with the Eisack, near where these fall into the Adige. It is a well-built flourishing town, surrounded by a wall 2 m . in length, and in some plaees 24 ft . thick, built to protect it from a mountain-torrent close by. Its situation at the junction of the roads from Switzerland, Germany, and Italy, has secured it a share of the trade of these countries, rendering it a thoroughfare for the transil of goods, and making it the first trading town of the Tyrol. The parish church is a Gothic building of the 14th century, with an elegant spire; adjoining it is the new cemetery. The other objects worthy of notice are, the church of St. Nicholas, a gymnasinm, customhouse, two monasteries, a normal school, and a numery. It has also some silk and woollen manufactures, tanneries, dyeworks, and a printing-office. Botzen is known principally for its four annual fairs, resorted to by commercial travellers from all parts of Italy and Germany. In the environs, wine and fruits are produced in abundance, and of excellent quality. The inhabitants of the town are chiefly German, but in the neighbourhood a dialect of the Italian is spoken almost universally. It is thought that the town occupies the site of the ancient Roman citadel, Pons Drusi. Pop. 10,000.-The circle, area, 964 geo. sq. m., produces all kinds of grain, hemp, and flax. A great quantity of silk is produced, and some of the wines, particularly the Kochelberger and the Leitacher, are celebrated. The cheese of Botzen also bears a high name, and is largely exported. Pop. 107,072.

BOU NOURA, a small tn. Algerian Sahara, S. slopes of the Atlas ; lat. $32^{\circ} 28^{\prime} \mathrm{N}$. ; lon. $2^{\circ} \mathrm{E}$. It is walled, and has three gates; and some trade in grain.

BOU SADA, a tn. Algerian Sahara, lat. $35^{\circ} 33^{\prime}$ N.; lon. $4^{\circ} 9^{\prime}$ E.; in a fertile site, amidst an arid plain, among the Atlas Mountains. It consists of 500 or 600 houses, and five mosques, divided into eight distinet quarters, each of which being surrounded with its own gardens, gives the whole the aspect of a eluster of villages. In one of these dwell the Jewish inhabitants, apart from the others. They have a synagogue, and their own cemetery, and schools. Each quarter has its school, wherein are taught reading, writing, and religious precepts. The Rahbat-el-Nader or public marketplace has, daily, all the bustle of a fair ; and it is not uncominon to see 500 to 600 camels of burden there at once; the town being, in fact, one of the greatest entrepots of $N$. Africa, and frequented by the people of many Arab tribes, who there exchange country products for local and foreign manufactures, of which part come from Algiers and Constantine. It is also a busy seat of industry, containing 40 soapworks, 10 smiths' and armourers' shops, several farriers' forges, four dyeworks, and numerous shops for general wares. Each family makes its own vestments and pottery The

Jews are employed either in commerce, or as wool-carders, tailors, dyers, goldsmiths, \&c.

BOUCHES-DU-RHONE, a dep. France, Provence (cap. Marseille), situated, as its name implies, at the months of the Rhone; bounded, E. by dep. Var, N. by dep. Vancluse, from which it is separated by the Durance, and W. by dep. Gard, from which it is separated by the main stream of the Rhone, as far as Arles, and thence to the sea by the W. branch of that river, and S. by the Mediterranean; between lat. $43^{\circ} 20^{\prime}$ and $43^{\circ} 55^{\prime} \mathrm{N}$. ; and lon. $4^{\circ} 25^{\prime}$ and $5^{\circ} 42^{\prime} \mathrm{E}$. ; about 76 m . E. to W., by about $30 \mathrm{~m} . \mathrm{N}$. to S . Area, 1,267,088 ac., of which about one-half is under cultivation, the remainder being oceupied by forests, heaths, wastes, water, \&c. A great portion of it is occupied by calcareous hills, the last elevations of the Alpine range in this direction, of which St . Victoire ( 3417 ft .) is the highest peak. Between the mountains are various basins, and towards the shore are extensive plains, sloping gently to the sea. Between the Rhone and the lagoon of Berre is the great plain of the Crau d'Arles. Its borders are tolerably well cultivated, and support a number of cattle; but the centre is little better than a desert of stones and pebbles, scantily mixed with reddish-brown earth, but affording winter pasture for shecp, which are fed on the pastures of Dauphiny in summer. The Rhone is the principal river. Near Arles it divides into two branches, leaving a large delta, ealled the Isle of Camargues ; other streams are the Durance, the Toulonbre, the Are, and the Huvcaune. Several canals facilitate transport, and are especially useful for irrigation. Some small islands in the Mediterranean helong to the department. The climate in general is very warm, with little rain during summer. A cold, and generally violent wind, called mistral, from the Cevennes, so invariably follows rain, that even a shower will bring it. It lasts from three to nine, and sometimes, though rarely, to twelve days; and produces evaporation, which dries the ground with astonishing rapidity. The soil of the department is generally arid and unproductive, without irrigation. Some alluvial spots are fertile, but the total produce of grain is inconsiderable, except in the territory of Arles. Vincs, however, thrive, and some of the wines are esteemed, though seldom exported. The plains of Crau and Camargues produce many plants not indigenous in the N. of France. The cypress, laurel, and myrtle appear in the hedges; the olcander along the streams; the cistus and rosemary amidst the rocks; and lavender, thyme, sage, and other odoriferous plants on the hills. Almonds, figs, capers, and nuts, and particularly olives, are extensively eultivated. The pastures are only used in winter, eattle being unable to endure the intense summer heat, which likewise parches the grass. Coal, limestone, marble, alabaster, gypsum, clay for pottery and crucibles, \&c., are found, but the minerals are of little commercial importance. Salt is extensively manufactured from the lagoons; and the saltworks of Berre are celebrated both for the quantity and quality of their produce. The artieles manufactured are principally soap, brandy, olive-oil (the best in France), soda, chemical stnffs, vinegar, scents, essential oils, cloth, leather, articles in coral, silk, glass, tiles, bricks, tobacco, \&c. The fisheries are numerous and productive. The tunny, anchovy, and sardine are eaught on the coast, or in the lagoons, which, dnring winter, are also frequented by the numerous water-fowl that migrate from the N. of Europe. The common language of the people is a compound of Celtic, Greek, and Latin, mingled with Catalan and Italian, and is very expressive. The inhabitants are frank, hospitable, and sober, but excitable and passionate. They are robust, and industrious, have great natural vivacity, and an excessive propensity to buffoonery. The women of this part of France are celebrated for their personal attractions. Before the first Revolution, paternal authority was recognized to an extent now altogether unknown. The head of the family was its ehief, and nothing was done without his sanction. This authority descended from father to son, and a general register was kept of domestic proceedings in a book, called the livre de raison. This book contained a record of titles, gencalogies, partitions, divisions of property, inventory of movables, \&e., and was contained in a chest appropriately sculptured, of which the head of the honse alone kept the key. During the lifetime of the father, the eldest son made the entries in the livre de raison, and each was signed by the father, who, on winter nights, brought forth the family treasure, and caused it to be
read for the general edification. Most of these singular books have now disappeared; but some of them are still extant in the vicinity of Arles, and carry back the history of families to the time of Charles of Anjou, or even to a period more remote. Principal perts:-La Vignole, Arles, Martigues, Port de Bouc, Ponteau, Marseille, Cassis, and La Ciotat. Pop. (1846), 413,918.

BOUFARIK, a vil. Algeria, prov. of, and 16 m . S.S.W. Algiers. It has well-frequented markets, and is an important military station on the road from Algiers to Blidalı and Oran. Pop. 2131.

BOUGAINVILLE.-1, An isl., S. Pacific, one of the Solomon Group. Cape Friendship, near the E. end, is in lat. $6^{\circ} 44^{\prime} \mathrm{S} . ;$ lon. $155^{\circ} 40^{\prime} \mathrm{E} .-2$, A cape, N. W. coast, Australia, forming the N.E. side of Admiralty Gulf; lat. $13^{\circ} 52^{\prime}$ S.; lon. $126^{\circ} 12^{\prime}$ E. (r.) - 3 , A cape, Van Diemen's Land, E. coast, forming the W. entrance into Oyster Bay; lat. $42^{\circ} 30^{\prime} \mathrm{S} . ;$ lon. $148^{\circ} \mathrm{E}$. (r.) - 4 , Shoals or reefs, sitnated about 180 m . off the N.E. coast of Australia; lat. $15^{\circ} 17^{\prime} \mathrm{S}$. ; lon. $147^{\circ} 57^{\prime} \mathrm{E}$.

BOUGIAH [French, Bougie], a tn. Algeria, prov. of, and 113 m . E. Algiers, on the Mediterranean, near Cape Carbon. It is strongly fortified, and has a considerable garrison. It has no harbour, but the anchorage is secure. Considerable trade is carried on here in oil, honey, wax, betel, and grain; and the town gave its name, Bougie, to the wax candles, for the manufacture of which it has been long famous. It was formerly a place of great importance, and contains extensive and interesting remains of antiquity. The French troops took possession of it in September 1833. Pop., exelusive of garrison, 467.

BOUILLON, a tn. Belgium, prov. Luxembourg, 17 m . W.S.W. Neufchateau, 1. bank, Semoy, in a deep gorge of the Ardennes, and overlooked by a strong castle, built on the summit of an adjacent rock, commanded in its turn by the surrounding hills. The town is small, but regularly built; and possesses two churches, a town-house, prison, hospital, poorhouse, and two schools. Manufactures:-woollen stuffs, leather, ard oil, with fulling, bark, and saw mills. Trade:hardware, cattle, oak-bark, \&e. Bouillon was once capital of an ancient ducliy of its name, and was the property of the famous Godfrey, leader of the first crusade, and subsequently King of Jerusalcm. The duchy was annexed to the French republie in 1794, and the town was beseiged by the allicd troops in 1815. The castle was restored to Belgitum, and fortified, in 1827. Pop. 2510.

BOUIN, a small isl. and com., W. coast, France, at the bottom of the bay of Bourgneuf, dep. La Vendée. It is separated from the mainland by a narrow ehannel, now crossed by a canseway. The circumference of the island is about 15 m .; and although low and marshy, it has some excellent pasturage, and proluces large quantities of salt, obtained from the salt marshes ; besides some corn, cattle, and horses. It contains only one village, that of Bouin [anc. Bovinum], from which the products of the island are exported. Pop. 2628.

BOULAC, Boolac, or Bulak, a river port, Egypt, r. bank, Nile, 3 m . N. Cairo, of which it is the port. The houses, generally of one or two storics, line the river at the port, and present an indifferent appearance, excepting the palace of Ishmael Pasha, which is a singular compound of Italian, Greek, and Saracenic architecture. Here passengers for Suez and India debark; and here is a custom-house, at which all duties on goods imported from Alexandria are levied. Boulae also has a school for engineers, a Government printing-house, a cotton-factory, a silk-mill, and some other manufacturing establishments. It was taken and burned by the French in 1799, and was rebuilt by Mahomet Ali; since which time it has become an important place. Pop. 13,200 .

BOULAY, a tn. France, dep. Moselle, 15 m. E.N E. Metz, r. bank, Nied. It is well built. The streets are regular and spacious; and the market-place, where the townhouse
stands, is of great extent, and adorned with a fountain. The parish church is large, and richly decorated. Its manufactures are cloth, blankets, glue, ivory black, hardware, foil blades, cotton yarn, and leather. Pop. 2894.

BOULEBANI, a tn., W. Africa, cap. Bondou, near l. bank, Falémé; lat. $14^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $12^{\circ} 24^{\prime} \mathrm{W}$. It lies in a large plain; bounded, E. by low rocky hills, and on other sides by forests. The buildings, many of which are mere liuts, are grouped together in clumps, the whole surrounded by a rudely embattled wall, pierced at intervals with gates. The streets, or rather, irregular passages around these groups of dwellings, are not paved or kept with the least regard to cleanliness; although the place is famous for its spring water, and, indeed, takes its name from its wells. In the centre of the town is an area, on which stands a mosqne, an extensive building, of very rude architecture, and the tata or fortified residence of the amamy, or sovereign of Bondou. Most of the people here are the slaves of the monarch, who draws a large revenue from their sale. Pop. about 2200.-(Raffenel's Afrique Occidentale.)

BOULGE, par. Eng. Suffolk; 700 ac. Pop. 45.
BOULOGNE [anc. Bononia Parva], a large and handsome vil. France, dep. Seine, 5 m . W. the centre of Paris, of which it forms a kind of suburb, between the wood of same name (Bois de Boulogne) and the Seine, which is here crossed by a stone bridge of twelve arches, leading across to St. Cloud. It is well built, and is especially celebrated for the promenades in its vicinity. The bois de Boulogne contains about 2400 ac .; was replanted and remodelled by Napoleon, when he fixed his residence at St. Cloud. In 1815, the English troops eacamped in it; and it has recently suffered from the construction of the fortifications of Paris, which traverse one of its extremities. The wood is surrounded with walls, has eleven gates, and is intersected with an infinity of roads and avenucs, which form the resort of the fashionable population of the capital. Pop. 6906.

BOULOGNE-sur-mer [anc. Bononia], a seaport tn. France, dep. Pas de Calais, at the mouth of the Liane, 20 m . S.S.W. Calais ; lat. (column) $50^{\circ} 44^{\prime} 30^{\prime \prime}$ N.; lon. $1^{\circ} 37^{\prime} 15^{\prime \prime}$ E. (R.) It is divided into the upper and lower town. The former, situated on an eminence, is surrounded with ramparts of ancient construction, along which is a promenade, from which a fine panoramic view is obtained, embracing not only the surrounding country, but extending across the Channel to the chalky cliffs of England, which, in clear weather, are distinctly visible. It contains the imperial palace, formerly inhabited by Napolcon ; and the house where Le Sage, author of Gil Blas, died. The Hotel de Ville occupies the site of the palace of the Counts of Boulogne. The castle, situated at a corner of the ramparts, was built in the 13 th century, by simon de Villers. On the ruins of the ancient cathedral, a modern cathedral is in course of erection, which, when completed, will far outstrip all the other public buildings of Boulogne. One of the gates lead down by a steep but spacious street, called the Grande Rue, to the lower town, which stands on a flat, and is well built in the modern style, and presents a greater appearance of activity and commerce than is usual in French towns. It has several cluurches, including an English Protestant church; a public library, containing 25,000 volumes; a museum of natural history and antiquities; an hospital, and an elegant bathing establishment. The harbour, formed by two large basins, defended by several forts; was enlarged by Napoleon when he proposed to invade England, and was the scene of Nelson's unsuccessful attack on the flotilla by gun-boats. A French army of 180,000 men was then encamped in the neighbourhood of the town, where, on August 15,1805 , were distributed the first decorations of the legion of honour. To commemorate the foundation of that order, and also, by anticipation, the conquest of England, the army erected a monumental column at its own expense, and dedicated it to the Emperor. The column, which is 164 ft . high, stands on an elevated plain about 1 m . from the town, and is surmounted by a statue of Napoleon, and ornamented with bronze bas-reliefs. The port is safe, but encumbered with a bar, and of difficult access. A fixed red light is placed on the N.E. jetty; and two other lights, one above the other, on the S.W. jetty. The harbour has latterly been improved, but is still, and in all probability must ever remain, only a tide harbour. The town is the seat of courts of first resort and of commerce. It has also an exchange, a custom-house,
and several societics-agricultural, commercial, and scientific. It manufactures coarse woollen stuffs, sailcloth, lace, fishingnets, crockery, and fine hewn stone for the colonies, bottles, cordage, bricks, tiles, and leather. The inhabitants are much employed in fishing, and daily despatch large quantitics of fresh fish to Paris. They also engage extensively in the herring-fishery, and, in 1843, had nine vessels employed in the Newfoundland cod-fishery. They are also understood to carry on a large contraband trade, particularly in brandy, with the English coast. The gencral trade of the port is extensive, and steam communication is kept up with London, Dover, and Brighton. In 1843, the foreign vessels entered at Boulogne were 831 ; tonn. 80,610 ;-cleared, 862 ; tonn. 82,408 . The recent (1848) completion of the railway to Amiens has brought it into communication with Paris. The annual number of passengers who embark and disembark, is about 60,000. Many English reside at Boulogne; and there are numerous educational establishments and boarding-schools for English children. The fishers are a body by themselves, inhabiting a particular part of the town, speaking their own dialect, and seldom intermarrying with the other inhabitants. They are bold seamen, and their boats are not surpassed by any in the Channel.

Boulogne still exhibits some Roman remains. The Northmen took it in 882, and massacred the inhabitants. On September 13,1544 , the town capitulated to Henry VIII. of England, after a sicge of six weeks. The English retained it till 1550, when Edward VI. restored it to France, upon payment of 400,000 crowns. Charles V. demolished it in 1553. During the Republic, Boulogne received the rame of Port de l'Union. Pop. (1821), 16,607; (1831), 20,85̃6; (1846), 29,741.

BOULSTON, par., S. Wales, Pembroke. Pop. 319.
BOULTHAM, par. Eng. Lincoln; 1210 ac. Pop. 72.
BOUNGO, a prov. Japan, one of the largest in isl. KiuSiu.

BOUNTIFUL ISLANDS, two isls., about $1 \frac{1}{2} \mathrm{~m}$. apart, Australia, Gulf of Carpentaria; the larger is intersected by the meridian of $140^{\circ} \mathrm{E}$., and is $2 \frac{1}{2} \mathrm{~m}$. long, and three-fourths of a mile broad. The smaller is about half a mile each way. They obtained their name from the quantity of turtle found on them.

BOURBON (Isle of), an African isl., belonging to France, Indian Ocean; about 400 m . E. Madagascar, and 90 m . W.S.W. the Mauritius ; lat. (St. Deriis) $20^{\circ} 51^{\prime} 30^{\prime \prime} \mathrm{S}$. ; lon. $55^{\circ} 29^{\prime} 45^{\prime \prime}$ E. (R.) ; 45 m . long, N.W. to S.E., and 33 m .

extreme breadth; area, 900 geo. sq.m. It is nearly circular, has no great indentations on its rocky coast, is volcanic, and composed of a mass of mountains, rising to a cousiderable elevation near the middle of the island, and sloping down on all sides to the coasts, along which is a girdle of cultivated
land, 3 to 4 m . broad. The mountains form two principal groups; that of Piton des Neiges [snowy peak], an extinet voleano, in the N.W., the most extensive; and that of the active volcano, liten de la Fournaise, in the S.E. The eulminating peaks are Piton des Neiges, $10,334 \mathrm{ft}$; Grand Bernard, 9743 ft ; and Cimandef, 7492 ft .; all in the N.W. group; and Piton de la Fournaise, 7217 ft . The plains between the two mountain groups are not extensive. The prineipal oncs, called the plain of the Caffres, and that of the Palmists, separated by a rampart of velcanic rocks, are at a considerable elevation above the sea level. The soil of the former is entirely composed of lava and other voleanic substances; and it is nearly destitute of vegetation, although in some places a few stunted shrubs exist. In the latter many trees are found, including palms, whence the plain derives its name. Streams are numerous, coursing down the mountain sides in all directions, and forming deep rugged ravines. They are, however, mostly torrents of no great size, except during the rainy season, when they descend with devastating force on the cultivated plains below. Earthquakes are rare, and little felt.
The climate is delightful, and healthy, especially in elerated situations on the windward side. The air is pure, and the sky always clear. At St. Dennis, the hottest part of the island, and at the sea level-extreme heat, $90^{\circ} 50^{\prime}$; mean of February and March, the hottest months, $81^{\circ} 50^{\prime}$; mean of August, the coolest month, $72^{\circ} 50^{\prime}$; lowest temperature, $61^{\circ} 25^{\prime}$. There are two distinct seasons, the hot and rainy season, from the end of November to the beginning of May; and the temperate season, from May to the end of November. The prevailing winds throughout the year are from the E. and S.E., except at new and full meons. The island is sometimes swept by terrible hurricanes, but was esteemed, until recently, entirely free of endemic maladies and fevers. It would appear, however, that now, after a residence of four or five years, Europeans are subject to bloody flux and typhoid fever. The mountains were at one time well wooded, and are still partly covered with forests, in whielı many useful trees are to be found. Excepting a circular basin, near Piton des Neiges, no part of the interior is cultivated or inlabited. All cultivation is on the shore girdle, already adverted to, round the foot of the mountains, where the soil, generally speaking, is of the greatest ferility, and presents all varieties of levels, from the margin of the sea to 3000 ft . high. The prineipal articles cultivated are sugar, coffee, cloves, peppers, tebaceo, and potatoes. Wheat, maize, and rice are also raised, but not in quantity sufficient for the consumption of the island. Manioc, the esculent arum, legumes, \&c., are also grown to some extent. The fruits of Bourbon are those both of European and tropical countrics, and include pine-apples, bananas, bread-fruit, dates, figs, grapes, oranges, strawberries, raspberries, \&c. The dryness of the pasture-lands prevents the rearing of cattle in numbers sufficient for the wants of the population; of domestic animals, pigs are, as usual, in greatest plenty, their numbers nearly equalling that of the inhabitants. A few wild goats are to be found in the woods, and landturtles are obtained in the W. districts. Bats are numerous, and are esteemed a great delicacy by the natives. The coasts abound with fish, and the shores with beautiful shells. Ambergris is also found. The island has neither metals nor useful minerals, other than volcanic stones and earth. It has one ferruginous alkaline spring, in the vicinity of Piton des Neiges, which is somewhat frequented. Manufactures there are almost none, excepting that of bags for helding sugar, \&c.; some lime-burning, and tanneries. The principal experts are:-raw sugar, rum, ceffee, caeao, cloves, mace; imports:rice, wheat, oil, wines, eattle, salt, porcelain, \&e., with eottons, and other manufaetured goods. After France, Bourbon trades chiefly with India, to which it sends cloves, and from which it imports rice; Madagascar, from which it obtains large cattle, and riee; and the Mauritius. In 1840, the imports amounted to $£ 686,894$, and the exports to $£ 420,871$. The island has no larbour, but only about a dozen of open, exposed roadsteads; of which, the best are those of St. Denis on the N., and St. l'aul's on the N.W. side. It is divided inte two arrondissements, sub-divided into 13 communes, six cantons, and 13 parishes; and has twe principal towns-St. Denis, the capital, and St. Paul; and 11 other towns and villages, mostly built on the coasts. Bourbon is presided over by a Governor, assisted Vol. I.
by a council of 30 members, elected for five years; and there are a royal court, twe courts of assize, and two of first resort. Besides a college, there are numerous schools on the island, 16 churches, two hospitals, two establishments for the relief of the poor, and two prisons.

The island was diseovered by Mascarenhas, a Portuguese navigator, in 1545 , at which period it was not inhabited, and received the name of its discoverer. In 1642, the French sent here some criminals from Madagasear, and, having formally taken possession of it in 1649, named it Bourbon. At the beginning of the first French Revelution, the name was changed into that of Réunion, and during the Empire into that of Bonaparte and Napoleon. It was captured by the British in 1810, and restored to France in 1815, when it resumed the name of Bourbon. Pop. (1841), 111,682, of which 65,993 were slaves.
bOURBON-l'archambault [anc. Borbo Erchenbaldi], a tn. France, dep. Allier, 13 m . W. Moulins, whence the royal Beurbons are said to have been named. The ruins of a castle, which belonged to the first lords of Bourbon, are pointed out as all that remains of the ancestral halls of the royal families of France and Spain. The town is now only noted for its thermal springs, used in cases of rheumatism, paralysis, gun-shot wounds, and diseases of the eye. The baths were known to the Romans, who appear to have had an establishment in this locality. Pop. 1615.
bOURBON-vendee, a tn. France, cap. dep. Vendée, $231 \mathrm{~m} . \mathrm{S}$. W. Paris, agreeably situated on a hill, r. bank, Yon. The streets are broad, straight, clean, and lined with goodlooking houses; and nearly all end in the Place Royale, a spacious square, bordered with ranges of fine trees, and surrounded by publie monuments and elegant mansions. The parish church, with a peristyle of six Doric columns, and the mairie or mansion-house, an elegant Italian building, are both in the Place Royale. Besides these, there are an elegant market-house, theatre, and extensive public offices, large barracks, and a small public library. Bourbon is likewisa the seat of a court of first resort; and it has an agrieultural society, and lyceum. It has no manufactures, and scarcely any trade. The town occupies the site of the ancient Roche-sur-Yon, a large feudal castle, founded prior to the Crusades; dismantled by Charles IX. and Louis XIII., and, in 1793, thoroughly destroyed by the Republicans. In 1805 , Napoleon selected Bourbon for the capital of the department, and devoted $3,000,000$ francs ( $£ 120,000$ ), to the erection of the public edifices requisite for the chief town of a prefecture. It was named Napoleon. Ville until 1814, when a decref of the Comte d'Artois, dated April 25, changed it to BourbonVendée. Pop. 5280.

BOURBONNAIS, a prov. France, now forming the dep. of Allier, and also the arrond. of St. Amand, dep. Cher.

BOURBONNE-Les-bains [anc. Borbonna], a tn. France, dep. Haute-Marne, 21 m . E.N.E. Langres, occupying the site of Roman thermal baths, succeeded by a feudal castle, and then by a small town. The present town was built about the commencement of last century, the former one having been almost entirely consumed by fire. The baths, whence the town is named, are derived from three springs, of the respective temperature of $136^{\circ}, 134^{\circ}, 121^{\circ}$ Fah. The latter belongs to the military hospital. The public bathing establishment is a very handsome edifice, where every convenience is previded for the invalid. The waters are used exelusively for chronic complaints, and for old wounds, in the cure of which they enjoy considerable reputation. The town is agreeably situated, and has some fine promenades. Its manufactures are cutlery and cetton hosiery. Pop. 3683.

BOUR1BOURG, a tn . France, dep. Nord, 9 m. S.W. Dunkirk; in a marshy country, near r. bank, Aa, on the eanal from that river to Dunkirk. It is an ancient town, and, during the Middle Ages, was the place where the Kings of England usually held their interviews with the Counts of Flanders. It has manufactories of lace, salt-refineries, breweries, and oil-mills. Pop. 2438.
boURG-argental, a tn. France, dep. Loire, 12 m . S.E. St. Etienne; on the Deome, in a district where silk of a superior quality is produced, bought prineipally by the manufacturers of Lyons, St. Chamond, and St. Etienne. The silk is white, and, being the best in France for the manufacture of blende lace, brings a high price. The manufactures are
lace, crape, and ribbons. There is an excellent bleachfield, and silk and cotton are spun in the town. In the neighbourhood are extensive nurseries. Pop. 1685.

BOURG-d'orsans, a tu. France, dep. Isère, 18 m. S.E. Grenoble, at the extremity of the dark and pieturesque valley of the Romanche, which is completely hemmed in by wooded heights, with numerous cascades. In the neighbourhood are the remains of a natural embankment formed by two torrents, which, becoming overflooded, threw down rocks and trees into the valley below, and gave rise to the Lake of St. Laurent. The lake thus formed in 1181, covered the valley near Bourg-d'Oisans to a depth of about 90 ft . Thirtyeight years afterwards the embankment suddenly gave way, and the vast volume of water rushing down, carried devastation into numerous villages in the line of its course, and almost drowned the town of Grenoble. Lead mines and rock erystal are wrought in the vicinity. Pop. 1643.

BOURG-dU-réage, a tn. France, dep. Drome, 11 m . N.E. Valence, r. bank, Isere, which separates it from St. Romans. The mulberry is extensively cultivated in the vicinity, and silk is spun in the town. Nut-oil is also manufactured here. Pop. 3360.

BOULRG-en-bresse [anc. Burgus Segusianorum], a tn. France, cap. dep. Ain, 232 m. S.E. Paris, l. bank, Reyssonse. It is well built, with good streets, tolerably clean, and ornamented with public fountains, one of whieh, in the form of a pyramid, was erected by the inhabitants to the memory of General Joubert. On the Promenade du Bastion is a bronze statue of Bichat, the celebrated anatomist, who pursued his early medical studies in the hospital here. Bourg has a parish chureh, a handsome edifice of the 16 th century; a public library, containing 19,000 volumes; a museum, and a spacious corn-market. Ontside the town is a magnificent hospital, surrounded by gardens; and the beantiful Gothic church of Biou, built by the direction of Margaret of Austria, daughter of Maximilian I. In front of the portal stands a curious elliptical sun-dial, reconstructed by the celebrated astronomer Lalande, who was a native of this place. Bourg is the seat of a court of first resort, and has also a lyceum, seminary, and agricultural society ; some manufactures of linen and hosiery, several tanneries, and a cotton mill; and a considerable trade in grain, poultry, wine, leather, horses, and cattle In 1814, the inhabitants of Bourg offered a stont resistance to the Allies, and held 1500 Austrians in check for some time; but the town was ultimately taken, and pillaged. Pop. 8863.

BOURG-st.-Anneol, a tn. France, dep. Ardeche, 25 m. S. Privas ; agreeably situated in a fertile and well cultivated country, r. bank, Rhone, which is here crossed by a suspension-bridge. It has manufactures of silk, and some trade in grain, flour, wine, brandy, olive-oil, and other productions of the S. of France. The church contains a Roman tomb, in marble; and in the immediate vicinity of the town is a grotto, with a temple to the god Mithras, and curious sculptures. The principal figure wears the Persian tiara. Pop. 3751.

BOUliG-st. maurice, a vil. Sardinia, Savoy, prov. Tarentaise ; on the Isere, about $6 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. of the Little St. Bernard. It was almost entirely destroyed by fire in 1794, but has since been rebuilt in an improved form. A cheese of some celebrity is produced in the neighbourhood, and, with cattle, forms the only article of trade. Pop. 2380.

BOURG-SUR-GIRONDE, or sUr-mer, a th. France, dep. Gironde, 8 m . S.E. Blaye, r. bank, Dordogne, near its confluence with the Gironde. It is tolerably well built, has a small port, admitting vessels of 200 or 300 tons; and, in the neighbourhood, some quarries of excellent stone, from whieh Bordeaux is supplied. The town has a considerable trade in wine. Pop. 1356.

BOURGANEUF, a tn. France, dep. Creuse, 17 m . S.S.W. Gneret, on the Thorion. It gives its name to a coal field or basin, extending through four of the neighbouring communes; and has manufactures of porcelain and paper. Pop. 2480.

BOURGAS, Buurgias, or Imngas.- 1 , A seaport tn. Turkey in Europe, prov. Roumelia, on the Black Sea, at the botton of gulf of same name, 70 m . N.E. Adrianople; lat. (minaret) $42^{\circ} 30^{\prime} 18^{\prime \prime} \mathrm{N}$. ; lon. $27^{\circ} 30^{\prime} 45^{\prime \prime} \mathrm{E}$. (n.) It is built on an eminence, and has a prepossessing appearance. The shops
are kept neat and clean, and being well stocked with showy articles, look very pretty. Its principal source of prosperity is in the manufacture of pottery, pipe-bowls, cups, \&c., for which a superior clay is found in the neighbourhood. They are, besides, tastefully made, richly ornamented, and are sold at a high price. The town has also a considerable trade in grain, wine, iron, woollen stuffs, butter, cheese, and other prodnctions of the country. Pop. 6000.-The QULF is formed by Cape Emineh on the N., and the town of Sizeboli or Sizopoli on the $\mathrm{S} ., 17 \mathrm{~m}$. apart. It opens E. and stretches about 22 m . inland.-2, Tchatal Bourgas, or Burgas, a tn . same prov. 45 m. S.E. Adrianople; lat. $41^{\circ} 21^{\prime}$ N.; lon. $27^{\circ} 18^{\prime}$ E.; with an old castle, a fine mosque, hospital, baths, small market-place, manufactures of terra-cotta, and about 2000 houses.

BOURGES [anc. Biturice or Bituria], a very ancient tn. France, cap. dep. Cher, 124 m. S. Paris, at the confluence of the Auzon and Yevre. It is surrounded with ramparts, now converted into public promenades, and is about $2 \frac{1}{4} \mathrm{~m}$. round. The streets are generally broad, but deserted and gloomy. owing to the small population, and peeuliar construction of the houses. Large unbuilt spaces, likewise, generally planted with trees, or oceupied as gardens and nursery-grounds, are met with here and there. The principal public buildings are, the cathedral, erected in the 13 th century, and esteemed one of the finest Gothic structures in France; the church of Notre Dame, founded in 1157, destroyed by fire in 1487, and rebuilt in 1520 ; and the chureh of St . Bonnet, founded in 1250 , destroyed by the same fire of 1487 , and re-built in 1510 . The glass in the chapels of the latter is exquisitely painted. The archiepiscopal palace is a handsome building, with gardens, designed by Le Notre. The hotel of the prefecture occupies the site of the old palace of the Dukes of Berry. Next to the cathedral, however, the most remarkable building of Bourges is the Hotel de Ville, built in 1443, and originally the mansion of Jacques Cour, a native of the town, and the celebrated and unfortunate treasurer of Charles VII., who, after lending his master 200,000 gold crowns, was cast into prison, and all his property confiscated, for certain imaginary crimes, of which he was accused by courtiers who shared in his spoils. He was condemned to death, but escaped to Rome, and died on a naval expedition, in the service of

house of jacques ceevr bourgar
From France slocumentale et Pitloresque.
the Pope. This building is in the florid Gothic style, and of great marnificence. Besides the mairie, the inansion of Jacques Cour contains the halls of the royal court, the courts of first resort, of commerce, and justiciary. The
ancient seminary is also a handsome edifice, now occupied as barracks. Bourges has a public library, containing 20,000 volumes; a college, museum, seminary, theatre, general hospital, prisons, and a house of refuge. The town is the seat of an archbishopric, of a royal court for the departments of Cher, Indre, and Nievre, of a diocesan theological seminary, ecclesiastical school, and normal school for the department. It is also the capital of the 21 st military division of the kingdom. The manufactures are inconsiderable, consisting of some coarse woollens, blankets, cutlery, and leather. It has also saltpetre works, breweries, and tanneries. The number of silversmiths is remarkable for a provincial town. The principal trade is in grain, hemp, wool, flannel, hides, wood, and fruit-trces. Bourges is of high antiquity. Six centuries before the Christian era, it was the capital of Celtic Gaul. In the time of Julius Cæsar it was called Avaricum, and was the capital of the Bituriges, from whom the modern name appears to be derived. Cæsar besieged and took it, b.c. 52. Under the Romans it became the capital of Aquitania. In 475 , it fell into the hands of the Visigoths, but submitted to Clovis, when he had vanquished Alaric, in the plains of Vouillé. It then became the capital of prov. Berri ; and, during the Middle Ages, partook of the vicissitudes common to the towns of France. The great fire of 1487 destroyed 3000 houses, and gave a blow to the commercial prosperity of the town, from which it never recovered. The cloth manufacturers, who were at that time numerous, removed from the place, and Lyons profited by the disaster, as the fairs were transferred to that town. In 1583, the plague carried off 5000 of the inhabitants. Seven councils have been held at Bourges, and the Pragmatic Sanction was accepted here by the elergy in 1438. Pop. (1846), 18,255.

BOURGET.-1, A lake, Sardinia, Savoy, 7 m . N. Chambery, and near the E. frontiers of France. It is about 11 m . long, from N. to S., and, on an average, not more than 2 m . broad. It empties its surplus water into the Rlione, by a tortuons channel, which permits steam-vessels to enter, and navigate the lake. The scenery is very romantic, the W. shore consisting of a precipice of limestone, which rises almost perpendicularly.- $2, \mathrm{~A}$ vil. at the S. W. extremity of the lake. It is a place of great antiquity, and many Roman remains have been found in it. Pop. 1650.

BOURGOGNE. See Burgundy.
BOURGOIN [anc. Bergusium], a tn. France, dep. Isère, 8 m . W.N.W. La Tour-du-Pin, on the Bourbre. It is surrounded with marshes, which have been partly drained, and which afford inexhaustible supplies of turf for fuel. The town has some woollen, cotton, and silk manufactures, and numerous flour-mills. It carries on a good trade in flour of excellent quality, hemp, linen, and woo!len elotll, \&c. Pop. 3337.

BOURGUEIL, a tn. France, dep. Indre-et-Loire, 26 m. S.W. Tours, r. bank, Doit, here called the Authion. The district produces red wine of good quality, flax, hemp, anise, liquorice, nuts, onion and other vegetable seeds. Trade in nut-oil, dried fruits, butter, maize, millet, and wine. Pop. 1729.

BOURKE, a co., S. Australia, 65 m . long, and 60 broad ; arca, 3000 sq. m., or $2,496,000 \mathrm{ac}$. It contains 35 parishes Pop. 17,331, of which 9440 are males, 7891 females.
bOURLOS. See Boorlos.
BOURN, or Bourne, three pars. Eng.:-1, par. Cambridge; 4073 ac. Pop. 909.-2, Bourne (St. MIary), par. IIants; 6640 ac. Pop. 1152.-3, Bourne (IVest), par. Sussex ; 4230 ac. Pop. 2093.

BOURNE, a tn. and par. England, co. of, and 33 m . S. Lincoln. The town lies at the foot of a range of lills, and consists of four principal streets, recently much improved in cleanliness and sewage; houses generally of brick, for the most part irregularly but well built; amply supplied with water, and well lighted with gas. The church is a large ancient structure, with two towers at its W. end. There are chapels belonging to Baptists, Methodists, Independents, and Calvinists; also, a grammar, national, and several private schools; a set of alms-houses, a clothing-fund, and some other minor charities, and a mechanics' institute. The manufacture of leather, formerly carried on here to a considerable extent, has long since ceased. The only trade of the town now is in wool and corn. Area of par. 8190 ac. Pop., in-
cluding the hanlets of Dyke and Cawtherpe, 3361.-(Local Correspondent.)

BOURNEMOUTH, a vil. England, co. Hants, 6 ma . IV. by S. Christ Church. It lics on the coast, and having of late years become a place of fashionable resort for bathing, many tasteful villas lave sprung up. A spacious hotel, a range of elegant and commodious baths, and a church, have also been recently erected.

BOURNEY, par. Irel. Tipperary; 12,981 ac. Pop. 4620. BOURO. See Boorv.
BOUR'TANGER MORASS, an extensive swamp, upwards of 40 m . in length, on the confines of Holland and Hanover, bank of the Ems. Being quite impracticable for the passage of troops, it forms, to the adjacent provinces, an important defence against invasion. At the N. extremity of the morass, in province Groningen, is a fort of the same name.

BOURTLE, par. Scot. Aberdeen; 4000 ac. Pop. 469.
BOURTON, three pars. Eng.:-1, Bourton-upon.Dunsmoor, par. Warwick; 2520 ac. Pop. 390.-2, Bourton-on-the-IIill, par. Gloucester; 2960 ac. Pop. 542.-3, Bourton-on-the. Water, par. Gloucester; 2290. Pop. 943.

BOUSNA, a city, Africa, Soodan, cap. prov. of samo name, on an island in the Niger or Quorra, about 3 m . long, and 1 m . broad ; lat. $10^{\circ} 14^{\prime} \mathrm{N} . ;$ lon. $6^{\circ} 11^{\prime} \mathrm{E}$. It is walled, and being surrounded by rocks, is a place of considerable strength. As in all African cities, the houses are irregularly placed, and thus cover a space of ground disproportioned to the number of inhabitants. The soil of the province is fertile, producing corn, yams, cotton, rice, and timber trees, in great abundance. Amongst the wild animals are elephants, hippopotami, lions, tigers, \&c. Boussa has obtained a melancholy notoriety, from the circumstance of its being the place where the enterprising traveller, Park, met his death. The population of the town of Boussa has been estimated at 12,000 to 18,000 .

BOUSSU, a tn. and com. Belgium, prov. Hainaut, 7 m . W. Mons ; with the fine castle of the Counts of Caraman and Beaumont, whence Louis XIV. directed the siege of Saint Ghislain, in 1665 . The commune has extensive breweries, an iron-foundry, and forge, and abounds in coal ; 30,000 tons are raised annually, two-thirds of which go to France. Pop. 3287.

BOUTONNE, a river, France, which rises at the foot of one of the towers of the ancient castle of Malesherbes, near Chef-Boutonne, dcp. Deux-Sè vres, and, after a S.W. course of about 50 m ., falls into the Charente, about 10 m . above its mouth. It passes, and is navigable from, St. Jean d'Angely.

BOUXWILLER, or Boswiller, a tn. France, dep. Bas Rhin, on the Moder, 20 m . N.W. Strasburg; formerly walled. It has extensive chemical works, producing alum, vitriol, Prussian blue, ammenia, animal charcoal, pyrolignous acid, \&c. It likewise has some large tameries, bleachfields, madder-works, ropeworks, and manufactures of fustian, linen, ironmongery, and excellent glue. Pop. 3951.

BOUZONV1LLE, a tn. France, dep. Moselle, on the Nied, 19 m. N.E Metz. Its manufactures are leather (common and shammy), glue, nails, and cabinet-work. In the neighbourhood are the ruins of an abbey, founded in 1030 . Its extensive Gothic buildings erown a liill, whose sloping sides are covered with orchards, and at the foot of which the Nied meanders through large and verdant meadows. Pop. 1580.

BOVA, a tn. Naples, prov. Calabria Ultra, 17 m . S.E. Reggio, on a mountain not far from the sea; seat of a bishop, suffragan to Reggio. It lias a cathedral, and several other churches, a seminary, hospital, and two monts de-piété. Silkworms are reared in the neighbourhood. Pop. 2882.

BOVEGNO, a vil. Austrian Italy, gov. Milan, prov. of, and 18 m . N. by E. Brescia, near l. bank, Mella. It has a parish charch, an hospital, and manufactory of iron vessels, and cutlery. In the vicinity are iron mines, and several mineral springs. Pop. 2546.

BOVEVAGH, par. Irel. Derry ; 19,636 ac. Pop. 5174.
BOVEY, two pars. Eng. Devon:-1, Bovey (North), 6600 ac. Pop. 660.-2, Bovey (South), 6480 ac. Pop. 1823.

BOVEY-TRACEY, a vil. and par. England, co. Devon, 4 m . W. by S . Chudleigh. There are here a large parish chureh, in the early English style; chapcls for Wesleyans and Baptists, and an endowed free school for 20 boys. There
are several extensive earthenware pottcries, and some coal mines in the parish. Area of par. 6480 ac . Pop. 1823.

BOVINO [anc. Bovinum], a tn. Naples, prov. Capitanata, 20 m. S.S.W. Foggia, near the Cervaro; the seat of a bishopric, suffragan to Benevento. It is fortified, and has a cathedral, two parish churches, and several convents. The Spaniards were defeated here by the Imperialists in 1734. I'op. 5721.

BOW, or Nymet-Tracey, par. Eng. Devon; 2740 ac. Pop. 973.

BOW, an isl., S. Pacific; lat. $18^{\circ} 6^{\prime}$ S.; lon. $140^{\circ} 48^{\prime}$ W. (r.) ; of coral formation, 30 m . long by 5 mean breadth; well wooded on the weather side, but scantily on the other; visited for its pearl-fishery. Pop. about 100.

BOW, or Stratford-Le-Bow, a vil. and par. England, co. Middlesex, $4 \frac{1}{2}$ m. E.N.E. St. Panl's Cathedral, Loudon. The village is agreeably situated; well paved, and lighted with gas. The church, an ancient structure, of a mixed style of architecture, has a low square tower, and a window gorgeously ornamented with figures in stained glass. There are, besides, places of worship for Wesleyans, Baptists, and R. Catholics; several free schools, an alms-house, and various other charities. Porcelain was formerly manufactured here to a great extent. The Eastern Counties Railway passes a little N. the town. Area of par. 630 ac . Pop. 4626.

BOWDEN, two pars. Eng.:-1, Bowden (Great), par. Leicester; 3120 ac. Pop. 3698.-2, Bowden (Little), par. Northampton; 2410 ac. Pop. 439.

BOWDEN, a vil. and par. Scotland, co. Roxburgh. The vil., 3 m. S. Melrose, has a church, and a good parochial school. Pop. 253. Area of par. 6700 ac. Pop. 857.

BOWDITCHI ISLAND, an isl., S. Pacific; lat. (N. point) $9^{\circ} 20^{\prime} \mathrm{S} . ;$ lon. $171^{\circ} 4^{\prime} \mathrm{W}$. (R.) ; of coral formation, and triangular form, with the apex S . It is 8 m . long N. to S ., and about 4 m . broad. On its N.W. and N. points the land is of considerable elevation, and on the E. are extensive groves of cocoa-nut trees and shrubbery. The scenery on some parts of this little island is of surpassing beauty, equalling all that the imagination bas pictured, or can picture of these paradises of the ocean, with their balmy climates and luxuriant foliage. The inhabitants, of whom there are about 600 , are friendly, gentle, and good-humoured, but extremely timid. In their persons they are well formed, and the expression of their countenances is extremely agrecable. The younger portion of the community go naked, but those more advanced in life wear the maro, a sort of apron, which in the men is from 16 to 18 inches wide; in the case of females it is of preposterous size, and weighs about 50 lbs ., presenting a very uncouth and ridiculous appearance. They do not cultivate the soil, but live chiefly on its spontaneous productions, which include cocoa-nuts, and on the produce of the sca; and that these sources afford them sufficient sustenance, says Capt. Wilkes, is amply proved by their robust and healthy looks. They are a very ingenious people, exhibiting great taste and dexterity in the manufacture of various small articles, such as fish-hooks, boxes, and working-implements, saws, files, and drills, formed, indeed, from rude materials, but well adapted for their purposes. They also manufacture an excellent kind of matting for sleeping in, and for clothing. Bowditch Island was discovered by Commander Wilkes, of the U. States' Exploring Expedition, on January 29, 1841, the island not having been laid down in any chart previous to that period, and being still wanting in many maps.

BOWDON, par. Eng. Chester; 18,660 ac. Pop. 9373.
BOWER, par. Scot. Caitlness; 7 m . long by 3 broad. Pop. 1689.

IBOWER-CIIALK, par. Eng. Wilts; 3120 ac. Pop. 447.
BOWERS-GIFFORD, par. Eng. Essex; 2230 ac. P. 249.
BOWES, par. Eng. York, N. Riding; 18,440 ac. P. 850.
I3OWFELL, a mountain, Eng. Westmoreland, 7 m . W. by N. Ambleside, 2911 ft . high.

BOWMORE, a vil. and port, Scotland, co. Argyle, isl. Islay, near the head of Loch-in-Daal. It is laid out with tolerable regularity. A principal street ascends a pretty steep hill, and is crossed by another wide street; and a third strect, with inferior houses, runs parallel to the first. The quay is substantial, and suited for coasting vessels. The parish church, a respectable circular building, surmounted by a neat spire, stands in the village, which likewise has
three schools. A distillery here is somewhat noted for the quality of the whisky produced. Pop. about 1500.

BOWNESS, a post tn. England, co. Westmorland; delightfully situated on E. shore, Lake Windermere, 9 m . W.N.W. Kendal, a favourite residence of visitors to the lake scenery. It has a parish church, free grammar school, and several handsome villas, and is within $1 \frac{1}{2} \mathrm{~m}$. of the Windermere station of the Kendal and Windermere Railway.

BOWNESS, par. Eng. Cumberland; 10,830 ac. P. 1488.
BOX, par. Eng. Wilts; 4130 ac. Pop. 2274.
BOXFORD, two pars. Eng. :-1, par. Suffolk; 2450 ac . Pop. 1121.-2, Boxford-cum- Westbrook, par. Berks; 2880 ac . Pop. 612.

BUXGROVE, par. Eng. Sussex ; 3410 ac. Pop. 736.
BOXLEY, par. Eng. Kent; 5670 ac. Pop. 1398.
BOXMEER [anc. Meer], a tn. Holland, prov. N. Brabant, 28 m . E. Hertogenbosch, near tho Maas. It is neat and clean; has an old castle, a handsome court-house, a R. Catholic chureh, a Carmelite monastery and convent, a gyminasium for the tuition of Latin, philosophy, and theology, and three other schools. Boxmeer has two calico printworks, and is noted for its fine beer. Pop. 630.

BOXTED, two pars. Eng. :-1, par. Essex; 3120 ac. Pop. 856.-2, par. Suffolk; 1580 ac . Pop. 200.

BOXTEL, a tn. Holland, prov. Gelderland, 7 m . S. Hertogenbosch, on the Dommel, which, winding through among the houses, propels a variety of mills, besides serving for the passage of boats, and together with the constant traffic of carriages of all sorts to and from Maastricht, \&c., renders this one of the most stirring places in the district. Boxtel has a R. Catholic, and a Reformed church, two schools, and a small alms-house. It is noted for the beanty of its diapers and damasks, and has bleacheries, and a paper mill. Pop. nearly all R. Catholics, about 3600 .

B()XWELL-with-Leighterton, par. Eng. Gloncester : 2210 ac. Pop. 334.

BOXWORTII, par. Eng. Cambridge; 2000 ac. Pop. 326.
BOYACA, a vil. New Granada, dep. same name, 60 m. N.N.E. Bogota, with important limekilns. It has become noted from the defeat here sustained by the Spaniards in 1819, and which secured the independence of the W. provinces.The department is very extensive, bounded by the republic of Venezuela, and provinces Cundinamarea and Magdalena; area, 92,800 geo. sq. in. ; capital, Tunja. In the W., it is traversed by a chain of the Andes, and in the E. it is composed of immense plains, watered by affluents of the Orinoco. Pop. (1840), 46,500.

BOYANAGII, par. Irel. Galway ; 15,832 ac. Pop. 5288.
BOYANNA BAY, a bay, N.W. coast of Madagasear, N.W. point; lat. $15^{\circ} 59^{\prime} \mathrm{S} . ;$ lon. $45^{\circ} 23^{\prime} \mathrm{E}$. It is about 3 m . wide in the entrance, and 6 or 7 m . in length; extending S., with depths from 6 to 4 fathoms, and which shoal to 2 and 1 fathom near the shore and at the bottom of the bay, around which there are several small villages; and on the W. side is the principal town of the province.

BOYD TOWN, a seaport, Australia, New S. Wales, at the head of Twofold Bay; lat. $37^{\circ} 10^{\prime} \mathrm{S}$.; lon. $149^{\circ} 57^{\prime}$ E., separated from E. Boyd by the river Kiah. Though but lately founded, it is in a flourishing condition, and has already a pretty extensive trade, and is laid out in good taste, and composed of well-huilt brick houses, and neat cottages, with verandahs. It contains a handsome Gothic church, with a lofty spire, a spacious hotel, and several ranges of commodious shops. There are here a large whaling establishment, employing nine sperm whaling ships, and several extensive salting and boilingdown houses. The port has a collvenient jetty, 300 ft . long, and vessels refitting have here the advantage of a heaving-down hulk, and every necessary mechanical assistance, abundance of water, and every description of provisions and vegetables. Both Boyd and E. Boyd are consequently favourite resorts for shipping.

BUYLE, a garrisontn. and par. Ireland, co. Roscommon. The town is $22 \mathrm{~m} . \mathrm{S} . \mathrm{E}$. Sligo, on a stream of same name, con necting Lough Gara with Lough Key, in a valley nearly surrounded by hills. It consists of four principal streets crossing at right angles, two of which are straight, the other two winding, one of the latter ascends a very steep hill; all indifferently paved and kcpt. The more modern houses, many of which are of stone, are well built, great improvement in this respect
having taken place of late years, but in the outskirts are many miserable hovels. Boyle has an Episcopal church, and chapel of ease, a R. Catholic, and two Methodist chapels, a workhouse, in the old English style; court-house, and bridewell, the latter a plain building, with freestone front; a national school for boys and girls, and a male and female infant school connected with the chureh; a dispensary, and a charitable loan fund. Oatmeal and flour are made at very extensive mills erected on the Boyle river, at the extremity of the town, and coarse fricze and flannels are mannfactured by some of the peasantry, but to a very limited extent, and only for the home market. A large number of cattle is sold at the fairs, which lake place nine times a year, and, being the centre of an cxtensive district, there is a good retail trade. In the environs is a public garden, decorated with a statue of King William III., with well laid-out walks, for the recreation of the inhabitants, provided by Viscount Lorton, the proprietor of the town. Pop. 3235. Area of par. 20,737 ac. Pop. 12,591. -(Local Correspondent.)

BOYLSTON, par. Eng. Derby; 1360 ac. Pop. 343.
BOYNDIE, or Boindie, par. Scot. Banff; 3000ac. P. 875.
BOYNE, a river, Ireland; rises in the bog of Allen, co. Kildare, $1 \frac{1}{2} \mathrm{~m}$. S.E. Carbery, and after a winding N.E. course of about 60 m ., through beautiful and romantic scenery, falls into the Irish Sea 4 m. E. by N. Drogheda. By artificial means, it has been rendered navigable for barges to a distance of 25 m . from the sea; but the bar at its entrance can be erossed only by vessels of small burden. The Boyne derives its chief importance from the memorable and decisive battle fought on its banks, July 1, 1690, between William III. and James II. An obelisk, in commemoration of the battle, was erceted in 1786, on the spot where William received a slight wound, the evening before the engagement.

BOYNTON, par. Eng. York, E. Riding; 2690 ac. P. 100.
BOYSTOWN, or Baltinoys, par. Irel. Wicklow; 25,134
Pop. 3644.
BOYTON, three pars. Eng.;-1, par. Devon and Cornwall ; 5120 ac. Pop. $600 .-2$, par. Suffolk; 1890 ac. Pop. 239.-3, par. Wilts; 4580 ac. Pop. 360.

BOYTONRATH, par. Ircl. Tipperary; 992 ac. Pop. 255.
BOZEAT, par. Eng. Northampton; 2400 ac. Pop. 845.
BOZZOLO, a fortified tn. Austrian Italy, gov. Milan, prov. of, and 16 m . W.S.W. Mantua, near r. bank, Oglio, with old fortifications, some silk looms, and an annual fair. Pop. 4049.

BRA, a tn. Sardinian States, div. Coni, prov. of, and 9 m . W.S.W. Alba. It has three parish churches, the principal of which is the chrreh of Santa Chiara, built in 1742 by Vettone. The town has a good trade in cattle, grain, wine, and silk, which last is held in high repute. Pop. 800 U.

BRAA, or Braile, a river, Prussia, rising in Pomerania. It forms numerous small lakes in the upper part of its course, flows S.S.E., and falls into the Vistula on its l. bank, 6 m . E. Bromberg; total length, about 108 m . The canal from Bromberg to Nakel unites it with the Netze, and thus forms a communication between the Vistula and the Oder.

BRAAK, or Brakke, several streams, S. Africa, Cape Territory:-1, Braak, or New River, rising in Graaf Reynet, near lat. $31^{\circ}$ S., flowing N.W. and falling into the Gariep or Orange River, after a course of 120 m ., exclusive of windings. -2 , The Great and Little Braak, the two head streams of the Great Fish River. - 3, A small affluent of the Little Fish River.

BRAAKE. See Brake.
BRABANT [Dutch, Hertogdom Braband], an ancient duchy of the Low Countries, of which Brussels was the capital. On the emancipation of the United Provinces of Holland, it became divided into two parts-one Dutch or N. Brabant, and Austrian Brabant, comprehending not merely the present province of S . or Belgian Brabant, but both it and the present province of Antwerp.

BRABAN'T (North), [Dutch, Noord-Braband], a prov. Holland, and on the frontier betwixt it and Belgium, along which it extends about 60 m .; area, $842,240 \mathrm{ac}$. It is generally flat, and is drained by the Maas, the Merwede, the Scheldt, the Amer, the old Maas, the Dommel, the Aa or Ade, the Donge, the Mark, and the Dintel, to which may be added the great South-William's-vaart Canal. Careful drainage has made the province famous for health and longevity, and while epidemics
have raged in other parts of the Netherlands, N. Brabant has been exempt from their attacks. There are no minerals of any consequence, The soil varies from barren moor and wet bog, to the richest arable and pasture land. Besides the common cereals, it produces hops, madder, cole-seed, flax, hemp, and orchard fruit. Not the least important product is the running plant, found indispensable for the preservation of the dikes from abrasion by the water. Oak and elm thrive well. The lower grounds afford excellent oziers and bulrushes, and the white mulberry is much grown for silkworms, which are reared chiefly at St. Michacl's Gestel. The liorses and cattle of N. Brabant are smaller than those of some of the neighbouring provinces. The wool of the sheep is mostly used within the province, particnlarly at Tilburg. The pigs are excellent. Immense quantities of geese and poultry are raised and exported. Bees also are an object of profitable attention. The rivers abound with fish, of which the anchovies of Bergen-op-Zoom, and the salmon of Gertruidenburg, are in great repute. Manufactures:-Woollen cloths, made at Tilburg, Eindhoven, and Gelddrop; coloured cottons at Melmond, and linen and cotton fabrics at Eindhoven and the villages around Hertogenbosch, where also the finest damasks and diapers are manufactured. In other towns there are carpet, hat, and pin manufactories, potteries, brick-fields, many celebrated brewerics, lace-making, iron-mills, \&c. For the administration of justice, N. Brabant is divided into threc districts, and these again into 19 cantons. It has 349 primary, and 14 Latin schools, the latter attended by about 300 scholars. Pop. 378,437, of whom R. Catholics, 328,741; 1rotestants, 47,535 ; Jews, 1951 ; attached to no religious communion, 210.

BRABANT' (South), [Dutch, Zuid-Braband], a prov Belgium, which, though in population only the third, and in extent only the forrrtb, is from its central position, and possession of the capital, the most important of all the provinces of Belgium. Its boundaries are, N. prov. Antwerp, E. prov. Limburg and Liège, S. prov. Hainaut and Namur, E. prov. E. Flanders. It has an area of 810,955 English ac., of which 671,484 are cultivated, 105,13 I under wood, of which one-tenth belongs to forest Soignies, and only 3107 uncultivated and waste, the remainder being occupied by water, roads, towns, \&c. Its soil, which owes much to nature, but more to industry, produces in abundance all the ordinary grain and pulse crops, seeds, and grasses ; its manufactures are various and extensive consisting chiefly of cotton stuffs, muslins, velvet, lace, and carpets. It has numerous potteries, tameries, and curryinghouses, hat-factories, sugar and salt refineries, coachworks, paper-mills, glassworks, distilleries, and very extensive breweries. There is also a very large book trade, the chief materials of which are obtained, not from native authors, but from the appropriated literature of France. Brabant is divided into three administrative and judicial arrondissements, of which the chief places are Brussels, Louvain, and Nivelles. According to the propertion of onc to every 45,000 inhabitants, it should send 18 members to the Chamber of Deputies. Pop. 691,357, of whom 220,547 use the French, and 467,696 the Flemish language.

13RABOURNE, par. Eng. Kent; 3640 ac. Pop. 889.
BRACADALE, a par. Scotland, co. Inverness, Isle of Skye; length, $17 \mathrm{~m} . ;$ breadth, 4 to $7 \mathrm{~m} . ;$ rocky, and intersected by several arms of the sea. Pop. 1824.

BRACCIANO [anc. Arcennum or Bracennum], a tn. Papal States, W. side, lake of same name, 22 m . N. W. Rone ; with a magnificent castle, belonging to the Dukes of Bracciano. In its vicinity are thermal springs and baths. Pop. 1800.

The lake [anc. Sabantina stagna] is 2437 ft . above the sea; area, 25 sq. m., and nearly circular. By the Arone it communicates with the Mediterranean.

BRACEBOROUGH, par. Eng. Lincoln; 2230ac. P. 231.
BRACEBY, par. Eng. Lincoln; 970 ac. Pop. 155.

BRACEWELL, par. Eng. York, W. Riding; 1920 ac. Pop. 153.

BRACKENHEIM, a tn. Würtemberg, circle, Neckar, cap. dist. of same name, 23 m. N.N.W. Stuttgart. It con tains two churches, a townhouse, an old castle, a graminarschool, and a well-endowed hospital. It is a place of great antiquity, and is said to have been a Roman station. Pop. 1520.-The district, area, 70 gee. sq. m., produces much fruit and wine. Pop. 24,415.

BRACKLEY, a market tn. and par. England, co. Northampton. The town is $18 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Northampton, and consists chiefly of one straight spacious street, nearly 1 m . in length; houses chiefly of stone, with large gardens behind; well lighted with gas. It contains a church, an ancient and handsome building; Wesleyan and Independent chapels, a free and a national school. The townhall, in the centre of the town, is also an ancient structure. There are two large breweries here, but no other manufactures of any consequence. Pop. 2121.-(Local Correspondent.)

BRACON-ASH, par. Eng. Norfolk; 950 ac. Pop. 293.
BRADANO, a river, Naples, which rises in a branch of the Appenines, prov. Basilicata, and, after an E.S.E. course of nearly 60 m. , falls into the Gulf of Taranto, at Ponte Tavole.

BRADBORNE, par. Eng. Derby; 6400 ac. Pop. 1303.
BRADDEN, par. Eng. Northampton; 1000 ac. P. 171.

Pop. 192.-5, Bralfield (St. George), par. Suffolk; 2090 ac. Pop. 479.-6, Bradfield (St. Clair), par. Suffolk, 1190 ac. Pop. 240.

BRADFORD, a flourishing manufacturing tn., bor., and par. England, co. York, W. Riding, 29 m. N.E. Manchester. It is pleasantly situated at the junction of three beautiful and extensive valleys, and is almost entirely built of fine frecstone. In the older parts of the town, the streets are narrow and illconstructed; but in the more modern they are spacious, well paved and lighted. The exchange is a beautiful huilding, with a library and news-room attached. Opposite to it is the piece-hall, for the exlibition and sale of stuff goods. Thursday is the day of sale; but, of late years, sales of goods have been effected, to a much larger amount, at the rooms and warehouses of the leading manufacturers and merchants, both on Mondays and Thursdays. The courthouse, erected in 1834, is a handsome and convenient building. There are also a good market-place, with a spacious cuclosed area; a mechanics' institute, for which a commodious and handsome building has been erected; a flourishing philosophical society, and a dispensary, liberally supported. Churches:-the parish church, erected in the reign of Henry VI., in the decorated style of English architecture; Christ Church, a chapel of ease, a neat structure, with a low tower; St. James's, St. John's, St. Jude's, and St. Paul's. The other places of worship are, three large Baptist chapels, three Independent, three Wesleyan Methodist, one New Connection Methodist, two Association Methodist, one U. Presbyterian (recently erected), one Unitarian, one Society of Friends, one Moravian, and one 12. Catholic. Bradford has a free grammar-school, liberally endowed by Charles II., and rebuilt in 1830; four national schools, and one conducted on the system of the British and Foreign School Society; and several parochial and Wesleyan schools. In the immediate vicinity is Airedale College, for the education of young men for the ministry among the Independents. The Baptists have a similar academical institution at Little IIorton; and at Woodhouse Grove, 4 m . distant, the Wesleyan Methodists have a school for ministers' sons. 'The infirmary, erected in 1842, is a noble building in the Tudor style, with wards for 60 patients, and a dispensary.

The staple manufacture of the town is worsted stuffs, and mixed worsted, alpaca, and mohair; also cotton and silk fabrics. The spinning of worsted yarn employs a great number of l:ands; and when spun it is largely exported, and also woven in the power-loom factories of the town. There are not less than 112 mills in the parish, for spinning and weaving worsted, \&c.; of these, 38 are in the town. Broad and narrow cloths (employing six extensive mills, chiefly in adjoining townships), wool-cards, and ivory and horn combs are made in great quantities. In the town and neighbourhood, some very extensive dyeworks have of late years been erected. The cotton manufactures are of recent introduction, but are naking rapid progress. The vicinity abounds with ceal and ironstone; and about 3 m . S.E. the town are the Low-nnoor ironworks, and 1 m . E. the Bowling ironworks, both of
which are on a very extensive scale, and particularly celebrated for the quality of their iron. Bradford has suffered less from the depression of trade than most other large manufacturing towns. Thursday is the market-day; and there are three important annual fairs. There is here a flourishing savings'-bank, with a handsome building, erected in 1837. Commercial operations have been greatly facilitated by the cutting of a branch from the Leeds and Liverpool Canal, near Slipley, into the very centre of the town. The admirable position of the town in respect to railways is also of advantage to its prosperity. The station of the Lceds and Bradford Railway, through which communication is established with the N.E. and N.W. of England, and with Scotland, is within 300 yards of the exchange. Equally easy communication is afforded with the S.E. and S.W. of England by the Lancashire and Yorkshire Railway, connected with Bradford by two branches, proceeding, respectively, in a S.E. and S.W. direction. A direct line from Bradford to Leeds is contemplated.

Bradford was incorporated in 1847. A mayor, 14 aldermen, and 42 common councilmen constitute the corporate body. By the Reform Act, it returns two members to Parliament. The boundaries of the borough comprise four townships. Number of electors (1850), 1871. liradford is a polling station at elections for the W . Riding of the county. The rapidity with which the population of the town has increased, affords one of the best evidences of its prosperity. In 1801 it was only 6393 ; in 1841, 34,560 . The four townships forming the parl. bor., in 1801, contained 13,264 ; and in 1841, 66,718 inhabitants.-The parash of Bradford is 15 m . in length, and, at an average, 4 m . in breadth, and comprises the town of Bradford, three chapelries, and nine townships; area, 33,710 ac. Pop. 105,257.-(Local Correspondent.)

BRADFORD (Great), an anc. market tn. and par. England, co. Wilts. The town is beautifully situated $28 \mathrm{~m} . N . W$. Salisbury, on a declivity, banks of the Lower Avon, here crossed by two bridges-a very old one of nine arches, in the centre of the town, and a modern one of four. The town consists of thrce regular streets, containing many handsome, and some elegant houses. It has a spacious clurch, with a tine altar-piece, and windows of stained glass; places of worship for Baptists, Independents, Friends, the Countess of IIuntingdon Connection, Wesleyans, and Unitarians, an endowed free school for the education of 60 boys, a news'-room, two almshouses, and a workhouse. Woollen cloth is the staple manufacture of the place, particularly that composed of fine Spanish and Saxony wool, for the dyeing of which the water of the river is highly favourable. Weekly market, Saturday; two fairs annually. Bradford was of some note in the time of the Saxons, St. Dunstan having been elected lBishop of Worcester at a synod held in it. The Kennet and Avon Canal passes close to the town, and the Trowbridge station of the Great Western Railway is 4 m . distant. Area of par. $11,740 \mathrm{ac}$. Pop. 10,563. Pop. of tu. 3836.

BRADFORD, four pars. Eng.:-1, par. Devon; 3670 ac. Pop. $530 .-2$, par. Somerset ; 1710 ac . Pop. $550-3$, Bradford Abbas, par. Dorset; 1810 ac. Pop. $652 .-4$, Bradford Peverell, par. Dorset; 2700 ac . I'op. 355.

BRADING, a small maritime tn. and par. England, Isle of Wight. The former is prettily situated at the head of an inlet called Brading Haven, E. end of isl., $3 \frac{1}{2} \mathrm{~m}$. S. Ryde, has little trade and no manufactures, and consists principally of one long irregular street. The church is an old and humble structure; and in the churchyard a plain head-stone marks the last resting-place of the heroine of Legh Richmond's interesting tale of 'Little Jane.' There are two other churches in the parish, as also two dissenting chapels, and a national school. The market, which is well supplied with corn, is held on Monday; and fairs are held on May 12 and October 2. Vessels of moderate burden can enter the harbour at high water. Area of par. 7350 ac. Pop. 2701.

BRADLEY, nine pars. England:-1, par. Derby; 1860 ac. Pop. 271.-2, par. Lincoln; 1450 ac . Pop. 106.3, par. Hants; 670 ac. 1’op. 125.-4, par. Stafford; 4690 ac. Pop. 649--5, Bradley (Great), par. Suffolk; 2280 ac. Pop. 544.-6, Bralley (Little), par. Suffolk; 890 ac. Pop. 33.-7, brulley (North), par. Wilts; 3020 ac. J'op. 2427. -8, Bradley-in-the-Moors, par. Stafford; 570 ac.-l'op. 72. -9, Bradley (West), par. Somerset ; 300 ac. Pop. 116.

BRADMORE, par. Eng. Notts; 1560 ac. Pop. 416.
BRADNINCH, or Braiss, a decayed bor., market tn. and par. England, co. Devon, 8 m . N.N.E. Exeter ; pleasantly situated on an eminence, and nearly surrounded with hills, 3 m . from the Collumpton station of the Bristol and Exeter Kailway. It consists of one principal street, nearly straight, about 1 m . in length, and of several smaller; houses generally of stone, mostly thatched, the remainder covered with slate. A new guildhall, with a prison under it, was erected in 1835. Bradninch has an old parish church, with a beautifully carved screen, time of IIenry VII. ; a Baptist and a Wesleyan chapel, and a national school, erected in 1837. There are two large manufactories for paper in the parish-the one, called Kensham Mills, for coarse papers, and the other, for fine papers, called Hele Mills. Arca of par. 4320 ac. Pop. 1714.(Local Correspondent.)

BRADON, par. Eng. Somerset; 530 ac. Pop. 41.
BRADPOLE, par. Eng. Dorset ; 990 ac. Pop. 1357.
BRADSBERG, or Bratsberg, a bail. Norway, composed of the fögderi of Üvre [Upper] Tellemarken, in prov. Christiansand, and of Nedre [Lower] Tellemarken, in prov. Aggershuus; area, $4030 \mathrm{sq} . \mathrm{m}$. It has about 25 m . of sea-coast in the Skager-Rak, and stretches landwards to the Hardanger Fjeld. It contains the coast towns of Stathelle, Langesund, Krageröe, and Brevig, and the inland towns of Skien, Porsgrund, and Osebacken. Pop. (1845), 67,090.

BRADSTONE, par. Eng. Devon; 1300 ac. Pop. 166.
BRADWELL, four pars. Eng.:-1, par. Bucks; 790 ac. Pop. 381.-2, par. Essex; 3210 ac. Pop. 293.-3, par. Suffolk; 1540 ac. Pop. 274.-4, Bralwcll-near-the sea, par. Essex; 3870 ac. Pop. 1034.

BRADWORTHY, par. Eng. Devon; 12,220 ac. P. 1081.
BRAEMAR, a par. Scotland, co. Aberdeen, now united to the parish of Crathie, remarkable for the grandeur and magnificence of its scenery. It is crowded with lofty, picturesque mountains, whose projecting cliffs and steep acclivities are covered with trees: while commingling with these sterner features are numerous gently sloping hills, which gradually subside into beautiful valleys and verdant plains. The principal mountains in this romantic district are Loshnagar, Cairntoul, Benmacdhui, Beunabuird, \&c. Balmoral Castle, one of the summer residences of Her Majesty Queen Victoria, is in the united parish of Crathie and Bracmar. (See Aberdeen County.)

BRAFFERTON, par. Eng. York, N. Riding; 4860 ac. Pop. 873.

BRAFFIELD-on-the-greex, par. Eng. Northampton; 1980 ac. Pop. 428.

BRAGA [anc. Bracara Augusta], a tn. Portugal, cap. prov. Minho. and seat of an archbishop, primate of Portugal,

It contains seven squares ornamented by fountains, an archiepiscopal palace, a large quadrangular building, containing a library ; a fine richly ornamented Gothic cathedral of the 13th century, six parish churches, eight monasteries, a seminary, college, hospital, and numerous antiquities, among which are remains of a Roman temple, amphitheatre, and aqueduct The inhabitants are industrious, and have manufactures of some importance, with which they supply the fairs of Portugal and of Galicia in Spain. The principal articles produced are, hats, shoes, iron and horn ware, harness, linen cloth, \&e. Besides weekly markets, Braga has two annual fairs, each of which lasts a fortnight. In the vicinity are cold sulphurons springs. Braga is supposed to have been founded by the Carthaginians. On a hill about 1 m . E. from the town is the famous sanctuary Bom Jesus do Monte, the most sumptuous and best frequented of any in Portugal. Pop. 16,077.

BRAGANÇA. -1 , An anc. tn. Brazil, prov. Para, 100 m . N.E. Bclem, 1. bank, Caite, near its mouth in the bay of same name; lat. $1^{\circ}$ S.; lon. $47^{\circ} 20^{\circ} \mathrm{W}$. It has several churches and a prison, and the river is navigable up to it at high water. Pop., tn. and dist. $6000 .-2$, A tn. Brazil, prov. of, and 50 m . N.E. São-Paulo. It has a churel ; its district is fertile, feeds numbers of cattle and pigs for the Rio de Janeiro market, and has a number of sugar-mills. Pop. 10,000 .
braganza, or Braganģa [anc. Bragantia], a tn. Portugal, prov. Tras-os-Montes, in a pleasant and fertile plain on the little river Fervença, 24 m . N.W. Miranda. It ranks as a fortress, being surrounded by walls, though in a ruinous condition, and defended by a citadel ; is the seat of a bishopric, suffragan to Braga; has two churches, three monasteries, a college, and manufactures of silk and velvet. Braganza is said to have been founded by Sancho I., in 1187. In 1640 , John II., eighth Duke of Braganza, ascended the throne of Portugal, under the name of Joln IV., and from him is descended the present royal family, who retain the name of Braganza. Pop. 3315.
bragenas. See Drammen.
BRAHESTAD, a small seaport, Russian Finland, N.F. shore of Gulf of Bothnia, dist. of, and 37 m . S.W. Uleåborg. The port is good, and some trade is carried on in pitch and tar. Pop. about 1000.

BRAHILOW, or Bralloff, a fortified tn . Turkey in Europe, Wallachia, r. bank, Dambe, of which it is one of the posts, 99 m . from its mouth, and may be reached by any vesse' capable of entering that river; lat. $45^{\circ} 15^{\prime} \mathrm{N}$.; lon. $27^{\circ} 54^{\prime}$ E. The honses are regularly built, and several handsome new streets have recently been added-a result of the increasing prosperity of the town, in which all the foreign trade of the province centres. It contains several large granaries and commodious warehouses. The principal exports are wheat, tallow, hides, beef, wool, salt, timber, staves, \&c. It has, besides, a valuable sturgeon-fishery. The chicf merchants are Grecks, but of late years several English houses have been established in the town. Pop. 6000.
bRalimapootila, Braimaputra, and erroneously, Burrempooter[offspring of Brahma], one of the largest rivers of Asia, formed by the junction of three streams, which unite in the N.E. part of Upper Assam, in lat. $27^{\circ} 47^{\prime} \mathrm{N}$.; lon. $95^{\circ} 30^{\prime} \mathrm{E} . ; 1026 \mathrm{ft}$. above the sea level. These rivers are called, respectively, the Dilhong, Dibong, and Lohit or Luhit, and have each, in turn, been represented as the head streain of the Brahmapootra, but without any of them having been left in undisputed possession of that honour. Nor, in the present state of information on the subject, can this point be yet confidently decided. All probability, however, is in favour of the Dihong; but this, again, is on the presumption that it is a continuation of the Sanpo-a presumption which,

32 m. N.N.E. Oporto, in a plain watered by the Este, and about 3 m . S. of the Cavado. It is surrounded by walls flauked with towers, and defended by a castle. The honses are old, and the streets, though broad, are not well laid out.
although apparently liighly probable, is by no means free from uncertainty. The Sanpo, a very large river, and on this account worthy to be the head stream of the Brahmapootra, rises in Tibet, on the N. slopes of the IIimalaya, in lat. $30^{\circ} 8^{\prime} \mathrm{N}$.;
lon. $82^{\circ} 10^{\prime} \mathrm{F}$.; nearly opposite the sources of the Ganges, on the S. side of the range, and not far from those of the Indus. It flows in an E. direction, parallel to the 11 imalayas, for about 750 m ., or to about lon. $95^{\circ}$ E., when, as is presumed, it suddenly bends round to the S., cuts through the Mimalayas, as the Indus does between Iskardo and Attock, and enters Upper Assam under the name of the Dilong, where, in lat. $27^{\circ} 50^{\prime}$, it is joined by the Dibong and Lohit, and then becomes the Bralimapootra, a name which it retains till within about 30 m . of its embouchure, when it is called the Megna. From the point at which it is joined by the Dibong and Lohit, the Bralmapeotra flows in a S.W. direction, through the centre of Assam, to lon. $90^{\circ} 15^{\prime}$ E., when it bends round, proceeds nearly due S ., and falls into the Bay of Bengal; its outlets mingling almost undistinguishably with those of the Ganges. The length of the Bralmapootra, from the point at which it obtains that name, or from the junction of its head streams in Assam to its embouchure, is between 500 and 600 m . If the Sanpo is taken as the original stream, the entire length of this great river will be nearly 1400 m . The volume of water discharged by it during the dry season, is about 146,188 cubic ft . in a second; the quantity discharged by the Ganges in the same time, and under the same circumstances, is only 80,000 cubic ft . In the annual floods, the quantity of water poured throngh the tributaries of the Bralmapootra from their snowy sources is very great ; the plains of Upper Assam are an entire sheet of water from the middle of June to the middle of September; the only means of communication then being by elevated causeways 8 or 10 ft . high. Its waters unite also with those of the Ganges in overflowing the E. portions of Bengal. In its course through Assam and Ilindoostan, the Bralmapootra forms numerous islands, some of which are of very considerable extent. For 60 m . from its embouchure, it is about 4 or 5 m . in breadth, and interspersed with numerous islets and sandbanks, and were it not for the freshncss of the water, it might be taken for an arm of the sea. From its mouth to the junction of the three head streams in Upper Assam, the river is navigable for the boats of the country; and above the junction, up the Lohit, there is plenty of water for canoes for many miles further. Its waters are usually thick and dirty, and its banks, during the latter part of its course, mostly covered with jungle or marsh-land. It is subject to the sudden and abrupt influx of the tide called the bore, but not to such an extent as the Hooghly, the principal branch of the Ganges. Its principal affluents in Upper Assam are, the Dikho, Dcesung, Booree-dehing, Noa-dehing, and Debooroo, with a great number of smaller streams. Those in Bengal are the Soormah, Barak, and Goonty on the left; and the Gadada, Neelcomer, and Tcesta on the right. The Dibong and Lohit, the two other alleged head streams of the lirahmapootra, flow from the N.E., and have their sources in a momitainous district in the S.E. corner of Tibet, and within about 30 or 40 m . of each other. The Lolit is formed by the junction of two mountain-streams, the Talooding and Talooka, which unite at lat. $28^{\circ} 12^{\prime} \mathrm{N}$.; lon. $97^{\circ} 10^{\prime} \mathrm{E}$.

BRAHOOIC MOUNTAINS, a name given by Pottinger to the Hala Mountains, between Beloochistan and Scinde.

BRAIC-Y-PWLL ILEAD, N. Wales, co. Carnarvon; lat. $52^{\circ} 47^{\prime} \mathrm{N} . ;$ lon. $4^{\circ} 48^{\prime} \mathrm{W}$.

BRAILES, par. Eng. Warwick; 5220 ac. Pop. 1284.
BRAILSFORD, par. Eng. Derby; 5200 ac. Pop. 756.
BRAINE E'Allevd, a tn. and com. Belgium, prov. $s$. Drabant, 13 m . S. by E. Brussels. Part of the operations of the battle of Waterloo were in this commune, in which is raised a mound surmounted with a colossal lion, to commemorate the event. Clothing, leather, glass, \&c., are manufactured here; and in the commune are some quarrics of paving-stones, but the inlabitants are chiefly agricultural. I'op. 4645.

BRAINE-LE-Comte.-1, A small and anc. tn. Belgium, prov. Hainaut, 34 m. S.S.W. Brussels; containing a handsome church, founded in the 13th century, and a large wellbuilt chateau. The Southern Railway branches off from this town, on the W. side, to Mons and Quiévrain, E. to Namur and Charleroi. Amongst its public works are, breweries, wire-works, dyeworks, oil, cotton, and corn mills. At one time it manufactured and dealt extensively in tin wares, but this branch of trade is almost if not entirely extinct. Fop.
4400.-2, A com. Belgium, prov. Brabant, with a brewery, and a paper and two cotton mills. P'op. 2350.

BRAINTFIELD, par. Eng. Hertford; 1540 ac. P. 201.
BRAINTREE, a market tn. and par. England, co. Essex. The town, pleasantly situated on a rising ground on the Brain, $40 \frac{1}{2} \mathrm{~m}$. N.E. London, consists of three principal streets, and several smaller; the former spacious, commodious, and well kept, but the latter dirty and inconvenient. A new town, in which the streets are wide, and most of the houses provided with small gardens, is forming between the railway terminus and the town, and rapidly extending towards Braintree. All the new honses are of brick. The town is lighted with gas, and tolerably well supplied with water from wells and springs. The corn exchange, recently built, is the only public building worthy of notice; it is a commodious structure, in the Corinthian style of architecture. Braintrce has a church, a Congregational, and two Baptist chapels; one boy's free school, two boys' boarding and day schools, two girls' schools, and several other smaller schools; several religious and benevolent societies, and a mechanics' institute. The manufactures consist of silk and crape weaving. The former gives employment to about 470 persons altogether; the latter employs about six looms. The town is increasing in size and population. Area of par. 2500 ac. Pop., tn . and par. (1841), 3670.

BRAITHWELL, par. Eng. York, W. Riding; 2990 ac. Pop. 800.

BRAKE, a vil. duchy of Oldenburg, circle, Ovelgönne, on the Weser, 16 m. N.E. Oldenburg. It forms part of the parish of Hammelwarden, and has a wool market, and some woollen manufactures, a dyework, and printfield. It is chiefly, however, as a shipping port that Brake possesses importance, being one of the principal commercial entrepots in the duchy. The Bremen ships usually stop here, bcing unable to get further up the Weser ; and in the building-yards, vessels of 300 to 400 tons are built. In 1848, the number of vessels that entcred was 394 ; and in 1849, 297. Of the former, 109 were British; of the latter, 70. Pop. 1397.

BRAKEL.-I, A tn. Prussia, Westphalia, gov. Minden, on the Brucht, near its confluence with the Netthe, 32 m . N.N.W. Cassel. It is walled, has two I. Catholic churches, a synagogue, a monastery, an hospital, and a workhouse. The iuhabitants depend chicfly on agriculture, more particularly the culture of flax. They have also breweries and distillcries. In the neighbourhood are glassworks, and a mineral spring of some repute. Pop. 25E0.-2, Brakel (Neder), a vil. and com. Belgium, prov. E. Flanders, 19 m . S. by E. Ghent, 1. bank, Zwalm, a small tributary of the Scheldt. It is regularly built, and has a church, communal, and several private schools; dyeries, bleacheries, brewcries, malt-houses, a salt refinery, thrce oil-mills, and a flax-mill. Several cattle-fairs are held annually. Pop. 3763.-3, Jrakakel $\left(O_{p}\right)$, a vil. and com. Belgium, prov. E. Flanders, 1 m . S. W. the above. The village is small but ncatly built, and possesses a church and two primary schools. The inhabitants are chiefly engaged in weaving, grinding corn and oil, and in husbandry. 1'op. 2120.

BRAMBACH.-1, A tn. Saxony, circle, Zwickan, on the Geisberg, on the Bohemian frontier, 11 m . N. Eger. It contains a castle and several mills, and has some linen manufactures and general trade. Pop. 1200.-2, A tn. Nassau, cap. bail. of same name, r. bank, Rhine, 7 m . W. Nassau. It lies well, but is a dull place, with dark narrow streets. It contains a palace and a parish church. Pop. 1507.

BRAMBANAN, a dist., isl. Java, prov. Soorakarta, famous for its magnificent remains of Brallminical temples. These were first visited by a Dutch engincer, who found them nearly buried merder the luxuriant vegetation of the soil. They were afterwards examined by Colonel C. Mackenzie, in 1812. An intelligent sepoy from Benares, who accompanied h:m, and who was perfectly acquainted with the history and purpose of the sculptured objects in Hindoo temples, was lost in surprise at the number, magnitude, and superior execution of those at Brambanan, to which he said that India could furnish no parallel. The temples at Brambanan are entircly composed of plain hewn stone, without the least mixture of brick, mortar; or rubbish of any kind, even to fill up the floors and basements of the largest structures. Capt. Baker, afterwards employed by Sir T. S. Rafles to take measurements and drawings of them, declares, after extensive experience

## BRAMBER

of like surveys in India, that he had never met with such finished specimens of human labour, and of ancient science and taste, crowded together in so small a compass as at the Chandi Sewu or 'Thousand Temples,' at Brambanan. On the S. face there are two gigantic figures in a kneeling posture, and of terrific forms, appearing to threaten, with uplifted clıbs, impertinent intruders. The ground plan is disposed in five parallelograms, one within the other, of which the outer consists of 84 small temples, 22 on each face; the second, of 76 the third, of 64 ; the fourth, of 44 ; and the central one, of 28 ; in all 296 temples. In the centre of the whole stands the great temple, about 90 ft . in height, and still a magnificent monument, though rent and overgrown by the trees that cover it. The style, taste, and execution of the sculpture with which the great temple in particular is covered, are light, chaste, and beautiful, and the figures, 3848 in number, display a wonderful variety of mythological characters. But of the smaller temples, at least two-thirds lay strewed on the ground.

BRAMBER, a vil. and par. England, co. Sussex. The village is 9 m . N.W. Brighton, on the Adur, which, from this place to the sea, at New Shoreham, is called the Bramber water, and is navigable for small craft. It has a Norman church, and the remnants of an old castle. Though now consisting of only a few cottages, Bramber was once a parliamentary borough, and continued to send two members to the House of Commons, till it was disfranchised by the Reform Act. Area of par. 870 ac. Pop. 138.

BRAMCOTE, par. Eng. Notts; 1000 ac. Pop. 732.
BRAMDEAN, par. Eng. Hants; 1360 ac. Pop. 225.
BRAMERTON, par. Eng. Norfolk; 1000 ac. Pop. 229.

BRAMSHAW, par. Eng. Wilts and Hants; 2760 ac. Pop. 793.

BRAMSHOT, par. Eng. Hants; 6190 ac. Pop. 1313.
BRAMSTED'T [Danish, Bramsted], a tn. Denmark, Holstein, cap. bail. Segeberg, 22 m. N. Hamburg, on the Bramawa, a tributary of the Stören, and on the high road from Kiel to Altona. The inhabitants are chiefly employed in agriculture and weaving. Here are some sulphur and chalybeate springs and baths. Pop. 1700.

BRAMWITH (Kirk), par. Eng. York, W. Riding; 1200 ac. Pop. 251.

BRAN (The), a rivulet, Scotland, Perthshire, issuing from the E. end of Loch Freuchie, and after a N.E. course of Vol. I.
about 14 m . through the strath to which it gives its name, falls into the Tay a little above Dunkeld Bridge.

BRANCASTER, par. Eng. Norfolk; 3340 ac. Pop. 913.
BRANCEPETH, par. Eng. Durham; 21,850 ac. P. 2151.
BRANCO, a high and rugged islet, Cape de Verde group, between Santa Luzia and Santa Nicolao. It has a well on it, and some decayed small wood; and a low sandy spit runs out from its S.E. side.

BRANCO.-1, A large river, Brazilian Guiana. It rises from various sources on the S. confines of British Guiana and Venezuela, flows S., and falls into the Rio Negro; lat. $1^{\circ} 25^{\prime} \mathrm{S} . ;$ lon. $62^{\circ} 10^{\prime} \mathrm{W}$. ; after a course of 400 m ., in which it receives numerous affluents.-2, An affluent of the Rio Grande, prov. Bahia, in the part lately annexed from Pernambuco. It rises in the serra Duro; lat. $11^{\circ} 25^{\prime} \mathrm{S} . ;$ lon. $46^{\circ} 10^{\prime}$ W.; flows S.E. a course of about 120 m ., and is navigable from its mouth to Tres-Barras, a distance of 40 m .

BRAND, a tn. Saxony, circle, Dresden, inhabited chiefly by miners. Pop. 2150.-Numerous places in Germany have the same name.

BRANDEIS, a tn. Bohemia, 14 m. N.E. Prague, called also Brandeis-on-the-Elbe, to distinguish it from another Brandeis, on the Adler. It has a castle, a dcanery church, a synagogue, and a manufacture of liqueurs. Pop. 2500. Brandeis-on-the-Adler has a pop. of 1172 .

BRANDENBURG (Mark, or Margraviate of), an anc. fief of the German Empire, and identical with the modern province of the same name, with the addition of a part called the Old [Alt] Mark, which is now included in the province of Saxony. The country was first possessed by the Varini, and thereafter, from the fifth century, by the Wends, till their subjugation by Charlemagne. In 926, the Mark was united to the dukedom of Saxony, but in 1143, under Albert the Bear, it was separated and became an immediate fief of the Empire. In the 14th century, it passed to the two houses of Bavaria and Luxembourg, the lattcr of which sold it to the burgrave of Nürnberg, Frederick, a younger branch of the house of Hohenzollern, under whom it became the nucleus of the present Prussian Monarchy.

BRANDENBURG, a prov. Prussia, the centre of the monarchy, bounded, N. by the two grand duchies of Mecklen-burg-Schwerin and Strelitz, and the Prussian province of Pomerania; E. by provs. W. Prussia, Posen, and Silesia; S. by provs. Silesia, and Saxony, and the Anhalt principalities; W. by prov. Saxony, and the llanoverian dominions; $15,330 \mathrm{sq} . \mathrm{m}$. , about a seventh part of the whole surface of the Prussian States. It is divided into the governments of Potsdam and Frankfort, and 34 circles. Its principal towns are Berlin, Potsdam, Frankfort, Brandenburg, \&c. The province is almost an entire plain, slightly elevated above the level of the Baltic Sea. The soil is extremely poor, being composed mostly of tracts of barren sand, and extensive heaths and moors. The principal products are grain, chiefly buckwheat, potatoes, wool, hemp, flax, tobacco, timber, hops, \&c. Much attention is also paid to the rearing of cattle and sheep, particularly the latter, the breed of which has been much improved of late years. Lakes are numerous, some of them of considerable beauty, and well supplied with fish. Its principal streams are the Elbe, the Oder, the Sprec, and the Havel; but the first two merely skirt the territory, the one forming the N.W. boundary, the other the E. The climate of Brandenburg is temperate, but exceedingly variable, and subject to violent winds. The minerals are iron, gypsum, lime, alum, brown coal (lignite), and saltpetre. There are several mineral springs. The greater portion of the inhabitants are of German descent, a few of French, most of whom are settled in Berlin. The majority of the former are of the Lutheran religion. The mannfactures are confined almost exclusively to a few towns. Pop. (1841), 2,066,993. The province is well supplied with good roads, and is traversed by the railways from Berlin to Leipzig, 1Ialle, Dresden, Stettin, Hanover, and Hamburg.

BRANDENBURG, a tı. Prussia, prov. of same name, gov. Potsdam, cap. circle of W. Mavelland, $35 \mathrm{~m} . \mathrm{W} . \mathrm{S} . \mathrm{W}$. Berlin, on the Havel, which divides it into two parts, the old town and the new, with an island in the middle, on which is a castle, cathedral church, equestrian college, and other buildings. The streets in the old town are narrow and crooked, those in the new town broad and straight. They are both walled, the former having five gates, the latter four ; some of 60

## BRAUNSEIFEN

these gates are very handsome. It contains, inclusive of the cathedral church, eight churches, one of which, the church of St. Katherine, though of brick, is of beautiful architecture; five hospitals, a council-house, a public library, a gymnasium, with a number of elementary and charity schools. Its manufactures consist of woollens, linens, brandy, beer, leather, stockings, \&c. It has, besides, a considerable trade in shipping, and in fishing; and is on the railway from Berlin to Magdeburg. Pop. (1846), 17,589.-Numerous places in Prussia have the name of Brandenburg.

BR.INDENBURG (New), the largest and most beautiful tn . in the grand duchy of Mecklenburg-Strelitz. It lies at the N. end of Lake Tollen, 55 m . W.N.W. Stettin ; is walled, and has four gates. It is regularly built; has a palace, a townhall, two churches, a chapel, several schools, a theatre, and two squares. The palace stands in the marketplace, and is a long low building. The inhabitants are generally in comfortable circumstances, and carry on trade in tobacco, hides, rags, paper, and horses. Manufactures:-tobacco, paper, soap, leather, and cloth; with oil, bark, fulling, and corn mills. Pop. 6145.

BRANDESTON, two pars. Eng.:-1, par. Norfolk; 580 Pop. 137.-2, par. Suffolk, 1060 ac. Pop. 555.
BRANDON, a market tn. and par. England, co. Suffolk. The tewn consists of two portions, the more important of which, called Town Street, is pleasantly situated 33 m . N.W. Ipswich, on the Little Ouse or Brandon, over which is a neat stone bridge; and the remaining portion, called Ferry Street, about 1 m . lower down, where there is a ferry for the conveyance of goods to the Isle of Ely. The church, situated midway between the two strects, is a handsome structure, with a lofty embattled tower. There are also places of worship for Primitive and Wesleyan Methodists, a free school, an alms-house, and several minor charities. Gun-flints were wont to be extensively manufactured here; and a considerable trade is carried on in corn, malt, coals, bricks, iron, and timber. The extensive rabbit-warrens in the neighbourhood afford large supplies to the London market. Weckly market on Thursday, and annual fairs in February, June, and November. The Eastern Counties Railway has a station here. The Duke of IIamilton and Brandon takes the latter title from this place. Area of par. 5570 ac. Pop. 2002.

BRANDON (Little), par. Eng. Norfolk; 1010 ac P. P. 222.
BRANDON BAY, and HEAD, W. ceast, Ireland, co. Kerry. The bay is $4 \frac{1}{2} \mathrm{~m}$. wide at its entrance, and stretches about 5 m . inland. It is formed between Brandon Head on the W.-lat. $52^{\circ} 18^{\prime} \mathrm{N}$. ; lon. $10^{\circ} 10^{\prime} \mathrm{W}$. (r.) -and a narrow neck of land on the E., which separates Brandon from Tralce Bay.

BRANDSBUR'ON, par. Eng. York, E. Riding; 3140 ac . Pop. 718.

BRANDYWINE CREEK, a small stream, U. States, rising in Pennsylvania, flowing S.E. through part of Delaware, forming the harbour of Wilmington, where it falls into the Delaware river, after a course of about 40 m . It is navigable to Brandywine village, where there is 8 ft . water at high tide.

BRANNIXTOWN, par. Ircl. Kildare; 889 ac . Pop. 111.
BRANSBY-with-Stearsby, par. Eng. York, N. liding; 2700 ac. Pop. 304.

BRANSCOMBE, par. Eng. Deven; 1750 ac. Pop. 956.
BRANSTON, par. Eng. Leicester; 960 ac. Pop. 333.
BRANTIIAM, par. Eng. Suffolk; 1940 ac. Pop. 404.
BRANTINGHAM, par. Eng. Ycrk, E. Riding; 3040 ac. Pop. 635.

BRANTOME [anc. Brantosomum], a tn. France, dep. Dordogne, 13 m. N.W. Perigueux, on the Drome. It was formerly fortified, and lad a rich Benedictine abbey, said to lave been founded by Charlemagne. The building still remains, and annexed to it is a church of singular construction. A crypt near the abbey has some bas-reliefs, with curieus celossal figures. The town has some manufactures of serges and bombazine, tanneries, and dyeworks, and exports large quantities of truffles. Brantome, the historian, held this abbey in commendam, and wrote part of his works here. In the neighbourhood is a curious tolmen, consisting of a large horizontal block, 10 ft . long by 4 ft . broad, resting, about 7 ft . from the surface, on three sinaller blocks. Pop. 1413.

BRANXTON, par. Eng. Northumberland; 1120 ac. I'op. 261.

BRASS.-1, A river, Africa, Guinea, being one of tho mouths of the Niger, falling into the Gulf of Biafra; lat. $4^{\circ} 20^{\prime} \mathrm{N} . ;$ lon. $6^{c} 12^{\prime}$ E.-2, A tn. near the mouth of the above, where the slave-trade is carried on to a great extent, chiefly by agents from Havanna and Brazil.

BRASSAC.-1, A. tn. France, dep. Tarn, 12 m. E.N.E. Castres, traversed by the Agout, which is here crossed by a bridge. It has manufactures of corduroy, moleskins, and cotton fabrics. Pop. 1301.-2, A vil. France, dep. Puy-do Dome, 8 m . S. Issoire, l. bank, Allier, which is here navigable, and makes Brassac the entrepet for the coal which is extensively worked, in a coal field of the same name in the neighbourhoed. Pop. 938.

BRASSCHAET, a vil. and com. Belgium, prov. of, and 7 m. N.E. Antwerp, on the great road between that city and Breda. The inhabitants are chiefly occupied with agriculture, disposing of their produce at Antwerp. They have also some trade in madder. Pop. 2468.

BRASsO. See Kronstant.
BRASTED, par. Eng. Kent; 4630 ac. Pop. 1130.
BRATSLAV, a tn. Russia, gov. Podolia, cap. dist. of same name, r. bank, Bug, 110 m. E. Kaminietz. It is defended by an old rampart and fosse, and makes some figure in history, having been taken successively by the Poles and Turks, previous to its final reunion with Russia. Pop. 2600.

ISRATTLEBY, par. Eng. Lincoln; 1220 ac. Pop. 168.
BRATTON, three pars. Eng. :-1, Bratton-Clovelly, par. Deven; 8200 ac. Pop. 870.-2, Bratton-Fleming, par. Devon; 4370 ac. Pop. 708.-3, Bratton-Seymour, or St. Maur, par. Somerset; 1170 ac. J'op. 103.

BRAUGHIN, par. Eng. Hertford; 4300 ac. Pop. 1358.
BRAUNA.-1, A fortified tn. Upper Austria, gev. Linz, on the confines of Bavaria, 28 m . S.W. Passau, at the confluence of the Salza with the Inn. It has manufactories of cloth, and paper, some celebrated breweries, several churches, ons of them an old Gothic church, built of tufa stone; a townhall, barrack, and an arsenal. Pop. 2000.-2, Brauna, a tn. and lordship, N.E. corner of Bohemia, circle, Königgrätz. The LORDSHIP consists of a valley about 30 m . long by 5 m . broad, bounded towards the N.E. and S.W. by lofty hills. It is fertile, and rears great numbers of cattle. Pop. 17,046, who are almest all R. Catholies, and speak German.-The town stands in the centre of the valley on the Steine, has two churches, one of them a large building, with two towers, several fine frescoes, and an excellent organ ; a gymnasium, and a town school, with 360 scholars. The chief employments are weaving and spinning. Pop. 1699.

BRAUNCEWELL-with-DuNsby, par. Eng. Lincoln; 3470 ac. Pop. 125.

BRAUNFELS, a tn. Prussia, prov. Rhine, gov. of, and 36 m. E.N.E. Coblenz. It has a handsome palace, adorned with fine pictures, and surrounded by well laid out gardens. Pop. 1472. The principality of the same name has an area of 50 geo. sq. m., and pop. 20,000 .

BRAUNHHRsCHEN, a vil. Austria, in the immediate neighbourhood of Viema. It contains a palace, and a church, and has several large manufacturing establishments. Pop. 2700.

BRAUNSDERG, a tn. Prussia, prev. E. Prussia, gov. Königsberg, circle of same name; on the Passarge, about 4 m . from its junction with the Frische Maff; lat. $54^{\circ} 19^{\prime} \mathrm{N}$. ; lon. $19^{\circ} 54^{\prime}$ E.; divided by the river into the old and new towns. It is the residence of the Bishop of Ermeland, and the scat of a royal court of justice ; contains four R. Satholic churches, and one Protestant church; a R. Catholic lyceum, with theological and philosophical faculties; a gymnasium, and seminary for priests, with six professors; a normal school, an asylum, and three hospitals. It has some linen and woollen manufactures, and tanneries; and a considerable trade in yarns, grain, and ship-timber, the river being navigable for small vessels as far as the town. Pop. 8161.-The circle, area, 280 gco. sq. m., contains 172 parishes, four towns, and 178 villages. The surface is well wooded, and the soil tolerably rich, both in arable and pasture land. It is watered by several considerable streams, and has good roads. Pop. 41,716.

BRAUNSE1FEN, a small tn. Austria, Moravia, circle of, and 18 m. N.N.E. Olmiitz ; with a handsome parish chureh, adorned with frescoes, an hospital, two workhouses, and a great number of looms for weaving linen. Pop. 2062.

BRAUNSTON, two pars. Eng.:-1, par. Northampton; ${ }^{5} 930 \mathrm{ac}$. Pop. 1469.-2, par. Rutland; 3250 ac . Pop. 443. BRAUNTON, par. Eng. Devon; 7010 ac . Pop. 2274. BRAVA.-1, One of the Cape de Verde Islands, 10 m . W. by S. Fogo ; lat. (W. point) $14^{\circ} 49^{\prime} 42^{\prime \prime}$ N.; lon. $24^{\circ} 45^{\prime} 15^{\prime \prime}$ W. (R.) It is very high, and would be visible from a great distance were it not constantly covered by a dense atmosphere. It has a temperate climate, fertile soil, and produces abundant crops of beans and Indian corn. It possesses four anchorages; but none of them being safe for vessels of burden, they are only frequented by small craft for orehilla and grain. Pop. 2000.-2, A tn., E. Africa, coast of Zanguebar, $110 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Magadoxo; lat. $1^{\circ} 6^{\prime} 48^{\prime \prime} \mathrm{N} . ;$ lon. $44^{\circ} 3^{\prime} \mathrm{E}$. (r.) It stands at the foot of a hill composed of sand and red earth, and has an imposing appearance on being approached from the sea. The houses of the Arabs and more wealthy inhabitants, are generally two stories high, and are formed of blocks of coral, cemented with mud; while the poorer part of the population dwell in small huts built around the town, and very closely huddled together. Brava carries on a considerable trade with India and Arabia.

BRAW1)Y, par., S. Wales, Pembroke. Pop. 767.
BRAXTED, two pars. Eng.:-1, Braxted (Great), par. Essex; 1240 ac. Pop. 410.-2, Braxted (Little), par. Essex; 1680 ac. Pop. 126.

BRAY. - 1 , A maritime tn . Ircland, cos. Dublin and Wicklow, on both banks of the Bray, which here forms the boundaries of these two counties, 12 m . S.E. Dublin. The portion of the town in Wicklow stands on an acclivity, that on the Dublin side on a plain. It contains but one principal street, straight, but indifferently kept. The houses are mostly of stone, but not in gencral well built ; supply of water indifferent. The places of worship are-a parish church, a chapel of ease, two R. Catholic chapels, and a Scotch and Methodist meeting-house. The schools consist of a national and several other schools. Brewing and malting are the only trades carried on in the town; both, however, are extensive. There is no harbour here; but a few small vessels are employed in the importation of coals, limestone, and slates, and are run upon the beach at high water, where their cargoes are unshipped. The scenery in the vicinity is beautiful. Pop. 3185.-(Local Correspondent.)-2, A vil. and par. England, co. Berks. The village, $4 \frac{1}{2} \mathrm{~m}$. N.W. Windsor, now forming part of the royal demesne, and included within the liberty of Windsor forest, contains a spacious parish church, an endowed school for boys, a national school for girls, and an hospital for 40 poor persons. It derives considerable notoriety from the conduct of the time-serving vicar, who, according to Fuller, conformed to all the changes in religion that took place during the reign of Henry VIII. and his three immediate successors; and expressed his determination to be true to the one principle, of living and dying Vicar of Bray. Area of par. 8900 ac. Pop. (1841), 3722.

BRAYBROOKE, par. Eng. Northampton ; 3060 ac. Pop. 420.

BRAYFIELD (Cold), par. Eng. Bucks; 530 ac. Pop. 83.

BRAYTON, par. Eng. York, W. Riding; 10,690 ac. Pop. 1894.

BRAZIL [French, Bresil; German, Brasilien; Italian, Brasile], a vast empire, S. America, occupying a space nearly equal to one-lalf of that entire continent. It is of extremely irregular outline, and varying dimensions; its greatest diameter being, E. to W., or from Cape Augustin, lat. $8^{\circ} 21^{\prime}$ S.; lon. $34^{\circ} 56^{\prime}$ W. (r.), to the river Yavari or Jabary, which separates it from Peru, 2630 m . ; and, N. to S., from Cape Orange, lat. $4^{\circ} 23^{\prime} \mathrm{N}$. ; lon. $37^{\circ} 27^{\prime} \mathrm{W}$. (r.), E. of Oyapok Bay, to the river Tahim, E. from Lake Mirim, 2540 m. ; area, roughly estimated at $3,956,800 \mathrm{sq} . \mathrm{m}$. It is bounded, S.E., E., and N.E. by the Atlantic Ocean ; N. by French, Dutch, and English Gniana, and Venezuela; W. and S.W. by Ecuador, Peru, Bolivia, Paraguay, and the Argentine republic of Missiones, and by the republic of Uruguay. Its entire coastline, from the river Tahim or Itahy, lat. $32^{\circ} 45^{\prime}$ S., to the head of the Bay of Oyapok, lat. $4^{\circ} 0^{\prime} \mathrm{N}$. ; lon. $51^{\circ} 32^{\prime}$ W., is upwards of 3700 m . Throughout this vast extent of coast, there are few great indentations; though, in some parts, smaller harbours and inlets are pretty numerous, many of the former excellent, and generally surrounded by flats. The
principal bays, reckoning from the S. extremity of the empire, are, Ilha Grande, Rio Janeiro, St. Salvador, or All Saints', on the S.E. coast ; and St. Marcos, St. Jose, Pinzon, and Oyapok, on the N. and N.E. coast. The principal capes or headlands are, Capes Frio, St. Thome, Point St. Antonio, St. Augustin, St. Roque, on the S E. and E. coasts ; and Magoary, Norte, and Orange, on the N. coast.

General Description.-The appearance of the coast of Brazil is very different at different places. From the river Tahim to the island of Sta. Catharina, a distance of about 400 m ., it is low, sandy, and intersected by the outlets of numerous lakes or lagoons, which skirt the shores throughout this whole extent. From this point, or from about lat. $27^{\circ} 30^{\prime} \mathrm{S}$., to lat. $21^{\circ} 45^{\prime} \mathrm{S} ., 700 \mathrm{~m}$., the land is very elevated, appearing rugged and mountainous from a distance, but, when more nearly approached, becoming highly picturesque; its hills being clothed with thick woods, and its valleys with a neverfading verdure. This part of the coast, the most rocky portion of which is between Santos and Cape Frio, may be seen from sea from a distance of 55 m . From lat. $21^{\circ} 45^{\prime} \mathrm{S}$., or from about St. João to Bahia, lat. $13^{\circ}$ S., 650 m ., the coast is in gencral low and level, with hardly any indentations. From Bahia to about lat. $4^{\circ}$ N., which embraces the whole E. projection of Brazil, the coast (about 800 m . in extent) is of moderate height, nowhere rising above 30 ft ., and is also destitute of harbours, excepting those formed by the mouths of rivers. From this point to the Amazon, it is extremely low and marshy; W. and N. of that river it is sandy, and somewhat higher, though still of inconsiderable elevation. From these details, it will be seen that the only portion of the coast of Brazil that can be called mountainous, or which has any pretension to picturesque appearance, is that between the island of Sta. Catharina, lat. $27^{\circ} 35^{\prime}$ S., and St. João da Praia, lat. $21^{\circ} 40^{\prime} \mathrm{S}$., or about a fifth part of the whole. With the exception of the Rio Francisco and the Parana, all the large rivers of Brazil empty themselves on its N. shores ; and nearly all run parallel courses from S. to N., traversing the vast plains which occupy the centre and N.W. portions of the empire, and presenting means of internal communication uncqualled in any other part of the globe. The surface of Brazil, generally, is divided into upland and lowland, in pretty equal portions; the former, which comprises the hilly districts and table-lands, extends over the E., S., and central parts, and has an average elevation of about 2000 to 2500 ft ., although at some points it reaches from 4000 to 6000 ft .; the lowland comprises the silvas or woody regions, and flanos or plains and flats; the former lying principally along both sides of the Amazon, and the latter stretching chiefly along the N. and N.E. shores.

Brazil is divided, politically, into 18 provinces, of which there are at least 11, each exceeding Great Britain in superficial extent. It is, however, very difficult to ascertain accurately the area of the provinces, and of the whole empire, the existing data being very unsatisfactory and conflicting. In the following table, the area of the provinces has been calculated from the measurements given in Diccionario Geografico do Imperio do Brazil, 1845; and the population has been supplied through a privatc source as the most recent and most accurate existing:-

| Provinces. | Area, Sq. m. | Population. |
| :---: | :---: | :---: |
| Maritime Provinces. | 1,281,270 | 205,000 |

|  | 3,956,800 | 6,065,000 |

Mountains, Table-lands, and Plains.-In remarkable contrast to the countries on the W. side of the S. American continent, Brazil has no mountains of very great elevation; with exception, perhaps, of Itambe, an isolated peak, in the province of Minas Geraes, which is variously stated at 5960 and 8426 ft . above the sea. The higher mountains of Brazil, most of them occurring at greater and lesser distances from the E. coast, extend generally, like the Andes, from S. to N., although numerous inferior ranges traverse the country in various other dircetions. The most connected chains, and those in which the highest summits occur, are the Serra do Espinhaço, the Serra dos Orgãos, and the Serra do Mar. The first originates in Bahia, about lat. $15^{\circ} \mathrm{S}$., and, intersecting the province of Minas Geraes, terminates at lat. $23^{\circ} \mathrm{S}$. It lies parallel to the coast, and at a distance from it of about 250 m . ; its culminating points are Piedade, 5830 ft . ligh, and Itacolumi, 5750 ft . The Serra dos Orgãos [organ mountains], so called from the fancied resemblance of its peaks to the tubes of an organ, and the Serra do Mar, which form, in fact, but one chain, the first name being applied to the N.E. half of the range, and the second to the S.W., lie also parallel to the coast, N.N.E. and S.S.W., but at a distance from it of a very few miles only, extending from about lat. $22^{\circ}$ to $27^{\circ} \mathrm{S}$. The culminating point of this range, Morro dos Canudos, which occurs in the Serra dos Orgãos division, has an elevation of 4476 ft . Hilly regions also extend N. and W. from these mountain-systems, through the provinces Minas Geraes. Pernambuco, Goyaz, and Matto Grosso, but none of the peaks appear to attain any very great elevation. Towards the Rio Paraguay, the hills become lower, and terminate, on the Bolivian frontier, in elevated marshes. In this locality occurs the water-shed between the affnents of the Amazon and La Plata. It is of very inconsiderable elevation; and some of the sources of the Madeira, which falls into the former, and of the Paraguay, the headstream of the latter, are not more than 3 m . apart, and might easily be joined by means of a canal. The hilly region or table-land extends along the E. side of the empire as far N. as lat. $3^{\circ} \mathrm{S} .$, but inland, in Matto Grosso, not farther than $12^{\circ} \mathrm{S} . ;$ and, N. of lat. $10^{\circ} \mathrm{S}$., the Serra Ibiapaba may be taken as the W. limit. This table-land occupies half the empire, together with part of the Argentine republic and Uruguay, and its average elevation is from 2000 to 2500 ft . Along the Amazon and its affluents, the vast plains or silvas are said to occupy a space equal to six times the size of France. Another great plain stretches between the Serra lbiapaba and the river Tocantins, measuring from N. to S. upwards of 600 m ., and from E. to W. more than 400 .

Rivers and Lakes.-The river system of Brazil is unequalled, perhaps, in any other part of the world, for the number and magnitude of the streams of which it is composed, the surface of the whole N.W. portion being interlaced with rivers of every length and volume; presenting the complex appearance of veins in the human body, to which the Amazon and its larger tributaries may be said to stand in the relation of main arteries. By far the greater portion of these numberless streams have a N. direction, and finally find their way, either directly or through their principals, to the N. shores of the empire. The largest river of Brazil, and the largest, it is believed, in the world, though not the longest, is the Amazon, which enters the empire from the W., about lat. $4^{\circ} 30^{\prime} \mathrm{S}$.; lon. $70^{\circ} \mathrm{W} .$, and, after a N.E. course, from the point named, of about 800 m ., falls into the Atlantic near the equator. The next in size is the Rio Francisco, which, after flowing N. for about 800 m ., suddenly turns due E., and subsequently S.E., falling into the sca about lat. $11^{\circ} \mathrm{S}$. In order of magnitude, follow the Rio Negro and Madeira, both tributaries of the Amazon; the former flowing from the N.W., the latter from the S.W. The other large rivers in this portion of the empire are the Branco, a tributary of the Nio Negro; the Tapajos and Xingu, other two large tributaries of the Amazon; the Araguay, Tocantins, Maranhão, and Paranahyba. Passing along the coast, S. from the embouchure of the Francisco, the following considerable rivers occur, the Vazabarris, Itapicuru, Paraguassu, Belmonte or Jequitinhonha, province of Bahia; Doce, province of Espirito-Santo; and the Paraiba-do-sul, the S. boundary of the same province. In this enumeration of the rivers having their embouchures on the E. coast of Lrazil, we have omitted an immense number of smaller strcams, perlaps not many below a hundred. In the interior of the S .
portion of the empire, occur the large rivers Uruguay, Yguazu, Paranapancma, Tieta, Para, Paraguay, and I'arana, with numerous smaller streams-smaller in comparison to these, but still large rivers-winding in all directions through every province. Most of the rivers in this part of Brazil have a W. and S. direction; those having the former proceeding from the W. side of the serras by which this part of the coast is lined; and those having the latter, issuing from the lilly tract which crosses the centre of the province of Matto Grosso from E. to W., and which forms the water-shed of the W. and ecntral part of the empire, the rivers of the province of Para flowing from it N., and those of Matto Grosso S. and W. Of the rivers last named, the Paraguay and Parana are the largest, and have the longest courses. The former has its sources in the central high lands of Matto Grosso, whence it flows nearly due $\mathrm{S} .$, quitting the Brazilian territory at lat. $21^{\circ} \mathrm{S}$., and from this point forming the W. boundary of the independent state of Paraguay. The latter rises in the hilly district of the province of Goyaz, not far from the sources of the Tocantins, although their subsequent courses are nearly in dircet opposi tion; the latter proceeding due N., while the former flows S.S.W. The Parana forms, throughout a portion of its course, the boundary between the Brazilian territory and Paraguay, quitting the former about lat. $25^{\circ} 40^{\prime} \mathrm{S}$. Although unrivalled in the number and magnitude of its rivers, Brazil has comparatively few lakes of any great extent. The largest is the Lagoa dos Platos, in the province of lio Grande de São Pedro, the most S . of the Brazilian provinces ; it is 150 m . in length, and 35 m . in breadth at the widcst part, and is separated from the sea by a narrow strip of land only; it discharges its waters into the ocean by a channel called the Rio Grande. Farther N., several smaller lakes occur, the largest of which may be from 20 to 30 m . in length. There are hardly any others worth mentioning throughout the whole of Brazil.

Geology and Mineralogy.-Granite prevails to the extent of 2000 m . along the coast of Brazil ; and, with syenite, forms the base of the table land. The superstructure of the latter consists of metamorphic and old igneous rocks, sandstone, clayslate, limestone, in which are large caverns, with bones of extinct animals and alluvial soil, of which the N. part of the empire is almost wholly composed, being intersected by numerous large streams. The mineral wealth of Brazil is considerable, and includes gold, silver, and iron, diamonds, topazes, and other precious stones. Amongst the earliest discovered, and first wrought gold mines, were those of Jaraguá, but they liave long ceased to be regularly worked; the precious metal being found more casily, and in greater abundance, mingled witl the sands and alluvial deposits of rivers. The process of separation, the gold being in small particles, is effected by repeated washings, which are continued until nothing but the pure metal remains at the bottom of the vessel. The entire quantity of gold produced has greatly fallen off of late ycars, being now hardly a fourth of what it was three quarters of a century since, owing, chiefly, to the auriferous sand having been exhausted. No country is so rich in diamonds as Brazil. The most celebrated mines are those of Serra do Frio, a district surrounded by almost inaccessible rocks, and guarded with the utmost vigilance. The diamonds have been hitherto found in the beds of rivers only, and are washed from the sand and flints witl which they are mingled, much in the same way as the gold. The largest known diamond was found in the Rio A basté in 1791, and weighs $138 \frac{1}{2}$ carats. Another, worth $£ 45,000$, was found, according to the Brazil journals, in 18.17, by a negro. The negro who finds a diamond weighing 17 carats oltains his liberty, a variety of proportionate rewards being appointed for those of lesser valuc. About 20,000 negroes are employed in the diamond mines. The Government reccives one-fifth of the total value of all the gold and diamonds found in the country. Notwithstanding the sounding names of these two items of the mineral wealth of Brazil, ncither of them have been nearly so profitable, nor so beneficial to the general interests of the country, as the homeliest of its agricultural productions. In the short space of a year and a half, the exports of sugar and coffee amounted to more than the value of diamonds found throughout a period of 80 years.

Climate.-As almost the whole of Brazil lies S. of the equator, and in a hemisphere where there is a greater proportion of sca than land, its climate is generally more cool and
moist than that of countries in corresponding latitndes in the N. hemisphere. This is particularly applicable to the flat portions of the empire, where impenetrable forests occupy the alluvial plains; and, by preventing the sun's rays reaching the earth, cut off one of the principal sources of heat-radiation. In the S. parts of Brazil, in consequence of the gradual narrowing of the continent, the climate is of an insular charactercool summers and mild winters. The quantity of rain that falls in Brazil differs widely in amount in different localities. The N. provinces generally are subject to heavy rains and violent storins; but the S. regions rejoice in a settled, mild, and salubrious climate. The rainy season commences in October, and usually lasts till March, setting in with heavy thunderstorms. At Rio, where the climate has been much modified by the clearing away of the forests in the neighbourhood, the mean temperature of the year is $72^{\circ}$; and the rains have been so diminished as to have seriously reduced the supply of water to the city. Generally, the climate of Brazil is delightful, diffusing and maintaining a perpetual summer throughout this favoured land. In the N. parts, the air in the lower tracts is somewhat sultry and oppressive; but vegetation is vigorous and profuse, the ground being covered with flowers, and the trees with a foliage that is ever green; while the nights are deliciously cool. Near the coast, the temperature is modified by the trade-wind; which, after traversing the Atlantic, fans the shores of Brazil, imparting a refreshing coolness to the atmosphere.

Soil, Vegetable Productions, \&c.-The soil of Brazil, so far as its capabilities have been tested, is highly fertile; although but a comparatively small portion has yet been subjected to this test, not more than a hundred and fiftieth part of the whole surface being under cultivation, and this portion is entirely limited to the coast, and to the N.E. part of the empire, which seems peculiarly well adapted for the cultivation of maize, sugar, and ooffee. The pastures, however, are of vast extent; and, being covered with prodigious herds of horned cattle, form one of the principal sources of the wealth of the country. Being almost wholly within the limit of the palm region, the vegetation of Brazil is characterized generally by the peculiar physiognomy which that bcautiful family of vegetables impresses on tropical countries. Of these no fewer than 100 species arc native to the country. The chief food plants are sugar, coffee, cotton, cocoa, rice, tobacco, maize, wheat, manioc, beans, bananas, ipecacuanha, ginger, yams, lemons, oranges, figs, \&c.; the two first, sugar and coffee, being the staple products of the empire. The manioc is a native of Brazil, and its farina is almost the only kind of meal used in that country. An acre of manioc is said to yield as much nutriment as 6 acres of wheat. The Indians find in this beautiful and uscful plant a compensation for the rice, and other cerealia of the Old World. But it is in the boundless forcsts of Brazil, that the vigour of the vegetative power is exhibited in its most imposing form. No language, it has been said, can describe the glory of the Brazilian forests; the endless variety of form, the contrast of colour and size, the largest trees bearing brilliant blossoms of every hue, and clothed with a drapery of curious epiphytes and festoons of climbing plants, while thousands, of a diameter of not less than 8 and 12 ft ., stand so close together, that it is impossible (the intervals being filled up with an undergrowth of plants) to clear a passage between them. In contrast to these giants of the forest stands the graceful palm, the delicate acacia and bamboos, and grasses of 40 ft . high. 'If the name of primeval forest,' says IIumbeldt, 'can be given to any forest on the face of the earth, nene can claim it perhaps so strictly as those that fill the connected basins of the Orinoco and the Amazon.' But it is not in the plains alone that this gigantic vegetation is met with; the sides of the mountains are also clothed with trees of enormous size, including the most beautiful specimens of the palm and tree-fern. The cocoa-nut palm attains a great size on the sea-shores; and the curious Bertholettia, or monkey-pot tree, the kernels of which are exported from Para under the name of Brazil nuts, is met with in many localities, but more especially in the N.W. parts of the empire. A peculiar characteristic in Brazilian vegetation, is the host of species of myrtle-trees which, though not of much use economically, perfume the air with their exhalations. Ainong the more valuable trees of the Brazilian forests are the andaaçu, or Purga da Paulistas (Anda Gomezii), the seeds of which
yield a tasteless oil, more powerfully cathartic than castoroil, and now imported into Europe; the cacao or chocolatetree, the cæsalpina echinata or Brazil-wood tree, used, under the name of Pernambuco wood, for dyeing silk of a crimson colour; the rosewood-tree, the fustic, mahogany, and a variety of others well adapted for the purposes of shipbuilding. The different kinds of forests and woods in Brazil are distinguished by the inhabitants by particular names. There are the Matos Virgens, or virgin forests, such as those which exist on the Organ Mountains, and along the whole maritime cordillera; the Catingas, consisting generally of small and deciduous trees; the Carrascos, close-growing slirubs, about 3 or 4 ft . high; and the Capveira, such wooded tracts as are formed by the small trees and shrubs, which spring up where virgin forests have been cleared away. The beauty, variety, and abundance of the flowers of this extraordinary country, are no less remarkable than any other of its vegetable productions. 'The whole country,' says Mr. Gardner, 'through which we had passed for nearly two days, was one vast flower-garden, where, "like a child at a feast," I knew not which object to grasp at first ; everything was not only now to me, but each more beatiful, or more curious than the other.

Animals.-The principal domestic animals of Brazil are, horned cattle and horses; the numbers of the former are prodigious, covering the boundless plains of the interior. The greatest part of them live in a wild state, and are not milked. IIorses are numerous in the S . provinces; they are of a middling size, from 12 to $14 \frac{1}{2}$ hands high, but strong, lively, and swift. Mules are reared in the S. provinces. Sheep are in little repute, the meat being ill flavoured, and the wool of indifferent quality. Goats and hogs are abundant. The woods of Brazil swarm with rapacious animals, tiger catz, hyenas, saratus (a fcrocious creature about the size of a fox), jaguars, sloths, porcupines, \&c. Wild hogs are also common, as well as an amphibious animal called the water-hog or capybara, resembling a hog in form, but of the size of a heifer. Monkeys are likewise numerous; and vampyres are in some localities so destructive, as to prevent the rearing of cattle. Amongst the feathered tribes are, the smallest, the humming bird, and one of the largest, the emu and vulture. Water fowl, especially geese and ducks, abound, in certain seasons, on the lakes and lagoons at the S. extremity of Brazil. The reptiles consist of the boa constrictor, the corral snake, the sorrocuco, and the jarraraca (Bothrops Neuwiedii, Spix), all venomous, and much dreaded by the natives, especially the last, which, when full grown, is usually aboat 6 ft . long, and is nearly allied to the rattlesnake genus. It prevails over all the $S$. provinces. Its bite is attended with great suffering, and with the most serious consequences, even where death is averted. In the marshy countries of the S., the boa or python is said to attain a length of 48 ft .; but, according to IIumboldt, the largest skins which have, as yet, been brought to Europe, and carefully measured, do not exceed 21 to 23 ft . The insects of Brazil are, many of them, remarkable for the beauty of their colours and their size, especially the butterflies. Other descriptions are so numerous in the woods, that their noise is heard in a ship at anchor some distance from the shore; while the white ants are so numerous and destructive, that Humboldt says, there is not a manuscript in S. America 100 years old. The scorpions of Brazil attain a length of 6 inches. Most of the bees of that country are stingless, there being no fewer than 30 species of that description. The shores and rivers abound with fish. Amongst the most valuable of those caught on the former, is the garopa, which attains a length of from 12 to 20 ft ., and is well tasted; they are most numerous on the coast of Bahia, where great quantities are annually taken and exported. The numbers of fish caught in the Amazon, and other rivers of the empire, is very great, constituting a principal part of the subsistence of the inhabitants, European settlers as well as Indians.

Literature, Education, \&c.-In every town schools for teaching the first rudiments are now to be found, to which all citizens are admitted free. There are two universities-one in São Paulo, the other in Pernambuco ; of which, the former is held in the highest estimation. In all large towns there are professorships of Latin, Greek, English, French, philosophy, rhetoric, geometry, chemistry, botany, \&c.; and printingpresses are now common throughout Brazil.

Pcople. - The free population of Brazil consists of Europeans, white persons born in Brazil, or native Brazilians; mulattoes; Mamalucoes, a mixed caste between whites and Indians; Indians in a domesticated state, called Caboclos; Indians in a savage state, called Tapuyas; free negroes, born in Brazil; manumitted Africans; Mestizoes, a mixed caste between Indians and negroes. The slave population consists of Africans, creole negroes, mulattoes, and Mestizoes. The native Brazilians are an idle and inactive race, with few wants, and fewer enjoyments. The mulattoes, the offspring of Europeans and negroes, are ingenious, and evince an aptitude for the mechanical arts. The Tapuyas or native Indians of Brazil, are of a copper colour, robust, and well made, but of short stature. They generally go naked, paint their skins, and are fond of ornamenting their heads with feathers. To this race belong the Botocudes or Botucudoes, a ferocious tribe, who inlabit the banks of the Rio Doce and the Belmonte. They are said to be descendants of an ancient people called the Aymores, who distinguished themselves by their cruclty to the Portuguese, whom they slaughtercd on one occasion, about the middle of the last century, without mercy, leaving impressions of horror and apprehension on the Portuguese colonists which are not yet effaced. They go entirely naked, and render themselves hideous by the insertion of large circular pieces of wood in the lower lip and lobes of the ears, the former giving the mouth the semblance of an ape's. In other respects, they have all the personal characteristics of the Tapuyas, while some of their young women are said to be really handsome; their light copper colour glows all over when they blush. They are said to be cannibals, and there seems little doubt that they were so at one time; but it would appear that the practice is now becoming obsolete amongst them. Those inhabiting the banks of the Belmonte seem to be of a somewhat milder nature than those on the Doce, who manifest an irreconcilable hostility to the whites, and are by far the most savage tribe in Brazil, if not in all S. America.

Commerce.-The principal articles of import are cottons, trinkets, furniture, wax, candles, hats, dry fruits, and wine from France; glass, beer, linen, paper, \&c., from Holland; the same, with the addition of iron and brass utensils, from Germany and Bohemia ; iron, copper utensils, saileloth, cords, ropes, \&c., from Russia and Sweden; wine, brandy, fruits, \&c. from Portugal, and wheat, flour, biscuits, soap, leather, \&c., from Anerica. The exports consist of coffee, sugar, cotton, hides, cabinet and dye woods, drugs, gums, and diamonds. The value of cotton goods, nearly all from Britain, imported into Brazil between August 22, 1846, and March 22, 1848, was $£ 2,670,200$.
Statement of the Value of the Imports and Domestic Exporits or

The annual imports from Great Britain are above $£ 3,000,000$; and the exports, to the same quarter, considerably above a million. The number and tonnage of vessels that entered and cleared from the principal ports of Brazil in 1847, was: entered, 4072 vessels; tonn. 535,106 ;-cleared, vessels 3998 ; tonn. 589,159 . Very strenuous efforts have been recently made by the Brazilian Government to put down the slave-trade. In September 1850, a law was passed declaring it piracy: several vessels have since been captured by Brazilian men-of-war, and two have already been declared good prizes. (For further particulars regarding the commerce of Brazil, sce Bamia, Para, Pernambuco, and Rio de Janeiro.)

Religion, Government, \&c.-The established religion of Brazil is R. Catholic, although other religions are tolerated. The Government of the empire is monarchical, hereditary, constitutional, and representative. The Legislative power is in the General Assembly, which consists of two chambers, the Senate, and Chamber of Deputies; the former elected for life, and the latter for four years. In 1848, the public debt stood as follows:-

Expenditure for $1849-50, £ 2,680,217$, being less than the
receipts. The military force for 1850-51, was fixed at 25,000 men of the line, besides which there are 60,000 national guards, and each province has a well-equipped municipal guard or police force. The navy, in 1850 , comprised 40 vessels of all sizes; three frigates, seven corvettes, and nine steamers; the remairder consisting of brigs, schooners, \&c., manned in all by 3500 men. The steam force is annually on the increase.
History. - Brazil was discovered May 3, 1500 , by Vincente Yancz Pinçon, one of the companions of Columbus, but was subsequently taken possession of by Pedro Alvares de Cabral. Various towns now sprung up along the coast under the anspices of the Portuguese Government, but not without much annoyance from the cupidity and jealousy, or envy, of other nations, especially the English, Dutch, and Spaniards, who repeatedly attacked and destroyed their settlements. The Portuguese, however, still retained possession of the country, which, notwithstanding thesc calamities, continued to prosper. On the invasion of Portugal in 1808 by the French, the sovereign of that kingdon, John VI., sailed for Brazil, accompanied by his court and a large body of emigrants. Soon after arriving there, lie began to improve the condition of the country by placing the administration on a better footing, and throwing open its ports to all nations. On the fall of Bonaparte, the King raised Brazil to the rank of a kingdom, and assumed the title of King of Portugal, Algarve, and Brazil. The revolution which took place in Portugal in 1820, compelling the King to return to that country, he next year sailed for Lisbon, leaving Pedro, his eldest son and successor, as lieutenant and regent. In the following year, 1822, Don Pedro, availing himself of a general wish on the part of the Brazilians for an entire separation from the parent country, declared Brazil to be a free and independent state, and assumed himself the title of Emperor. The King, after some slight and ineffectual attempts to reestablish the former relations between Portugal and Brazil, acknowledged the independence of the latter country in 1825. Some years afterwards, a series of tumultuary proceedings ended in the abdication of Don Pedro, who left Brazil on April 7,1831, leaving his son, who was under age, as his successor. The rights of the latter were recognized and protected, and a regency of three persons appointed by the chamber of deputies to conduct the Government during his minority. In 1840, the young Emperor was declared of age, being then in his 15 th year, and was crowned on July 18, 1841.-(Spix and Martins' Travels in Brazil; Kidder's Brazil; Gardner's Travels in Brazil; Mrs. Sommerville's Physical Geography; Mumboldt's Aspects of Nature, and Cosmos; Diccio. Geo. Imp. Brazil; Parl. Papers; Private Information.)

BRAZOS-DE-Dios, a large river, U. States, Texas, rising among the mountains in the N.W. part of the state, under the parallel of $33^{\circ} \mathrm{N}$. ; flowing S.E. between the Colorado and Trinidad, and after a course of about 900 m ., falling into the Gulf of Mexico, between Quintana and Velasco, 58 m . W.S.W. Galveston; lat. $28^{\circ} 48^{\prime}$ N. ; lon. $95^{\circ} 40^{\prime}$ W. It is navigable, during freshets, for a considerable distance; but there are only 6 ft . water on the bar at its mouth. The plain through which it flows is strongly impregnated with salt and nitre; and one of the streams which forms its head waters, issues from a saline lake, 20 m . long, and about 6 broad. Its principal affluents are, the Red Fork and Navosota. Among the towns on its banks are Milam, Nashville, Washington, and Richmond. The cotton plantations along its banks are highly productive.

BRAZZA [anc. Brachia], an isl. Austria, in the Adriatic Sea, and belonging to Dalmatia; lat. $43^{\circ} 16^{\prime} 42^{\prime \prime}$ N.; lon. $16^{\circ} 37^{\prime} 30^{\prime \prime} \mathbf{E}$. (r.) It is 24 m . long, and from 5 to 7 broad; contains 20 villages, and is separated from the mainland by a channel 12 m . broad, which aftords excellent anchorage for shipping. The island is very mountainous and well wooded; and in the valleys vines are grown, from which are made the best wines in Dalmatia. It produces, also, good oil, almonds, and saffron, and grain in small quantity. Much attention is paid to the cultivation of bees and silkworms. The kids and lambs of this island are prized for the delicacy of their flesh, and the chcese is also in high repute. Near St. Martin, in the E. part of the island, there is an extensive stone quarry, from which large quantitics of building-stone are exported. The chief town, St. Pietro di Brazza, has a small port, do-
fended by a mole. At Milna there is a considerable shipbuilding yard. The island of Brazza forms a district, divided into seven communes, and gives a title to the Bishop of LesinaBrazza. Pop. 14,090.

BREADALBANE, or Braidalbin, a mountainous dist. Scotland, co. Pcrth, in the centre of the Grampian range, about 33 m . in length, and 31 in breadth. The hills afford excellent pasturage, and the valleys are, many of them, susceptible of profitable cultivation. One of the most striking features of this romantic district is Loch Tay, a beautiful sheet of water, of about 16 m . in length, with an average breadth of about 1 m . From the N.E. extremity of this lake issues the river Tay, one of the three principal rivers of Scotland. Loch Lyon is another beautiful, though much smaller lake. It is situated at the head of Glenlyon, is about 3 m . long, and half a mile in breadth. The district abounds in limestone and various kinds of minerals. Breadalbane gives the title of Marquis to a branch of the family of Campbell, who are also principal proprietors. The chief seat of the family is Taymouth Castle, a magnificent residence.

BREADSALL, par. Eng. Derby; 2410 ac. Pop. 620.
BREAGE (St.), par. Eng. Comwall; 7390 ac. P. 6166.
BREA HEAD, Ireland, W. coast, co. Kerry, Valentia Island, S. side of Dingle Bay ; lat. $51^{\circ} 55^{\prime} \mathrm{N} . ;$ lon. $10^{\circ} 1^{\prime} \mathrm{W}$.

BREAKSEA ISLAN1.-1, A small isl., S. W. extremity of New Munster, the most S. of the two larger islands of New Zealand, at the entrance of a narrow strait between Paterson and Resolution Islands; lat. $45^{\circ} 35^{\prime}$ S.; lon. $166^{\circ} 40^{\prime}$ E.2, Breaksea Spit, a reef of 18 or 19 m . in lengtb, E. coast, Australia, stretching N. from Sandy Cape; its extreme N. point is in lat. $24^{\circ} 24^{\prime} \mathrm{S}$. ; lon. $153^{\circ} 18^{\prime} \mathrm{E}$.

BREAMORE, par. Eng. Hants; 3440 ac. Pop. 647.
BREANE, par. Eng. Somerset; 1330 ac. Pop. 126.
BRECH, a tn. France, dep. Morbihan, about 20 m . from Lorient. A battle, fought here in 1364, in consequence of a challenge given by Jean de Montfort, son of Edward III. to Charles de Blois, was gained by the former, chiefly by the aid of his English allies, and gave him the crown of Burgundy. Georges Cadoudal, the celebrated Vendean partizan, was a native of Brech. A monument, begun to be erected to his memory, was abruptly terminated by the Revolution of 1830 . Pop. 134.

BRECH-FFA, or Brechva, par., S. Wales, Carmarthen. Pop. 109.

BRECIIIN, a royal bor. and par. Scotland, co. Forfar. The town is situated on an acclivity, l. bank, S. Esk, 8 m . from its junction with the sea at Montrose, 23 m. N.N.E. Dundee. It consists of one principal strect, stretching N. to S., of another, nearly three-fourths of a mile in length, and several cross streets. The houses are all stone, and have a respectable appearance, particularly those of recent erection; and, on the whole, the town is rapidly improving. The cathedral church, which now forms the parish church, is situated on the N. bank of a ravine-formerly a moat-which separates the town from Brechin Castle. It has a large and beautiful Gothic window over the W. door, and a tower and spire 120 ft . high. Near the church stands the tall slender tower of Brechin, commonly called the Little Steeple, which has long been a puzzle to antiquarians. It is an unadorned turret of frcestone, 85 ft . in height to the cornice, and 15 ft . more to the pinnacle of the spire, which has more than once been repaired. There is an interior communication to the cornice, by means of movable ladders. There are here also the remains of an ancient chapel, called Maison Dieu. The other churches are-two Free, three United Presbytcrian, one Original Secession, and one Congregationalist ; a Scotch Episcopal chapel, and a R. Catholic meeting-house. The two Free churches are handsome edifices. The public schools, which have been long celebrated, are situated in the lower floor of a building erected by Lord Panmure for educational purposes; besides which, a building has been erected, called the Educational Institute, chiefly supported by Free Churchmen and Dissenters, in which also are schools, well attended by young children. Brechin has likewise a mechanics' institution, occupying a handsome building, erected and endowed a few years ago by Lord Panmure, with a large library attached. The linen trade is the staple of the town. A considerable quantity of flax is annually spun into yarn, employing a large number of hands. There is also an extensive blcaching establishmient here; but the greater part
of the working population within the town are employed in hand-loom weaving of linen fabrics. There are also two distilleries and two breweries; the former manufacturing not less than from 80,000 to 100,000 gallons of whisky per annum. Brechin Castle, for many centuries the residence of the Maules of Panmure, stands on a precipice overlooking the Esk, and is separated from the town by a deep ravine. Brechin unites with Montrose, Forfar, Bervie, and Arbroath, in returning a member to the IIouse of Commons; registered electors in 1850,172 .-The Parish is about 7 m . in length, and 6 m . in breadth. Pop. 7560. Pop. of tn. 3951.-(Local Correspondent.)

BRECHT, a tn. and com. Belgium, prov. of, and 14 m . N.E. Antwerp, with manufactures of cloth, tanneries, brewcries, a dyework, and a brick and tile work. Pop. 3126.

BRECKLES, par. Eng. Norfolk; 1860 ac. Pop. 160.
BRECON, or Brecknock, an inland co. England, S. Wales, about 38 m. N. to S., and varying from 34 to 14 m . E. to W.; bounded, N. and N.E. by co. Radnor, E. by co. ITereford, S.E. by co. Monmouth, S. by co. Glamorgan, and W. by cos. Carmarthen and Cardigan ; area, 482,560 ac., or 754 sq. m. It is one of the most mountainous counties in the principality, and is distinguished by great sublimity and beauty of scenery. The principal mountain-range, called the Black Mountains, traverses the S. part of the county from E. to W.; and near its centre rises the Van or Beacon, forming the highest summit of S. Wales, and having a height of 2862 ft . The chief geological formation of Brecon is the old red sandstone, which is most largely developed in the central and S.E. districts. According to Mr. Murchison, it is divisible into three minor formations ; viz., a basis of tile-stones, a centre of marls, limestones, locally called cornstones, sandstones, \&c., and an upper portion, consisting of saudstones and conglomerate, which usually compose the great mountain masses, and, as in the case of the Beacon already described, ascend to their highest summits. In the N. districts, the rocks are still older in the series, consisting chiefly of graywacke slates, traversed and penetrated by a remarkable line of trap and porphyry. In the S., near the borders of Glamorgan, a band of mountain limestone appears, forming part of the long narrow zone which encircles the important coal fields of $S$. Wales. A very small and inferior portion of this coal field is included in Brecon; and though some ironworks have been established near its E. borders, they must derive their chicf supplies, both of coal and iron, from adjoining counties. As a whole, Brecon cannot boast of mincrals. The river W ye forms a natural boundary between this county and Radnor; and the Usk, rising in the Black Mountains, crosses the county, and flows through a fine valley towards the town of Brecon. About 2 m . E. from the latter is Brecknock-Mere or Llans-afeddar, one of the largest lakes in S. Walcs, abounding in otters, pike, tench, perch, and eels. The climate is, in general, temperate and salubrious. The farms are small, and the land under cultivation is about $230,000 \mathrm{ac}$. The lower parts of the county contain several fertile valleys, which yield considerable agri cultural produce, consisting of oats, wheat, rye, barley, turnips, vetch, and potatoes; also of wool, timber, butter, cheese, and cattle, which are sent to the markets in the neighbouring English countics. The mountains are usually of a sterile nature, and, towards their summits, produce little herbage; but their lower slopes are verdant, and are chiefly used to pasture sheep, which are generally small, but much prized for their excellent quality. The manufactures of the county consist principally of coarse woollen cloths, stockings, and other worsted stuffs. The trade has been considerably facilitated by a canal from Brecknock to Llanelly, 18 m . in length, and 9 ft . deep, and navigable for barges of 25 tons burden, thus opening a commnnication with the sea; and by the Brecon and Merthyr-Tydvil Railway. The county is divided into six hundreds, and possesses four market towns-l3recon, Builth, Crickhowell, and Hay. It sends one member to Parliament; number of electors (1850), 2548. Pop. (1851), 61,474.

BRECON, or BRECKNOck, cap. of above co., and nearly in its centre, in an open valley, at the confluence of the rivers Honddu or Hondey, and Usk, over whieh there are four bridges; 145 m. W. by N. London It consists chiefly of three principal streets, and several smaller; most of them tolerably straight, and well kept; and all of them paved and flagged. The houses are of stone, and generally well built,

## BREDA

particularly those of recent ercction. It is badly supplied with water, and is but indifferently lighted, though furnished with gas. The town, however, is, on the whole, improving in appearance, particularly as regards its shops and public buildings; of which last the most noteworthy are, the new countyhall, a handsome structure in the Grecian style; a new girls' and infants' school, in the Elizabethan style; a large and commodious market-house, and a barrack. Brecon has three churches, two chapels belonging to the Independents, two Wesleyan, two Baptist, and one Calvinistic Methodist. The Priory church, one of the above, is a finc structure, partly Norman, and partly English style. Its schools are-the college school, and several others for boys, for girls, and for infants. There are here an infirmary, and a mechanics' institute. The trade of the town is merely of a local nature, and it has no manufactures, except that of flannel and coarse woollen cloths, wrought to a small extent. Markets three times weekly; and fairs annually, for hops, leather, cattle, \&c. Brecon returns a member to the House of Commons; registered electors in 1850, 342. The celebrated Mrs. Henry Siddons was born here in 1755 . The town is of high antiquity, its origin dating A. D. 1092, at which time its castle was built. Of this building hardly any trace now remains. Pop. 5317.

BREDA, a tn. and frontier fortress, Holland, prov. N. Brabant, on the Mark, about equidistant from Bergen-op-Zoom, Antwerp, and Hertogenboscl, in a finely-wooded country. Its defences are strong, though irregular, and capable of being increased by flooding the surrounding country. The town is of a triangular form, has four gates and above 50 strects, nine of which open into the market-place, which is surrounded with trees. There are other charming public walks within the walls. St. Barbaras, now the parish church of the Reformed, adorns the market-place with its lofty tower. Destroyed by lightning in 1694, it owed it3 restoration chiefly to William III. of England. The Lutherans also have a handsome church. The R. Catholics are divided into three parishes, of which each has a church; and the Jews have a synagogue. The other public buildings are the castle, used for the royal military academy until the revolt of Belgium ; the Government-house ; a handsome townhouse ; the palace of justice, where the local courts meet ; a bridewell, and two prisons. On the parade ground there is the great arsenal, a beautiful building; also the new and the little arsenals, and various other buildings required in a fortress of the first order. Among the public institutions there are hospitals for the old and sick, and two orphan-houses, a drawing-school, a scientific and literary association, a branch of the imitative arts society, a department of the public utility society, and three musical societies; besides a Latin, there are other 16 schools of various kinds. From its central position, and water communication with other provinces and the sea, Breda is frequented by vessels tradirg with all the principal towns in Holland; but its trade has suffered from the separation from Belgium. It has manufactories of carpets, hair-cloth, linen, hats, soap, tallow, and wax candles; also, cotton print and dye works, tanworks, breweries, roperies, letterpress and lithographic printing-houses, a letter foundry, a copper foundry, and japanning works; coachmakers, armourers, \&c. Previous to the revolt of the Netherlands against Philip II., Breda was a favourite residence of William I. of Orange. There he held court, and excreised a princely hospitality, occupied more with hounds and hawks than with politics. At Breda, in 1566, the famous league of the nobles was first proposed by Count Louis of Nassau and the famous Marninx, Count St. Aldcgonde. Breda repeatedly fell, Sy force or fraud, into the hands of the Spanish or Dutel during the 80 years' war of indejendence; but was finally secured to the latter in 1637. The pop. of the town, 13,000 , adding 2700 for the garrison, 15,700 ; of which $11,780 \mathrm{R}$. Catholies, 3700 Protestants; and 180 Jews.

BREDE, par. Eng. Sussex ; 5700 ac. Pop. 1151.
BREDENBURY, Iar. Eng. Herefori; 540 ac. Pop. 46.
BREDFIELD, par. Eng. Suffolk; 1630 ac. Pop. 468.
BREUGAR, par. Eng. Kent; 1810 ac. Pop. 540.
BREDHULST, par. Eng. Kent; 400 ac. Pop. 131.
ISREDICOT, par. Eng. Worcester; 430 ac. Pop. 53.
13REDON, par. Eng. Worcester; 6130 ac. Pop. 1567.
ISREDSTEDT, a tn. Denmark, duchy of, and 27 m . W.N.W. Schleswig, near the coast. It has a church (built
in 1510), a manufactory of tobacco, some trade in cattle and corn, a considerable number of looms employed in weaving linen, and owns 8 or 10 small vessels. Pop. 1800.

BREDY, two pars. Eng. Dorset:-1, Bridy (Little), 2190 ac. Pop. 196.-2, Bredy (Long), 2000 ac. Pop. 340.

BREDWARDINE, par. Eng. Hereford; 3890 ac. P. 409.
BREEDEE, a river, S. Africa, Cape Colony, rising in the district of Worcester, and, after a considerable course, chicfly S.E., falling into St. Sebastian's Bay; lat. $34^{\circ} 45^{\prime} \mathrm{S} . ;$ lon. $20^{\circ} 50^{\prime} \mathrm{E}$. Though it has only 13 ft . water at low tide, it is the deepest river in the district, and considerable quantities of the wool grown in the neighbourhood are shipped from it.

BREEDEVOORT, or Breevoort, a tn. Holland, prov. Gelderland, 20 m. S.E. Zutphen. It was once fortified, has a Reformed and a R. Catholic church, and a school. Besides some linen-weaving, and bleaching, there is a tanwork, and a cotton manufactory. Pop. 900.

BREEDON-on-the-hill, par. Eng. Leicester; 6410 ac. Pop. 2625.

BREGENZ, a tn. Austrian States, cap. of co. Vorarlberg, gov. of, and 77 m. W. by N. Innsbruck; beautifully situated on the slope of a hill, on the banks of Lake Constance. It is well bailt, divided into the old town, which is an ugly place, and occupies the eminence; and the lower town, which is more pleasant, and spreads along the shores of the lake. It has three churches and a school, two monasteries, an orphan asylum, and a military swimming-school. Woollen and cotton spinning are carried on, and articles in wood and straw are manufactured. The inhabitants are very industrious, and export large quantities of frameworks, wooden fittings for houses, and even wooden chalets, ready for erection, to the Swiss cantons. They likewise do a good business in corn, fruit, wine, butter, and cattle. In the neighbourliood are saltpetre-works, blast-furnaces, and coal mines. Bregenz is supposed to be the Brigantium of Strabo and Ptolemy, whence the Lacus Brigantinus [Lake of Bregenz, but now Lake Constance] got its name. The old castle, once the stronghold of the powerful Counts of Montfort, and the ruins of which are to be seen on Mount Gebhard, behind the town, was for a long time one of the most important fortresses in this part of Germany. Pop. 4800.

BREGOGE, par. Irel. Cork; 1333 ac. Pop. 441.
BREHAR, or Bryher, one of the Scilly Islands, England, off the Land's End, co. Cornwall, at the S.W. entrance into the English Channel, about lat. $49^{\circ} 53^{\prime} \mathrm{N}$.; lon. $6^{\circ} 20^{\prime} \mathrm{W}$. It is about $1 \frac{1}{2} \mathrm{~m}$. in length N . to S ., with an average breadth of half a mile, and comprises an area of 330 ac . It consists of several steep hills, connected by tracts of low land, a considerable part of which is in cultivation. A small group of houses is called 'the town of Brehar,' in which there is a church erected a few years ago, on the site of a more ancient one. Pop. between 2000 and 3000 .

BREIIAT, an isl. France, coast of Brittany, dep. Cotes-dn-Nord, 24 m . from St. Bricuc, in the English Channel; lat. $48^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $3^{\circ} 5^{\prime} \mathrm{W}$. It is about 3 m . long, and 2 m . broad, and is separated from the mainland by a channel 1 m . broad. It has three harbours, Clos on the S., la Cordcrie on the W., and la Chambre on the E.; the last of which has 8 to 16 fathoms water, according to the state of the tide. Brehat is the only point on the French coast, between Brest and St. Malo, where frigates can enter, and in time of war is much frequented by convoys navigating the channel. On the rocky reef of Heaux-Brehat, there is a lighthonse, the light of which is visible from a distance of 14 m . The island is defended by 12 small batteries. It has no springs, the inhabitants using rain water. Pop. 1519.

BREINTON, par. Eng. Hereford; 1490 ac. Pop. 362.
BREISACH (Alut), [Latin, Brisiacum], a tn. grand duclyy of Baden, circle, Upper Rline, 12 m . W. Freiburg, 34 m . S. Strasburg, r. bank, Rhine, opposite Neu Breisach, and Fort Morticr, in France. This is an ancient town, and was formerly very strong, being regarded as the key of Germany, on the W., but its fortifications were dismantled in 1641. The only building in the town worthy of notice is the minster of St. Stephen, remarkable for a beantiful altar-screen, carved in wood. The chief employments of the inhabitants are weaving, agriculture, and the rearing of cattle. Pop. 3200 .The balliwick of the same name has a pop. of 22,000 .
bREISACII (Neu). See Neuf-Brisach.

## BREMEN

BREISGAU, a fertile district, one of the most beautiful In the grand duchy of Baden, comprised in the Upper and Middle Rhine circles; area, 960 geo. sq. m. It is hilly, containing the highest peaks of the Schwarzwald, and includes the towns Breisach, Freiburg, Waldshut, \&c. The Breisgau belonged, from the 15 th century till 1801, to the House of Austria; by the treaty of Lumeville, in that year, a portion was ceded to, and the rest subsequently acquired by, the Ilouse of Baden. Rudolph of Hapsburg, was born in the castle of Limburg, in this district. Pop. 150,000 .

BREITENBACH, numerous small places in Germany, the only one of which, deserving of notice, is a market town, Schwarzburg-Sondershausen, $7 \frac{1}{2} \mathrm{~m}$. S.S.E. Illmenau, containing a castle, a porcelain factory, and an alum and vitriol work. In the neighbourhood a good deal of oil-seeds and medicinal herbs are grown. Pop. 2502.

BREITENBRUNN, a tu. Saxony, circle, Zwickau, with a paper and several other mills, a vitriol and sulphur work, and an iron forge, which employs 300 persons. In the neighbourhood are tin and iron mines, and limestone quarries. Pop. 2100.

BREITENBURG, a vil. and lordship, Denmark, duchy of Holstein, dist. Itzehoe, on the Stör, 30 m . N. W. Hamburg. The castle of Breitenburg, built in 1530 , was a place of great strength, and stood several sieges. It was stormed in 1627, by Wallenstcin, after a bombardment of six days. Only a clapel and a tower now remain. The lordship, which belongs to the Counts of Rantzau, has an area of 48 geo. sq. m., and is traversed by the Stör and the Bramane. Pop. 6700.

BREITENFELD, a small vil. Saxony, circle of, and 5 m . N.N.W. Leipzig, famous for the battle fought in its neighbourhood, September 7, 1631, in which Tilly and Papjenheim were signally defeated by Gustavus Adolphus.

BREJO-d'area, a tn. Brazil, prov. of, and $45 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Paraliba, on the mountains of same name. It has a church, and two schools; its district is fertile, and has 5000 inliabitants.

BRELADE (St.), par. Eng. Isle of Jersey. Pop. 2170.
BREMBILLA, a vil. and com. Austrian Italy, gov. Milan, prov. of, and 12 m . N. Bergamo, on river of same name, near the bridge of Sedrina. It has a church, and some mineral springs, and stone quarries, in which fine fossils are found. Pop. 2036.

BREMBIO, a vil. Austrian Italy, gov. Milan, prov. of, and $9 \mathrm{~m} . \mathrm{S} . \mathrm{E}$. by S. Lodi, on the Brembiolo, near the high road from Lodi to Casal Pusterlengo. The vicinity is very fertile, and well irrigated, and the herbage rich. Pop. 2746.

BREMBO, a river, Austrian Italy, gov. Milan, which rises in a series of small lakes on the mountain-ridge separatting prov. Bergamo from the Valteline, and, after a S. course of about 40 m ., joins r. bank, Adda, near Vaprio, 10 m . S.S.W. Bergamo. It is nowhere navigable, but is employed for transporting rafts of timber. After passing Zogno, it becomes a considerable stream, and both supplies water to irrigate the fields, and move several manufactories. It is well supplied with fish.

BREMEN.-1, One of the four free Gierman Hanseatic cities, on the Weser, and cap. of the republic of the same name, 58 m . S. W. Hamburg ; lat. (observatory) $53^{\circ} 4^{\prime} 36^{\prime \prime} \mathrm{N}$.; lon. $8^{\circ} 49^{\prime}$ E. (R.) The city is divided by the river into two unequal portions-the larger, called the old town [Altstadt], on the right; the less, the new town (Neustadt), on the left bank. There is also a populous suburb on the E. side of the town, well built, and containing many fine gardens. The streets of the old town are narrow and crooked, and lined with antique houses, in the style of the Middle Ages; while those of the new town are regular and spacious, with handsome houses of modern construction. Between the two towns is an island called the Werder, on the lower part of which are some houses included within the limits of the town. The whole is kept remarkably clean. The communication between the two parts of the town is maintained by a bridge. The old town was formerly surrounded by ramparts; but they have been levelled, planted with trees, and converted into beautiful promenades. Both sides of the river are lined with quays, from which a fine view of the city may be had. Its principal public buildings are-the cathedral, an ancient structure in the Gothic style, built in $1160,296 \mathrm{ft}$. in length, 124 in breadtl, and 105 in height; the church of St. Ansgarius, with a liandsome steeple, 325 ft . high; and the old townhall, also Vom. I.
a Gothic structure, formerly an archicpiscopal palace. Below this hall is the Rathsweinkeller, the council's wine-vanlts, which contain wines, chiefly hock, 100 and 200 years old, kept in vats called the Twelve Apostles, and said from age to have become nearly as thick as oil. Other public buildings are-the

exchange, the schütting, the waterworks, the arsenal, weighinghouse, and granaries; the museum, which contains a large library, with collections in natural history, mechanics, and the arts; Dr. Olbers' observatory, from which he discovered the two planets Pallas and Vesta, in 1802 and 1807 ; and several other buildings of less note. Bremen has a number of schools and other educational establishments, including a school of design, and another of commerce and navigation. Its charitable institutions are also numerous, and include two orplian asylums. The principal manufactures are of woollens, cottons, leather, hats, tobacco, refined sugar, rape-oil, whalebone, flour, soap, starch, vinegar, \&c., with above 100 brew. eries and distilleries, several soap boiling works, and sailmakers. There is also a considerable trade in building and fitting out vessels. Vessels drawing more than 7 ft . water cannot ascend so high as the city; those drawing 12 to 14 ft . stop at Vegesack, and larger vessels at Bremerhafen, where an excellent new harbour has been formed. The principal imports are tobacco, coffee, sugar, whale-oil, cotton, and cotton yarn ; cheese, butter, wine, tea, \&c. The exports consist of linen and other manufactured goods, including tobacco; also oak-bark, rags, oilcake, bacon, \&c. Having become one of the chief outlets for the goods of the Zollverein, and the main port of embarkation for German emigrants, its trade in recent years has greatly increased. The following table exhibits the gross exports and imports in the years 1847-1853:-

$1849 \ldots 5,130,067 \ldots 4,391,693$ 1853... 8,034, $371 \ldots$ 7,460,415
1850... $5984,453 . \quad 5,310,58:$

The largest amount of the imports is derived from the Zollverein, amounting, in 1853 , to $£ 3,184,114$; and the greatest exports are to the U. States, amounting, in 1853 , to $£ 2,779,663$. In 1847 there embarked at Bremen 33,689 emigrants, in 235 vessels; and in 1853 the numbers were 58,111 cmigrants, in 288 vessels. The total of vessels entered at Bremen in

1853 was 2729 , tom. 348,046 ; and clatred 2696 vessels, tom. 373,529 . A railway connects Bremen with E., N., and Central Germany on the one hand, and with W. Germany, Belginm, and France, on the other. Bremen was founded, or, at any rate, first rose into note, in the year 787 or 788 , when it wats made the seat of a bishoprie by Charlemagne; snbsequently elevated to the dignity of an arehbishoprie, which, at the treaty of Westphalia, in 1648 , was seeularized in favour of Sweden. After various political changes, the city was taken by the Frencl, in 1806; and from 1810 to 1813, it was the capital of the department of the Mouths of the Weser. In 1815 it was restored to its old franchises, by the Congress of Viemua. Bremen holds the third rank amongst the frec eities of the Germanic Confederation, and with them holds the 17 th rank in the Diet. Pop. (1842), 49,700.2, Rerublic, a territory stretching along both sides of the Weser, and is bounded, N., E., and S. by IIanover, and W. and S. by Oldenburg; arca, $100 \mathrm{sq} . \mathrm{m}$. The inhabitants are nearly all of the Protestant faith. The executive government of the republic of Bremen (eity and territory) is vested in a senate, called die Wittheit [the Wisdom], consisting of four burgomasters, two syndies, and 24 comncillors; and in the convention of burgesses, composed of all resident citizens who pay a certain amount of taxes, without regarl to their religious opinions. Pop. 72,820 , including the city.3, Duciry, a subdivision of the landdrostei or provinee of Stade, llanover, ocerpying the N. portion of that kinglom between the Elbe and Weser. Area, $1957 \frac{1}{2} \mathrm{sq} . \mathrm{m}$.

BREMERIIAFEN, a seaport at the mouth of the Weser, formed on ground on its $r$. bank, purchased by Bremen from Hanover in 1827, and completed in 1830 ; lat. (Bremer or Weser Light) $53^{\circ} 49^{\prime} 30^{\prime \prime} \mathrm{N}$.; lon. $8^{\circ} 9^{\prime}$ E. (n.) It is 34 m . N.N.W., and is the proper port of Bremen. It consists of an onter harbour, a slniced doek, and an inner harbour. The difference between the lowest cbb and the highest flood is 26 ft ; but the average rise does not exceed 10 ft . Sinee the completion of the harbour, Bremerhafen has grown up into a considerable village; but the narrow limits of the space of ground purchased, and its sterile nature, give no promise of its ever becoming an important town. It is garrisoned by Hanoverians, and defended by the ILanoverian battery, Fort Wilhelm, on the opposite side of the river. Pop. 2380.

BREMERVORDE, a tn. Hanover, dist. of, and 18 m . S.W. Stade, duehy, Bremen, on the Oste; with distilleries, lime-kilns, dyeworks, and manufactures of eloth, leather, and paper ; and some trade in turf and wood. Pop. 2481.

BREMGARTEN, a tn. Switzerland, can. Aargau, cap. eircle of same name, 14 m . E.S.E. Aaran, r. bank, Reuss, whieh is here erossed by a wooden bridge. On the l. bank of the river is a Capnehin eloister. It has a large chureh, a respectable townhouse, and a paper-mill. The chice employment is agriculture. Dullinger, the reformer, was born in this town. Pop. 1882.

BREMIIILL, par. Eng. Wilts; 5920 ac. Pop. 1550.
BREMILHAM, or Cowitcir, par. Eng. Wilts; 300 ac. Pop. 47.

BRENCIILEY, par. Eng. Kent; 8590 ac. Pop. 2472.
BRENDON, par. Eng. Devon ; 9470 ac. Pop. 271.
BRENKELEN, a vil. Holland, prov, of, and 8 m . N. by W. Utrecht, 1. bank, Vecht, with a Reformed and a R. Catholic ehurch, two schools, a brewery, and a briekfield. Pop. 1500.

BRENN, a populous vil., W. Afriea, on the Senegal, about 50 m. above its embouchure ; lat. $16^{\circ} 25^{\prime} \mathrm{N}$. ; lon. $16^{\circ} \mathrm{W}$. ; built on two sides of a marsh.

BRENNE (LA), [Latin, Briona Sylva], a country, Franee, in the ancient prov. of Touraine and Berri. The part of this country still retaining the name is marshy, and filled with pools, affluents of the Claise, and lies in dep. Indre, between Chateauroux and Le Blane. The inhabitants collect leeches in the marshes.

BRENNER, a mountain of the Tyrolese Alps, between the Inn, the Aicha, and the Adige; height, 6777 ft . The roal from Innsbruck to Verona, by Botzen and Trent, traverses this mountain, at an elevation above the sea of 4658 ft . This is one of the lowest roads practicable for carriages over the main ehain of the Alps; and one also of the most ancient, laving been much used by the Romans.

BRENO, a tn. Austrian Italy, gov. Milan, prov. of, and

35 m . N.E. Bergamo, I. bank, Oglio. It is well built; and has a fine squa:e, townliouse, an ancient Gothic church, and a strong castle. In the vieinity is also a beautiful stalactitic grotto. Pup. 2466 .

BREN'T, five pars. Eng. :-1, Brent (Last), par. Somerset ; 3180 ac. Pop. 849.-2, Brent-Eleigh, or Ely, par. Suffolk; 1650 ac. Pop. 289.-3, Brent (South), 1ar. Devon; 10,180 ac. Pop. 1237.-4, Brent (South), par. Somerset; 3210 as. Pop. 1074.-5, Brent-Tor, par. Devon; 2810 ac. Рор. 169.

BRENTA [anc. Medoacus Mujor], a river, Austrian Italy. Its source is Lake Caldonazzo, in the Tyrol, 8 m . S.E. Trent, whence it flows S.E., with a winding course of 112 m ., and falls into the Alriatic through the canal of Brenta-nova or Brentono, at Brondolo. Formerly its embouchure was at Fusina, opposite Venice. It has a rapil course, and is navigable for 46 m .

BRENTVORD, a market th. England, eo. Middlesex, 7 m. W. London ; on a slight aeclivity, on the Great Western Road, and at the junction of the Brent with the Thames, the former dividing it into Old and New Brentford. It eonsists chiefly of one long, winding street, well kept, and containing some good houses. There is a great deficieney of water in Old Brentford; but in New Brentford the supply is better. The former is lighted with gas, the latter only partially. The town is exceedingly ill drained, and the poorer localities filthy and wretehed in the extreme. The townhall and markethouse recently erected is a handsome structure. The churehes are two-one in Old Brentford, and one in New; three Baptist chapels, two Independent, and one Wesleyan; and the schools, two infant, a national, and a British, both for boys and girls. The charitable institutions are a lispensary, and Old Brentford visiting society. A large distillery, a soap manufactory, which makes between 2000 and 3000 tons ammally, and extensive sawing and planing mills, are the ehief manufactories. The retail trale is considerable, especially on market days. Petty sessions are held every Saturday, and the county court is held every month. 13rentford is the county town for elections, a market, and union town. Pop. 7232 (New Brentford, 2174; Old Brentford, 5058).-(Local Correspondent.)

BRENTONICO, a th. and com. Austria, Tyrol, $6 \mathrm{~m} . \mathrm{s}$. Roveredo; on the N. slope of Mount Baldo, overlooked by a small castle. Vine-culture is the main occupation. Pop. 2661.

BRENTWOOD, a market tn. England, co. Essex, on a commanding eminence, $11 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Chehmsford; consisting of one principal street, with houses in general old, and irregularly built. It has a ehapel eonnected with the Established chureh, Independent meeting-house, and free grammar-school, open to all boys within 3 m . of the town; and a large ale and porter brewery. The weekly market is on Saturday; and there are two annual fairs for horses and cattle. The Eastern Counties Railway bas a station here. Pop. 2362.

BRENZET'T, par. Eng. Kent; 1740 ae. Pop. 228.
BREOCK (St.), par. Eng. Cornwall; 7860 ac. Pop. $173 \%$.
BRERETON, par. Eug. Chester; 4240 ac. Pop. 667.
BRESCIA, a deleg. Austrian Italy, gov. Milan; bounded, N. by the Tyrol and Valteline, E. by Verona and Mantua, S. by Mantua and Cremone, and W. by Bergamo; area, 888 geo. sq. m. Towards the N. it is lilly, but in all other directions it is a fertile plain. The chief rivers are the Oglio, and its tributaries Mella and Chiese. The air is mild and pleasant. The chief productions are grain, flax, hemp, grapes, and olives. A good deal of silk is prodncet and manufactured. The principal mineral is iron, which is extensively mined, and supplies numerous works. A great deal of paper also is made. Pop. 310,000.

BRENCIA [Latin, Brixia; French, Brescc], a city, Austrian laly, cap. of above delegation; lat. $45^{\circ} 36^{\prime} \mathrm{N} . ;$ lon. $10^{\circ} 13^{\prime} \mathrm{E} . ; 40 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Verona, and about the same distance N.E. Lodi, on a beautifnl plain, l. bank, Mella. It is a handsome and flourishing city, of a square form, about 4 m . in circuit, and surrounded by walls; its streets are spacious, and its public buildings numerous, partieularly its churehes, which are further remarkable for the number and value of the paintings with whieh they are enriched. A few of them only, however, liave mueh pretension to arehitectural beauty; amongst those that have, are the new eathedral, a handsome structure of white marble, and the chureh of San Domenico. But however plain in exterior appearance most of the Brescian

## BRESLAU

churehes may be, they are all richly decorated within with the most beautiful frescoes, and otlier creations of taste and art. The other buildings most worthy of notice are the 1'alezzo della Logia, and the Broletto. The first was intended for the palace of the municipality, or townhall; it is composed of the richest marbles, and was worked upon by the first arehiteets of the 15 th and 16 th centuries, guccessively. The Broletto, the aneicnt palace of the republic, combines the elaracters of fortress and townhall, and is surmounted by a great tower, whose deeply-cleft Italian battlements produce a singularly grand effeet. The whole is in a colossal style, and marked by the peeuliar characteristies of the age in which it rose-supposed to be abont the end of the 12 th, and beginning of the 13 th centuries. The eity contains, also, a lyceum, two gymnasia, an athenæum, a college, with a unuseum of antiquities, and a botanic garden ; a public library, with 30,000 volumes; a theological seminary, a liandsome theatre, a corn exchange, an extensive hospital, two monts-depiété, a workhouse, and several other edueational and charitable establishments. There are 72 publie fountains in the streets and squares, besides some hundreds of private ones. Outside the town is a cemetery, begun in 1815 , designed by Vantini.

Breseia is a place of consideralle trade and manufacturing industry. Near it are large ironworks; and its fire-arms are esteemed the best that are made in Italy. It has also silk, linen, and paper factories, tanyards, and oil-mills, and is an important mart for raw silk. But it derives its greatest interest from its fine Roman remains, having been at one time the seat of a Roman colony. These first attracted attention in the 17th century; although, as far as regards inseriptions, they had been objects of especial care to the citizens of Brescia for two centuries before this period; but it was not till 1820 that any very earnest efforts were made to bring the buried remains of entire buildings to light. Since that period some remarkable discoveries have been made, embracing, besides numerous statues and inscriptions, the beautiful marble temple of Vespasian, and a number of noble and magnificent Corinthian columns, with numerous fragments of mouldings and ornaments, some gilt, and all of great elegance. Breseia was the seat of a school of painting, of great merit, to which many eminent artists belonged, ineluding Alessandro Bonvicino, commonly called 'il Moretto,' who flourished in the 16 th century, and was remarkable for the deep devotional feeling which he threw into his sacred subjects, as well as for his excellence as a portrait painter. The city is of great antiquity, having been the chief town of the Cenomani, a Gallic tribe, who were subsequently conquered by the Romans, when it became-but at what period is unknown-a Roman colony, and afterwards a municipium. In the year 412 it was burned by the Goths, and was soon afterwards destroyed by Attila; but was rebuilt about the year 452. In 936, Otho I. of Saxony deelared it a free city; and it so remained for nearly three centuries, when it fell a prey to the factions of the Guelphs and Ghibellines, and ultimately put itself under the protection of Venice. In 1796 it was taken by the French, and was assigned to Austria by the general treaty signed at Vienna, on June 9, 1815. In 1849 it was involved in the commotions by which so large a portion of continental Europe was disturbed in that year; its streets were barricaded, but the city was eventnally carried, at the point of the bayonet, by the Austrians under General Haynau. Brescia is the sce of a bishop, suffragan to the Arehbishop of Milan. Pop. 35,551.

BRESCOU, a roeky islet, France, dep. Merault, in the Mediterranean, $2 \frac{1}{4} \mathrm{~m}$. from Agde. It appears to be an extinct volcano, and is crowned by a fort, whieh has batteries hewn out of the rock, and was formerly a state prison. On the fort is a lighthouse, lat. $43^{\circ} 17^{\prime} \mathrm{N} . ;$ lon. $3^{\circ} 30^{\prime} \mathrm{E}$. The light is visible 8 m . off.

BRESKENS, or Bresjes, a vil. Holland, prov. Zeeland, $5 \frac{1}{2} \mathrm{~m}$. S. Middelburg, 1. bank, W. Scheld. The Reformed chureh is evidently the ehancel of a R. Catholic ehureh, of which the nave is supposed to have been washed away by the sea. Breskens is a very thriving plaee, mainly owing to the steamboat ferry thence to Flushing, and its corn trade with Rotterdam and Antwerp. Pop. 620.

BRESLAU, a gov. (Regierungsbeairk) Prussia, prov. Silesia; area, 3870 geo. sq. m. The surface in the S. .,
towards the borders of Bohemia and Moravia, is mountainous, some of the summits being about 4000 ft ; in other directions it is almost level. The chief rivers are the Oder, and its tributaries the Stober and the Weide on the right, and the Neisse, Ohlan, Lohe, and Weistritz on the left. 'There are no lakes of great extent. The climate varies with the surface, being cold and severe among the mountains, but mild in the plains ; and also healthy, except where swamps prevail. The valley of the Oder is generally fertile on the left bank, but on the right bank inclines too much to sand, and is extensively covered with forest. In addition to the ordinary cercals, a good deal of flax, madder, hops, and tobacco are grown. The minerals include arsenic, zine, lead, iron, and copper, and a little graphite. Precious stones, particularly amethysts, carnelians, agates, opals, and garnets, are frequently found. The manufaetures of this government were at one time of very great importance, but have lately suffered much by foreign competition. Pop. 1,084,522.

BRESLAU, the third city of the Prussian dominions, and sixth of Germany, cap. prov. Silesia, and of gov. of same name, at the confluence of the Ohlau and Oder; situated on a spacious plain ; bounded, N. by the Trebnitz Mountains, and S., at a greater distanee, by those of Zobten. It is divided, by the Oder, into old and new towns, which, with the various suburbs, are

[^4]5. Court-hous:
6 Cathedri I.
7
Storehousc
8. Storehous.
connected by not fewer than 120 bridges, of whieh one of castiron, ereeted in 1822 , is particularly handsome. The streets of the old town are narrow, those of the new broad, and the houses in general good. The public squares and buildings are liandsome. The churches, numbering in all 37, possess peculiar interest from the number of mural monuments and other sculptures with which they are enriched, some of which are in the finest style of art. The most remarkable buildings are-the cathedral, built in the 12 th century; the Rathhaus or townhall, a quaint and curious old Gothic strueture, supposed to have been built in the beginning of the 14th century, situated in the square called Grosse Ring; and the Government-honse, an elegant edifice. In the square named after Blither is a colossal bronze statue of him, by Rauch, in commemoration of his victory on the Katzbach, in 1813. The university, whieh was transferred hither from Frankfort-on-the-Oder in 1811, oceupies a building which was originally an imperial palace. Attached to the university are a museum of natural history, a library of 250,000 volumes, an observatory, a cabinct of antiquities, in pieture-gallery, and a botanie garden. The number of students amount to about 700. Besides the university, there are a sehool of industry, of deaf and dumb, of surgery, one R. Catholie, and three Protestant, together with a vast number of other educational institutions. There are also a great many hospitals and asylums ; amongst the latter, one for the support and education of officers' daughters ; and anongst the former, an hospital for faithful servants, opened in 1820. Breslan is the seat of
government for the province, and has varions administrative establishments. It is also the seat of a royal mint and bank, with a royal office for mining productions. There is a theatre and opera-house in the city, and a number of musical assoeiations, both public and private. The fortifications with which Breslan was fornerly surrounded have been levelled, and tastefully planted and laid out in gardens and pleasuregrounds, the whole forming a delightful promenade. The manufactures of Breslan are numerous, comprising gloves, plate, jewellery, silks, woollens, cottons, linens, and stockings. Its lithographic and common printing-presses amount to 24 . It carrics on, besides, an extensive trade in Silesian products and fabries, the principal of which are corn, metals, and timber. The number of distilleries in the town amount to nearly 100. Breslau is also the first market for wool on the Continent. It is altogether a bustling and thriving eity; and from its salubrity, the cheapness of provisions and edueation, the sociable dispositions of the people, and the beauty of its environs, is a very desirable place of residence. By railway it communicates with Vienna on the one hand, and with Berlin, Stettin, and Hamburg on the other. Pop. (1710), only 41,000; (1844), 103,282; (1846), 112,194.

BRESSAY.-1, An isl. Seotland, one of the Shetlands, opposite Lerwiek, united, parochially, with Barra and Quarff; lat. $60^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $1^{\circ} 6^{\prime} \mathrm{W}$. ; about 6 m . in length, and from 2 to 3 m . in breadtl. Its coast line is rocky, and deeply excavated in many places by the action of the sea; the interior hilly, but presenting some cultivated land sloping towards the shore. A dismal-looking hill, covered with heath, stunted grass, and peat-moss, 724 ft . high, called the Ward or Beacon IIIll, rises near its S. extremity ; and another of 400 ft ., called St. Andrew's or Ander Hill, on the E. side. On the S. are three bold headlands, the Ord, the Bard, and IIammer; the first is 500 ft . high, and inhabited by eagles; the other two are about 200 ft . each. There are a number of small lakes in the island, abundantly stored with excellent trout. Quarries of a coarse kind of slate have been wrought for many years. Culinary vegetables thrive well here, but trees make little progress, although it must bave been otherwise at one time, as large trunks are frequently found buried in the mosses. Sea-fishing is the prineipal occupation of the inhabitants. To the ling-fishing, called the haaf or far-fishing, Bressay sends upwards of 13 boats, of 18 or 20 ft . keel; and shares propor tionately in the cod and herring fishing. Kelp, also, is manufactured here to a considerable extent; herring-nets, and a little Shetland hosiery. Several traces of Pietish buildings ocerr in the island, and some tumuli, in which human bones have been found. There are also two or three perpendicular or standing-stones here, one of which forms a landmark for vessels entering Bressay Sound. Pop. 904.-2, Bressay Sound, between the isl. of Bressay and Mainland; is well known as a safe harbour; from about 1 m . to $1 \frac{1}{2} \mathrm{~m}$. average breadth; depth, about 15 fathoms at high water; fall of tide, about 8 ft . Two centuries ago, Bressay Sound was much frequented by foreign vessels during the fishing season. It is still resorted to by numbers of English and Dutch busse3, and is a rendezvons for whale ships on their voyage to Greenland and Davis Straits. The S. entrance is the one always taken by vessels of a large draught, the N . being narrow, with a rapid current, and only 18 ft . water at its deepest point, even at spring tides. At the $\mathbf{N}$. entrance is a sunken rock, seen at low water, called the Unicorn, from the circumstance of a war-vessel of that name, sent in pursuit of the Earl of Bothwell, having been wreeked on it.

BRESSE (La), a dist. France, which formerly belonged to prov. Burgundy, and had Bourg for its capital. It took its name from an extensive forest, which stretched from the Rhone to Chalons, and was called Drixius Saltus. It now forms the greater part of dep. Ain.

BRESSINGIHAM, a par. England, co. Norfolk; 2300 ac. Pop. 647.

BRESSUIRE, a tn. France, dep. Denx-Sèvres, 38 m . N. by W. Niort. It was formerly strongly fortified, but was ruined by wars, especially that of La Vendée, when it was reduced to ashes, with exception of one honse and the ehureh. It is now improving, and has some manufactories of flannel and cotton. Granite quarries are worked in the neighbourhood, and the parish clureh is built entirely of that material. Pop. 2320.

BREST, the principal naval seaport tn . France, dep. Finistere, situated alnost at the W . extremity of the kingdom, near the mouth of the English channel, 320 m . W. by Paris ; lat. (observatory) $48^{\circ} 23^{\prime} 36^{\prime \prime} \mathrm{N}$. ; lon. $4^{\circ} 29^{\prime} 15^{\prime \prime} \mathrm{W}$ (r.) The town stands on the N . side of a superb roadstead,

at a short distance from the mouth of the Elorn, and on both banks of the Penfeld, which divides it into two parts. On the 1. bank is Brest Proper, and on the r. an extensive suburb called Recouvrance. Its cireumference is about 3 m . The upper part of the town stands on the slope of a hill, with a declivity so abrupt, that the streets leading to the lower town are in some cases provided with flights of steps. The upper town is built with tolerable regularity, and has some fine edifices. The lower town is well and substantially built, and clean in the vicinity of the port, but some quarters are confused and dirty. Recouvrance has one or two good streets, but the greater portion are very inferior to those on the other side of the river, and very dirty. Brest is encireled by ramparts, which, being planted, form agreeable promenades, and afford a fine view of the port and shipping. From its natural advantages, the extent of its various establishments, and its means of defence, the port of Brest is considered one of the first naval ports in Europe. The outer road is perhaps one of the finest in the world, and although surpassed in extent by those of Constantinople and Rio de Janeiro, it is surpassed by none in the safety and excellence of its anchorage. It communicates with the ocean by a single passage called the Goulet, 1750 yards broad. In the middle of this channel rise the Mingan roeks, which contract the entrance still more, and oblige ships to pass inmediately under the batteries. From this entrance to the mouth of the Elorn, the roadstead is about 6 m . in lengtl. Its diameter varies considerably from the irregularity of the shores, but in some places it is 3 m ., so that the port could contain all the navies in Europe. The Goulet is so completely defended, that no hostile ship could enter it without being knocked to pieces. There are about 400 pieces of cannon and mortars in the various batteries that command the channel, and the anchorage inside is still further protected by the guns that line the shore. Outside of the Goulet is the fort of St. Matthew and the new lighthouse. The inner port or harbour of Brest is formed at the mouth of the Penfeli. It is narrow, but has depth of water for ships of war, 40 or 50 of whieh might lie liere in single file. The mouth of the harbonr is closed by a boom. It is defended by several tiers of batteries rising from the water edge. Near the entrance to the harbour is the old eastle which belonged to the Dukes of Brittany, and was partially transformed into a modern fortification by Vauban, in 1688. The horse-shoe battery is on the water level, and has every convenience for heating shot. In addition to all these defences, the town is protected by numerous batteries, mounting several hundred pieces of cannon. On the summit of the hill behind it is the powder magazine, where ships that enter the port deposit their powder. The celebrated doekyard of Brest is situated on both sides of a narrow but deep inlet of the sea. It contains the building slips, dry doeks, sail-house, general repository, ropery, cannon-foundry (begun in 1841), the sailors' barracks, where seamen are lodged while in port in the same manner as
solliers; and the bagne or convict station, a building 300 yards long. There are also timber-yards and boat-sheds, and fine building-yards. The victualling-office contains 24 ovens and a slaughter-house, granary, \&c. In the year 1803, when the French and Spanish fleets were here, it supplied 50,000 rations daily. Outside the dockyard is the naval hospital. The town has also a naval library, containing 20,000 volumes, a cabinet of national history, a botanical garden, a marine observatory, theatre, IIotel de Ville, and naval schools of medicine, surgery, pharmacy, artillery, hydrography, and seamanship. The communal college is attended by more than 300 students.

Brest lias little trade excepting for the supply of the naval department, and its manufactures scarcely extend beyond glazed hats and tarpaulins for the scamen. The merchant shipping is small in extent, bringing principally timber, building materials, wine, grain and flour, salt, iron, hemp, tar, \&c. Although Brest has been alleged to occupy a Roman site, no mention of it occurs in history till the year 1240, at which period its castle was ceded to John, first Duke of Brittany. This castle had a small town in its vicinity, and was several times besieged by the English, French, and Spaniards. Cardinal Richelieu was the first to take advantage of the natural capabilities of the port for a naval station, and, in 1631, commenced the fortifications which were improved and extended by Vauban. In 1694, it was attacked by an English fleet under Admiral Berkley, but the expedition failed, and 900 men who landed were cut to pieces, as the tide had receded and left the boats dry. In 1773, the line of fortifications was considerably extended, and the town soon became as populous as it is at present. Pop. (1846), 35,163; besides which, the barracks can accommodate nearly 10,000 military.

BREST-LITOV, a tn. Russia, gov. of, and 110 m . S. Grodno, r. bank, Bug. It stands in a marshy district, and is a place of some strength, being both walled and defended by a castle seated on a rock. Outside the town is an imperial palace with gardens. Both tlee Greeks and R. Catholics have churches and schools here, and there is a famous synagogue, held in high repute, and much visited by Jews from every quarter of Europe. The trade is in grain, hemp, flax, and honey. Pop. 4000.

BRETAGNE [English, Brittany], one of the 33 provinces into which France was divided before the revolution of 1789. It is now distributed among the five departments of [he-et-Vilaine, Loire Inferieure, Côtes du Nord, Morbihan, and Finistere. Its inhabitants still retain their ancient language, which is closely allied to the Welsh, and is exclusively used by the peasantry in the W. part of the prevince. Brittany is principally remarkable for its people, who are a century or two behind in costume, manners and customs, agriculture, \&c., and for the prodigious number of Celtic remains that are scattered over its heaths. It is supposed to have been peopled by natives of Great Britain, partly during the Roman dominion, and partly after the invasion of the Saxons.

BRETEUIL, two tns. France:-1, In dep. Eure, 16 m. S.W. Evreux-on-the-Iton, near an extensive forest of same name, in a district abounding in iron mines. It has a church, erected in the 11th century, and the remains of a castle built by William the Conqueror. The inhabitants are principally engaged in the ironworks, foundries, pin and nail works, which are extensivc. Pop. 1487.-2, In dep. Oise, 16 m . N.E. Beauvais, ncar the source of the Noye, with remains of ancient walls. The only remarkable building is the extensive abbey of St. Mary, built 1628. The town produces large quantities of shoes for the hospitals and troops of Paris, and has manufactorics of shawls, serges, woollen goods, paper, leather, ironmongery, and earthenware. Pop. 2474.

BRETFORTON, par. Eng. Worcester; 1530 ac. P. 511.
BRETHERTON, par. Eng. Lancaster; 2360 ac. P. 833.
BRETIGNY, a vil. France, dcp. Eure-et-Loire, 5 m . S.E. Chartres, remarkable for the treaty of 1360 , which bears its name, by which Edward III., influenced, it is said, by a vow made during a violent thunderstorm, renounced his claim to the crown of France, and John II. of France, who had been made prisoner at Poitiers, obtained his liberty, after four years' captivity, on agreeing to pay a ransom of three millions of crowns of gold, and delivering the first persons of his kingdom as hostages-among ethers two of his sonz, and his brother the Duke of Orleans.

BRETON BAY, W. Australia, co. Twiss, about 18 m . N. Perth, the cap. of the colony. The river Garban discharges itself into the bay.

BRETON (Cape). See Cape Breton.
BRETTEN, or Bretheis, a tn. Baden, circle, Middle Rhine, on the Salzbach, 12 m. E. Carlsruhe, remarkable chiefly as the birthplace of Melancthon, the great theologian of the Reformation. An inscription, stating the fact, has been placed on the house in which he was born. Pop. 3059.

BRETTENHAM, two pars. Eng.:-1, par. Norfolk; 2170 ac. Pop. $62 .-2$, par. Suffolk; 1550 ac. Pop. 367.

BREVEN, or Brevent, a mountain of the Pennine Alps, Savoy. It forms the N.W. boundary of the valley of Chamouni, viewed from which it presents a vast line of apparently inaccessible precipices. Its summit, which is 5000 ft . above the valley, and 8500 ft . above the level of the sea, is the best position for obtaining a view of the whole mass of Mont Blanc.

BREVIG, a seaport tn. Norway, prov. Aggershuus, bail Bradsberg, 12 m . W. Laurvig, with a good harbour, on the highway from Christiania to Christiansand, and or the Langesunds Fjord, across which there is here a ferry. It has a busy trade in deals and iron. Pop. 1308.

BREWARD (St.), par. Eng. Cornwall; 9180 ac. P. 724.
BREWHAM, two pars. Eng. Somerset:-1, Brewham (North), 2310 ac. Pop. 392.-2, Brewham (South), 3590 ac . Pop. 513.

BREWOOD, par. Eng. Stafford; 11,950 ac. Pop. 3641. BREZNO-BANYA. See Bries.
BREZOWA, a market tu. Hungary, co. Neutra, on a river of same name, about 19 m . N.W. Lcopoldstadt. It contains two churches, a R. Catholic and a Protestant, and has some manufactures of leather and several distilleries. Pop. 6157.

BRIANÇON [Latin, Brigantium], a tn. France, dep. IIautes Alpes, r. bank, Durance, 35 m. N.E. Gap, near the Italian fronticr ; a fortified place of the first class, formerly a kind of Alpine Gibraltar. It stands on an eminence at the foot of the Col de Genèvre, at the point where two small rivers unite and form the Durance. It is 4284 ft . above the level of the sea, and is the highest town in France. The fortifications consist of a triple line of walls encircling the town, with seven forts commanding the arproaches. The road to

mrta nçon -From Voyag s dans l'Ancienne France.
Italy is enmmanded by several redoubts and half-moon batteries. The principal works are on the l. bank of the Clairée, whose deep gorge is crossed by a bridge of a single arch. All the heights in the vicinity are converted into points of defence, and the position is considered impregnable. Briancon is the French arsenal of the Alps, and the central point of attack and defence from which troops can be marched on the passes of Mont Cenis, St. Bernard, the Simplon, and the Col de Tende. From the town itself there is a practicable passage into Italy by Mount Genèvre. There is oniy one tolerable street. Briancen nianufactures cotton goods, hosiery, scythes, sickles, hemp hackles, and other small articles, and has some trade in mules and sheep reared in the vicinity, chalk, crayons, turpentine, lavender water, and manna. Pop. 1419.

BRIANSK, a tn. Russia, cap. dist. of same name, gov. of, and 70 m . W.N W. Orel, r. bank, Desna. It is surrounded with an earthen rampart, contains 16 churches, a monastery, with a seminary, and two poorhouses; and has a considerable
trade in grain, hemp, hemp-oil (sent to Petersburg and Iiga), honey, and wax ; and linen, cables, and cordage, foundry pig and ironware, bark, mats, lime, and tar, sent to Kherson, Olessa, and other parts of the Black Sea. It contains imperial building-yards; near it are a camon foundry, and a manufacture of small arms. Pop. 6000.

BRIARE, a tn. France, dep. Loiret, 43 m. S.E. Orleans, r. bank, Loire, where it is joined by the Briare Canal. This canal, begun by Sully, was completed in 1642 , and is renarkable as the first construeted in France. The town has some trade in wine, wood, and charcoal. Pop. 2587.

BRIAVELS (St.), par. Eng.Glo'ster; 4710 ae. Pop. 1287.
BRICETT' (Great), par. Eng. Suftolk; 950 ac. Pop. 214.
BRICHERASCO, a vil. Sardinian States, Piedmont, prov. l'ignerol, 23 m . S.W. Turin ; with a church and convent, two paper-mills, and numerous tanneries. Pop. 3000.

BRICKEND()N, par. Eng. Hertford; 1690 ac. P. 757.
BRICKENDOWN, par. Irel. Tipperary; 1254 ac. P. 383.

BRIDGEHAM, par. Eng. Norfolk; 2330 ac. Pop. 328.
BRIDGEND, a market tn., S. Wales, Glamorgan, 17 m . W. by N. Cardiff ; beautifully situated in a fertile distriet, on the Ogmore, which divides it into two hamlets, called Oldcastle and Newcastle, connected together by a neat stone bridge. It consists of four straggling, irregular strects, containing substartial stone houses; is well supplied with water, lighted with gas, and is inereasing in size and population. It has two Established churches, six chapels, belonging to liaptists, Independents, Calvinistie Methodists, and Unitarians; several schools, a dispensary, and savings'-bank. In the town and neighbourhood are several extensive ironworks. The South Wales Railway passes close to the town, and has a neat station within a few minutes' walk of it. Pop. 1471.(Local Correspondent.)

BRIDGENOR'JI, a bor. and market tn. England, Shropshire, 19 m. S.E. Shrewsbury; on the Severn, which divides it into two portions, ealled the High and Low towns, connected by a handsome bridge of six arches. The high town is about 200 ft . above the bed of the river. The steep acclivity here is covered with houses, the foundations of the one row being ligher than the ehinncys of the other. These are approached by a winding carriage-road, or more directly by flights of steps cut in the rock, and rendered safe by iron railings. There are six streets in the high, and two in the low town, all straight, and, with one exeeption, well kept. The houses are principally of brick, some of them sufficiently liandsome, but the greater portion of a very mean deseription. The market-hall is a spacious old structure, of timber frame
work, filled up with plaster. The town is well supplied with water, the higher from a reservoir, into which the water is forced by machinery from the river; and lighted with gas. Bridgenorth has two churches, a chapel of case, a Baptist, Independent, and Wesleyan Methodist chapels, and a handsome little chureh belonging to the lrvingites; and a free grammar-school, a blue-coat and national schools, a sehool in comnection with the Baptists, and another in connection with the Imlependents, besides several well-conducted private academies; an infirmary, supported by voluntary contributions; some alms-houses, and a meehanies' institute and reading-room. The prineipal manufacture is carpeting, which is carried on to a great extent. There was formerly a large carrying trade by the Severn, but it has been nearly annihilated by the railways. Bridgenorth sends two members to the llouse of Commons. ('onstituency (1850), 793. Pop, of tn. 5770.-(Local Correspondent.)

BRIDGEI'OR'T, a city and post township, U. States, Connectient, co. Fairfield, 62 m . N.E. New York, W. side of an arm of Long Island Sound. The harbonr is upwards of 1000 yards wide at high water, but the ehannel is reduced to 160 yards at ebb tide. The bar at its mouth has 13 ft . at high water. There is a lighthouse on Fairweather Island. A mile and a half above its entrance, the harbour is crossed by a bridge 1237 ft . long. The city is neatly built, and conLains six churehes-two Congregationalist, one Episcopal, one Baptist, one Methodist, and one R. Catholic. It has two banks, 20 vessels engaged in the coasting trade, and five in the fisheries. Its manufactures of carriages and saddles are extensive. Daily steamboats comect it with New York. It has eight aeademies, and 13 schools. Pop. (1840), 4570.

BRIDGERULE, par. Eng. Devon and Cornwall; 4010 ac. Pop. 497.

BRIDGE-SOLIERS, par. Eng. IIcreford; 740 ac. P. Gí.
BRIDGETOWN, the cap. of isl. Barbados; lat. $13^{\circ} 4^{\prime} 12^{\prime \prime}$ N.; lon. $59^{\circ} 37^{\prime} \mathrm{W}$. It extends along the shore of Carlisle Bay, S.W. coast of the islanl, and is nearly 2 m . long, and about half a mile broad. On entering the port, its appearance is very pleasing, the houses being embosomed in trees, while hills of moderate height rise behind, studded with elegant villas. Many of the houses have baleonies, painted in gay colours, which give them a lively and cheerful appear ance. The town contains a landsome square, called Tra. falgar Square, in which there is a bronze statue of Lord Nclson, placed there with great ceremony in 1813. The principal buildings, none of which are in any way remarkable, are-the church of St. Miehael, now the cathedral of the diocese, a large but plain edifice, rebuilt in 1789 ; the church of St. Mary, the Jewish synagogue, the central seliool, IIarrison's free sehool; a handsome market-place, shaded by trees; the barracks at the S. extremity of the city, and the military hospitals. There are six hotels in the town, and several private boarding-houses. Bridgetown has been at several periods mueh damaged by fire ; the last calamity of that kind oceurred in 1845 , when a large portion of the town, which still remains unbuilt, was destroyed. 'The population is estimated at from 35,000 to 40,000 .

BRIDGET'OWN, par. Irel. Cork; 3240 ac. Pop. 993.
BRIDGEWATER [ane. Imgia, Brugge-Walter, and Burgh Walur], a river-port, municipal and parl. bor. and par. England, co. Somerset, on both sides of the Parrett, between 8 and 9 m . from its embouehure in Bridgewater Bay, Bristol Channel, and $29 \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{W}$. Bristol, and on the Bristol and Exeter liailway. The river divides the town into two nearly equal parts, which are connected by an elegant iron bridge of one arch, erected in 1795, on the site of an ancient stone structure. The town is of considerable size, and generally well built, partieularly the more modern houses, all of which, as well as the old, are chiefly of red brick. There are several prineipal strects, and a number of smaller, the former spacious, well paved, and lighted with gas. In the portion of the town on the W. side of the river, water is abundant, and of excellent quality, but in that occupying the E. side it is more seanty, and less pure. There are three churehes-the parish church, or St. Mary's, 'Trinity Church, and St. Joln's. The first is a large, landsome, aneient structure, with a low tower at the W. end, surmounted by a lofty spire, together 174 ft . high. The interior decorations are very fine, and include an altarpiece of great merit. Trinity Church, which stands a littlo
out of the town, is a plain building, of no architectural pretension. St. Joln's is an elegant modern Gothic edifice, with a well-designed tower at the W . end. The other places of worship are eight in number, belonging to Wesleyan and Primitive Methodists, Baptists, Independents, Unitarians, Society of Friends, and R. Catholics. About a quarter of a mile from the town is a recently laid off cemetery. There are two endowed schools, within the borough-the free grammar-school, founded by King Janez I., and a school for the sons of decayed gentlemen and trades-people residing within the town; also, two national and Unitarian infant schools. There is one literary and scientific institntion, indificrently supported, and an infirmary, a plain building, established in 1814. The market-bouse, a modern building, is large and commodious, and forms a prominent object in the centre of the town. The townhall is a large, plain, modern building, containing apartments for the local law courts, and for the meetings of the town-council. The union-house, and hospital attached, is a large brick edifice, on the $N$. side of the town, capable of containing 368 paupers. Situated still further N. are the docks and warehouses, erected within the last few years; the former consisting of an outer and inner dock. The docks, which were made legal quays, July 20,1850 , comprise an area of 3 ac ., and are capable of accommodating 80 or 90 vessels of ordinary size ; the highest register entered was for 552 tons; vessela drawing 19 ft . can enter readily. In 1845, the number of vessels that entered inwards was 2997 ; tonn. 222,880 ;-outwards, 768 ; tonn. 30,000 . Bricks, \&c., not liable to enter at the enstom-house, and not including the above as exports from this place, amount to about 20,000 tons annually. The trade of the port may be averaged at about 200,000 tons. About 10,000 tons of timber are annually imported from the Baltic and America. One lmmired and three vcssels entered the docks from foreign ports in 1849 ; tonn. 12,220. The principal imports are timber, corn, coal, flax, divi-divi, tallow; and exports-bricks (scouring and builling), tilcs, timber, hay, beans, potatoes, \&c. The borough returns two members to the House of Commons; registered electors (1849), 529. The corporation consists of a mayor, six aldermen, 18 council-men, recorder, town-clerk, ant coroner. Bridgewater being chicfly a trading port, has few manufactures, the principal being brick making, including a kind of scouring-brick, composed of a mixture of clay and sand from the river, and called Bath or Flanders brick. There are also two corn-mills. It was the birthplace of the celebrated Admiral Blake, who was born there in 1599, and received his early education in King James's grammar-school in that town. Bridgewater obtained its ancient name, Burgh Walter, from its having belonged to Walter de Donay, one of William the Conqueror's followers, to whom it was given by that monarch. In the civil wars of the 17 th century, the inhabitants embraced the royal cause, and defended the town resolutely against the Parliamentarians, but were subdued by Fairfax, who carricd off a large booty, and 1000 prisoners. The town again suffered severcly for supporting the pretensions of the Duke of Monmouth, who was here received with great pomp, and proclaimed King. Pop. (1841), 10,436.

BRIDGTOWN, a post vil., port of entry, U. States, New Jersey, on both sides of Cohansey creek, 20 m . from its entrance into the Delaware Bay. It has, on the W. side of the creek, a court-house, jail, and public offices; on the E. side, a Presbytcrian, a Baptist, and a Methodist chureh, a bank, an academy, a public library, anl various manufactories. Thirty vessels, of from 50 to 80 tons, sail from the place. On the W. side of the creek are very extensive ironworks, which employ about 122 persons. Tonnage of the port (1840), 14,171 tons.

BRIDLINGTON or Burlington.-1, A market tn. and par. England, co. York. The town is agreeably sitnated abont 1 m . from the sea, 37 m . N.E. York, on the railway from Ifull to Scarborongh, and consists of one principal, and several smaller strects, narrow and irregular; honses, in general, ancient, but having a respectable appearance; lighted with gas. The parish church forms part of an ancient priory of elegant architecture, but now much defaced. There are places of worship for Independents, Baptists, Primitive and Wesleyan Methodists, the Society of Friends, and R. Catholics, together with a free grammar-school. A considerable trale is carried on in corn. Market-lay, Saturday, and two
fairs annually. Area of par., 12,410 ac. Pop. 6070.2, Bridlington Quay, a handsome modern little tr., about 1 m . S.E. Bridlington, on the sea coast, in the recess of Bridlington Bay. It consists of one spacious strect, and several smaller, is lighted with gas, and abundantly supplied with water. It contains a handsome new district church in the English style, besides places of worship for Wesleyans and Primitive Methodists, national schools, and an infant school. There is here an excellent harbour, enclosed by two substantial stone piers, which afford a safe retreat to coasting vessels during contrary winds, while the bay, which is protected from the N.W. winds by the coast, and the N. winds by Flamborough IIcad, offers safe anchorage to ships in gales of wind. Bridlington Quay is much frequented during the bathing season, for which a beach of fine hard sand peculiarly adapts it. For invalids, there are hot and cold baths, and commodious rooms. At a short distance from the town, there is a chalybeate spring of reputed efficacy. Pop. 1852.

BRIDP()RT, a seaport, bor., market tn., and par. England, co. Dorset, 14 m . W. by S. Dorchester, in a fertile valley, surrounded by hills, with the river Bride, whence the town is named, on the W., and the Asher on the E. These streams unite S. of the town, and form a commodious harbour, of easy access ; lat. $50^{\circ} 42^{\prime} 7^{\prime \prime} \mathrm{N}$. ; lon. $2^{\circ} 44^{\prime} 5^{\prime \prime} \mathrm{W}$. (r.) Bridport consists chiefly of three spacious, clean, and well-pavel strects, containing many well-built modern houses, mostly of brick, with a few of Portland stone. It is well lighted with gas, but the supply of water is not abundant. In the centre of the town is the market-house, a bandsome building in the Grecian style, centaining the townhall, which occupics the second story. The church is a bcautiful structure, and contains a fine organ. There are, besides, seven chapels for Wesleyans, Independents, Baptists, Unitarians, R. Catholies, and a Quakers' meeting-house. The cducational and literary institutions are, one public, and four private schools, with several excellent boarding-schools, a mechanics' institute, young men's mutnal improvement society, and a young men's Christian association. The principal manutactures are hempen goods, sailcloth weaving, and shoe-thread, which are carricel on to a considerable extent. The harbour is safe and commodious for vessels not excecding 250 tons. The principal imports are coals, timber, hemp, and flax ; exports, manufactured hempen goods, and fishing-nets, chiefly for Newfoundland and Holland. The number of vessels registered at the port in 1847, was 21 ; tonn. 2105. The number entered for the same year was 255 ; tonn. 19,767 ;-clearcd, 147 ; tonn. 8570. In 1845 , the former was 232 ; tonn. 1647 ; -the latter, 139 ; tonn. 5919 ; slıowing an increase of several theusand tons, in both cases, in favour of 1847. Shipbuild ing is carried on to some extent. Market-days, Wednesday and Saturday; and three fairs annually. Bridport returns two members to the House of Commons; constituency (1850), 538. Area of par. 250 ac . Pop. 4787.-(Local Correspondent.)

BRIDSTOW, par. Eng. IIereford; 1870 ac. Pop. 625.
BRIE, a dist. France, which formed part of Champagne and Isle-de-France, and had Meaux for its capital. Its name was derived from a large forest called Saltus Brigensis, still in part existing. It is now included in deps. Seine et-Marnc, Aisne, and Marne.

BRIE comte-hobert, a tn. France, dep. Seinc-et Marne, 12 m . N.N.W. Melun, r. bank, Isère. Its former fortifications are now demolished; and its old castle, founded by Count Robert, brother to Louis VII., is now a heap of ruins. The parish church was built in the 13 th century, and has some remarkable tombs. The only manufacture is that of writing quills, but a good trade in grain and cheese is carried on. Pop. 2629.

BR1EG, a tn. Prnssia, prov. Silesia, 1. bank, Oder, cap. circle of same name, 26 un . S.E. Breslau; a thriving place, with well-built houses, and broad and straight streets. It is surrounded by fortifications, which, however, are not very formidable, and some of which have been converted into promenades. It has five gates, two Lutheran, and two R. Catholic chmrches, a synagogue, several hospitals, and other charitable institutions; a gymnasium, with a good library attached; and a lmatic asylnm. Its mannfactures consist of linens, woollens, woollen gloves, and stockings; cottons, ribbons, lace, leather, tobacco, \&c. Its trate has gained much by the completion of the Vienna and Breslau Railway,
on which the town lies. It is the seat of a head office for the royal Silesian mines, of a royal salt factory, and of distriet courts of justice. The Oder is crossed here by a substantial wooden bridge. Pop. (1846), 12,615.-The cincle, area, 174 geo. sq. m., consists almost entirely of an extensive fertile plain. It is traversed by the Oder, on the l. bank, of which the soil is generally a strong loam, while on the r. it is rather of a sandy nature. The principal crops are wheat and barley. On the left of the Oder, German, on the right Polish, is generally spoken. Pop. 46,761 , of whom nearly nine-tenths are Protestants.

BRIELLE, or The Briel, a tn. and fortress, Holland, prov. S. Holland, 1. bank, Maas, and near its mouth; 14 m . S.W. Rotterdam; lat. $51^{\circ} 54^{\prime} 15^{\prime \prime}$ N.; lon. $4^{\circ} 10^{\prime}$ E. (R.) An outer haven connects its two inner havens with the Brielle-diep at the narrowing of the Maas, by the island of Rozenburg. As Brielle commands the mouth of an important river, it is well fortified, particularly towards the sea. It has a water and three land gates, is intersected by several eanals, has three market-places, a townhouse, prison, arsenal, and look-outhouse, for the use of pilots. The Reformed have two ehurehes. The larger is remarkable for the height of its tower, which forms a characteristic feature of the place when seen from the sea; and a chime of two octaves of bells. The R. Catholics have also a church, and the Jews a synagogue. Brielle lias an orphan house, two hospitals for the old of both sexes, a military hospital, a savings'-bank, and several benevolent societies, a department of the public utility society, a Latin, a Dutch and French, a Dutch, and a poors' school.

Brielle was a flourishing town early in the 15 th century, when it had a large trade with the Baltic and Scotland. The cutting of the Voorne Canal, and the transference of the English steam-packet station to Helvoet-sluis, have diverted business to other channels. But it will ever bear a conspicuous place in history, as the first place in which the standard of Dutch independence was raised, in the 16th century, and the first fortified town in IIolland, in which the burghers, without the slightest aid from without, rose against and overpowered the French garrison, in 1813, in both instances verifying the words, Libertatis primitio, inscribed in front of the townhouse. Pop. 4170.

BRIENNE-le-chateau, a th. and com. France, dep. Aube, 14 m. N.W. bar-sur-Aube, at the foot of a high hill. The town consists of two streets, behind whieh is situated the clateau, a magnificent edifice, erected in the last century by Louis de Lomenie, last Count of Brienne. In 1776, a military school was established here, which Napoleon Bonaparte entered as a pupil, April 23, 1779 ; being thus 10 years of age, and unable to speak any language but Italian. He left the school October 17, 1784, after an attendance of five and a half years. Brienne, which saw the first dawn of Napoleon's career, had almost seen its termination thirty years after; for, as he was about to enter the town after driving Blïcher out of it, a band of Cossacks charged his staff, and one of them, who had couched his lanee at the Emperor, was only arrested by a bullet from the pistol of Gourgaud, when so near Napoleon that the Cossack fell at his feet. The town had been almost destroyed in the contest, and Napoleon promised to rebuild it, and found a military school in place of the old one, which had been suppressed in 1790 . His projects were never realized, but he bequeathed a million of franes to the town, and 200,000 to the inhabitants, who had suffered most severely. Pop. 1930.

BRIENON, or Bhenon L'Archevecque, a tn. France, dep. Yonne, 10 m . E. Joigny. It is well built, clean, and agreeably situated on the Burgundy Canal, which separates it from a suburb called the Port. It manufactures coarse cloth, and has worsted-mills and tanneries, and carries on a large trade in firewood, charcoal, and grain. Pop. 2661.

BRIENZ, a tn. Switzerland, can. Bern, beautifully situate on the N.E. shore of the lake of same name; on a narrow ledge, at the foot of the Bernese Alps, and in the immediate vicinity of the Giesbach Falls. The shore of the lake is lined by the gardens of the town, enelosed by a wall 8 ft . ligh, to protect them from inundation. The church, with some old ruins, and a handsome school, stand on a lieight, and have a very picturesque appearance. The ehief article of traffic is cheese, which bears the name of Brienz, and is celebrated. Pop. 3102.

BRIENZ (Lake of), [German, Brienzersee], a lake, Switzerland, can. of, and 30 m . S.E. Bern; 8 m . long, N.E. to $\mathrm{S} . \mathrm{W}$., and on an average about 2 m . broad. It receives the Aar at its E. extremity, and at its W. empties its surplus water, by a continuation of the same river, into the Lake of Tlun. It is surrounded by lofty mountains, the chief of which. the Rothorn. commands magnificent views of the whole range of the Bernese Alps. The lake is 850 ft . abore the level of the sea, and varies in depth from 80 to 300 fathoms. A small steamer now plies upon it. The principal fish is the Lotte, a fish in some respects resembling herring, which is esteemed a great delieacy.

BRIERLY-HILL, a vil. England, co. Stafford, $2 \frac{1}{4} \mathrm{~m}$. N.N.E. Stourbridge. It has several streets, a large chapel, a national school for 500 children, and a handsome infant school. There are numerous collicries, large ironworks, glassworks, and potteries in the vicinity, and the manufacture of steam-boilers, and other heavy articles of iron, is extensively carried on.

BRIES, Brisen, or Brezno-Banya, a royal frce tn. Hungary, co. Sohl, on the Gran, 22 m . E.N.E. Neu SohI. It stands on a plain, surrounded by hills and forests, and contains a parish ehurch, Piarist college, and grammar-school. The inhabitants live chiefly by agriculture, the rearing of cattle, and the timber trade, and make an exeellent cheese, which is known by the name of the town, and extensively exported. Pop. 3500.

BRIEUC (St.), a seaport tn. France, cap. of dep. Côtes-du-Nord ; lat. (cathedral) $48^{\circ} 30^{\prime} 54^{\prime \prime} \mathrm{N}$. ; lon. $2^{\circ} 45^{\prime} \mathrm{W}$. (r.); on the Gouet, about 1 m . from its mouth, in the Bay of St. Brieuc. The port, properly speaking, is the hamlet of League, at the mouth of the river, with quays accessible to vessels of 300 or 400 tons. The intermediate space is partially occupied by build ings, which have rapidly increased of late years. The town is badly built, with old tortnous streets, and has several public fountains, bridges, and a cathedral erected in the 13 th eentury. On the top of a promontory, conimanding the entrance to the river, are the remains of the tower of Cesson, which IIenry IV. attempted to blow up after the wars of the League. It now serves as a landmark, visible 15 m . at sea. The town is a bishop's see, and has courts of first resort and of commerce, an agricultural society, communal college, diocesan seminary, school of hydrography, and a public library with 24,000 velumes. Linsey-woolseys, drabs, and moleskins, serges, paper, leather, gilt buttons, and liqueurs are manufae tured here, and a tolerable trade is carried on in agricultural produce. Vessels are equipped for the Newfoundland codfishing, in which the inliabitants were at one time largely engaged, but it has now fallen much off. Races are annually held on the sands below the tower of Cesson for three days: during the first fortnight of July. Pop. 9398.

BRIG, or Brieg, a tn. Switzerland, can. Valais, between 1. bank, Rhone, and its small tributary the Saltina, and at the commencement of the ascent over the Simplon, 47 m . N.E., Martigny. It is well built; and the houses are covered with a white slate, which shines like silver. During the last European war, it carried on an extensive and gainful traffic, but, since the peace, it has lost all its importanee; has no manufactures, and scarcely any trade. The most conspicuous building is the Jesuits' college, and church attached. There is also an Ursuline convent. Pop. 751.

BRIGA, a vil. Sardinian States, prov. of, and 33 m . N.1. Nice, on the Livenza; with a castle, and collegiate church; and trade in cattle, wax, and honey. Pop. 3000.

BRIGG. See Glandford-Brigg.
BRIGHAM, par. Eng. Cumberland; 22,580 ac. P. 7397.
BRIGHOUSE, a vil. and ecclesiastical dist. England, eo. York, W. Riding, 3 m . E. by N. Halifax. The village, delightfully situated in the Calder Valley, coutains many handsome houses, and is kept in excellent order; the church is an elegant structure, with an embattled tower. The manufacture of worsted and cotton goods, and of cards for wool, flax, and cotton, is carricd on. The town has some tanneries and flour-mills; and there are valuable quarries in the vicinity, from which stone is sent to different parts by the Calder and Ilibble navigation. The Yorkshire and Laneaster Railway has a station at the village. Pop. (1841), 320 ; ; 1851 ), 6091.

BRIGIIT, par. Irel. Down; 5544 ac. Pop. 1886.
BRIGHTL1NG, par. Eng. Sussex; 3390 ac. Pop. 692.

BRIGHTLINGSEA, par. Eng. Essex;2890 ac. P. 2055. BRIGHTON [formerly Brighthelmstone], a parl. bor., maritime tn., watering-place, and par., England, co. Sussex, at the junction of the London and Brighton with the S. coast Railway. The town is 47 m . S. London, or by railway $50 \frac{1}{2} \mathrm{~m}$. ; lat. (pier light) $50^{\circ} 49^{\prime} \mathrm{N}$. ; lon. $8^{\prime} \mathrm{W}$. (r.) ; on a slope near the centre of the curved line of coast, between Beachy Head and Worthing Point, and stretching along the shore for nearly 3 m . It is divided into two nearly equal parts by an open space of ground called the Steyne or Steine, surrounded by elegant houses. The high land of the S. Downs, imnediately behind the town, protects it from the N. winds.

Brighton comprises upwards of 500 streets, of all descriptions, with numerous handsome terraces, squares, and crescents. The principal streets have a slight curve in conformity with the shore line, and contain many shops fitted up in the most splendid style. In front of the town is a stupendous sea wall, extending nearly 2 m ., and supporting a spacious drive and promenade, constructed at a cost of $£ 100,000$. The houses are mostly of brick and flint-stone, and some of those of modern erection 6 or 7 stories in height; many of them are covered with cement, painted and finished in a tasteful and ornamental style. The town is abundantly supplied with water, and well lighted with gas. The buildings of any note, exclusive of the clurches, are few. The most remarkahle
tional institutions comprise the Brighton College, opened in 1847, for the education of the sons of noblemen and gentlemen; the St. Mary's Hall Institution, for the education of the daughters of poor clergy; a diocesan school, for training school-mistresses; several national schools, British schools, ragged schools, numerous private schools, \&c. The benevolent institutions are the county hospital, already named, containing about 50 rooms, some of them large enough to hold 20 beds; a dispensary ; an infirmary, for diseases of the eye; lying-in dispensary ; self-supporting dispensary ; orphan asylum ; Percy alms-houses ; and Swan Downer's school for girls. Literary institutions :-the royal literary and scientific institution, athenæum and young men's literary union, working man's institute, \&c. At a short distance E. from Brighton, on a piece of sloping ground, a cemetery, having an area of 13 ac., was laid off in 1850.
Brighton has no manufactures; the greater portion of the inhabitants being almost exclusively engaged in providing for the accommodation and comfort of the numerous visitors who resort to the town. Some idea of the extent to which this prevails may be inferred from the fact, that there are no fewer than 500 regular lodging-house keepers, besides a large amount of hotel and private accommodation; and 346 licensed hackney coachmen. Building is the chief source of employment to the mechanics and labourers resident in the town; but mackerel and herring fishing are also extensively prosecuted, there being about 400 persons so employed.

Races are held here in the beginning of August. The race-course is situated on the summit of the Downs, to the N. and N.E. of the town.

Brighton was anciently a fortified town of considerable importance; but was gradually annililated by the sea, which has, from time immemorial, been encroaching on the coast of Sussex. In the reign of Elizabeth, the town stood in the tract where the chain pier stands, but no traces of it are now perceptible; and but for the sea wall recently ereeted, the modern town would, in all probability, have shared a similar fate. The town owes its prosperity to George IV., who made it his residence when Prince of Wales. Brighton returns two members to the House of Commons. Registered electors (1849), 2776. Area of par. 1980 ac. The increas of its population is remarkable; in 1801, it was only 7339 ; in 1821, 24,429; in 1841, it had reached 46,661 ; and is now (1851) estimated at 63,000.- (Local Correspondent.)

BRIGHTON (New), a watering place, England, co. Chester, 3 m. N.W. by N. Liverpool. It forms the N.E. corner of the peninsula of Wirral, between the Mersey and the Irish Sea. It possesses excellent natural advantages for sea bathing, having a bracing atmosphere, a smooth and firm sandy beach, and clear water. It has communication with Liverpool by stcamers every hour. On the black rock, at the confluence of the Mcrsey with the Irish Channel, is a strong fort, mounting 15 large guns.

BRIGH'T'WELL, three pars. England:-1, par. Berks; 1680 ac. Pop. 611.-2, par. Suffolk; 510 ac. Pop. 81.3, Brightwell-Baldwin, par. Oxford; 1660 ac. Pop. 312.

BRIGNALL, par. Eng. York, N. Riding; 1910 ac. P. 190.
BRIGNANO, a vil. Austrian Italy, gov. Milan, prov. of, and 11 m . S. Bergamo, surrounded by walls, and entered by two gates. It has a large and handsome chureh, and a palace of the Counts of Milan, and some trade in silk and lace. Pop. 2655.

BRIGNOLES, a m. France, dep. Var, 22 m . W.S.W. Draguignan, pleasantly situated in a fertile valley, surrounded by wooded hills, and watered by a small stream named the Calami. It is well built, and has several squares planted with trees, and ornamented with handsome fountains; is the seat of courts of first resort and of commerce, and has a normal school for the department. It has long been celebrated for its salubrity, and formerly was the summer residence of the Counts of Provence. It manufactures common cloth, silk, crockery, soap, wax candles, glue. and has distilleries, several
extensive tanneries, and silk and fulling mills. The neighbourhood produces olive-oil, and large quantities of excellent prunes, called prunes de Brignoles. 1'op. 4707.

BRIGOWN, par. Irel. Cork; 15,2 12 ac . Pop. $10,614$.
BRIGSLEY, par. Eng. Lincoln; 860 ac. Pop. 125.
BRIGSTOCK, par. Eng. Northampton; 5900 ac. P. 1262.
BRIGUS, a settlement, Newfoundland, Conception Bay, S. of Port de Grave. It is a wild rocky place. Pop. 2000.

BRIHUEGA, a tn. Spain, New Castile, prov. of, and 19 m . W. by S. Guadalajara, on a stony slope, r. bank, Tajuna, crossed here by a stone bridge of one arch. It was formerly surrounded by walls, of which, and its gates, the ruins yet remain. The town is tolerably built, though with badly-paved and crooked strects, and has four parish churches, four schools, a townhouse, hospital, prison, 14 public fountains, and the remains of an old Moorish fortress, which now serves as a cometery. Manufactures:-crlass, cloth, woollen fabries, and shoe leather. Pop. 4464.

BRILLL, par. Eng. Bucks; 2600 ac. Pop. 1449.
bRILL (The). See Buelle.
BRILLEY, par. Eng. Hereford; 4250 ac. Pop. 587.
BRILON, a tn. and circle, Prussia, prov. Westphalia, gov. Arnsberg. The town, on a height above the Mönne, $23 \mathrm{mn}$. E. Arnsberg, is one of the oldest in Prussia, has two churches, one of them, the Great Parish Church, said to have been built by Charlemagne in 776; a college, an hospital, and manufactures of linen, tinware, and nails. In the neighbour hood are mines of iron, lead, and calamine. Pop. 3301.The cincle, area, 280 geo. sq. m., is rugged and mountainous, at some points ncarly 2500 ft . high, and yields silver, copper, iron, lead, calamine, and gypsum. There is not much land nnder the plough, but a great number of cattle are reared. Pop. 33,000.

BRIMFIELD, par. Eng. IIereford; 1880 ac. Pop. 591.
BRIMI'SFIELD, par. Eng. Gloucester; 2240 ac. P. 417.

BRINDISI [anc. Brundusium], a seaport tn. Naples, prov. Terra di Otranto, on a small promontory, in a bay formed by the Adriatic; lat. $40^{\circ} 39^{\prime} \mathrm{N} . ;$ lon. $18^{\circ} 1^{\prime} \mathbf{E}$. Brundusium was one of the most important cities of ancient Italy, and one of the most flourishing ports in the Adriatic. It had an excellent harbour, from which the Romans usually embarked for Greece and Asia. Cæsar attempted to blockade Pompey's flect here, and commenced the ruin of the harbour, by running mounds of earth across the entrance. In the 11th ecntury, it fell into the hands of Roger Guiscard, King of Naples, and in the 12 th, its population is said to have amounted to 60,000 . It is now a fortified town of the third class, but its defences are of little importance. The inhabited houses are scattered over a great extent of ground, where many vestiges of antiquity are still visible. Brindisi is the seat of an archbishopric, and has a cathedral, several churches, convents for both sexes, a seminary, college, and two hospitals. The harbour only admits small vessels. There is good anchorage in the roadstead. The poct Virgil died at Brundusium, in the year 19 в.с. Pop. 6555

BRIONES, a walled tn. Spain, Old Castile, prov. of, and 22 m. W.N.W. Logroño, on a declivity, near r. bank, Ebro. It is composed of a square, and several well-paved, clean, and neat streets, and has a parish church, Latin, and two endowed schools, townhouse, prison, hospital, and cemetery. Manu-factures:-linen and hempen fabrics, and brandy. Trade:export of manufactures, wine, brandy, and hemp. Iop. 2736. BRIONNE, a tu. France, dep. Eure, 9 m. N.E. Bernay, on the Rille. It was formerly strongly fortified, and suffered
several sieges during the English wars in France. Mant-factures:-cloth and cotton spinning. 1’op. 1902.

BRIOUDE, a tn. France, dep. Haute Loire, 28 m . N.W. Le Pny, near l. bank, Allier, in a spacious basin, surrounded by hills. In general it is badly built, with narrow, dirty streets. The only edifices of note are the college, and the cathedral church of St. Julian, founded in the ninth century. Brionde has courts of first resort and of commerce, a communal college, an agricultural society, and a public library. It has manufactures of linen and woollen stuffs, and a trade in grain, wine, hemp, and antimony. Lafayette was a native of this town. Pop. 4795.

BRISACH (Neuf). See Neur-Brisachi.
BRISPANE, an inland co. New S. Wales; length, 86 m . S.W. to N.E.; breadth, at the broadest part, about 48 m .; area, 2344 sq . m., or $1,500,160 \mathrm{ac}$. It consists of several ranges of table land, with occasional plains and peaks, some of which rise to a considerable elevation. In this county is situated the burning hill called Mount Wingen, or the Burning Mountain; lat. $31^{\circ} 55^{\prime} \mathrm{S}$. ; lon. $150^{\circ} 56^{\prime} \mathrm{E}$. The portion of it under the process of combustion is from 1400 to 1500 ft . above the level of the sea. The stock of the county is computed at 1332 horses, 11,125 head of horned cattle, 211 pigs, and 174,969 sheep. The chief town is Murrurundi. Pop. 1406; of which 936 are males, and 470 females.

BRISBANE RIVER, New S. Wales; it rizes in the mountains in the county Canning, flows S.E. to lat. $27^{\circ} 35^{\prime}$; lon. $153^{\circ}$ E., when it suddenly bends round, and, after a further course of about 15 m . in a N.E. direction, falls into Moreton Bay. The whole length of the stream is about 70 m . The tide ascends 50 m . above its mouth.

BRISIGHELLA, a tn . Papal States, deleg. of, and 26 m . S. W. Ravenna, on the Amone. It has a considerable trade in silk. Pop. 2500.

BRISLEY, par. Eng. Norfolk; 1230 ac. Pop. 388.
RIRISLINGTON, par. Eng. Somerset; 2960 ac. P. 1338
13RISSAGO, a tn. and par. Switzerland, can. Tessin, W. bank, Lake Maggiore, 6 m . S.W. Locarno. The situation is remarkably pleasant. The houses, of a white colour and checrful appearance, are built on sunny slopes. Orange and citron trees line the shore of the lake, and an alley of old cypresses leads to the church, which is adorned by a fine picture by a native artist, named Caldelli. The situation of Brissago gives it a good transit trade. Pop. 1493.

BILISTOL, a city, co., and seaport, England, situated near the mouth of the Bristol Channel, at the S. extremity of co. Gloucester, and the N. of Somerset, but independent of both; covering seven knolls or hills, and their intermediate valleys, on both sides of the Avon and Frome; lat. $51^{\circ} 26^{\prime} 8^{\prime \prime}$ N.; lon. $2^{\circ} 35^{\prime} 5^{\prime \prime}$ W. (r.) ; 120 m . W. London by the turnpike road, and $118 \frac{1}{2}$ by the Great Western Railway, which here connects with the Bristol and Birmingham, and the Bristol and Exeter Railways. The entire city, with its suburban districts -Clifton, Westbury, Montpelier, St. Philip and Jacob Out, and Redminster-all of which are included within the parliamentary and municipal borough, has an area of about 2000 ac ., and a circumference of abont 9 m . The old town, which now forms the heart of the city, stands upon a narrow hill, about 40 ft . in height. Of the eminences on which Bristol is built, the highest are St. Michael's Hill and Kingsdown, which are 200 ft . above the lower parts of the town. In the old town, some of the streets are narrow, and the houses lofty and incommodious; but, in the more modern parts, the former are wide, and the buildings elegant and spacious. Many of the principal merchants and traders, however, reside at Clifton, Westbury, Abbots' Leigh, and in the other suburbs. Bristol is tolerably well supplied with water for ordinary household purposes, and now with wholesome drinking water, from the river Chew and the Rarrow Springs by the New Water Works Company. In the report of the 'IIealth of Towns' Commission,' the want of a sufficient supply of soft water-most of that in Bristol bcing hard-is represented as the cause, in a great measure, of that unusual amount of ancleauliness amongst the poor of the city, which, combined with deficient sewage, has ranked it as the third most unhealthy town in England.

Churches, Chapels, and Public Buildings.-The established churches and chapels of Bristol are 36 in number, besides four R. Catholıc chapels, one Jews' synagogue, and 42 dissenting clapels of the various denominations. Bristol pos-

## BRISTOL

seases rather more than the usual proportion of handsome pnblic buildings, among which may be mentioned many of its churches, some of which present beautiful specimens of early English architecture, particularly the cathedral, a fine
establishments are the city grammar-school, where upwards of 200 boys receive a good classical and commercial education; the college grammar-school ; Queen Elizabeth's hospital, for the education, subsistence, and apprenticing of 100 boys, to be increased to 200; Colston's hospital, for maintaining, educating, and apprenticing 100 boys, which, with two other schools, and several alms-houses, was founded and endowed by the philanthropist Edward Colston, upwards of a century ago; a school in Temple parish for 40 girls; the merchants'-hall school for teaching gratuitonsly the sciences of mathematics and navigation, in addition to a general education; the Red Maid's school, for maintaining and instructing about 120 girls, and afterwards providing them with places of service; the Bishop's College, opened in 1831, for teaching a university education, \&c. In addition to these, there are a variety of unendowed schools, upon the Lancas. terian, national, and other plans of education, to the number of 58 . On the books of these schools, by a return just (1850) made, there are 4179 boys, of whom 3275 are in daily attendance; 3080 girls, of whom 2296 are in daily attendance; and 2270 infants, of whom
structure, in the form of a cross, 175 ft . in length; breadth of transept, 128 ft ; height of tower, 140 ft : : and breadth of the nave and aisles, 73 ft . Of the parish clurches, that of St. Mary Redeliffe, which is now (1850) being restored, is one of the most elegant ecclesiastical structures in England. It was founded in 1249, and is of various dates, and built in the form of a cross, having a nave raised above the aisles, and lit by a series of lofty windows on each side, in the manner of a cathedral. In the muniment room over the N. porch of this church, Clatterton pretended to have found the poems which he attributed to Rowley. Among the other public buildings

1572 were in attendance. In the day and the endowed schools there are therefore 19,089 children entered, receiving education. This return does not include evening and Sundayschools, of which there are several. The hospitals, almshouses, and other charitable institutions, are very numerous; and the donations and bequests to the poor, both in and out of the Corporation and Charity Trustees, exceed in number and amount those of any other place in England, except London. The Bristol infirmary, now (1850) the Royal lnfirmary by grant of Her present Majesty, was founded in 1736, and is the largest provincial infirmary in the kingdom; the Bristol general hospital was founded in 1832 , and is now (1851) about to be rebuilt in a more extensive form ; the Bristol institution for diseases of the eye in 1810, and the eye-dispensary in 1812. There are also two dispensaries for the treatment of diseases generally. The workhouse usually contains about 550 innates, and the out-poor generally amount to about 4000 .

Manufactures. - Bristol has numerous glassworks and potteries, and has long been famous for its glass and pottery ware. There are also brass, copper, zinc, lead, iron, and tin works; chain, cable, and anchor factories; sugar refineries; locomotive, and other steam engine works; distillcries, brewerics, malthouses, chemical works; soda, soap, leather, ropes, sails, shoes, saddlery, patent shot, spelter, floor eloth, pins, hats, tobacco and snuff, \&c., are also extensively manufactured; and a large cotton factory, employing several liundred hands, has recently been erected. On the banks of the Avon are several dockyards, in which shipbuilding, to a very considerable extent, both in wood and iron, is carried on, Bristol having been for centuries celebrated for this art, and having built some of the finest frigates used in the late wars, and steamers used in the Royal Mail service. Commerce. -The commerce of Bristol is principally with the West Indies, the Mauritius, Havana, Venezuela, the East Indies, China, Canada, and the U. States, carried on in vessels varying from 500 to above 1000 tons. There is also an extensive fruit trade with the Mediterranean and the Azores, and considerable commercial intercourse with Russia, S. America, France, and the African coast. Bristol formerly possessed a large trade with Spain in wools, but this has latterly fallen into decay. With America, outwards, the trade is principally in emigration, iron, or coals for ballast; this trade is rapidly

## BRISTOL

increasing, as are also the imports from the U. States and C'anada, consisting of cotton, timber, flour, provisions, tobacco, and turpentine. The tobacco trade of Bristol is considerable, and the manufacture of suuff extensive. The quantity of leaf tobacco entered in 1843 , amounted to $1,326,605 \mathrm{lbs}$; of manufactured tobacco and cigars, 790 lbs . From the period of the establishment of the floating harbour up to 1848, owing to heavy dues being charged by the dock comprany, the trade of Bristol did not increase correspondingly with other ports, but in that year the enormous dues were reduced, and the trade has been improving ever since. On January 1, 1846, the number of sailing vessels registered at the port of Bristol was 272 , tonn. 38,143 ; steam vessels, 26 , tonn. 3905 .

Bristol also possesses a very considerable Irish and coasting trade, which is also increasing, employing, in 1847, 546,753 tons of shipping, and in 1850, 643,217 tuns. The inland sommerce of Jristol is much promoted by the Great Western, the Birminghain and Bristol, and other railways, and by the extensive internal water communication afforded by the Severn, the Wye, the Usk, the Avon, the Parret, the Tone, and the numerous canals connected with them.

Municipal Government.-Bristol received from Henry II. a partial charter; which was confirmed and extended by John and Henry III. Edward III. constituted it a city and county in itself; and Henry VIII., after the general dissolution of the religious houses, made it the seat of a bishopric. Its privileges were still more extended by the charters of Elizabeth and Charles I.; and it received a new charter from Charles II., which was confirmed by Queen Anne. By the new Municipal Act, the city is divided into 10 wards, and is governed by a mayor, 16 aldermen, and 48 councillors, with a recorder. It holds its own sessions. Bristol has returned two members to Parliament since the 23d of Edward I. in 1283 ; nuniber of electors (1850), 11,032. In October 1831, this city was the scene of a series of frightful riots, which lasted for several days; when the custom-house, the excise office, the bishop's palace, the public jails, and more than 40 private houses, were burned down, and many lives were lost. The pretext for the riots was the attempt of Sir Charles Wetherell, who had rendered himself very unpopu-

places, and a daily market, which is well supplicd. Two annual fairs, for two days each, are held March 1, and September 1. They used to be frequented by dealers from all parts of the country, but of late have greatly declined.

The suburban town of Clifton, the locality of the celcbrated Bristol waters, is situated about 1 m . N. the city, on the summit of lofty eliffs, whence its name. It contains a humber of elegant squares, terraces, crescents, and many handsome houses, of freestone and limestone, from quarries in the vicinity. The streets are well paved, and lighted with gas. There are four churches, and a chapel of ease, besides chapels belonging to the Independents, Wesleyan Methodists, and Baptists, and an unfinished R. Catholic place of worship, intended for a cathedral. The national school is the only endowed school in Clifton, but there is an educational institution, called Bishop's College, at which a university education is given, several academies for the higher elasses, both male and female, and a number of private subscription schools for the children of the poorer inhabitants. Being merely a watering place, Clifton has neither trade nor manufactures. Its medicinal waters, and the beauty of its scenery, form its chief attractions, and are the sole sources of its prosperity. In the scheme of Pope Pius IX., in 1850, for establishing a Papal hicrarchy in England, a R. Catholic bishop was appointed to Clifton. The pop. of the town is estimated at 20,000.

Bristol was a fortified city in the fifth century, but was not otherwise of any consideration, but in the beginning of the 12 th century, when it was called Bric or Briestow, it had become a place of some importance. In the reign of Edward III., it contributed to the service of that monarch against France as many ships and nearly as many men as London, while Liverpool, a few years before, had furnished one small barque only. With exception of some occasional vicissitudes, it continued from this period to advance steadily, till it became one of the most flourishing and wealthy towns in the empire, being, in the 17 th century, next to London, the greatest seaport in England. At this period it carried on a tluriving trade with N. America and the West Indies, not the least active or profitable part of which was shipping kidnapped persons for the colonies-a traffic in which the first magistrates of the city were extensively engaged, and from which sume of them derived large fortuncs. The Bristol of these days, however, was a very different place from the Bristol of the present time, as may be learnt by reference to Macaulay's History of England (vol. i. p. 535, et seq.), where, amongst other curious particulars, it will be found that the streets were theu so narrow, that if a coach or cart ventured into them, there was no small danger of its being wedged between the houses; that goods were conveyed about the town on trucks drawn by dogs, and that the richest inhabitants exhibited their wealth, not by riding in gilded carriages, but by walking the strects with trains of servants in rich liveries, and by keeping tables loaded with good cheer. Among the more cminent natives of Bristol, were William of Worcester, the topographer; William Grocyn, an eminent Greck professor at Oxford ; the celebrated discoverer of Newfoundland, Sebastian Cabot, son of a resident Venetian; the ill-fated Chatterton; Bayley, the sculptor; Bowdich, the African traveller; and the late poet-laureate, Dr. Southey. Bristol returns two members to the House of Commons. Registered electors in $1850,12,157$. Pop. in 1831, 59,074, exclusive of the suburbs, which returned 44,812; total (1841), 1 40,158.-(Local Correspondent.)

BRISTOL, a flourishing tn. and port, U. States, Rhode Island, 15 m. S. by E. Providence, on E. side, NarrgansettBay; lat. (Episcopal church) $41^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $71^{\circ} 17^{\prime} 15^{\prime \prime}$ W. (r.) It has a townhouse, and five churehes,
lar by his opposition to the Reform Bill, to make a public entry into the city as recorder, previous to holding the assizes. Bristol confers the title of Earl and Marquis on the noble family of IIervey. It has three principal market

Baptist, Christian, Congregational, Episcopal, and Methodist; and two banks. It has a good harbour, and is extensively engaged in the coasting trade and the fisherics. Tonnage (1840), 15,890 . Pop. 3490.

BRISTOL BAY, N. America, Russian territory, S.W. coast, having the promontory of Aliaska on the S., and Cape Newenham on the N.; lat. $58^{\circ}$ N.; lon. $158^{\circ}$ W.

BRISTOL CHANNEL, England, an arm of the Irish Sea, extending between the S. shores of Wales and the coast of Somerset and the N. coast of Devon, and terminating in the estuary of the Severn; remarkable for its high tides, and for the rapidity with which they rise. Outside the channel, the spring tides rise from 22 to 24 and 26 ft ., at the mouth of the Lower Avon to 48 ft ., and at Chepstow to 60 ft . Taking Lundy Island, lat. $51^{\circ} 10^{\prime} 6^{\prime \prime} \mathrm{N}$.; lon. $4^{\circ} 40^{\prime} 15^{\prime \prime} \mathrm{W}$. (r.), as the W. extremity of the channel, and meridian $3^{\circ} \mathrm{W}$. as the E. extremity, it will be about 50 m . long, by a breadth varying from about 40 to 14 m .

BRISTON, or Burston, par. Eng. Norfolk; 2450 ac. Pop. 963.

BRITAIN (Great). Sce British Empire (The).
BRITAIN (NEw), the name of two large and several small islands, in the S. Pacific Ocean, lying between the parallels of $4^{\circ}$ and $6^{\circ} 30^{\prime} \mathrm{S}$., from near the N.E. point of New Guinea, to the S.W. part of New Ireland; and having Dampier Strait to the W., and St. George Channel to the E. The two larger islands contain mountains of great elevation; and at the N.E. extremity of the most northerly, is a volcano in active operation. Extensive plains, of great fertility, stretch along the shores of both islands, which produce cocoanuts, sago, bread-fruit tree, and other kinds of palms; also bananas, yams, ginger, sngar-cane, bamboo, \&c. Pigs, turtle, and fish, are also plentiful. The islands of New Britain have a large population, a stont and well-made race, of very dark complexion, and bearing altogether a strong resemblance to the natives of Papua. These islands were believed to form part of the latter, till the discovery of Dampier Strait, in 1699 or 1700 , by the celebrated navigator of that name, who established their insular character.

BRITANNIA ISLAND [native name, Uea], in the S. Pacific, off N. W. extremity of New Caledonia; lat. $21^{\circ} 26^{\prime}$ S.; lon. $168^{\circ} 10^{\prime}$ E. (r.) It is about 30 m . in length, of coral formation, elevated on the S.E. part to about 250 ft ., and quite level on the top; the other parts are not quite so high, and the whole of it is thickly wooded. The coast on the S.E. part is composed of perpendicular cliffs, and no sonudings within 100 yards of the breakers; on the W. side the land is low, thickly studded with cocoa-nut trees, and laving a white sandy beach stretching along its margin, which gives the shore a beantiful appearance. From the E. side to the centre of the island, the ground is rocky, and destitute of soil; but on the W. side, around, and a little inland from the villages, the soil is good, and capable of producing every variety of tropical fruits and vegetables. It is well cultivated, and yields abundant crops of sweet potatoes, bananas, and sugar-cane. The climate is salubrious, and well adapted to a European constitution. The island is inlabited by two distinct tribes, who live in a constant state of warfare. They are generally above the middle size, and their complexion between black and copper colour. They are treacherous, and are accused of cannibalism. Pop. estimated at about 4000.

BRITFORD, par. Eng. Wilts; 3350 ac. Pop. 878.
BRITISH AMERICA comprises, with execption of the Russian possessions, the whole of N. America north of parallel $49^{\circ}$, together with some irregular portions, including New Brunswick and Nova Scotia, stretching S. to lat. $43^{\circ} 30^{\circ}$ N., and the triangular portion of which the Canadas form the base, the apex extending S. to lat. $41^{\circ} 56^{\prime}$ N. This vast territory is thus bounded, E. by the Atlantic, Davis Strait, and Baffin's Bay, N. by the Arctic Ocean, N. W. by Russian America, W. by the Pacific, and S. by the U. States. It comprehends the Canadas (Upper and Lower), New Brunswick, Nova Scotia, Cape Breton, Prince Edward's Island, Newfoundland, N.W. Territory, and Hudson's Bay Territory. British N. Amcrica is, generally speaking, a level country. It contains few hills; and those, for the most part, of inconsiderable height, with exception of the Rocky Mountains. The climate in the N. parts is so extremely rigorous, that the hardiest forest trees cannot withstand it. It is covered with lakes and rivers, all of which abound with fish of various kinds. Wild fowl are also numerous, especially grouse, wild geese, and ducks. The animals hunted for food are deer, of four different kinds, buffaloes, rabbits, and porcupines. The principal objects of
traffic, in the more N. parts, are the skins of fur-clad animals, of which there are here a great variety. The chief tribes inhabiting these N. regions are the Chippewas, the Assiniboins, the Crees, the Slave Indians, and the Esquimaux. Of all these tribes the Crees have the best character, being active, honest, and hospitable, kind to their women, and fondly attached to their children. The others are crucl, treacherous, and unprincipled.

BRITISH CHANNEL. See Evglish Channel.
BRITISH EMPIRE (THE), in many respects the greatest now existing, or that has ever existed, in the world ; and remarkable not more for the magnitude to which it has attained, than for its comparatively humble origin-an empire which, thongh apparently destined, by geographical position, to occupy only an archipelago in the N.W. corner of Europe, so remote as to have been at one time deemed beyond the limits of civilization, now stretches out its arms in every quarter, in a manner encircling the globe, and ruling its destinies, pre-eminent alike in wealth and population, manners and religion, law, literature, and arts-an empire, in short, in which the great problem of human government is practically solved, and the power of the sovereign so happily reconciled with true freedom in the subject, that other States, in reforming themselves, look to the British Constitution as their most perfect model; and the humblest, as well as the most illustrious of other lands, when driven into exile, hasten to the British shores as their safest asylum.

It is obvious, both from the extent of the subject, and the narrow limits here necessarily assigned to it, that little more than a general sketch of this magnificent empire can now be attempted. Its minuter subdivisions will of course be described under their different names.

The British empire comprehends two great divisions:-1, The British Isles, or what is commonly called, the United Kingdom of Great Britain and Ireland; and 2, Colonies and Dependencies.

General Description.-The British Isles occupy a kind of archipelago in the N.W. of Europe, and consist of the two principal islands of Great Britain and Ireland, and a great number of smaller islands, which sometimes singly, but more frequently in groups, line the shores of the other two, or lie in the surrounding seas at no great distance from them. On the N.W. and S.W. they lie open to the surges of the Atlantic, on the E. they are washed by the N. Sea, or German Ocean, and on the S. by the Atlantic and the English Channel. Taking the most N. point of Unst, in the Shetland Isles (lat. $60^{\circ} 49^{\prime}$ N.), and the most S. point of England, Lizard Point (lat. $49^{\circ} 57^{\prime} 30^{\prime \prime} \mathrm{N}$. ), as their extremities N . and S. , and Lowestoffe (lon. $1^{\circ} 46^{\prime}$ E.) and Dunmore Head (lon. $10^{\circ} 27^{\prime}$ W.) as their extremities E. and W.; straight lines drawn through these four points, will include a space extending over nearly $11^{\circ}$ of latitude, and rather more than $12^{\circ}$ of longitude. Hence, at the summer solstice, the longest day at the N. will exceed that at the S . extremity by 2 h .40 m ., being 18 h . 48 m . at the former, and only 16 h .8 m . at the latter, while at all seasons there will be a difference between the E. and W. extremities of nearly 49 m . of time. The United Kingdom, formed by the union of what were formerly the three independent kingdoms of Scotland, England, and Ireland, is still similarly subdivided for administrative purposes. The principal subdivision of the kingdoms is into counties, of which England, with Wales, has 52, Scotland 32, and Ireland also 32.

The colonies and dependencles are not confined to any particular quarter of the world, but lie scattered over its surface, often at immense distances, some of them forming the very antipodes of the mother country, while others stretch over the globe in succession, from E. to W., and make that which was once flatteringly said of the Spanish monarchy to be emphatically true of the British empire-that 'the sun never sets upon it.' It is singular, however, that with all these vast dominions, Britain possesses not one colony, and has only one dependency on the continent of Europe. On the accession of her present Majesty, the kingdom of Hanover, previously included in the empire, passed from it, under the operation of the Salic law; and the only continental spot now remaining is the impregnable fortress of Gibraltar. To this may be added, in the same quarter, the strong island of Malta, possessed in absolute right, and the Ionian Isles, held under the name of a protectorate; and off the estuary of the Elbe, the rock of Heli-
goland, which had great commercial importance during the ascendancy of Napoleon, but lost it on his downfall. Leaving the European, and proceeding S. to the African continent, on reaching the coast of Senegambia, nearly in the parallel of $15^{\circ} \mathrm{N}$., we find a series of British settlements skirting the coast, and extending, with interruptions, for 1000 m ., almost to the equator. These settlements are of little commercial value; but lave, perhaps, done more than any other part of the empire to raise the British name, and place it on the proud eminence which it now occupies among the nations. There, with no hope of pecuniary return, and in the deadliest climates to which European constitutions can be exposed, Britain pursues a labour of love-both keeping up her settlements, though at fearful sacrifices, and scouring the coasts with her ships, in order to put down an inhuman traffic. Crossing the equator, and still proceeding S., the first British possession reached is the island of Ascension ; and after it, at a long distance, the more famous island of St. IIelena, of some importance as a point of rendezvous on the voyage to India, and still long to be remembered as the ocean-isle where Napoleon, by just retribution, found a prison and a grave. The next British settlement is the important one of Cape Colony, occupying the peninsular extremity of S. Africa, and possessing, with great intrinsic, still greater adventitious value, from its admirable position in regard both to the mother country and her possessions in the E. On the S. and W. it is washed by the ocean, while in the N. its natural limits are determined by bleak elevated tracts, called karoos, so sterile in soil, and so seldom visited by rain, that vegetation is almost extinct; but a large space of better promise stretches far eastward, and, being already under British protection, must, at no distant period, merge into the colony. Indeed, the work of incorporation has already begun, and promises to make rapid progress by means of the recent settlement of Natal, which, for the present, may be regarded as the limit of British possession in this quarter. To Africa, however, properly belong the groups of the Amirantes and Seychelles, forming a small archipelage on the N.E. of Madagascar, and also, though far to the E. of the A frican coast, the valuable dependency of the Mauritius; while the importance recently given to the navigation of the Red Sea, now one of the great highways to the E., has alrcady led to negotiations for the acquisition of Socotra, and the actual purchase of the islands of Mushakh, in the Gulf of Aden. The passage across this gulf brings us from Africa to Asia, and places us in the town of Aden; which, since it became a British dependency, has made such rapid progress as to justify the belief that it is the nucleus from which other important settlements are destined to radiate. From this point E., the Asiatic coast is skirted by the Arabian desert, where, notwithstanding of the perfumed gales, poeti cally said to be wafted from its shores, ncither the enterprise nor cupidity of Europeans has yet found anything to tempt the formation of a scttlement; but, once across the Arabian Sea, and the scene alters. There an immense peninsular tract is reached, commencing in the S. in a mere point, but gradually swelling out on both sides as it ascends towards the N., till length and breadth have become almost equal, each having a stretch of nearly 2000 m ., while a mountain-range of unequalled height and grandeur crowns the N. frontier, and forms the appropriate barrier of this great territory. The whole, with a few insignificant exceptions, belongs in property or in trust to Great Britain, and is unquestionably her most magnificent foreign possession-a possession in extent so vast, in resources so rich, and in people, tongues, and nations, so multitudinous, that there is no extravagance in the language which isolates it from other dependencies, and speaks of it apart as our Indian Empire. At the S.E. of Hindoostan, and so closely connected with it by the islets of Manaar and Rameserum, that no properly navigable passage intervenes, is the large and beautiful spice and coffee island of Ceylon, in which British supremacy has long been established. Proceeding E. across the Bay of Bengal, we arrive at Aracan, and considerably to the S.E. on the same coast, at the Tenasserim Provinces, both once belonging to Burmah, and ceded to Britain in 1826 , and both now included in India E. of the Ganges. Considerably to the W. are the Andaman, and to the S. some other island groups, nominally the property, but not actually in the possession of Great Britain. Leaving these, we reach the peninsula of Malacca, and; turning into its Strats,
find several British trading settlements-first, Prince of Wales Island or Penang, then Malacca, of much larger extent, but as yet far inferior in trade; and lastly, on emerging from the straits and rounding the peninsula, the most important of all, the flourisling settlement of Singapore, placed at the entrance of the Chinese Sea, and forming the great depôt for its traffic. In the lower portion of this Sea, the only British settlement is that of the island of Labuan, with the accompanying rajaliship, of Sarawak, both now regarded with deep interest by the British public, not so much on account of the results which they have actually produced, as of those which are sangainely anticipated from them. The number of British settlements in the Chinese Sea, bears no proportion to the magnitude of the British interests connceted with it. Not another is met with on this side of the coast of China, and even then, the only possession which Britain calls her own, is the paltry islan'l of Hong-K ong. Passing out of the Chinese Sca by the S. of the Philippine Isles, and procceding into the vast archipelago, to which, on account of its numberless islands, the name of Polynesia is perhaps the most appropriate that could be given, we reach New Holland or Australia, the largest island of the world, and only a fifth less than the continent of Europe. This island Great Britain as yet possesses undivided, and is apparently converting into a new cmpire. Wherever favourable localities could be found, colonies have been placed, and appear to prosper, subject, however, to the scrious drawback of being partly peopled by convicts, and their immediate descendants. On the S.E. of Australia is the thriving colony of Van Diemen's Land, and considerably further S.E., first the Auckland Islands, granted by Government to the Enderbys, their discoverers, as a whaling station, and then Campbell Island. To the N. of these islands are the recently forined and hopeful colonies of New Zealand, consisting mainly of two islands, which, though the antipodes of Great Britain in respect of position, bear some resemblance to it in slape, and, from the thousands of respectable emigrants who have crowded to their shores, promise soon to resemble it in more important features. To the N.W. of New Zealand, is the penal settlement of Norfolk Island. Beyond it, the bosom of the Pacific is dotted over with islands, of which several nominally belong to Great Britain, while to many others she possesses all the right which both priority of discovery, and of possession by her subjects, can give. It wonld seem, however, from recent occurrences, that this title is either incomplete, or has been voluntarily abandoned. These islands, interesting as they must always be to the true philanthropist, as the scencs where civilization, with religion for its handmaid, early gained some of its completest triumphs, have little political or commercial import ance; and their inhabitants, therefore, still lie at the mercy of any unprincipled power, which, under the alternate guidance of infidelity and bigotry, chooses to force its protection upon them. Turning, then, from Tahiti and the other islet groups of the same Sca, our course now lies S . over a long expansc, then round Cape Horn, and N. to the Falkland Isles, which Britain early acquired, but chicfly values as a station in connection with the fisheries of the South Sea. Almost the whole coast of S . America must now be coasted N. before another British settlement is reached. The first which occurs is British Guiana, the N.W. extremity of which is almost lost in the embouchure of the Orinoco. In common with the other parts of the extensive tract almost encircled by this river and the Amazon, it is chiefly remarkable for the rank lnxuriance of its vegetation, and the large supplies which it raises of all kinds of colonial produce. In this latter respect, it may be considered as belonging to the scries of settlements which lie principally in and around tho Caribbean Sea, there forming the West India Islands, the management of which presents, with many of the darkest, one of the brightest spots in British annals. Before leaving this quarter, mention should be made of Honduras, a settlcment from which Britain has long continued to derive some of her finest ornamental timber. Proceeding N., past the Bermudas, now a penal station, we reach the last great division of cur settlements-a division included under the general name of British America, and originally almost of boundless extent, as may be estimated from the fact, that, though its S. portion already constitutes a vast union of independent democracies, it still stretches from the Atlantic to the Pacific Ocean, and from the parallel of $42^{\circ}$ to the North Polc. The

## BRITISII EMPIRE

area and population of the different countries of which the British Empire is composed, is exhibited in the following Table:-

The rapid sketch now given must suffice for the British colonies and dependencies, but the geography of the United Kingdom requires a fuller description, and to it, therefore, we now return.
United Kingdom.-Geography.-As already observed, it occupies a kind of archipelago in the N.W. of Europe, and consists of numerous groups of islands, the principal of which are Great Britain and Ireland, separated from each other by the Irish Sea, which, near the centre, attains its greatest width of about 130 m. ; hut between Holyhead in Wales, and Howth Head in Ireland, in the tract taken by the English packets, is not wider than 60 m .; and between the Mull of Cantyre in Scotland, and Fair Mead in Ireland, narrows to about 12 m . Great Britain, the larger, and by far the more important of the two islands, is situated between lat. $49^{\circ} 57^{\prime} 42^{\prime \prime}$ and $58^{\circ} 40^{\prime} 24^{\prime \prime} \mathrm{N}$. It is the largest island in Europe, and the seventh largest in the world; the only islands ranking before it, in this respect, being Australia, Borneo, I'apua, Sumatra, Niphon, and Madagascar. Its nearest approach to the continent of Europe is at its S.E. extremity, where the Strait of Dover, separating it from France, is only 21 m . broad. On both sides of the Strait the distance is rapidly increased. To the W., the English Chaunel widens out till the extremities of England and France are 100 m . asunder. On the E., the German Ocean, where it separates England from Belgium and Holland, is also about 100 m . across; but, a little N., it suddenly gains thrice that width, and retains it so as to place the E. shores of Great Britain at the average distance of 350 m . from the W. shores of Denmark and Norway. The contour of Great Britain is so very irregular, tbat it seems vain to compare it to any mathematical figure. It has sometimes been described as a triangle, with its vertex in the N., and its base resting on the S.; and it is, no doubt, true that the island narrows much in the former, and attains nearly its greatest breadth in the latter direction; but the E. and W. coasta, which, to complete the figure, must represent the sides of the triangle, cannot, by any force of imagination, be made to assume the form of straight lines. The N. part of the island in particular, exhibits on its E. coast a succession of large salient angles, while the W. coast is broken and ragged in the extreme; the land ever and anon jutting out into the sea, and the sea making deep inroads into the land, as if the two elements had not yet ascertained their boundaries, and were contending for mastery. The greatest length of Great Britain, measured on
a line bearing N. by W. from Rye to Dunnet IIcad, is 608 m . The breadth, necessarily modified by the numerous indentations of the coast, varies exceedingly. The longest line which can be drawn across the island, in a slanting direction, is, W.S.W. to E.N.E., 367 m. , from Land's End to Lowestoffe; but the longest line, measured from the W. to the E. coast on a parallel of latitude, between St. David's Head, in Pembrokeshire, and the Naze, in Essex, is only 280 m . The breadth is least in the N. parts of the island. Between the Clyde at Dumbarton, and the Forth at Alloa, it is only 33 m ., in the Oikel, which falls into Dornoch Firth, the tide ascends till within 18 m . of the W. coast, and the remarkable chain of lochs between the Moray Firth and Loch Limnhe leaves solitule land intervening between the opposite coasts, that the communication left unfinished by nature has been completed by art, and now forms the Caledonian Canal. The area of Great Britain, including the groups of the Orkneys, Shetlands, and IIebrides, is about $88,051 \mathrm{sq} . \mathrm{m}$. Of these, England and Wales occupy $57,812 \mathrm{sq} . \mathrm{m}$. , and Scotland $26,014 \mathrm{sq} . \mathrm{m}$.
Ireland, as already mentioned, lies to the W. of Great Britain, being separated from it by the Irish Sea, and surrounded on all other sides by the Atlartic Ocean. It nowhere extends so far as either the N. or S. extremities of Great Britain, but occupics an intermediate space between lat. $51^{\circ} 25^{\prime}$ and $55^{\circ} 23^{\prime} \mathrm{N}$., its N . extremity being on the same parallel with the central part of Ayrshire, and the town of Alnwick, in Northumberlandshire; and its S. extremity being opposite to Bristol Channel, nearly in the latitude of London. E and W . it lies between lon. $6^{\circ}$ and $11^{\circ} \mathrm{W}$. Its shape is much more regular than that of Great Britain, and bears a considerable resemblance to a rhomboid, two sides of which are nearly due N . and S., while the other two take a slanting direction, between W.S.W. and E.N.E. The greatest diagonal of the rhomboid is between Mizzen Head, in Cork, and Fair Head, in Antrim, about 300 m .; the greatest length, measured on a meridian (nearly that of $8^{\circ} \mathrm{W}$.) , is 230 m .; and the greatest breadth, measured on a parallel (about $54^{\circ} 25^{\prime} \mathrm{N}$.), is 180 m . The breadth across the centre is nearly 165 m . Owing to the compactness of its form, Ireland does not exhibit such variation of breadth as we have seen to exist in Great Britain; but the breadth, from Galway Bay to Dublin, is not 110 m. ; and the shortest breadth of all, between Ballyshannon and Dundalk, is only 85 m . One remarkable fact is that, notwithstanding the general compactness of Ireland, its opposite coasts and arms of the sea are so conveniently situated in regard to each other, that there is not a spot on its surface which is not, in some direction or other, within 55 m . of the ocean. The area of Ireland is about $32,513 \mathrm{sq} . \mathrm{m}$.

Physical Features.-We are so much accustomed to think and speak of the two kingdoms of England and Scotland, that we are apt to imagine, not merely a political, but also some great physical distinction between them. In fact, however, there is no such plysical distinction. Their frontiers, in part at least, merge insensibly into each other, and the whole must be viewed as one island, which in regard even to physical features, is among the most interesting islands in the world. Though of comparatively limited extent, all varieties of scenery are exhibited in rich profusion on its surface, and all forms of geological structure lie within its bosom. The N. part of Great Britain is, for the most part, rugged, mountainous, and barren. To the N. of a line drawn from the Frith of Clyde on the W., to Stonehaven on the E. coast,
the whole country is composed of primary rocks. Gneiss, and mica slate, with numerous outbursts of granite, form lofty mountain chains, whose lower slopes are usually covered with beds of conglomerate and old red sandstone. These mountain chains maintain a remarkable degree of parallelism, their longer axis almost invariably taking a direction between S.W. and N.E. The principal chain is the Grampians, but though its mountains are the loftiest in the island, they are by no means of the first class. Their culminating points, Bennevis and Benmacdhuie, are, rcspectively, 4380 and 4305 ft . From their N. sides, snow scarcely ever disappears. These mountains, from the nature of the materials of which they are composed, frequently assume the form of peaks and frowning precipices, which, as they descend, instead of terminating at the general level of the base, are continued downwards, and become the romantic barriers of deep extensive lakes, presenting scenes in which sublimity and beauty strangely intermingle. The last range within the line already mentioned is that of the Ochils, which are much less elevated than the Grampians, and exhibit scenery of a much tamer description. They consist chiefly of porphyry and amygdaloid, in which numerous nodules of agate and carnelian are found. Instead of towering up in sterile peaks, they are generally rounded, and clothed to their summits with verdant or heathy pastures. On their S. slopes, a new geological formation appears. The carboniferons system, at first with its strata almost turned on edge, and thrown into confusion by contact with masses and veins of trap, soon becomes fully developed, and stretches, with occasional interruptions, from the E. to the W. coast, over the basins both of the Forth and Clyde. The mineral treasures of this district make it one of the most important in Great Britain. To the S., immediately beyond the limits of this coal ficld, the country again assumes an alpine character, and mountains, which, for the most part, are composed of rockz of graywacke and coarse slate, rise with heights varying from 2000 to 3000 ft , above the level of the sca. A considerable part of this district is occupied by the Lead Hills, so called from the rich veins of lead by which its strata of graywacke are intersected. In earlier times, their alluvial covering embedded a more precious metal, and the mere washing of the soil is said to lhave yielded gold to the value of $£ 100,000$. Still further to the S., several large masses of granite occur. Coal also again appears, and forms two minor coal fields. Towards the S.E., the most conspicuous feature is formed by the Cheviot Hills, a porphyritic range, which once formed part of the boundary between two independent kingdoms, and sends its ramifications into both. Those which pass into England may be regarded as the commencing links of a long chain of mountains and hills, which extends, with scarcely a single interruption, along the W. side of that division of the island, forming its most important water-shed, and throwing out numerous branches, particularly those which penetrate into Cumberland and Wales, and give a somewhat modified, but scarcely less attractive repetition of the magnificent scenery to which reference has been made. In the $N$. part of this chain, or that part to which the name of Cumbrian range is sometimes given, the most striking feature is formed by the series of romantic lakes so well known to tourists from all countriez. Here granite and a species of basalt are occasionally seen, but the prevailing rocks are slates and sandstones, belonging to the silurian serics. In other parts of this range, trap-porphyry occurs. It forms the very summit of Scawfell, and is seen, in still more interesting circumstances, at Sotaller, in Borrowdale, where, at its contact with a bed of red unctuous clay and ironstone, occurs the celebrated vein of graphite, which has long furnished the finest black-lead pencils in the workl. Another largely developed rock of the same range is the mountain limestone, which, if anywhere, here truly deserves the name; inasmuch as it forms lofty mountain-masses-Ingleborough, Whernside, Pennigant, and Cross Fell being almost entirely composed of it. This limestone is often intersected by rich veins of lead. In the lengthened chain already referred to, and to the S. and W. of the Cumbrian, is the Cambrian range, spread over the great part of Wales ; and containing, among others, the highest mountain of S. Britain-Snowdon, 3571 ft . The rocks, like those of the Cumbrian range, lie low in the geological series, and consist almost entirely of slate, and different varieties of trap and porphyry. The great exception is towards the S .
limits of the range, where the silurian rocks are overlain by an extensive tract of old red sandstone, overlain in its turn by the montain limestone, which, like a girdle, encircles the most extensive, if not the most valuable of the British coal fields.

To the S . of the Cambrian is the Devonian range, stretcling from the Bristol to the British Channel, and thongh lofty enough, when viewed from the level of the sea, to present a coast of remarkable boldness, too low to deserve the name of mountainous. Here granite is extensively developed, and, often possessing the property of decomposing rapidly, furnishes the white clay called kaolin, of which our finest porcelain is made. The granite is overlain by the old red sandstone, or rather by a slate which is considered to be its equivalent ; and prevails to such an extent, particularly in Devonshire, as to have given its name to a gcological formation, hence termed the Devonian series or system. Here the mineral treasures are tin and copper, veins of which, generally at s high angle, and in a direction from E. to W., intersect the slate and granite, and vary in width from a few inches to several feet. Not unfrequently a vein commencing with tin is converted into a vein of copper after a considerable depth has been reached. Tin, too, occurs in the sands of rivers and valleys in the form of grains and pebbles, and is known by the name of stream-tin-the rocky walls which once enclosed it having evidently been decomposed and washed away. The different rangez now described as occupying the W. side of England, and stretching from its N. to its S. extremity, are composed entirely of primary rocks, or at least of rocks which, with the exception of the great Welsh coal field, and another of limited dimensions on the $\mathbf{N}$. coast of Cumberland, never stand higher in the geological series than the lowest strata of the carboniferous system. On proceeding $E$. the case is reversed, and the oldest strata which occur are identical with those which were formerly the most recent. Here, accordingly, secondary formations prevail, beginning with the mountain limestone or coarse quartzose sandstone, known by the name of millstone grit, on which our coal fields are usually based, and ascending by regular gradations up to the more recent tertiary deposits. The coal fields, notwithstanding of their incalculable economical value, occupy a comparatively limited extent of surface-an extent certainly not underestimated at one-twentieth of the whole. A line drawn from Lyme Regis to Bath, thence to Gloucester, Warwick, Leicester, Nottingham, and Tadcaster, and from Tadeaster to Stock-ton-on-Tces, has on its E. side nearly two-thirds of the wholo surface of England. In the whole of this space no coal is worked. If the series of strata are regular, there can be no doubt that coal exists ; but probably at a depth far beyond the reach of any known means of excavation. Immediately above it lie immense beds of red marl, sands, sandstoncs, and conglomerates, composing the new red sandstone serics, and remarkable for the saline springs and rock-salt with which it abounds. This serics, from its proximity to the coal, is usually at no great distance from the coal fields, and its lower strata must often be sunk through to great depths in order to reach them. It occupies a considerable portion of surface, but its saliferous deposits nowhere appear so rich as in the neighbonrhood of Chester. Above the new red sandstone is the oolitic series, composed of numerous beds of linestones, clay schists, and sandstones, and stretching, with partial interruption, from the S. of England into Yorkshire. It is rich in fossils, and beds of fireclay, and furnishes much of the finest building stone in the kingdom. Passing the wealden scries, so called from having its chief development in the Weald of Sussex, we reach the chalks, which occupy the uppermost place in the secondary formation, and which, though confined to a few patches of N., constitute a marked feature in the geology of S . Britain, where they not only compose the prevailing strata of extensive undulating tracts, but form in many places, both on the E. and S. coasts, bold and giddy cliffs, from whose white colour the ancient name of Albiom is said to be derived. The tertiary formation, which includes all the rocks above the chalk, is of comparatively limited extent, and is succeeded by immense beds of diluvial gravels, sands, and clays, in which are found remains of the larger existing quadrupeds, several of them, like the elephant and rhinoceros, belonging to gencra which now exist only in much hotter climates. Above these diluvial beds lie
alluvium and other superficial deposits, the constituents of which, mainly depending on the rocks from which they have been disintegrated, determines the natural properties of the soil, sometimes giving it an almost inexhaustible fertility, and sometimes dooming it to perpetual barrenness.

Turning from Great Britain to Ireland, one of the most marked features which meets our view, is the dreary expanse of bog which stretches over its interior. The surface, as might hence be inferred, is much flatter than that of Great Ibritain. It is not, however, by any means destitute of mountains. Of these no fewer than 24 exceed 2000 ft ., and four exceed 3000 ft . Carn Tual, the culminating point of the island, is 3404 ft . It belongs to a great range called the mountains of Kerry, which, in connection with the lakes of Killarney, placed in the very heart of them, furnish scenes of grandeur which few countries can surpass. The great mountain groups consist of primary and transition rocks, and are generally situated near the coasts, which accordingly become of the boldest description. Inland behind these lofty barriers lies a vast uudulating plain, occasionally penetrated and broken up by masses of primary rocks, but occupied almost throughout its whole extent by secoudary formations. Of these, by far the most largely developed is mountain limestone, much of it so finc-grained and compact as to furnish quarries of marble, both black and variegated, but seldom containing the rich veins of lead which usually accompany the same formation in England. The limestone is succeeded in regular gradation by the upper strata of the carboniferous system, and coal has been found to a greater or less extent in no fewer than 17 Irish counties. In general, however, its quality is inferior. Much of it is in the form of anthracite, of which seams of remarkable purity, almost entirely composed of carbon. occur in the vicinity of Kilkenny; but the greater part of the coal raised is mere dross or culm, scarcely fit to be employed for any more important purpose than burning limestone. Still higher in the series above the coal, the upper strata of the secondary formation are corsiderably developed in the N., where they are capped by numerous masses of volcanic origin. The most magnificent specimen of these is the range of basaltic columns which forms the celebrated Giant's Causeway.

Rivers and Ports.-The mountain-chains which constitute the principal water-sheds of Great Britain, are generally at no great distance from the W. coast, and hence the rivers which descend from them in that direction, have a short course and are comparatively unimportant. The two great exceptions to this rule are the Clyde and the Severn. Both of them have their months on the W. coast, bat they owe both their volume and the length of their course to a series of longitudinal valleys, which, instead of opening directly to the coast, take an opposite or parallel direction, and thus rather skirting the water-shed than flowing from it, obtain much larger supplies of water than a direct course could have given them. The former of these rivers, though of vast commercial importance, is indebted for it far less to its natural channel, than to the immense sums judiciously expended through a long series of years, in improving and almost creating its navigation. Considered merely as a river, it is comparatively insignificant, the whole length of its course to Dumbarton, where the Frith properly commences, being not more, including windings, than 73 m . The Severn is a much longer stream, and carries along with it a much mightier flood, which, commencing in the mountains of N . Wales, proceeds S . through long valleys opened into by others which add their tributary streams, till the immense accumulated volume is poured into the Bristol Channel. To counterbalance these, the only rivers of any considerable volume of which the W. coast can boast, though it also possesses the Mersey, in commercial importan ee the second river of the empire, the E. coast, proceeding from N. to S. receives the Spey, Don. Dee, Tay, Forth, Tweed, Tyne, Ouse, Trent, and Thames. This list contains the Tay, in volume the first river of Great Britain, and the Thames not much less in volume, and in navigable importance the greatest river of the world. It is remarkable that no river of importance empties itself either on the N. or S. coast. Owing to the great central flat of Ireland, its rivers usually flow on in a gently winding course, and, little interrupted by natural obstructions, are admirably fitted for navigation. Those of importance are not very numerous, but one of them, the Shannon, is understood to be the largest river of the British

YoL. I.

Isles. Within 7 m . of its source it enters Lough Allen, which is itself navigable, and after passing out of the Lough pursues a S.W. course of 214 m. , the whole of which is available for transport by smaller vessels, while from its mouth up to Limerick, a distance of 70 m ., it floats vessels of 400 tons. In numerous features this noble river bears a remarkable resemblance to the Severn. We have seen that in Great Britain the E. coast receives the greater part of its rivers. In Ireland the rule is reversed. The Liffey, more important from having the capital on its banks, than from its own magnitude, is the only river on that coast deserving of notice. While both Great Britain and Ireland are thus provided with numerous streams, which ramify over their various districts, and are either themselves navigable, or, when they cease to be so, furnish the means of continued navigation by acting as the feeders of canals, the coasts are scooped out into doep and sheltered bays, in some of which whole fleets of the largest ships can float and ride in safety. It is true, however, that the number of ocean harbours, properly so called, is not great, and that the E. coast of Britain in particular, is so scantily provided, as to make the construction of a great harbour of refuge at some central point a work of primary necessity, which must sooner or later be performed. The best of these harbours are situated on the S. coast, and most providentially, at the very points where the proximity of the Continent, and the presence of a mighty rival, animated by a deadly hate, and ever on the watch to strike a blow, made it of most importance to possess them. Within these harbours lie the wooden walls which form the true defences of the British Empire.

Climate.-Among the many advantages which the British Isles derive from their geographical position, one, the beneficial effects of which cannot easily be over-rated, is the peculiar kind of climate conferred by that position-a climate in which the natural rigours of a comparatively high latitude are so modified, that at no season is either cold or heat in extreme; and the mean temperature maintained is one of the most favourable to the full and healthy development both of animal and vegetable life. The peculiar excellencies of this climate cannot be more correctly and happily expressed than in the words which, according to Sir William Temple, were used by Charles II., when, in answer to some courtiers who were disparaging the British climate, and lauding that of Italy and France, he said, 'IIe thought that was the best climate where he could be abroad in the air with pleasure, or at least without trouble or inconvenience, the most days of the year, and the most hours of the day; and this, he thought, he could be in England more than any other country of Europe.' The accuracy of this opinion is undeniable, and the ground on which it rests might easily be explained, did our limits admit of detail. The British Isles being nearly in the centre of the temperate zone, have, in common with all countries so situated, four different seasons, which merge almost insensibly into each other, but exhibit a wide range of temperature between their opposite extremes, as determined by the sun's elevation above, or his depression below, the equator. The ceritral latitude of the United Kingdom is nearly $55^{\circ} \mathrm{N}$., and the isothermal line which passes through it indicates a mean annual temperature of $50^{\circ}$. Did this isothermal line, when continued E. across the continents of Europe and Asia, or W. across that of America, pursue the same parallel, it would prove that the climate of all countries on that parallel was uniform, and that the British Isles, if they had nothing to complain, had also nothing to boast of. In point of fact, however, the deviation is very great, and it is wholly in their favour. The isothermal line, on crossing the German Ocean, and approaching the coast of IIolland, is deflected $\mathrm{S} . ;$ and this deflection continues to increase in the same direction till it reaches lat. $45^{\circ}$, on the E . side of the Sea of Azof. From this point it pursnes its course with great uniformity, skirting the N . shore of the Caspian, and passing onward through Mongolia and Manchooria on the N. of China, to the Sea of Japan. The fact thus established is, that in respect of mean temperature, the British Isles have the advantage of all countries of the same latitude to the E. of them; and that on the continent of Asia this advantage is so marked, as to amount to a difference of $10^{\circ}$ of latitude, the British latitude of $55^{\circ}$ enjoying as much annual heat as the Asiatic latitude of $45^{\circ}$. But this is by no means the whole
amount of the advantage. A mean temperature is an average obtained by adding temperatures of different seasons together, and then dividing them. Hence it follows, that the same mean temperature may exist when the climates are of a different and almost of an opposite description. A winter of $10^{\circ}$, and a snmmer of $90^{\circ}$, give the same mean temperature as a winter of $40^{\circ}$, and a summer of $60^{\circ}$; but how unlike the elimates! The former gives a range of temperature equal to $80^{\circ}$, the latter a range equal only to $20^{\circ}$; in other words, the inlıabitants living under the one climate are alternately benumbed by piercing cold, and enervated by scorching heat, whereas those living under the other are blessed with a kind of perpetual spring. Now, it is precisely in regard to range of temperature, that the superiority of the British climate becomes most apparent. The range of the temperature between the coldest and the warmest months, is, at Paris, $30^{\circ}$; at London, only $26^{\circ}$. In the S.W. and S.E. of France, it is, re spectively, $31^{\circ}$ and $35^{\circ} 30^{\prime}$, and in Italy, $32^{\circ} 30^{\prime}$; in England generally, only $24^{\circ} 30^{\circ}$. The range of Edinburgh is $25^{\circ} 3^{\prime}$; that of St. Petersburg, no less than $55^{\circ}$. The mean winter temperature of Dublin, only $39^{\circ} 8^{\prime}$, is $3^{\circ} 6^{\prime}$ higher than that of Milan, Pavia, Padua, or the whole of Lombardy. In the N.E. of Ireland, the myrtle grows in the open air, as in Portugal ; and in the S.E. of Cornwall, the mean temperature is only $2^{\circ} 4^{\prime}$ less than that of Montpellier and Florence. The chief agent in moderating the natural climate of the British Isles, is the Atlantic Ocean. Its temperature, never below the freezing point, and raised by the influx of the Gulf Stream, is communicated to the winds and vapours which are wafted along its surface; and hence, these winds and vapours, on reaching our coasts, combine with the colder temperature of the atmosphere and surface, in forming one of a medium and mitigated description. A continual struggle is carried on between the low enrrent of dense and intensely cold air, which comes from the frozen regions of the N., and the downward current of warm air, which is expanded and driven N. by the vertical suns of the N. tropics. In this struggle the warm air generally proves victorions, and hence the general prevalence of S.W. winds. While they blow, frost is of rare occurrence, and never of long duration in the British Isles. When the wind blows from the N., after it has passed over immense fields of ice, or from the E., where, from the limited expanse of the German Ocean, its temperature continues nearly as low as that which it had acquired in passing over the Continent, our atmosphere is rapidly cooled down, and frosts are occasionally severe. These consjderations explain the only disadvantages under which the British climate labours. South-ivest winds, charged with vapour, bring deluges of rain; and N. and E. winds are accompanied with considerable, and too often sudden accessions of cold. East winds, in particular, prevail in spring, and not only check vegetation, but tend to produce, or, at all events, greatly aggravate pulmonary complaints. Still the advantages already enumerated far more than counterbalance the disadvantages; and the cloudless skies of S. Europe, accompanied as they are with scorching beats which wither up the fields, and often make what should be the finest the least tolerable season of the year, poorly compensate for the magnificent foliage and rich verdure which, at the same season, give a peculiar charm to the British Isles.

Industry.-Great Britain, though somewhat late on entering on the career of improvement, and hence indebted to foreigners for the first establishment of more than one flourishing manufacture, ultimately succeeded in outstripping her competitors, and now confessedly leads the world in all the great branches of industry. This unexampled success is owing, partly to physical, and partly to moral causes. To the former belong the vast resources of the country itselfthe fertility of its soil sufficiently great to reward industry, but not to foster indolence, the comparative mildness of its climate, and the untold treasures deposited beneath its surface; to the latter belong the spirit of activity, enterprise, and independence, engendered by free institutions, and the perfect security of property, guarded from foreign aggression by invincible fleets, and effectually maintained at home by good laws, fairly and vigorously administered. Another great cause of industrial prosperity may be found in the obstacles which have been removed, and the facilities afforded, by bringing all the parts of the United Kingdom into casy communica-
tion with each other, by means of roads, canals, and railways. On all of these, sums of almost fabulous amount have been expended, and the proportion which their united lengths bear to the whole area, far exceeds that of any other country. Before proceeding to give a sketch of the leading industrial interests, the following Table of the lines of communication, to which all these interests are essentially indebted, may be appropriately introduced:-

Agriculture.-Of all branches of industry, this unqnestionably demands precedence, both because the produce which it yields is greater in aggregate value than that of any other braneh, and is also, by its very nature, not merely conducive to the well-being, but essential to the very existence of society. But though agriculture is at once the most useful, aud the earliest of arts, there is none in which improvement advances with so sluggish a pace. A routine once established, becomes almost immovable; and not unfrequently when everything else has yielded to the force of improvement, the husbandman continues in the ancient tract, performing all rural operations after the fashion, and with the rude implements, of centuries before. Even yet, traces may be found of the wretehed farming which reserved all the manure for the fields around the homestead, and kept unnercifully scourging those at a greater distance, till, as if resenting the injury, they refused to repay the expense of sced and labour; and in some parts near the very heart of England, a long line of horses is still attached to an ordinary plough, to move along in solemn state under tlie guidance of drivers, and do the work which is elsewhere better performed by a single pair. Such things, however, are not now the rule, but rare exceptions to it; and in almost every distriet in Great Britain where the plough can move, farming of a superior description may be scen. Instead of the slovenly manner in which, not a century ago, all operations upon the soil were performed, new implements, many of them of recent and ingenious contrivance, now execute the work in the most efficient manner, and with the least waste of draught. Draining, not confined as formerly to swampy spots, is extended systematically to whole farms, and every field of them, not a single furrow being left without its artificial drain of tiles or stones, into which the surplus water may percolate freely, and yet so gradually, as not to carry off nourishment along with it. Science, too, has been called in to act as the handmaid of art. The organism of plants, the primary elements of which they are composed, and the food on which they live, have been assiduously and skilfully investigated, and most important results obtained, particularly in regard to manures and rotations. These results, instead of remaining a dead letter, have passed from books into the hands of practical farmers; and the farmyard, though still justly retaining its pre-eminence, has ceased to be the only source from which the soil derives its nourishment, and becomes capable of producing heavy crops. Artificial manures, in great variety, have come into common use, not only increasing the produce of lands previously cultivated, but extending the limits of cultivation itself. Steeps which, from the impossibility of carrying up the requisite weight of farmyard dung, could not be brought under a regular course of cropping, are easily supplied with a few cwts. of bone-dust, or of some substance chemically prepared. This application first secures a crop of turnips; sheep eat them where they grow, and thiss supply the soil with additional nourishment of the richest kind; a grain crop of wheat or barley, sown with grass sceds, follows, and the succeeding year shows a rich clothing of the finest grass, where all previously was weeds and barrenuess. This grass, allowed to lie, becomes for years a feeding pasture; or, cut for hay, is broken up at the close of the year for another green crop. The rotation is now complete, and tlie process as described again begins. The effects produced by such means are truly astonishing. Under an improved sys. tem of management, the produce of many farms has at least been doubled, and, over the whole kingalom, has so greatly

## BRITISH EMPIRE

inereased, that the territory which once with diffieulty sup ported ten millions, finds no difficulty in supporting twenty. Part of the result, no doubt, is to be aseribed to additional lands which, formerly possessed as commons, or lying as unimproved wastes, have been brought under eultivation. But the far greater part is undoubtedly derived, not from new, but from the increased productiveness of old lands.

The following Table gives a good general idea of the state of land in the British Empire :-

|  | Arable and Gardense | $\begin{array}{\|c} \text { Meadows, } \\ \text { Pustures, and } \\ \text { Marshes. } \end{array}$ | Wasten im. provabie. | Wustes not improvable. | Summary. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\Gamma \mathrm{r}$ | Acres. <br> 10,252,800 | $15,379,200$ | $3,451,000$ | Acres. <br> 3,256,400 | Acres. $32,342,400$ |
| Wales. | 890,570 | 2,226,430 | 530,000 | 1,105,000 | 4,752,000 |
| Scotland... | 2,493,950 | 2,771,050 | 5,950,000 | 8,528,930 | 19,738,930 |
| 1 reland... | 5,389,040 | 6,736,240 | 4,900,000 | 2,416,664 | 19,441,944 |
| Brit. Isles. | 109,630 | 974,060 | 166,100 | 569,469 | 1,119,159 |
|  | 19,135,990 | 28,086,980 | 15,000,000 | 15,871.463 | 78,074,433 |

One of the most striking facts apparent from the above Table is the proportion which the available land of England and Wales bears to its whole area, compared with the same proportion in Scotland. In England and Wales, excluding wastes of all kinds, improvable and unimprovable, and ineluding only the two first heads of the table, that proportion is sevennintlis: in Scotland it is little more than one-fourth, proving, that while the former is agriculturally one of the most favoured portions of the world, the latter is among the poorest. Ireland is in a middle state, having more than onehalf of its surface available. The land under the plough in Great Britain is generally cultivated on systematie principles, according to one or other of the following rotations:-

First Rotation.-1. Fallow, often not manured; 2. Wheat; 3. Beans, heavily manured; 4. Barley, with grass sceds; 5. Hay ; 6. Oats.

Second Rotation.-1. Potatoes or Turnips, generally latter eaten off by sheep; 2. Barley, with grass seeds; 3. Hay or Iasture; 4. Wheat or Oats.

Third Rotation.--1. Part fallow, manured; part potatoes or turnips; 2. Wheat or Barley, with grass seeds; 3. Hay onee cut, then pastured; 4. Pasture; 5. Oats.

The first of these rotations is particularly adapted to rich alluvial clays, which have originally formed the beds of lakes or flooded banks of rivers, and been gained either by the spontaneous retirement of the water, or the exclusion of it and subsequent elevation of the surface by the well-known process of warping. The finest specimens of these soils are seen near the mouth of the Humber, and in the rich carse lands of Scotland. The seeond rotation constitutes the celebrated Norfolk husbandry, so called from its having first come into most extensive use in that county, particularly under the anspices of Mr. Coke. It is generally used on light sandy loams, on which heavy crops of turnips can be raised, and then eaten off by sheep. It is a severe rotation, keeping the land almost constantly under the plough, and repeating elover at such short intervals as are scarcely eonsistent with its growth. A great improvement of the rotation has been made, by extending it to five or six years, by means of two or more additional years of pasture between the barley and wheat. This makes it almost identical with the third rotation, than which perhaps no better can be adopted on two-thirds of the soils of this country. In addition to the crops above mentioned, several others are occasionally introduced. The most important of them are rye, eole or rape, beet-root, hops, and flax. At the present low price of grain, the culture of the last will probably be greatly extended. It already forms almost a staple crop in Ireland. From the above Table of the state of the employment of the land, it will be seen that the quantity under the plough in England, is about five millions of aeres less than that in meadow and pasture. The produce of the latter is consumed to a considerable extent in feeding farm horses; still a vast surplus remains, and exhibits, both in the mode in which it is raised, and the uses to which it is applied, a peculiar feature of English, as distinguished from Scoteh husbandry. In Scotland, there is not much arable land ktpt permanently. in grass, except that whieh is intended for ornament, in the neighbourhood of country seats. Meadows artificially formed for irrigation, by a kind of cateh-work, exist on an extensive
scale, in particular localities, but meadows, in the sense in which an Englishman understands the term, are scarcely known. The meadows of England are permanent hay-fields, which are annually cnt, and maintained in fertility, by regular and heavy doses of farmyard manure. Much of the land thus employed is naturally of poor quality, having only a thin covering of soil over a hungry gravel, or ferruginous tenaeious clay, but, by the careful management of perhaps a century, has become covered with a close sward of the richest green, and of admirable feeding qualitics. The attention paid to this kind of land is sometimes in excess, and has led, in several districts, to a comparative neglect of the labours of the plough-a circumstance which accounts, in some degree, for the alleged superiority of the best Seoteh, to the general average of English farming. Taking the term, in its widest sense, as including not merely the raising of crops of grain, or roots, but the rearing and fattening of stock, the improving of breeds, and dairy nanagement, there is no country in the world that can be compared to several of the S. distriets of Great Britain. It is sufficient to mention, among horses, the race-horse, the finest type, and the parent of the best existing breeds of that animal; among cattle, the short horns of Durham; and among sheep, the celebrated South Downs and Leicesters. In dairy produce, several districts are equally pre-eminent. Attempts lave sometimes been made to speeify the extent of acres devoted to each particular kind of crop, and from this, on a supposed average yield per acre, to estimate the gross value of the agricultural produce of the United Kingdom. Such calculations being, for the most part, founded on data which have no official authority, can only be regarded as very distant approximations to the truth; and, therefore, instead of entering into details, it seems sufficient here to mention the general results from Mr. M'Culloch's Account of the British Empire, Ed. 1847.

| England and Wales.. scotland <br> Ireland | Prorluce of Land under crop. | Produce of grass land and woots. | Total. |
| :---: | :---: | :---: | :---: |
|  | $\stackrel{\mathscr{E}}{79,992,857}$ | $\stackrel{巳}{61,6!4,000}$ | $\frac{\mathfrak{e}}{141,606,857}$ |
|  | 18,744,285 | 9,000,000 | 27,744,285 |
|  | 28,200,83! | 20,000,000 | 48,200,834 |
|  | 126,937,976 | 90,614,000 | 217,551,976 |

The above Table, in common with all others yet published on the same subjeet, labours under the serious defect of assuming an erroneous average of price. In the Table, for instance, the price of wheat is taken at 50 s., whereas, at present (1851), it does not exceed $40 s$.

Minerals.-Sueh is the mineral wealth of the British Isles, that, with exeeption of quicksilver and gold, which, though found both in Scotland and Ireland, are too limited in quantity to repay the labour of searehing for it, it is seareely possible to mention a metal or mineral produet, of economical value, which is not worked, to a greater or less extent, beneath their surface. Among these, the first place is unquestionably due to

Coal.-It elaims precedence, not merely because the annual output of it, in regard both to quantity and aggregate value, exeeeds that of any other mineral produet, but beeause with. out it the other natural resources of the country, and the industry of its inhabitants, must liave for ever remained, in a great measure, undeveloped. The coal fields are not confined to one particular district, but occupy a series of basins sometimes touching, but more frequently at a considerable distance from each other, and extending, in an irregular curve, from the S. slopes of the Ochil Hills to the Bristol Channel. Under the head of Physical Features, reference has already been made to the carboniferous formation both of Great Britain and Ireland, and little more can now he done than glance at the localities of particular fields, and append a few important statistics. Beginning with the N. limit, we find a field commencing in the W. by great outbursts of trap, of which Stirling Castle crowns the most prominent summit, skirting the foot of the Ochils, and passing onward to the German Ocean, near St. Andrews; then turning round into the estuary of the Forth, and eontinning up the 1 . bank of that river; oecupying great part of Fifeshire, a small isolated portion of l'erthshire, and almost the whole of Clackmannanshire. The coal of this field is of several kinds; but the most important seams are splint, part of it of a free, open, burning quality, greatly
in demand for steam navigation, from its not corroding the furnaees and boilers, and part of it admirably adapted for the blast furnace. I'art of this field, immediately to the W. of Dunfermline, contains a coal whieh, in its richness and quality of caking, bears a resemblance to that of Newcastle, and has been worked, as ancient records prove, for at least five centuries. On the opposite side of the Forth, and almost in visible communication with the field already described, another field extends over a considerable portion of the Lothians. It furnishes the greater part of the fine fuel which is used in the metropolis of Scotland, and contains excellent seams of parrot coal. To the W., but at some distance, lie the coal basins of Lanark, Renfrew, and Ayrslire; the first, famous throughout the world for the immense manufacturing establishments which it mainly has called into existence, and made prosperous; the second, remarkable chiefly as containing, near Johnstone, the thickest seam of coal in Scotland or (if the Dudley field be not an exception) in the British Isles; and the last, as yet imperfectly developed, but evidently destined to higher importance than it has yet attained. In the N.W. of Dumfries-shire, in the neighbourhood of Sanquhar, there is a coal field, the capabilities of whieh, hitherto little known, because of its inland and almost inaccessible position, will be proved, now that an important railway intersects it. In the S.E. of the same county is another small field near Canonbie, with a considerable local consumption, and particularly interesting as the last of the Scotch, and the connecting link with the great English coal fields. Immediately on passing the border, the first of these fields lies before us, extending over the greater part of the counties of Northumberland and Durham, and centering near Newcastle, which gives it its name. The proximity of this field to the sea, and the excellence of the coal, unrivalled for domestic use, early made it the great theatre of mining operations, which are there carried on to an extent, and on a scale of magnificence, which make it a world's wonder. It furnishes the larger proportion of sea-borne coal, whether to domestic or foreign ports, and, notwithstanding of the competition which it now has to sustain with inland supplies by railway, still sends anmually to London about $3,000,000$ tons. Several of the pits have a depth exceeding 150 fathoms, and more than one colliery has a capital exceeding $£ 100,000$, sterling. On the opposite coast, nearly in the same latitude, is a small coal field, the workings of which, at Whitehaven and Workington, have been carried to a great distance beneath the sea. Besides supplying the local consumption, it exports extensively to the S. of Scotland and the N. of Ireland; in particular to the town of Belfast, whose flourishing foundries and factories mainly depend upon it. The next coal field to the $S$. is, in many respects, the most important of all. It ineludes a large central space, not entirely occupied by coal, but interrupted, longitudinally, by a broad belt which consists of the lower strata of the carboniferous system, and thus forming a kind of twin fields, the one of which extends from Leeds to Nottingham, while the other has its greatest length from S.W. to N.E., and borders, at its E. and W. extremities respectively, on Manchester and Liverpool. It thus can boast, not only of being the seat of what has been termed the world's great workshop, but of furnishing the most essential elements both of its existence and prosperity. The W. branch of this coal field is continued S . by a narrow belt, and terminates in a space of a triangular shape, oceupied by the small field of Neweastle-under-Line. The only other coal field of a magnitude similar to those already mentioned, is that of S . Wales, whieh, though it long lay almost unknown or unheeded, has, in comparatively recent times, become the centre of some of the greatest public works of the empire. It is of an irregularly oval shape, and passing from Monmouth on the E., continues W., without interruption, through Glamorgan to Carmarthen Bay, aeross which another field or continuation of that already mentioned, stretches irregularly to St. Bride's Bay. The characteristic features of this great coal field are, the large quantities of anthracite or stone coal which it contains, and the hilly nature of the country in whieh it lies. The latter gives the important advantage of obtaining access, even to the deepest seams, by means of horizontal adits, which, as the miners express it, carry off the water ' on ita own feet,' and save the expense both of deep sinkings and powerful engmes From the extent of this field, and the number and thickness of its seams, which, near its centre, number 23 , with
an aggregate thickness of 95 ft ., the field of S . Walcs hats probably a better title than any other in the kingdom, to be deemed almost inexhaustible. There are several other minor fields, all of them, with exception of that of N. Wales, situated near the centre of England, and thus, from position as much as from extent, possessed of great value. Their names are, the N. Staffordshire, the Shropshire, the S. Gloueester and Somersetshire, the Warwickshire, and the S. Staffordshire. The most important on the list are, the first, N. Staffordshire, from being the principal seat of the potteries; and the last two, Warwickshire and S. Staffordshire; (ioventry deriving its supplies from the one, Lichfield, Walsal, and Dudley from the latter, and Birmingham chicfly also from it, but partly from both. In S. Staffirdshire oceurs the enormous seam known as the Ten-yard Coal of Dudley. It properly consists of several seams separated by very thin beds of clay, called partings, and, owing to the necessity of working it in seetions, is by no means so profitable as might be imagined. The average annual output of coal in Great Britain las been conjectured, rather than calculated, at 30 millions of tons, and apportioned in three equal parts-ten millions to domestic use, ten to ironworks, and ten to mannfacturing and miscellaneous establishments and export. Assuming the medium price of $6 s .8 d$. per ton, the value is $£ 10,000,000$ sterling. The export of coal to foreign countries, in 1849 , was, including cinders and culm, 2,837,979 tons. The following Table shows the progress of the foreign coal trade :-

Tons of Coals Suipped Coastwise, and Exported do Buitish Colonies and Foreign Countries in 1841-46.

|  | 1844. | 1845. | 198. |
| :---: | :---: | :---: | :---: |
| Coastwise | 7,377,862 | 8,723,468 | 8,305,442 |
| British Colonies | 324,425 | 363,255 | 412,9:8 |
| Foreign Cuuntries | 1,429,746 | 2,167,9:7 | 2,118,180 |
| Total | 9,132,033 | 11,254,630 | 10,836,550 |

Iron.-Almost the whole of the iron ore smelted in this country is a carbonate, which is invariably found, to a greater or less extent, in all coal measures, but exhihits itself in a great variety of forms, and with very different qualities. Of our great coal fields, none is so destitute of iron as that cf Neweastle; and hence, though not a few blast furnaces are in operation there, the ores used are obtained, not from the surrounding pits, but by importation, often from considerable distanees. More than one furnace is supplied by black. band ironstone shipped from Scotland, after being calcined. The most important iron districts of England are those of S. Yorkshire, Shropshire, S. Staffordshire, and S. Wales. The coal fields already described sufficiently fix their localities; and, therefore, it is only necessary to mention here that the ores are obtained partly from bands, and partly from seams. The former name is usually applied to nodules or balls, generally of a round or oval shape, which lie together with considerable regularity, often in contact, but always without adhesion, and are, for the most part, embedded in thick beds of shale or blaes. The latter name is given to ironstone lying in regular strata, and worked in the same manner as coal. These strata generally are only a few inches, and scarcely ever a foot in thickness. Perhaps not always the finest in quality, but, for many reasons, the most valuable of the stratified ironstones is the blackband, so called from the darkness of colour produced by the large proportion of coaly matter whieh it contains. It is singular that the only part of England known to contain this stratum, is a portion of the coal field of S . Wales. In Scotland, also, it was at one time supposed that it was merely a local deposit, and that its existence, or at least its good qualities, were confined to the range of a few miles in the neighbourhood of Airdrie. Here, accordingly, some of the largest smelting establishments of the kingdom suddenly sprung up; and a small estate, the surface of whieh did not yield $£ 500$ per annum, began to yield its fortunate possessor, from its mineral treasures, at least $£ 10,000$ ver annun,. A more careful examination has proved that few of our Scottish coal fields are without these blackband seams, and numerous ironworks have, in consequence, arisen in numerous districts, where their profitable existence had hitherto been deemed impossible. To the N. of the Forth, only one ironwork had been able to maintain a languishing existence. Other two, one with five and the other with two blast furnaces, have already been erected.

On the opposite bank of the Forth, stand the Kinneil Works, with four furnaces, supplied with ironstone from old pits, in which the seam had been sunk through while its value was unknown. In Lanarkshire, the area of the seam has proved equally extensive, but, from the number of ironworks previously existing, it has not so much led to the establishment of new as to the extension of old works, and to the almost universal substitution of blackband for the inferior claystones formerly in use. Ayrshire, on the other hand, where the works of Muirkirk only existed, is now beginning to be almost studded over with them. A discovery of perhaps greater importance than that of the blackband, because applicable to the ironworks of England as well as to those of Scotland, took place about the same time. By heating the blast, before entering the furnace, to about $600^{\circ}$ (i.e., to such a degree that lead exposed to it melts), its power is so much increased, that the most stubborn materials quickly give way before it, and raw coal becomes even more efficient in smelting than coke was before. A ton of iron can thus be obtained with much fewer materials, and, what is of considerable moment, in far less time. A furnace which, under cold blast, makes 70 tons a week, easily makes 100 under hot blast. Another improvement, by which the gases evolved within the furnace are not allowed to escape, but collected, and made available for fuel, is in operation in several works, and promises important results. The annual make of pig-iron in the kingdom is estimated at $1,500,000$ tons. About one-third is used for castings, and the remainder, not exported, is converted into malleable iron. In this second part of the process, Scotland apparently fails. Her furnaces smelt about one-third of the whole produce, but a considerable part of this make is sent as pig to England, to be made malleable there, either by itself, or in mixture with English pig. The cause of this is not very obvious, but there is probably some ground for a prevalent belief that pig made from a variety of ores, as in England, is somewhat superior to that made from blackband alone, and that this superiority becomes still more manifest when it is made malleable. A similar opinion exists in some quarters as to the superior strength of iron made by cold blast; which, accordingly, notwithstanding of its numerous disadvantages in other respects, is still used to a considerable extent. The principal statistics of the iron trade are given in the following Table:-

Paoduction of Laon, and Export, in Great Britaln.

| Years | Furnaces. | Quantities in tons. | Fxport in tons. |  |
| :---: | :---: | :---: | :---: | :---: |
| 18:30 | 376 | 677,417 | 59,885 | 12,036 |
| 1840 | $4{ }^{4}$ | 1,396,400 | 144,719 | 49,801 |
| 1844 | - | 1,4001,000 | 249,915 | 99,960 |

The whole production of 1849 has been estimated at $1,500,000$ tons. Of this quantity, Scotland, possessing 113 furnaces, produced 690,000 tons. The annual produce, per furnace, in 1796, did not exceed 1033 tons; in 1849 , it had risen to 6106 tons.

The principal localities in which lead, copper, and tin are found, have been already mentioned. Additional facts of importance are subjoined :-
Estimated Avnual Average Pronuce of Smelited Lead, Copper, and Tin, form 1845-48, in tons.

The ton of lead is supposed to yield, on an average, about 8 oz . of silver.

It seems unnecessary to give any details as to minerals of minor importance. The principal articles are salt, of which the quantity obtained, chiefly from rock-salt and brine pits, has been estimated at nearly 550,000 tons. The locality in which salt is most extensively worked at present, centres near Chester; and the supply is so great as to be inexhaustible. Quarries also exist in every part of the British Isles, except the S.E. of England. They furnish granite susceptible of a polish which makes it fit for statuary, freestone of the purest white and most durable substance, and immense quantities of the finest roofing-slates. As to the value of the produce from quarrics, little authentic information exists. The fol-
lowing summary of the mineral produce of Great Britain, on an average of three years, ending 1846, is from M'Culloch's British Empire, 3d edition, vol. i. p. 624 :-

It will be seen that several of the quantities differ from those already given, and believed to be more accurate. At present prices, also, the iron and coal as rated in this estimate, are greatly over-valued.

Fisheries.-The raw materials obtained from the land of the United Kingdom, either by growing them on its surface, or digging them from its bowels, having now been described, we proceed to notice those which are obtained from its waters, including under the term, not merely rivers and lakes, but bays and creeks, and immediately surrounding seas. Considering the large extent of space occupied by these within the interior of the kingdom, and along its coast, it might be supposed that the fisheries, by which their produce is obtained, would be one of our greatest national interests. They have accordingly been felt to be so, and many efforts have been made by Government to foster them. The success of these efforts not being such as to encourage their continuance, all bounties have been withdrawn. One great obstacle to the general consumption of fresh fish, has been the difficulty of transport, now much diminished by the facilities offered by railways, and it would seem that in some important inland towns, where fresh fish were previously known only as an expensive luxury, they can now be had at a price which places them within the general reach, so far at least as to afford a wholesome and grateful change of diet. The principal British fisheries are those of salmon, herring, and cod. The first is carried on chiefly in the rivers and estuaries of Scotland and Ireland; the second on all the coasts and islands of Scotland, the great centre of resort for curing being the towns of Wick, Peterhead, and Fraserburgh; the last around the N. islands, and along the E. coast of Great Britain, particularly the edges of the Dogger Bank, off the coast of Yorkshire. Among minor fisheries may be mentioned those of mackerel, pilchards, oysters, and lobsters. Of these last, and indeed of all kinds of fresh fish, by far the largest consumer of the kingdom is London.

Manufactures.-Taking these in the order of their importance, we begin with cotton. The history of this manufacture, which now employs more hands than any other within the kingdom, and furnishes above one-third in value of the whole exports, is indeed remarkable. The raw material is of vegetable origin, and is obtained from the internal coating of the pod or seed-vessel of the Gossypium, of which there are several varieties, some growing as a tree or shrub, and others as an annual herbaceous plant. It is from the latter that the far greater part of the supply is obtained ; and for this supply, as none of the varieties grow in our climate, we are entirely dependent on other countries. Cotton grows well in India, and would undoubtedly thrive well in many of our other pessessions; but at present, and for many years, the supply has been in a manner monopolized by a few of the slave states of N. America. In so far, therefore, as regards the raw material, we have no advantage in the market over other competitors; but, compared with one of the most jealous and enterprising of them, are placed in unfavourable circumstances. The more astonishing is our success in gaining the lead, and maintaining it, while all other nations are lagging at an immeasurable distance behind. The explanation of the fact is to be found in the nature of the manufacture, and a scries of wonderful inventions, all made, with the exception of that of the American Whitney, for separating the cotton from the seed, by subjects of Great Britain-by Arkwright, Hargreaves, Compton, and Cartwright-contrivances, too, tending, in a remarkable manner, to give new advantages to a country possessing, like ours, exhaustless fields of coal, unrivalled machinery, vast accumulations of capital, and a dense, orderly, and industrious population. On the subject of this manufacture, interesting volumes have been written; and as any
analysis, however condensed, would far exceed our limits, the leading facts must be exhibited in a tabular form.

Tabie or Ivports of Cotton Wool into, and of Exports and Declared Value of Cotton Manufactubes, Twist, and Yabn, from the United Kingdom.

Woollen.-This is our most ancient, and was for centurics our great staple manufacture. The flocks fed on our downs and other pastures, furnished wool of peculiar excellence, and in such abundance, as both supplied the home demand at a moderate price, and left a large surplus for exportation. There cannot be a doubt, however, that the first great improvements were not of native invention, but were introduced by foreigners, whom either the wise policy of our suvereigns had allured, or the merciless bigotry of their sovereigns had driven into the kingdom. Though the manufacture cannot boast of an extension like that of cotton, it holds the next place to it; and, besides working up the greater part of the wool grown within the kingdom, draws largely on other countries for additional supplies, particularly on Australia, which see, p. 263. In the finer broadcloths our manufacturers have formidable competitors in the Belgians, from whose forefathers we may be said to have learned this branch, and also in the Saxons; but in other woollens our position, in sevcral branches, is at least as high as that of any other country, while in not a few our superiority is decided. The chief seat of the woollen manufacture is in England-the W. Riding of Yorkshire, Lancashire, Gloucestershire, and Wiltshire, being the most distinguished for broad clotlıs; Norfolk for worsted stuffs, Leicestershire and Nottinghamshire for woollen hosiery. Blankets and flannels have numerous localities, but for the finer qualities the W. of England and several of the Welsh counties are most conspicuous. Carpets, of every quality and pattern, are extensively made at Kidderminster, Cirencester, Worcester, \&c. ; but those of Wilton and Axminster are so superior, as to suffer little by comparison with the celebrated fabrics of Turkey and Persia. A particular species of woollen manufacture, in which the resources of modern ingenuity are signally displayed, is that of shodily. Its raw material is woollen rags, which, after various purifying processes, are reduced to their original wool, then re-spun, re-dyed, and remanufactured. Formerly, the article produced was so coarse as to be fit only for padding and similar purposes, but now, cither alone or with a partial mixture of raw wool, shoddy is made into flushings, druggets, pilot and other great-coats, carpets, and table-covers, some of the last of great beauty. The principal seat of the shoddy trade is Dewsbury, about 8 m . from Leeds. The woollen manufacture of Ireland is on a verylimited scale, being confined to a few broad-cloth factories near Dublin and Cork; and a few blankets and flannels, the former in Kilkenny, and the latter at Wicklow. Scotland has made much

more progress, but still bears no proportion to England. Tho chief seats of the Scotch woollens are Abercleen for broad eloths, chiefly coarse, and the spinning of worsted; Kilmarnock for carpets, bonnets, and shawls; Stirling and its neighbourhood for carpets and tartans; Galashiels, Jedburgh, and also a number of small towns along the foot of the Ochils, for narrow cloths of several varieties, tartans, shawls, plaids, \&c.; Inverness for tartans, and Hawick for hosiery.

Linen.-In England the spinning of flax is carried on to a great extent, but its manufacture into cloth is comparatively limited. A considerable quantity of damask and diaper is made at Barnsley. Should the recently invented process, for the improved preparation of raw flax, have the effect anticipated, and enable the preserit cotton machincry to spin fine thread from a mixture composed of a large portion of flax and a small portion of cotton, and producible at a much cheaper rate than cotton singly, the manufacture of flax in this form may be expected to make almost unexanpled progress. Linen is the great staple of Ireland, and was long, in regard to textile fabrics, the staple also of Scotland. In the former, extraordinary means were employed to foster it. It early fixed its seat in the N., particularly near Belfast, and there the great changes which have taken place in the mode of manufacture, by the substitution of spirning-mills and factories for the domestic wheel and loom, appear only to lave fixed it more permanently. Almost the only form into which flax is manufactured in Ireland is plain linen, chiefly shirtings. In Scotland, the manufacture assumes greater variety. Besides plain linen, it has manufactures of Osnaburgs, sheetings, sailcloth, sacking, \&c., chief seat, Dundee; and of diaper and damask, chief seat, Dunfermline. The staples of both towns are by far the most important of their kind in the kingdom.

Silk.-Mere the rav material is, like cotton, entirely of foreign production, with the important difference in favour of silk, that, instead of being almost monopolized, and consequently liable, in regard both to quantity and price, to be controlled by a single country, the limits of its production include an immense range, of which a considerable portion belongs to our own colonies and dependencies. This is perhaps the only great branch of manufacture, in regard to which, at least in finer fabrics, we must yield the palm of superiority, and be contented with something less than equality. The number of silk-mills is considerable, and confined chicfly to England. To England, likewise, belong the chief seats of the silk manufacture. Paisley is almost the only town out of it in which it is carried on to a great extent; and even there, the celebrated shawls of unrivalled excellence are generally a mixed fabric of silk and wool. The chief seate of the silk trade in England are, the district of Spitalfields in London, Manchester, and Coventry.

The following Table contains a statement of the imports of the raw materials of the woollen, linen, and silk manufactures; and of the exports of goods manufactured from them.

Beside the manufactures already mentioned, there is a great number which, though separately of less importance, absorb immense sums of capital, exhibit many of the most wonderful specimens of human ingenuity, and give subsistence to millions of the population. We can do little more than glance at the most prominent.

Under the head of minerals, we only noticed the preliminary steps of converting ores into metals; and, in the case of iron, we referred to the additional step of converting it, from its first smelted state, into malleable iron. Vast processes remain belind, and constitute numerons branches of manufacture under the general name of hardware. Several of the
articles produced are of a boldness and magnitude almost sublime, and many of them are so small as to be almost microseopic. To the former class belong iron bridges, no longer suspension only, but tubular bridges, one of whieh, the latest wonder of the age, now spans the Menai Straits; -steam-engines, either lifting up whole rivers from the lowest depths, or plonghing the widest and stormiest oceans; or, it may be, performing some minute or singularly delicate process, which the most skilful human fingers would vainly attempt to imitate;-maehinery of every kind, by which inanimate matter acts as if it were endowed with vitality, not only performing its appointed tasks, but giving distinet and audible warning when, from accidental causes, it beeomes incapable of performing them. For minuter articles of hardware, reference may be made to the countless products of Sheffield and Birmingham, not exeluding articles in the precious metals-plate, jewellery, and watches, made also exten sively in the same towns, but nowhere in the wide world so perfectly as in London. Passing from netals we come to earths, both in the more ordinary forms of pottery, and in the form of porcelain, with its classie shapes and gorgeous colours, and exquisite designs. In the district of the potteries in Stafford, we see a great national interest, almost created by the enterprise and genius of a single man. Among earths, too, at least as to principal constituerts, we may include glass, and the numberless forms of beauty and utility which it has been taught to assume. The principal seats of the manufacture are Neweastle and Sonth Shields; but should the beautiful material which it produces become applicable in the erection of structures such as that just completed in London for the 'World's Fair,' it is evident that both in this and other lands the manufaeture of glass is only beginning to exist. Another manufacture, almost of equal beauty, and of more importance to civilization, is that of paper. It is of vast extent, and, in its processes, exhibits some of the highest triumphs which human ingenuity has yet achieved. In conneetion with it are various manufaetures, of which it may be considered as, directly or indirectly, the parent-type-founding, printing, books, and with them literature in its various departments, engraving, \&c. From these we must descend to less refined employments, and one of the first which claims attention is the manufaeture of leather, including its various subdivisions of tanning, eurrying, shoe, glove, and harness making, with numerous minor branches in which leather is employed, as in making trunks, portmanteaus, \&c. The list of manufactures would be very incomplete did we not mention hats, soap, and candles; sugar-refining, and the varions chemicals on which our textile manufactures in particular depend, for accomplish ing their nicer processes, as bleaching, dyeing, \&e. Our last head, and it is the only one of whose undue magnitude philanthropists justly complain, is that of breweries and distilleries. The former, furnishing the national beverage of England, are there of unparalleled magnitude, but the liquor must be used in great excess before it can be productive of serious misehief. The latter have their greatest extent in Scotland and Ireland. The product, taken undiluted or in excess, is worse than a poison. To its maddening effects, three-fourths of the poverty and crime, at least of Seotland, may be traced.

Trade and Commerce.-In every country possessing muelı accumulated capital and a dense population, partly in wealthy, and generally in somewhat comfortable circumstances, the lome may safely be presumed to be greater than the external trade. Its extent, however, cannot easily be ascertained, even in countries where all the districts and towns are hemmed round with officers to levy customs on every article which may be brought into them, and becomes altogether conjectural in a country like ours, where not a shadow of restraint prevents us from moving about at will, and transporting both our persons and our goods throughout its whole length and breadth. Our foreign trade or commeree, properly so called, is more easily calculated, at least in its leading branches; but the magnitude to which it has attained is so great, and the strides with which it continues to advance so rapid, that it is impossible to contemplate it without feeling bewildered and overpowered. Fortunately we now posses3 official information on alnost every topic of a commercial nature, and by drawing freely on the tables regularly published by the Board of Trade, and using a little diseretion in selecting from them, cverything of essential importance can be communicated
within a very narrow compass. The two fundamental points are, the extent of our commerce, as indicated by the quantity and value of imports and exports; and the direction of our commerce, as indicated by its apportionment among the different countries with which it is carried on. These points, and some others of a kindred nature, sueh as the quantity of shipping employed, are elucidated by the following Tables:-

## BRITISH EMPIRE

Government.-Under this general head, a variety of inportant particulars are included. The first in order is the Constitution. The British Constitution is the growth, and embodies the wisdom and experience, of ages. No man or set of men first preconceived it in theory, and then proceeded to give it a real existence. It assumed its leading features in times when theorics were little thought of, and has become what it now is almost imperecptibly, without premeditated design, so that it may truly be regarded as more the result of providential arrangement than of human invention. A constitution so formed, is necessarily full of anomalies, which perplex the theorist, and refuse to bend into accordance with his speculative forms. At the same time, the type of government to which it belongs is obvious. It is a linited, hereditary monarchy, in which the executive power is lodged in the Sovereign, but controlled in its exercise by the legislative power, shared in common by three bodics, of which the Sovereign, though the first in dignity, is by no means the most influential member. The second and third of these bodies are the House of Lords and IIouse of Commons, who meet and vote in separate Chambers. With the Sovereign at their head, they form the Legislature or Parliament; and every enactment, before becoming law, must obtain their separate assent, given first by the House in which it originated, and expressed either unanimously or by an open vote; then in like manner by the other House; and, finally, by the Sovereign, the date of whose assent is held to be that of the operation of the Act, provided no other date is specially expressed. The House of Lords is composed of Lords temporal, that is, peers of blood-royal, British peers, representative peers not British, and of Lords spiritual. Pecrs of bloodroyal sit by courtesy; British peers, after their first creation, by hereditary right; representative Peers by election. Peers of the last class are partly Scotch, partly Irish, and are elected by the other peers of their respective countries, who are not British. Scotch peers, 16 in number, are elected for each Parliament ; Irish peers, 28, sit for life. Lords spiritual are archbishops and bishops of the United Church of England and Ireland. All those of England, with exception of four without seats, sit for life. Of those of Ireland, only four (one an archbishop) sit by rotation for a single scssion. The House of Lords is presided over by the Lord Chancellor, and, in addition to its legislative, performs judicial functions, being, in all civil causes, the Supreme Court of Appeal for the three kingdoms. The third body is the IIouse of Commons. Its members are elected for a single Parliament, which expires legally in seven years, and gencrally sooner. Its members, 658, are arranged as follows :-

The qualifications of the electors vary, in minor points, in the different kingdoms; but the general principle is to give a vote for county members to every male not under legal incapacity, who within the county either owns houses or lands to the clear value of $£ 10$ per annum, or rents them to the amount of $£ 50$ per annum; and a vote for borough members to every like male who owns or occupies houses or lands of the value of $£ 10$ per annum, within a certain limit, called the parliamentary burgh, and actually resides within 7 m . The number of electors, according to the registrations of $1849-50$, is as follows:-

| England. |  | Seotland. | Ircland. | Total. |
| :---: | :---: | :---: | :---: | :---: |
| Counties..... $461,413$.Boroughs..... $378,384$. |  | 48,456 | 31,832 | 578,685 |
|  | 11,035. | 41,819 | 40,231.. | 471,502 |
| 839,797 | 48,019 | 90,305 | 72,066 | 1,050,187 |

The president of the House of Commons is the Speaker, one of the members elceted by a majority of the others at the commencement of each Parliament, and for its whole duration. In general, any legislative measure may originate in either Ilouse; but the House of Commons possesses the exclusive Vol. I.
privilege of originating money bills, and voting money-a privilege which it guards so jealously, that it will not allow the Lords to make any change on a money clause in any bill, of the most general nature, which the Commons may have passed, and sent up to them. When we are told of the immense power of the Crown-its sole right to levy armies, and fit out navies, to make peace or declare war, to appoint all the high functionaries of the State, and dignitaries of the Church; when we are further told that the Sovereign is inviolable in person, nay, by an undisputed maxim of the Constitution, 'can do no wrong'-we are almost tempted to imagine that our boasted free Constitution is little better than an unmitigated despotism; but when we look, on the other hand, to the money privilege of the Commons, and to the necessary consequence, that most of the mighty things which the Crown can theoretically do, it cannot do actually without their sanction, the danger to the Constitution, if there is danger, is seen to lie elsewhere. A revolutionary House of Commons would in fact be a revolution accomplished. But there is no danger, and therefore there need be no fear. Reference has been made to the maxim that the 'Sovereign can do no wrong.' The words sound strangely, but their meaning simply is, that the acts of the Government are considered to be the acts, not of the Sovereign, but of the Ministry which for the time conducts the Government. This Ministry consists principally of what is called the Cabinet, in which are 14 high functionaries. Of these the most important are, the First Lord of the Treasury, who is Prime Minister; the Chancellor of the Exchequer, the Lord Chancellor, and the three Secretaries-Home, Foreign, and Colonial. Scveral other functionaries, though not possessing seats in the Cabinet, are usually regarded as part of the Ministry. It is not with the Sovereign, then, but with ministers, that the responsibility rests; and hence, for their own safety, when they lose the confidence of Parliament and the country, they have no alternative but to resign. Other ministers of different principles succeed, and difficulties which might have seemed to threaten a collision between the highest powers of the State, pass off quietly, and are soon forgotten. In this way the Constitution, like some mechanism of exquisite contrivance, possesses within itself a power of re-adjustment, and seems destined-if neither overpowered by external violence, nor torn to picces by internal dissension - to be as lasting as the world.

Intimately connected with the Constitution, or important integral portions of it, are its Ecclesiastical Establishments, of which there are two; both Protestant, and in doctrine almost identical, but very different in form-the one, under the name of the United Church of Englard and Ireland, being Episcopal, and the other, confined to Scotland, Presbyterian. As these churches will be fully described under the heads of England, Ireland, and Scotland, it would be out of place to do more here than mention, besides the Established churches, those of the Dissenters, who no longer labour under civil disabilities, and are both numerous and influential.

After ecclesiastical, our attention is naturally directed to Judicial Establishments, for an account of which we again, and for the same reason, refer to the lieads of England, Scotland, and Ireland. Indeed, the only court of justice which can be considered as belonging to all of them alike, is the House of Lords sitting in its judicial capacity, as already mentioned, not to exercise original jurisdiction, but to hear civil causes on appeal. Strictly speaking, this is the only Supreme Court within the British Isles, though the name is usually given to the Court or Courts of each kingdom, whose decisions are subject to no other review but that of the House of Lords. As it is truly to the whole Honse that the judicial power belongs, every peer having a seat in it is entitled to judge and vote, but in practice, only those called Law Lords exercise judicial functions.

From judicial we turn to Military Establishments, usually comprehended under the general head of the

Army and Navy.-The extent of the British Empire necessarily makes the aggregate military force very considcrable; but there is no European state in which the standing army bears so small a proportion to the whole population. This great privilege is mainly owing to our safcty from foreign aggression, and the internal tranquillity which, with one great exception, generally prevails. The total number of troops of
the line at present, including Queen's troops in the pay of the East India Company, is 129,625 . To these must be added 14,410 artillery, making the whole force 144,035 . The number on home service is only 51,947 , of whom 30,305 are in Great Britain, and 21,642 in Ireland. This of course is the peace establishment, but during the last great European war, when our very existence as an independent nation seemed to be threatened, gigantic efforts were made, and no state shared more largely than Great Britain in the glory of saving the liberties of Europe, by putting down an unprincipled tyrant. Wherever British troops have been sent on foreign campaigns, and properly commanded, they have proved unrivalled. Here it is sufficient to name the achievements of Marlborough during the last century, and those of Wellington in the Peninsula and at Waterloo. In many respects, and particularly as a defensive force, the army must yield to the navy. The advantages of our insular position are often talked of, as if the mere fact of living on an island were in itself a source of safety, whereas the safety is not in the position, but in the ability to defend it. In early times, immense fleets, filled with warlike hordes, issued from the 'frozen loins of the populous North,' and 'poured like a deluge' on our shores, which, from their vast extent, and with the feeble means possessed, it was impossible to defend. Our insular position was in those times our greatest weakness, and so must it be again, if we ever lose our decided superiority at sea. The public mind is, happily, alive to this vital consideration; and hence, while a large standing army is, for many reasons, eyed with jcalousy, our navy swells every British heart with honest pride, and is confidently appealed to as a sufficient response to the strange cry which is sometimes heard, proclaiming the defenceless state of Great Britain. A force which is thus honoured and fostered, naturally attracts the best and bravest spirits of the land, and many of the brightest pages in our annals are filled with naval achievements. The principal details respecting the navy are as follows:-

The number of Ships and Steam Vfissels in the British Navy, with the number of guns they munt, and the horse-power of their engines, corrected up to 1850 :-

19 First-rates...............of 120,116 , and 110 guns, mustering 2,216 guns 76 Second \& third-rates varying from 104 to 70
$\begin{array}{rl}126 \text { Fourth, fifth, and sixth-rates } n & 55 \text { to } 18 \\ 79 \text { Sloops ........................... } \\ 18 \text { to } 8\end{array}$
6,196
16 Brigs ......................................... " 18 to 8 " 3 ",
16 Bries.......................... " 6103 " $\begin{aligned} & 686 \\ & \\ & 3\end{aligned}$
22 Steam-ships and frigates.......With 12,222 horse-power and 281 ",

38 Gun-vessels..................... ", 6, 6,718
$\left.\begin{array}{r}2 \text { Schooners (screw, with auxiliary } \\ \text { steam power) }\end{array}\right\} \quad 120$
125 "
$\left.\begin{array}{l}\text { Horse-power of steam guard and } \\ \text { block-ships, classed as fourth-rates }\end{array}\right\} 3,800$.
Making a total of 420 vessels, mounting 15,026 guns, of which 114 are steamers, propelled by engines of an aggregate power of 36,180 horses. This does not include the fleet of mail steamers at Dover, Pembroke, Holyhead, Liverpool, \&c., which are only armed with light six-pounder gans for signals

Money, Weights, and Measures.-Passing from subjects of a warlike nature, we come to economical arrangements, and of these, the first which meets us as forming the basis of the whole, is the currency or money system; and, in connection with it, the system of weights and measures. In the United Kingdom, 1 lb . Troy of gold, 11 parts pure, and one alloy, is coined into 46 sovereigns and 820 ths of a sovereign, in other words, into $£ 46,14 \mathrm{~s} .6 \mathrm{~d}$.; thus making the mint or standard price $£ 3,17 \mathrm{~s} .10 \frac{1}{2} d$. per oz. The gold coins in use are sovereigns and half-sovereigns, and constitute the only legal tender in all sums above 40 s . One lb. Troy of silver, containing 11 oz .2 dwts. pure, and 18 dwts . alloy, is coined into 66 s. , of which 20 s . constitutes the money pound; thus making the mint price of silver $5 s .6 d$. per oz. The silver coins in use are five-shilling pieces or crowns, half-crowns, shilling pieces, half-shillings or sixpences, fourpenny pieces, and threepenny pieces. The only copper coins are pence, each of which is $\frac{1}{12}$ th of a shilling, and halfpence. They are legal tender to the amount of 18 . Coins form a comparatively small part of the circulating medium of the country. A far larger part consists of mere representatives of value, in the form of olligations to pay. Of these the most common in use are bank notes, or documents binding the par-
ties who issue them to pay the specified sums contained on them, to the bearer on demand. The permission to issue bank notes is now confined to certain existing banks, and to cortain definite amounts for each bank. By far the largest circulation is that of the bank of England. In that part of the kingdom, no notes under $£^{5}$ s can be issued. In Scotland and Ireland, they are still issued for $£ 1$.

In weights and measures, we cannot boast of anything so scientifically formed as the system of France. That country having been thrown into the revolutionary caldron, had no prejudices to consult, and could make any change, however violent. Our Legislature had a very different task to perform, and therefore, instead of attacking inveterate habits and customs with a violence which could only have defeated its own purpose, wisely endeavoured to produce uniformity, by adopting, not the system whicl it knew to be most philosophical, but that which it believed to be most practicable. In every system, two standard units are essential-one of length, and another of weight. The lineal units of the United Kingdom, as fixed by 5 Geo. IV., c. 74, is the 'Imperial Standard Yard,' measured by 'the distance between the centres of the two points in the gold studs in the straight brass rod, now in the custody of the clerk of the House of Commons,' whereon the words and figures, 'Standard Yard, 1760,' are engraved; and to make the recovery of it easy, in the event of it being lost, it is declared that its length is to that of a pendulum vibrating seconds in the latitude of London, as 36 to $39 \cdot 1393$ inches. This standard yard is declared to be "the only standard measure of extension, whereby all other measures of extension whatsoever, whether the same be lineal, superficial, or solid, shall be derived.' The principal subdivisions are the foot $=$ $\frac{1}{3}$ yard, and the inch $=\frac{1}{1}$ th foot. The principal multiples are the pole or perch $=5 \frac{1}{2}$ yards, the furlong $=220$ yards, and the mile $=1760$. These lineal measures, squared, give superficial measures, of which the principal are the rood $=$ 40 sq. perches $=1210$ sq. yards, and the aere $=160 \mathrm{sq}$. perches $=4840$ sq. yarls. The standard unit of weight is the Imperial standard Troy pound, made in 1758, and now in the custody of the clerk of the House of Commons. From this, measures of weight are derived. It is subdivided into 12 oz ., each oz. into 20 dwts., and each dwt. into 24 grains. To fix the avoirdupois pound, it is declared to be 7000 grains Troy, and subdivided into 16 oz ., and each oz. into 16 drams. The multiples avoirdupois are $28 \mathrm{lb} .=1 \mathrm{qr} ., 4 \mathrm{qrs} .=1 \mathrm{cwt}$. . and 20 ewt. $=1$ ton. The standard measure of capacity is fixed by the standard imperial gallon, containing 10 lb . avoirdupois of distilled water, at temperature $62^{\circ} \mathrm{Fah}$., or $277 \cdot 274$ cubic inches. The corn, wine, and ale gallons have respectively 268.8231 , and $262^{\circ}$ of these cubic inches.

Finance.-To carry on the affairs of such a wondrous fabric as the British Empire, necessarily requires sums of an amount so immense, that it is scarcely possible to form a very definite conception of them, notwithstanding of the minute accuracy of the series of official blue books in which they regularly appear. The separate amounts of revenue and expenditure under their different heads, as well as the total amount, are given below. This vast revenue is generally raised in accordance with what are understood to be the soundest principles of political economy; in other words, the taxes, direct and indirect, and the customs which furnish it, are, with few exceptions, collected in the least obnoxious form, fall lightest on articles of primary necessity, or the raw materials of manufacture, and heaviest on articles either of luxury, for which the persons using them must be supposed well able to pay; or of noxious consumption, from the use of which the persons unhappily addicted to them, ought, if possible, to be deterred by the high price which they are compelled to pay. Almost all the great heads of revenue furnish facts of the deepest interest, and it is difficult to refrain from making several of them the subject of special remark. Nowhere can we find data better fitted to explain the actual position of the country than in the various sources from which its revenue is obtained; for example, the direct taxation on property and income, showing the vast amount of wealth which must annually be produced, when $7 d$. per pound raises a sum of more than $£ 5,000,000$ sterling; the inconceivable amount of correspondence, in endless forms of variety, which must be carried on, when a single penny on each letter, after paying all expenses of management, yields a clear surplus of more than $£ 800,000$. But our
limits forbid, and nothing more can be done here than to append the following important Tables:-

long been carried on, and is daily attracting more attention as a necessary outlet for a constantly inereasing population.

This great population, like that of Europe generally, belongs to what is called the Caucasian race, which exhibits the human form in its highest physical type, and is so superior to all other races, that in whatever quarter of the globe it fixes its seat, it sooner or later becomes dominant. One of the most celebrated varieties of this race is the AngloSaxon; and to it, though with a considerable intermixture of other Gothic races, the great majority of the inhabitants of Great Britain unquestionably belongs. The Anglo-Saxons, however, were not the original owners of the soil. They found the Celts in possession, and drove them before them into the wildest and most inaccessible parts of Great Britain, particularly the N. and W., where they still remain, and prove their separate origin by one of the most marked of national distinctions -a peculiar language. Ireland experienced a different fortune, and, with the exception of the N. province, where an Anglo-Saxon colony was established in comparatively recent times, is almost entirely peopled by Celts. The Celtic language is also, though with considerable variations, the vernacular of the Highlands of Scotland and Wales, the W. of Ireland, and the Isle of Man, but it has not, and does not seem destined ever to lave, a literature. The Anglo-Saxon or English, on the contrary, promises soon to be, if it is not already, the most widely spoken of European languages, and has proved itself inferior to none as a vehicle of thought. Fitted alike for all the great walks of literature, it can move with the dignified step of bistory, pursue the mazes of metaplysies, give utterance meet to the finest bursts of forensic, senatorial, and pulpit eloquence, and, untwining all the cords of harmony, sustain poets and

At the Revolution in 1688 , the national debt was $£ 664,263$, and the interest and management $£ 39,855$. At the commencement of the last European war, in 1793 , it was $£ 239,350,148$; and in 1817, shortly after its termination, $£ 840,850,491$. It is now $£ 773,168,316$, and the interest and management, as seen above, £28,194,507.

People.-Under this general head we include not merely their numbers or population, properly so called, bnt whatever is peculiar in their condition-their origin and language, their literature, religion, and manners-everything, in short, which throws light on their social position, and is now usually comprehended under the designation of moral and vital statistics. Some of these topies we can barely glance at, and even the most important of them must be discussed in a few brief sentences.

In 1710 , the population of England and Wales was $5,066,337$; and nearly at the same time, that of Scotland, $1,050,000$; and that of Ireland, 2,099,094; in all, 7,215,431.

The census was first actually taken in 1801 in Great Britain, and in 1821 in Ireland, and ever since in both islands decennially, with the following results:-
other imaginative minds in their loftiest flights. The long list of distinguished men who occupy the highest niches in the temple of Fame, and embodied their conceptions in the English tongue, of itself indicates that those who speak it are an intellectual race. Nor is this their greatest praise. As a people they have been thought defieient in softer graces, but are unsurpassed in the sterner and sublimer virtues. Nowhere are honour and integrity in higher esteem; nowhere has philanthropy made more costly sacrifices, or gained more glorious triumphs; nowhere are the final destinies of man held in higher reverence; and nowhere are the great truths of Christianity more deeply pondered, more thoroughly understood, more cordially believed, more sedulously praetised. This superiority of character is accompanied, as usual, with superiority of social position; and when men ask, Where is the greatest amount of national prosperity to be found? the best informed of every country turn round and point, with one aceord, to Great Britain. There, vast accumnlations of wealth have been made, and vast multitudes of families are living in the daily enjoyment of the ordinary comforts of life. But all pictures have their darker shades, and our prosperity is by no means without their darker shades, and our prosperity is by no means without

alloy. Giganticevils raise their heads
in many quarters, and threaten to advance, in spite of all the efforts that are made to stay them. The population is not merely great in proportion to extent of surface, but is much more crowded together, in dense masses, than that of any other country in Europe. France, in addition to its metropolis, has only three towns with a population exceeding 100,000 . The United Kingdom, besides its metropolis, has no fewer than nine. All of these contain immense commercial or manufacturing establishments, in

The decennial period liaving again expired, another census is on the eve of being taken, and a population of at least $29,000,000$ is anticipated. The known proportion between births and deaths seems to indicate a greater increase; but considerable allowance must be made for emigration, which has
whieh myriads seek their means of subsistence, and live on from day to day, often from the scantiness of their wages unable, and oftener still, from improvidence or some worse habit, unwilling to make any provision for the future. But all trades are more or less fluctuating. Changes oceur in the political
world, or markets become glutted, and a sudden revulsion takes place. Want of employment at once dries up the only source from which the first necessaries of life could be obtained; disease soon begins to commit its devastations, and the whole fabric of society is shaken to its base. Such things are not of unfrequent occurrence, and threaten results which it is fearful even to contemplatc. But apart from these, pauperism has struck its roots deep, and multitudes live solely on the pittance which a legal provision can obtain for them. In regard to many of the poor, such provision, when other means of subsistence fail, is perhaps one of the simplest dictates of justice; but unhappily the law operates by inflexible rules, and cannot draw any moral distinctions. Poverty in fact is all that it provides for; and hence, the poor who have become so by unavoidable misfortune, or, it may be, by the practice of a more than ordinary virtue, must stand on the same footing with those who have made themselves poor by the grossest indulgences, or perhaps only pretend poverty in order to procure additional means of continuing them. When such things can be practised (and an effectual preventive still remains to be discovered), pauperism preys on the very vitals of society. A specimen of the state of pauperism in the United Kingdom is given in the following Table for 1846 :-
since Mr. Farr, one of the highest authoritics on the subject. statea the difference in the duration of life in town and country, at not less than 17 years in favour of the latter-the proportion bcing 55 years in the country, and only 38 in towns. It is not, however, by physical means, important though they be, but by moral means, that permanent improvements of our social system are chiefly to be cffected. The first of these, unquestionably, is education. Taken in its highest sense, it includes the whole course of training, by which a human being is raised to the highest perfection of which his nature is susceptible. Such an education is always of difficult attainment ; but it is believed that where it meets with congenial minds, the education pursued in our higher schools and colleges is not surpassed in any country in Europe. The description of these celebrated institutions must be reserved for the particular divisions of the empire in which they flourish. Here we can only advert, for a moment, to the humbler education which every citizen ought to receive, because, without it, he is to all interts and purposes not a civilized man, but a savage. For a long time it was supposed that this education was as widely diffused in Britain as in any other country; but the contrary has been proved, and our place among educated nations is not the first. The fact is somewhat humiliating, but it is hoped will soon cease to be a reality. Circumstances have hitherto prevented the establishment of a national system, and Government has in the meantime adopted one of the most effectual modes of stimulating voluntary exertions-by rewarding them with additional grants from the Treasury. Education, on a basis so extended that the most scrupulous cannot refuse to receive it, and of a kind 80 pure and hallowed, that none can receive without being essentially benefited by it, should be one of the earliest, as it certainly would be one of the noblest achievements of our country. For educational and criminal statistics, see England, Scotland, and Ireland.

History.-Great Britain, for many ages, consisted of two independent, and almost incessantly hostile kingdoms, which became united in 1603, under one sovereign, in the person of James, previously the sixth of the name in Scotland, and thereafter known as James I. With him the history of the British Empire properly begins. His reign has the merit of having been peaceful, but he was ungainly in person, vulgar in manners, and of a cunning, ungenerous, and selfish nature. His learning, which might have shone like a jewel in his crown, only furnished displays of his pedantry, and his highest princely quality was the very equivocal one of entertaining extravagant notions of his royal prerogative. His son and successor, Charles I., was a man of a very different stamp. In person, he was every inch a king; and had he lived in less trying times, the many noble qualities, of which he was undoubtedly pos-

One of the most favourable symptoms of British society, is the general attention which the condition of its humbler classes is now attracting. Both in ligh places, and elsewhere, clear heads and warm hearts are labouring anxiously to ameliorate it. And it is well that, amidst their devisings, sanitary measurcs are not forgotten. Our climate is eminently favourable to health; but for a long time good evidence of the fact was to be found only in the rural districts. Many of our larger towns, with their stagnant atmosphere, their narrow filthy lanes, and damp, sunless, crowded cellars, were the chosen abodes of disease and pestilence. The improve ments which have been effected, and continue to be vigorously followed $n p$, already furnish one of the most interesting chapters in the comparatively recent but very important science of vital statistics. In the five years ending 1805, the mortality was one in 41.9 ; in 1810 , one in 44.3 ; in 1830 , one in 46 ; in 1840, one in 44.5 ; and in 1844, one in 46 . In London in 1685, the mortality, according to Macaulay, was one in 23. It is now one in 40 . It is plain, however, that much of a sanitary nature is still required in our larger towns,

The same causes which foster pauperism tend to foster crime. Of this, too, there has been a great increase in recent times; but there is reason to hope that the increase is more apparent than real, and that numerous cases which appear in our criminal calendar, indicate not so much an extension of crime, as superior skill in detecting it. The density of the population, and the consequent difficulty often experienced in finding employment, has led to extensive emigration, which is carried on partly under the auspices of the Government, and has unquestionably been most beneficial, inasmuch as it both relieves the mother country of a load which might ultimately prove too heavy for it, adds greatly to the comforts of the emigrants themselves, and tends to supply the most serious want which many of our colonies experience-a want of labour. The extent and direction of emigration from the United King. dom is exhibited in the following Table:-

## Extent and Direction of Eimigration from the United Kinodom.

| Years. 1846 | From |  |  | To |  |  |  | Total. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Unhappily, he inherited his father's notions of prero-gative-notions which, though they had only furnished the father with a topic on which he was perpetually giving utterance to a kind of blasphemous bombast, beeame the occasion of fearful calamities to the son, at once terminating his reign and his life by a bloody tragedy. An interregnum succeeded, in which the chief actor performed his part with unrivalled ability; but with a character so enigmatical, that many are still puzzled where to give him a place-whether among saints or lyppocrites. IIe had ruled by a military despotism; but the sceptre, which even he was scarcely able to wield, dropt at once from the hands of his feeble, but respectable son; and the Restoration of Charles II. was hailed with loud acclamations. Society now underwent a sudden change, and, as too often happens, passed from a bad to a worse extreme. Under the pretext of discountenancing hypocrisy, licentiousness gained the ascendant; and nowhere more completely than at court, where the monarch himself was soon found raising sums for his debaucheries, by pawning lis kingdom, and

stooping to the ineffable infamy of bartering its independence, for a pension from such a swaggerer as Louis XIV. The death of Charles II. made way for his brother, Jaines II., an intolerable bigot, who at once brought matters to $a$ crisis, and was soon beyond the kingdom an ignominious exile. Then followed the glorious Revolution of 1688 , which completed the Magna Charta by its Bill of Rights, and placed the Constitution on its immovable basis. William and Mary were succeeded by Anne, whose reign is remarkable chiefly for the Act of Union in 1707, and the band of distinguished writers who flourished in it, and have justly procured for it the name of the Augustan Age of English Literature. George I. and Gcorge II. followed, both of them adding to limited intellect the greater disadvantage of being foreigners by descent, language, and manners. The reign of each is marked by a rebellion, which aimed to bring back the House of Stuart. They were succeeded by George III., whose blameless private life has endeared his memory to every right-hearted Briton, and whose long reign, though not free from blemishes, is, on the whole, one of the most illustrious in British annals. A visitation of providence withdrew him from public life, and placed him in a state which, notwithstanding of the trappings of majesty which still surrounded it, the very meanest of his subjects could not envy. Meanwhile his place was occupied by his son as Prince Regent, who afterwards succeeded him, under the name of George IV. He looked a king, but can scarcely be said to have lived one. During his reign, the hope which the nation had entertained of an illustrious female succession, was suddenly and grievously extinguished. The sceptre of the British Empire was again to be wielded by a female, but, in the meantime, it passed into the hands of William IV., whose reign, not otherwise much distinguished, is famous for the Reform Act. The period appointed for a female reign now arrived, and our beloved sovereign, Queen Victoria I., ascended the throne. This reign has hitherto been as illustrious as that of the great Maiden Queen, without being tarnished by any of its darker spots. Many years of it have already elapsed, and many more, we trust, are still to come; but this much can now be saidNever could loyalty to the crown be more justly claimed, and never has it been more cordially and universally paid.(Macaulay's History of England; Porter's Progress of the Nation; M'Culloch's British Empire; Baines' History of the Cotton Manufacture ; Johnston's Physical Atlas; Statistical Journal; Parliamentary Returns; \&c.)

BRITWELL-SALOME, par. Eng. Oxford ; 730 ac. Pop. 233.

BRIVES [anc. Briva Lurretia], a tn. France, dep. Corrèze, 15 m . S.W. Tulle; agreeably situated amidst vineyards and orchards, 1. bank, Corrèze, surrounded by a fine avenue of elms; houses substantially built of stone, but the streets narrow, and the public squares indifferent. It has a college and hospital, a court of first resort and of commerce, an agricultural society and seminary, and in the vicinity an extensive cotton-mill. Manufactures:-woollens, cotton goods, nut-oil, and wax-candles, brandy, and wax-refining. Trade:timber, wine, chestnuts, truffles, truffled poultry, wool, eattle, pigs, \&c. Coal is worked extensively in the neighbourhood. Pop. 5983.

BRIVIESCA, a tn. Spain, Old Castile, prov. of, and 20 m . N.E. Burgos. It stands in a plain, l. bank, Oca, and is well built; houses generally of two stories, and streets straight, spacious, clean, and well paved. It has two parish churches, both handsome buildings; a townhouse, and three hospitals; is well supplied with water, part of which is furnished by a finely ornamented fountain. The mannfactures are of no consequence; but corn-mills are nnmerous, and there is a considerable trade in grain. Pop. 2064.

BRIVIO, a walled tn . Austrian Italy, gov. Milan, prov. of, and 17 m . E.S.E. Como, r. bank, Adda; commanded by a castle, and having a bandsome parish church, and some chapels. Manufactures:-silk and linen fabrics, lace, and paper. Pop. 1930.

BRIXEN, a tn. Anstria, Tyrol, circle, Schwatz, gov. of, and 40 m. S. by E. Innsbruck; in a narrow valley, near the confluence of the Rienz with the Eisach. The town is regu-
larly built; but there is little in it deserving of notice, except the cathedral, which has four towers, and a façade of white marble. Brixen is the seat of a bishop, and has an Episcopal palace, a townhouse, prison, hospital, and several convents. Among the educational institutions are a gymnasium, with 200 students; and a normal school. Some silk is manufactured. Pop. 3600.

BRIXHAM, a market tn., seaport, and par. England, co. Devon. The town is prettily situated on the Englisli Channel, occupying the sides of two hills, a little S. from Berry Head, the S. point of Torbay, and 23 m . S. Exeter ; lat. $50^{\circ} 23^{\prime} \mathrm{N}$. ; lon. $3^{\circ} 30^{\prime} \mathrm{W}$. It is divided into two parts, called Upper and Lower Brixham, the former comprising a long straggling street. The generality of the older houses are very indifferent buildings; but some of those of more recent erection are sufficiently respectable. The shops are lighted with gas, but not the streets. There are two churches - the parish church, a large ancient structure, in the perpendicular style; a chapel of ease, and Wesleyan, Independent, and Baptist chapels; also, a chapel belonging to the Plymouth Brethren; a national and two private schools, several benefit and benevolent societies, and other charities. The trade of Brixham is chiefly in fish, which is carried on to a great extent, London, Bath, and Bristol receiving supplies from this place. The port possesses also a number of vessels, engaged in the coasting and foreign trade; those in the latter plying chiefly to the Mediterranean. Brixham is celebrated in history as the place where the Prince of Orange, afterwards Williain III., landed, November 4, 1688. Pop. (1851), 5627. Area of par. 5210 ac. Pop. (1841), 5684.

BRIXTON, three pars. Eng.:-1, Par. Devon; 3060 ac. Pop. 823.-2, Par. Isle of Wight; 2700 ac. Pop. 710.3, Brixton-Deverill, par. Wilts; 2690 ac. Pop. 197.

BRIXTON, a vil. England, co. Surrey, forming an agreeable suburb of London, 3 m . S.S.W. St. Paul's. It consists of North Brixton, and Brixton Hill, composed of neat, well-built houses, extending about 2 m . along either side the road from Kennington to Streathan, with numerous handsome detached villas. In the village and district are three Episcopal and three Dissenting places of worship, a house of correction for the county, St. Anne's asylum, an elegant brick edifice, where 200 boys and 100 girls are maintained and educated ; Trinity asylum for aged females, and the Reform almshouses. Pop. 10,175.

BRIXWORTH, par. Eng. Northamp.; 3410 ac. P. 1202.
BRIZINA, or Berizina, a vil. Algeria, in the Sahara, 256 m . S.W. Algiers ; lat. $33^{\circ} 32^{\prime} \mathrm{N} . ;$ lon. $0^{\circ} 45^{\prime}$ E. It contains about 150 houses, begirt with a wall; and has a mosque, and schools. The people spin and weave wool, make tolerable gunpowder, and are good armourers, siniths, farriers, \&c. Saltpetre abounds in the environs, while sulphur is obtained from the Beni Mzab. A good deal of fruit is grown, but not much grain. The neighbouring hills contain extensive beds of gypsum.

BROACH, See Baroacry.
BROAD BAY, a bay, Scotland, N.E. side isl. Lewis, having Keep Head on the N.W. of its entrance, and Champan Head on the S.E. Its length, inland, is about 7 m ; breadth varying from 3 to 4 m .; lat. $58^{\circ} 20^{\prime} \mathrm{N}$.; lon. $6^{\circ} 10^{\prime} \mathrm{W}$.

BROAD SOUND, an extensive bay, N.E. coast, Australia, in lat. (entrance) $22^{\circ} 22^{\prime} \mathrm{N}$. ; lon. $149^{\circ} 30^{\prime} \mathrm{E}$. It runs about 50 m . into the land, in a S.S.E. direction, measuring from the parallel given above, and terminating in a point at its S . extremity, where it is encompassed by high, barren hills, with craggy tops.

BROAD.CHALK, par. Eng. Wilts; 8380 ac. Pop. 775.
BROAD-CLIST, par. Eng. Devon; 10,270 ac. P. 2407.
BROADFIELD, par. Eng. Herts; 620 ac. Pop. 6.
BROADFORD, a small vil. Scotland, Isle of Skye, 15 m . S.W. Portree; with a church and school-house. A market is held anmually. Pop. 80 .

BROADHAVEN, a bay, N.W. coast, Ireland, co. Mayo, extending from Erris Head on the W., to Kid Island on the E., $5 \frac{1}{2} \mathrm{~m}$. The anchorage is good, and the water sufficiently deep; but in N. winds there is only room for two or three vessels to ride in safety.

BROADHEMBURY, par. Eng. Devon; 5950ac. P. 851.
BROADHEMPSTON, par. Eng. Devon; 2140 ac. Pop. 747.

BROAD-HINTON, par. Eng. Wilts; 4670 ac. P. 670. BROADMAYNE, par. Eng. Dorset; 2540 ac. Pop. 490. BROADOAK, par. Eng. Cornwall; 3240 ac. Pop. 303. BROADSTAIRS, a small seaport and hamlet, England, co. Kent, Isle of Thanet, 2 m. N.N.E. Ramsgate ; lat. $51^{\circ} 23^{\prime} \mathrm{N}$.; lon. $1^{\circ} 26^{\prime} \mathrm{E}$. ; situated on a slope, facing the E . It consists of fonr principal streets, and a handsome terrace. The thoroughfares are straight and spacions, and though unpaved, are well kept. The houses are in general good; the larger of brick, the others of flint. Water, obtained from deep wells, is abundant. It contains four chapels-one chape! of ease, one Wesleyan, and one Baptist, and an ancient chapel, called the chapel of the Virgin, occupied from time to time by various denominations. There are four principal schools, and several others; a Dorcas society, and various other charities. The town has of late years become a fashionable water-ing-place, and is provided with suitable accommodation for visitors, including well furnished lodging-houses, a hotel, news and assembly rooms, public libraries, and hot and cold baths. The only trade of the place is in fish. Pop. 1457.

BROCKDISII, par. Eng. Norfolk; 1080 ac. Por. 466. BROCKENHU RS'T', par. Eng. Hants; 2980 ac. P. 928. BROCKEN, or Blocksbere [Latin, Bructerus Mons], a mountain, Prussian Saxony, gov. Magdeburg, about 20 m . W.S.W. Halberstadt. It is the culminating point of the Harz Mountains, and 3791 ft . high. The summit and nucleus of the mountain are granite, around which the sedimentary rocks lie, enveloping it like a mantle. An inn, called the Brockenhaus, in which the host constantly resides, occupies its loftiest summit. Close to the inn is a tower of massy timber, 50 ft . high, and about 1 mile from it is a cleft called the Schnceloch, from which the snow scarcely ever disappears. Owing to the hazes which prevail, the view, which is said to he fine, and very extensivc, can seldom be seen to advantage. The mountain is said to be haunted, and is the cradle of numerous fabulous legends, which are still well known throughout Germany. One cause of their prevalence is a curious natural phenomenon, called the Spectre of the Brocken, occasionally seen at sunset or sunrise, when the mists rise perpendicularly out of the valley opposite to the sun, and at the same time leave the mountain-top clear. Every object reflected from this wall of vapour is magnified. The whole mountain becomes of larger dimensions, the inn is converted into a palace, and human beings appear giants. At the foot of the mountain the Bode, Ilse, Ocker, and Holzemme take their rise.

BROCKFORD-and-Witheringset, par. Eng. Suffolk; 3980 ac. Pop. 1065.

BROCKHAGEN, a vil. Prussia, prov. Westphalia, gov. of, and $33 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Minden. There is a distillery; and a good deal of yarn is spun. In the neighbourhood, hops are extensively cultivated. Pop. 2184.

BROCKHALL, par. Eng. Northampton; 720 ac. P. 59.
BROCKHAM P'TON, par. Eng. Hereford; 620 ac. P. 132.
BROCKLESBY, par. Eng. Lincoln; 3860 ac. Pop. 229.
BROCK LEY, two pars. Eng. :-1, par. Somerset; 910 ac. Pop. 171.-2, par. Suffolk; 1080 ac. Pop. 380.

BROCKTHROP', par. Eng. Gloucester; 1100 ac. P. 169. BROCKVILLE, a tn. Upper Canada, co. Leeds, 1. bank, St. Lawrence, 48 m . E.N.E. Kingston. It is a handsome town, and lies on a limestone bed, which supplics the material of which the houses are built. It has a court-honse, jail, and six churches-Presbyterian, Episcopal, Methodist, Baptist, Congregational, and R. Catholic, all built of stone. Tanning, brewing, smithy work, waggon-making, and various other handicrafts, are carried on. Granite is obtained in the
neighbourhood. The steamboats from Montreal to Kingston call here. Pop. (1852), 3246.

BROCKWORTH, par. Eng. Gloucester; 2360 ac. 1’. 409.
BROD, or Brood.-1, A fortified tn. Austria, gov. of same name, military frontier of Sclavonia, 21 m . S.E. Poscga, 1. bank, Save, opposite the Turkish town of Brod. It carries on an active trade with Bosnia, whence it receives raw lides, woollens, and cottons. Pop. 2470.-The negiment, or district of Brod, extends over 576 geo. sq. m., with a pop. of 81,200.-2, Brod, or Ungarisch-Brod, a tn. Austria, Moravia, gov. Briunn, circle of, and 9 m . E. Hradisch, r. bank, Olsawa. It is walled, has a handsome parish church, a Dominican cloister, which has existed since 1337; and a townhouse. It has also manufactures of cloths, and a good trade in fruits and hides. Pop. 3369.-3, Brod [Bohemian, Cesty Brod], a tn. Bohemia, circle, Kaurzim, cap. lordship of same name; on the Zembra, and on the Olmïtz and Bohemian Railway, 19 m . E. Prague. It is surrounded with walls, in which are three gates; and contains two churches and a chapel, one of them a deanery church; with fine oll monuments, a townhouse, school, \&c. It is well situated for trade, but the inhabitants live chiefly by agriculture and weaving. Pop. 1877.-4, Brod (Deutsch), [Bohemian, Niemeczky], a tn. Bohemia, circle of, and 22 m . S.S.E. Czaslan, on the Zazawa; with a gymnasium and custom-house. Pop. 3938.-5, Brod, a tn. Turkey in Enrope, prov. Bosnia, r. bank, Save, opposite Brod in Sclavonia, 90 m . N.N.W. Bosna-serai. It is defended by a castle, and is a commercial entrepot.-Many other places in Central Europe also bear the name of Brod.

BRODSWORTII, par. Eng. York, W. Riding; 3170 ac. Pop. 467.

BRODY, a tm . Austria, N.E. part of Galicia, gov. of, and 50 m . E.N.E. Lemberg, on the Russian frontier; lat. $50^{\circ} 7^{\prime} \mathrm{N}$. ; lat. $25^{\circ} 18^{\prime}$ E.; situated on a swampy plain. It is ill built and dirty, and the honses mostly of wood. It has been called the 'German Jerusalem,' from the large number of resident Jews, who constitute three-fourths of the whole population. It has several squares, three Greek churches, a R. Catholic church, several synagogues, a chamber of commerce, court of exchange, a convent of the Sisters of Charity, a great many Jewish and other schools and seminaries, a Jewish hospital, a theatre, and a large palace belonging to the Potocki family. Since 1779, it has been a free commercial town, having its own magistrates and courts of justice, and its imports and exports exempted from all duties. It is the first town in Galicia in commercial importance, and the second in population. The transit trade with Poland, Moldavia, Wallachia, Turkey, and the S. parts of Russia, is very extensive. The imports from the latter have lately increased nearly twofold, but the exports have fallen off in more than the same proportion. The trade of the town is almost exclusively in the hands of the Jews, and consists chiefly in the export of horses, cattle, wax, honey, tallow, hides, leather, isinglass, aniseed, dried fruits, \&c., and in the import of wax, honey, tallow, raw hides, wool, caviare, \&c., from Russia, and of jewellery, pearls, colonial produce, and manufactured goods, silks, cloths, furs, and particularly hardware. It has tanneries and linen manufactures; and its markets are numerously attended, especially that which takes place four weeks after the Leipzig fair, to which large quantities of goods from the latter are transferred, and are bought up chiefly by Russian merchants. Pop. (1846), 17,789.
bROEK-in-Watemland, a vil. Holland, prov. N. Hol land, about half-way betwixt Amsterdam and Edam, on a brook, from which it is supposed to take its name, called the Aa or Ee, and placed in the middle of four lakes or meres. Broek, though otherwise an inconsiderable place, is renowned for the devotion of its inhabitants to neatness and cleanliness. The houses are very irrcgularly placed, some projecting, others retiring, but all built of wood, and painted white or blue, so as to appear as if newly erected. The most sedulous attention is paid to the state of the streets; no smoking is allowed, as the ashes of the tobacco might defile them. The war with diri is carried on incessantly, within as well as without. Each house has generally two kitchens, the smaller kept for the purpose of preserving the larger from the disarrangement and soiling of its utensils. Lach house has an apartment also kept for the sole purpose of being cleaned, except on the occa-
sion of a baptism, marriage, or funeral. Each also has two outer doors, of which one, in consequence of the outer steps to it being removed, is some feet raised above the ground, and is never used by any member of the family but on three occasions, baptism, marriage, and burial. The gardens and flower-plots equally attest the horror in which slovenliness and dirt are held by their owners, and attract many strangers, who come to admire the taste and attention bestowed on them. There is but one church, the Reformed, a highly ornamented, and carefully preserved building, with a high square tower passing into an octagon, a curious painted glass window, and an elaborately carved pulpit. The court-house is on the N . side of the village, and formerly served also for the school; but being found unuch too small, a large and handsome school-house was built in 1826 , and is attended by 170 scholars. There is also an orphan-house. Pop. of the parish nearly 1200, all Protestants, excepting 30 R. Catholics, and 10 Jews.

BROKEN BAY, Australia, New S. Wales, between the counties of Northumberland and Cumberland, having the former N., and the latter S.; 18 m. N.E. Port Jackson; lat. $34^{\circ} 15^{\prime}$ S. ; lon. $151^{\circ} 20^{\prime} \mathrm{E}$.

BROKENBOROUGH, a par. England, Wilts; 2590 ac. Pop. 429.

BROKEN ISLAND.-1, An isl. China, off the N.W. extremity of isl. Chusan, with which it is connected at low water ; it is about 700 ft . high, and is steep on all sides, ex cepting that next the island juşt named. -2 , An isl., s. Pacific Ocean, N. coast, Papua; lat. $2^{\circ} 40^{\prime}$ S.; lon. $134^{\circ} 50^{\prime}$ E. (R.) - 3, A group of islands, sometimes called Borongo or Bolongo islands, Bay of Bengal, coast of Aracan; they are three in number, and are situated immediately to the S. of Aracan river. They are long and narrow, mountainous, woody, and rugged, without any appearance of inhabitants or cultivation and the whole coast of Aracan, both to the N. and S. of them has a similar dreary and repulsive aspect.

BROMBERG, a tn. Prussia, prov. of, and 69 m . N.E. Posen, cap. gov. and circle of same name, on the Braa, 6 m . W. its confluence with the Vistula. It is well built, has three suburbs, and contains three churehes, a monastery, a convent, and several educational and charitable establishments. It has a large sugar-refinery, several tobacco and chicory manufactories, several flour and oil mills, potteries, and limekilns; also a vinegar-work, several distilleries, and breweries. It has likewise a considerable trade in grain and wine, for which its situation on the Bromberg Canal gives it great advantages. For a short time under Napoleon, Bromberg was restored to the Poles, and formed the capital of a department of the same name._-The government, area, 3437 geo. sq. m., consists generally of an extensive plain with a double slope, one E., belonging to the basin of the Vistula, and the other S.W., sending its waters, by the Netze and other streams, into the Oder. The soil is of a middling description, but agriculture, owing more to the industry of the inhabitants than to their natural advantages, lias made considerable progress. All the ordinary crops of grain are raised. The potatoes are excellent. The chief manufactures are woollen, linen, leather, and paper. There are also several saltpetre-works and sugar-refineries. The breweries and distilleries are numerous. Pop. of gov. (1846), 463,969 ; of circle, 57,520 ; of tn. 11,282.

BROMBOROUGH, par. Eng. Chester; 2250 ac. P.573.
BROMESWELL, par. Eng. Suffolk; 3060 ac. Pop. 200.
BROMFIELD, two pars. Eng.:-1, par. Cumberland ; 12,850 ac. Pop. 2312.-2, par. Salop; 9330 ac. Pop. 655.

BROMHAM, two pars. Eng.:-1, par. Bedford; 1910 ac. Pop. 314.-2, par. Wilts; 3300 ac. Yop. 1558.

BROMLEY, a small market tn. and par. England, co. Kent. The town lies 10 m. S.S.E. London, on the N. side of the Ravensbourne, in the neighbourhood of the Croydon Canal and Railway, and consists chiefly of a long street of well-built houses, with an alms-house for old people, and a well-endowed hospital for 40 widows of elergymen. In the neighbourhood is the palace of the Bishop of Rochester; area of par. 4630 ac. Рор. 4325.

BROMLEY, five pars. Eng. :-1, Bromley Abbotts, par. Stafford; 8360 ac. Pop. 1508.-2, Bromley (Great), par. Essex; 3050 ac. Pop. 738.-3, Bromley (Little), par. Essex ; 2260 ac. Pop. 426.-4, Bromley (King's), par. Stafford; 3370 ac. Pop. $718 .-5$, Bromley (St. Leonard's), par. Middlesex; 620 ac. Pop. 6154.

BROMPTON, a W. suburb of London, co. Middlesex, 1 m . W. Hyde Park corner, well built, lighted with gas, and supplied with water. It has a handsome church, in the later English style; a chapel of ease, a mecting-house for Independents, a school, and an elegant hospital for consumptive patients. The land in the neighbourhood is laid out chiefly as nursery grounds. Pop. 9514.-2, A vil. England, co. York, N. Riding, on a plain, about 2 m . N.N.E. Northaller ton, near the Great North of England Railway. The houses are chiefly of brick, and very mean. It contains a chapel of ease, in the Gothic style, and one school. The battle of the Standard was fought here, 1138. Pop. 1535

BROMPTON, four pars. England :-1, par. York, N. Riding; 10,180 ac. Pop. 1534.-2, Brompton-Patrick, par. York, N. Riding ; 5560 ac. Pop. 1130.-3, Brompton-Ralph, par. Somerset ; 2800 ac. Pop. 492.-4, Brompton-Regis, par. Somerset; 8810 ac. Pop. 875.

BROMSBERROW, par.Eng.Gloucester; 1760 ac . P. 233.
BRÖMSEBRO, a hamlet, Sweden, län of, and 27 m . S.S.W. Kalmar, on the Brömsebäck, here crossed by a bridge, and which here falls into the sea. It lies at the bonndary between the ancient provinces of Bleking and Småland, and is celebrated for the treaties entered into here by the re presentatives of Sweden and Denmark in 1541, 1641, and 1645.

BROMWICII (West), par. Eng. Stafford ; 5380 ac. Pop. 26,121.

BROMYARD, a small market tn. and par. England, co. Hereford. The town is 13 m . N.E. Hereford, r. bank, Frome and consists of one principal strect, crooked, and indifferently kept; houses in general tolerably well built, partly of stone, and partly of brick; ill supplied with water. The church is a fine old structure. The other places of worship are-al Independent chapel, a Primitive Methodist chapel, and a Quaker meeting-house. There are, in all, 10 schools, of which the most important are the charity school, established by the Goldsmiths' Company, a national school for girls, and a British school for boys. Area of par. 9310 ac. Pop. 2927, and decreasing

BRONDOLO, a tn. Austrian Italy, gov. of, and 18 m . S. Venice, on the S. of the Isle of Lido, and the mouth of Bacchiglione. It is fortitied, and was once a flourishing town, standing at the mouth of the Adige, which has changed its course, and made a new embouchure a little to the S . Owing to its low situation, Brondolo is very unhealthy. The har bour is capacious, but shallow. Two wooden bridges connect Brondolo with Chioggia.

BRONGWYN, par., S. Wales, Cardigan. Pop. 377.
BRONI, a tn. Sardinian States, Piedmont, gov. Alessandria, 11 m . S.E. Pavia. Near it is the castle of Broni, famous for the victory gained by Prince Eugene over the French in 1703. Pop. 2500.

BRONNITZY, a tn. Russia, gov. of, and 30 m . S.E Moscow, on the Msta. It stands on the site of the ancient Sclavonic town of Kholmograd, often mentioned in Russian chronicles, and famous for a battle fought, in 1614, between the Russians and Swedes. In the neighbourhood is a hill of considerable height, in the shape of a sugar loaf, and crowned by a church, built on the ruins of a heathen temple, which possessed an oracle in such repute, that it was repeatedly consulted in person by the rulers of the North. Pop. about 2000.

BRONTE, a tn. Sicily, Val di Catania, 22 m . N.N.W Catania, W. base of Mount Etna. It has several churches convents, and a seminary; manufactures of woollen cloth and paper, and some trade in wine, oil, silk, grain, almonds, \&c. produced in the neighbouring district. Lord Nelson was created Duke of Bronte in 1799. Pop. 8870.

BROOANG, or Burendo Pass, a pass through the Himalaya Mountains, on the course of the Sutlej, 15,095 ft. above the level of the sea; lat. $31^{\circ} 23^{\prime} \mathrm{N}$. ; lon. $78^{\circ} 12^{\prime} \mathrm{E}$. The country in the neighbourhood is extremely rugged; and from the top of the pass, a magnificent view is obtained of the peaks of the Himalaya, towering 6000 or 7000 ft . above.

BROOK, four pars. Eng. :-1, par. Kent ; 540 ac. Pop. 158.-2, par. Hants; 750 ac. Pop. 150.-3, par. Norfolk 2060 ac. Pop. 756.-4, par. Rutland; 1560 ac. Pop. 113.

BROOKESBY, par. Eng. Leicester; 640 ac. Pop. 20.
BROOKLAND, par. Eng. Kent; 1500 ac. Pop. 462.

BROOKLYN, a city, U. States, on Long Island, New York, separated from the city of New York by the narrow channel called East River. It is properly a suburb of that city, and is a place of great business. It is regularly built, the streets straight and wide, and many of the houses of a very superior description. In consequence of its pleasant and healtliful sitnation, it has become a favourite place of residence with many of the merchants of New York, with which it is connected by four steam ferries, the trip being performed in about five minutes. It contains a jail, a handsome building of freestone; 30 churches, and the lyceum, a fine granite structure, in which there is a spacious lecture-room; 19 academies, and 38 schools. The city library contans 3000 volumes, and has a spacious reading-room. The U. States' navy-yard, covering 40 acres of ground, is in the E. part of the town, in Wallabout Bay. Connected with this establishment is the U. States' naval lyceum, a flourishing institution, with a valuable library and museum. Half a mile E. of the navy-yard is the naval hospital, occupying a commanding eminence, and surrounded by 33 acres of cultivated ground, enclosed by a brick wall. Brooklyn has extensive manufactories of cotton, woollen, glass, oil, earpets, saddles, and harness, chains, cables, and engines, besides five distilleries, and one brewery. Pop. (1830), 12,042; (1840), 36,233; (1845), 59,966; (1850), 96,850.

BROOKO, or Bruko, a territory, N.W. Africa, in the S.E. part of Senegambia, between the Boki and Kokoro rivers, two of the head streams of the Senegal. It is of small extent, not exceeding 50 or 60 m . in length, from N.W. to S.E., and about 40 in breadth; anl is intersected by lat. $13^{\circ} 30^{\prime} \mathrm{N} . ;$ and lon. $10^{\circ} 30^{\prime} \mathrm{W}$.

BROOM (LOch), a bay, N.W. coast, Scotland, co. Ross, having Priest and Summer Islands at its entrance, and Martin Island at its head. Inland from the head of the bay extends a narrow salt-water lake, at the head of which is the small village of Lochbroom.

BROOME, three pars. Eng. :-1, par. Worcester; 550 ac. Pop. 129.-2, par. Norfolk; 1470 ac. Pop. 610.-3, par. Suffolk; 1650 ac. Pop. 328.

BROOMFIELD, three pars. Eng.:-1, par. Essex; 1980 ac. Pop. 820.-2, par. Kent ; 1000 ac. Pop. 146.3, par. Somerset; 4050 ac. Pop. 497.

BROOMHILL, par. Eng. Kent; 3580 ac. Pop. 121.
BROOMSGROVE, or BromsGrove, a market th. and par. England, co. Worcester. The town is pleasantly situated on a plain, $13 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Birmingham, on the Birmingham and Bristol Railway, l. bauk, Salwarp, and consists of one principal street, and some diverging lanes, the former stretching along the Birmingham and Worcester turnpike road. It is well paved, abundantly supplied with water, and lighted with gas. The houses are in general well built, and mostly of brick, intermingled with a few ancient wood framed edifices, ornamented with black and white stripes. In the centre of the town is the townhall, a neat and commodious, though inpretending building. The parish church, on an eminence in the centre of the town, is an ancient and handsome structure, in the decorated English style, with a tower 189 ft . ligh. The other places of worship are, one Wesleyan chapel, one Baptist, one Independent, and one R. Catholic chapel. Broomsgrove has a grammar and a national school, some alms-houses, and several minor charities, and a literary and scientific institution, lately established. Buttons, nails, and hooks are manufactured bere to a considerable extent; area of par. 11,230 ac. Pop. 10,308.-(Local Correspondent.)

BROOS, or Szaszvaros, a market tn. Austria, Transylvania, country of the Saxons, cap. of Brooser Stuhl, $45 \mathrm{~m} . \mathrm{W}$. by N. Hermannstadt, on an affluent of the Maros. It is well built, has a spacious castle, a I. Catholic, and two Reformed churches, and a gymnasium. The inhabitants are mostly employed in agricultural , pursuits. Pop. 3300._T The Brooser Stuhl, area, 128 geo. sq. m., is traversed by the Maros, and is, for the most part, fertile in corn and fruit. Pop. 20,400.

BROQUE (La), a vil. France, dep. Vosges, 24 m . from St. Die; cotton-spinning is carried on here. 1'op. 1350.

BROSELEY, a market tn. and par. England, co. Salop. The town is 13 m . S.E. Shrewsbury, on the summit of a hill, which rises abruptly from the Severn, and consists chiefly of one long street, straight, and well kept; but the other parts of the town are extremely irregular. The older houses are
low, and inconvenient, but the modern are generally well built and commodious, principally of brick. It is lighted with gas, but ill supplied with water. In the centre of the town is the townhall, a handsome brick building, with the market-place underneath. The church, which is situated at the N.E. end of the town, is a beautiful structure, of white brick, in the Gothic style. The other places of worship are two Baptist chapels, one Wesleyan, one Primitive Methodist, and one Independent chapel ; and the schools are, a church day free school, and several other day schools. Broseley has long been, and still is, noted for the manufacture of glazed tobacco pipes, tiles, and firebricks. In its vicinity are extensive ironstone and coal mines; area of par. 1550 ac. Pop. 4829 .(Local Correspondent.)

BROSNA, par. 1rel. Kerry ; 11,960 ac. Pop. 2871.
BROTERODE, a tn. Hesse-Cassel, about $12 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Gotlia, with a handsome church, several extensive ironworks, several mills, and an active trade in articles of iron, stee!, and wood; also in tobacco, leather, and wine. Pop. 2359.

BROTHERS (THE). - 1 , Two small islands, Bay of Bengal, Andaman group, about 10 m N.E. Little Andaman; lat. $11^{\circ} 0^{\prime}$ N.; lon. $92^{\circ} 41^{\prime}$ E. (R.) -2, Two islands, Bay of Bengal, near the N.W. entrance to the Strait of Malacea, of the S. end of the island of Salang or Junkseylon, W. coast, Lower Siam; they are small, but of considerable height ; lat. $7^{\circ} 31^{\prime}$ N.; lon. $98^{\circ} 20^{\prime}$ E. (R.) - 3 , Two small islands, covered with wood, in the Strait of. Malacca, 4 or 5 m . from each other ; the most N. is in lat. $3^{\circ} 24^{\prime}$ N.; lon. $99^{\circ} 49^{\prime}$ E. They are also called, respectively, Pulo Pandan or Pandang, and Salanama; the latter is the larger.-4, Three islands, in the Durian or Duryan Strait, at the S.E. entrance to the Malacea Strait; the most S. , the largest and highest, is in lat. $0^{\circ} 32^{\prime} \mathrm{N}$. ; lon. $103^{\circ} 48^{\prime}$ E. $\qquad$ -5 , Two small islands, Java Sea, on the Sumatra coast, near the N.E. entrance to the Strait of Sunda. The most N. is in lat. $5^{\circ} 9^{\prime} 30^{\prime \prime} \mathrm{S} . ;$ lon. $106^{\circ} 5^{\prime} \mathrm{E}$. They are near to each other, are covered with trces, and may be seen from a distance of 18 or 20 m . They are united by a reef, said to be nearly dry at low water. 6 , Four high, small, round islands, covered with trees, 6 to 10 m . S.E. Malacca Road.
-7, Two small islands, in the Chinese Sea, off the E. coast of China; lat. $23^{\circ} 32^{\prime} \mathrm{N}$.; lon. $117^{\circ} 42^{\prime} \mathrm{E}$. (R.) -8 , Two islands, China Sea, $70 \mathrm{~m} . \mathrm{N}$. W. Cape Camboja, or Cambodia; lat. $8^{\circ} 35^{\prime}$ N.; lon. $106^{\circ} 15^{\prime}$ E. (R.) The most W. is a barren rock, and las high breakers on its E. side during blowing weather; the most E. is a higl round islet, with trees on its summit.9, Two islands, China Sea, Galong Bay, island Hainan, S. coast. The E. Brother is in lat. $18^{\circ} 11^{\prime} 3^{\prime \prime}$ N. ; lon. $109^{\circ} 41^{\prime}$ E. (r.) -10, Two small islands, N. Atlantic Ocean, W. coast, Africa, Bight of Biafra; lat. $1^{\circ} 21^{\prime} 1^{\prime \prime}$ N.; lon. $7^{\circ} 17^{\prime} 5^{\prime \prime} \mathrm{W}$. (R.) -11, Two small islands, E. coast, China, the Tchin-San of the Chinese ; lat. $30^{\circ} 10^{\prime} \mathrm{N}_{\mathrm{i}}$; lon. $122^{\circ} 56^{\prime} 6^{\prime \prime} \mathrm{E}$. (r.) - -12 , Two sinall islands, Arabian Sea, at the entrance to the sea of lsab-el-Mandeb, off the S.W. coast of the island of Socotra, about 110 m . N.E. Ras-Asser, or Cape Guardafui ; lat. $12^{\circ} 7^{\prime}$ N.; lon. $53^{\circ} 17^{\prime}$ E. (r.) ; sometimes called Durjy.-13, Two small islands, near the head of the Red Sea, off Kossier, in Egypt; lat. $26^{\circ} 21^{\prime}$ N. ; lon. $34^{\circ} 49^{\prime}$ E.- 14 , Two islands, Grecian Archipelago; lat. $35^{\circ} 49^{\prime}$ N. ; lon. $26^{\circ} 29^{\prime}$ E. (r.)

15, Two islands, Hudson's Bay, British N. America; lat. $58^{\circ} 42^{\prime} \mathrm{N} . ;$ lon. $80^{\circ} 32^{\prime}$ W. (r.)

BROTHERTON, par. Eng. York, W. Riding; 2120 ac. Pop. 1744.

BROTTON, par. Eng. York, N. Riding; 3560 ac. P. 468.
BlROU, a tn. France, dep. Eure-et-Loire, 22 m. S.W. Chartres, on the Ozanne. It has manufactures of linens, serges, bombazines, hackles, bricks and tiles, and some trade in wool and grain. Pop. 2047.

BROUAGE, a maritime tn. France, and fortification of the third class, dep. Charente Inferieure, 4 m . N. Marennes. Excellent salt is obtained from the extensive marshes around the town, and constitutes the main article of commerce. Bronage was formerly an important town, and had 400 houses, and was fortified by Cardinal Richelicu; but the unhealthiness of the place caused it to be abandoned as an official station in 1730 , when the public offices were removed to Marennes. Pop. 250.

13ROUGH, a small market tn. and par. England, co. Westmorland. The tn. lies 23 m . N.E. Kendal ; on a plain. It cousists chiefly of one long, straight strect; houses of stone.
but very indifferently built; amply supplied with water. It contains a church, a Baptist and Wesleyan chapel; has no trade, nor manufactures, but lead and coal mines in the vicinity give employment to some of the inhabitants. In the forest of Stainmore, in this neighbourlood, was the cross which marked the boundarics of England and Scotland, erected by William the Conqueror, and Malcolm the Scotch King. Pop. of tn. 899. Arca of par. 22,650 ac.; pop. 1536.

BROUGHAM, par. Eng. Westmorland; 6580 ac. P. 249.
BROUGHTON, seventeen pars. Eng.:-1, par. Bucks; 1020 ac. Pop. 168.-2, par. Huntingdon; 2950 ac. Pop. 363.-3, par. Lancaster; 2570 ac. Pop. 695.-4, par. Lincoln; 7880 ac . Pop. 913.-5, par. Pop. 412.-16, Broughton-Poggs, par. Ox ford; 360 ac. Pop. 151.-17, Broughton-Sulney, par. Notts; 1600 ac. Pop. 371.
broughton, Glenhola, and Khbucho, par. Scot. Pecbles; 20,000 ac. Pop. 764.

BROUGHTON-IN-FURNEss, a market tn. England, co. Lancaster ; on a gentle declivity, 23 m . N.W. Lancaster, in the form of a square, with a lofty obelisk in the centre. The spinning of woollen yarn was formerly the principal occupation of the inhabitants; but the making of hoops is now their chief employment. In the neighbourhood are several slate quarries, and numerous iron and copper mines. The weekly market is on Wednesday; and fairs are held in April and August, for horned cattle, and in October for cattle and sheep. The Furness Railway has a station at the town. Pop. 1250.

BROUGHTON'S ARCIIIPELAGO, a range of islands, rocky islets, and rocks, N. Pacific, N. of Vanconver's Island, W. coast of N. America; so called from an Englishman, who discovered them in 1790 ; lat. $50^{\circ} 33^{\prime}$ to $51^{\circ} \mathrm{N}$.

BROUGHTY-FERRY, a marine vil. and wateringplace, Scotland, co. Forfar, N. shore of the estuary of the Tay, 3 m. E. Dundee; on the Edinburgh and Northern Railway, at the ferry across the Tay, from Ferry-port-on-Craig. It consists of four principal streets, stretching E. and W., and four others crossing them at right angles. They are, with one exception, straight; and are all clean, but most of them unpaved, or only macadamized, supplied, however, with convenient foot-paths. The houses are of stone, and generally well built, while many of those of modern erection are extremely neat and tasteful. Ilandsome villas, in various styles of architecture, but chiefly Elizabethan, belonging to Dundee merchants and manufacturers, are also numerous. The village is lighted with gas, and tolerably supplicd with water. There are four places of worship-a chapel of ease, belonging to the Established chureh; a Free church, with a steeple, erected in 1844 ; a United Presbyterian, and Episcopal chapels, the former a neat Gothic structure. The schools are-one under the auspices of the Established church; anotherunder that of the Free church; an infant and two private schools, well attended. The only manufacture carried on here is that of coarse linens, in which about 30 weavers are employed. Nor do the inhabitants desire that any other should be established, it being a condition in many of the feus that no manufacturing works be erected. A great portion of the working population is employed in fishing, for supplying the Dundee market. At the E. extremity of the village, on a rocky eminence projecting into the sea, stands the old castle of Broughty, when or by whom built is unknown.-(Local Correspondent.)

BROUWERSHAVEN, a tn. Holland, prov. Zeeland, about $6 \mathrm{~m} . \mathrm{N}$. Zieriksee, N. shore of isl. Schouwen. The five gates of this ancient and much decayed town have been pulled down. The Reformed chureh is old, and large; and the market-place adorned with a stone statue of Jacob Cats, the most popular of Dutch poets, and a statesman of some note, who was a native of the town. The inhabitants were Yol. 1.
once largely engaged in the herring-fishery, but are now almost purely agricultural. An old man's, an old woman's, and an orphan-honse have all disappeared; but there is still a school. Pop. 1100.

BROWNSEA, an isl. England, co. Dorset, near the entrance into Poole harbour, $1 \frac{1}{2} \mathrm{~m}$. S. Poole; about 3 m . in circumference, and having on its E. extremity a castle, built in the reign of Elizabeth, for the defence of the port. Pop. 70.

BROWN'S ISLANDS, a chain of low isles, N. Pacific Ocean; the most N. in lat. $11^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $162^{\circ} 15^{\prime} \mathrm{E}$.

BROWNSOVER, par. Eng. Warwick; 1130 ac. Pop. 90.
BROWNSTOWN, par. Irel. Meath; 1199 ac. Pop. 421.
BROXBURN.-1, par. Eng. Hertford; 4580 ac. Pop. 2386.-2, A vil. Scotland, co. Linlithgow; on a stream of same name, and on the Edinburgh and Glasgow Railway, 11 m . W. Edinburgh.

BROXHOLME, par. Eng. Lincoln; 1230 ac. Pop. 145.
BROXTED, or Chawretir, par. Eng. Essex; 3110 ac. Pop. 737.

BROZAS, a tn. Spain, Estremadura, prov. of, and 21 m . W.N.W. Caceres; on the top of a hill nearly 800 ft . high, surmounted by a fortress. It has irregular streets, three squares, two churches (one bnilt of granite), a townhouse, prison, six schools, an hospital, and a cemetery. Manufactures --linen and woollen cloths, hats, soap, earthenware, and tanned leather; but chiefly celcbrated for its medicinal baths, used in chronic rheumatism, ague, and in scorbntic and cutaneous disorders. A fair is held in April. Pop. 7121.(Madoz.)

BROZZI, a tn. and com. Tuscany, prov. of, and 6 m . w. Florence, r. bank, Arno. It has a church, and townhouse, and manufactures fine stuffs, silk, and hats. Pop. 8712.

BRSESK, a tn . Poland, dist. Plotzko, on an affluent of the Vistula, 90 m . W.N.W. Warsaw. The Jesuits bad once here a fine convent and college. Pop. (chiefly engaged in linen and woollen weaving), 1300.

BRUAR (The), a rivnlet, Scotland, co. Perth, in the district of Athole; a tributary of the Garry, which it joins 19 m . N.W. Dunkeld. Its beautiful falls, and well-wooded banks, are much admired. This stream forms the subject of Burns's poem, 'The Humble Petition of Bruar Water.'

BRUAY, a vil. France, dep. Nord, 3 m . from Valenciennes; with manufactures of glass. Pop. 1506.

BRUCA (LA), [anc. Portus Pantasius], a scaport tn. Sicily, dist. of, and 15 m . S.E. Catania; on a promontory, at the mouth of the Porcari. Its harbour, fit only for small vessels, enebles it to carry on a little trade. Pop. 3000.

BRUCE ISLAND, an isl. Red Sea. See John (St.)
BRUCIIE, a small river, France, which rises near a hamlet of the same name, in the Vosges, and, after a N.E. course of about 45 m ., joins the Rhone and Rhine Canal, of which it is an important feeder.

BRUCHSAL, a tn. Baden, cap. bail. same name, circle, Middle Rhine; on both sides the Salzbach, 12 m . N.N.E. Carlsruhe, and on the railway between it and Heidelberg. It is walled, and has spacious barracks. The charch of St. Peter is interesting, and coutains some antique tombs. It has also an admirably regulated hospital, a R. Catholic gymnasium, and other seminaries; and a house of correction for the circle of the Middle Rhine. It is an ancient town was the residence of the Prince-bishops of Spires, from A.D. 1024, whose antique castle is still standing; and is the scat of the judicial administration of the bailiwick. The grand Duke of Baden, who acquired it in 1803, has a fine palace and grounds here. In the environs are the salt springs of Ubstadt, formerly turned to acconnt, but now neglected. Pop. (cxclusive of garrison), 7386.-The balliwick is traversed by the Psinz, and contains the towns of Bruchsal and Heidelsheim. Its area is 76 geo. sq. m.; and its population, of whom four-fifths are R. Catholics, 33,897 .

BRUCK.-1, A tn. Lower Austria, gov. and circle, Vienna, from which it is 22 m . E.S.E.; on the Leitha. It is divided into the old and new towns; has a church, a chateau, with a noble park and botanic garden attached, belonging to the Counts of Harrach; a theatre, college, and a cottonspinning factory. Pop. 2600.-2, A tn. Austria, in Styria, cap. circle of same name, at the confluence of the Mur and Mïrz ; with a good transit trade, and gypsum quarries. Pop. 1500.-The cIrcle, area, 1168 geo. sq. m., is intersected
by high hills, at the foot of which lie valleys of considerable extent. It is well wooded and watered, and contains both game (particularly the chamois) and fish in abundance. It is also rich in minerals, particularly iron and copper. The inhabitants live chiefly by mining, and the rearing of cattle. Pop. 62,000.-3, A tn. Prussia, prov. Brandenburg, gov. of, and 17 m . S.W. Potsdam; with manufactures of woollens and linens; and some breweries. Pop. 1255.-Numerous other places in Germany have the name of Beuck.

BRUCKENAU, a vil. Bavaria, on the Sinn, $40 \mathrm{~m} . N$. Wuirzburg, with a castle, in which the royal family often reside during summer. It is also a favourite watering-place, containing saline, alkaline, and chalybeate springs, which are much frequented. Pop. 1850.

BRUFF, par. Irel. Limerick; 1331 ac. Pop. 2900.
BRUGELETTE, a vil. and com. Belgium, prov. Hainaut, on the Dendre, 14 m . N.W. Mons, with linen manufactures, several limestone quarries, and limekilns. There is a Jesuit college here, with about 300 students. Pop. 1787.

BRUGES [bridges; Flemish, Brugge], a city, Belgium, cap. prov. W. Flanders, in a plain, 8 m . from the German Ocean, 54 m . N.W. Brussels; lat. $51^{\circ} 12^{\prime}$ N.; lon. $3^{\circ} 13^{\prime}$ E.; surrounded with a double water line, which includes the canals of Ostend (which traverses the city, and is of great depth), Ghent, and the Damme or Sluice (Eclusc), all of which here conjoin. The city has 54 bridges, 42 stone and 12 wooden, all opening in the middle for the passage of vessels; is of an oval shape, lying S.W. to N.E., and is fully 4 m . in circuit. It is surrounded by walls with seven gates, and has more than 200 streets. Many of these, owing to the great decrease of the population in modern times, seem half deserted; but they have all a venerable look, and bear upon them a otrong impress of the Middle Ages. The houses in the leading, and even some of the retired streets, mostly remain as they were originally erected, and in excellent preservation, with lofty fantastic gables and ornate fronts, abounding in quaint designs. Bruges is the see of a bishop, the seat of assize courts for the province, and was long one of the finest cities of Europe. Near the Grande Place, or chief square, stands the old edifice called Halles (cloth and other halls, or

> naUges, LA TOUR DFA nALLES.

From Delepriers, Albur. Pittoresque de Bruges.
markets), a square building, surmounted by a tower 354 ft . high, in which is a very numerous and sweetly-toned set of climes. The precise date of this edifice is unkrown. Burnt in 1280, and again in 1493, it was extensively repaired, if not quite rebuilt, in 1502. A watch has been kept in it for more than three centuries, to give the alarm the moment a fire appeara in the city or environs. To the E. of the market-place stands the Hotel de Ville, and a small but beautiful Gothic townhouse, containing severpl quaint pictures. Adjoining it
is the town library, of about 8000 vols., and 500 to 600 MSS ., most of which belonged to the old abbey of Dunes. A butting on the townhouse is the chapel of St. Basil, composed of two distinct chapels-an upper and a lower; the front being a kind of screen of florid Gothic. Contiguous to this double chapel is the Government-house, and the court-houses. The old parts of the latter contain rooms once inhabited by the sovereign Counts of Flanders, and Dukes of Burgundy.

The cathedral of Bruges, or Church of the IIoly Saviour, is said to have been first founded A.D. 646. The first building being destroyed by fire in 1358 , the present church was raised shortly thereafter. The Church of Our Lady is a sumptuously furnished and richly adorned edifice, finished in 1119. The exterior of this church, like the preceding, is plain, both being built of brick. The tower and spire of Our Lady's rise to the height of nearly 450 ft ., and serve as a landmark to mariners. In side chapels are the fine tomb of Charles the Bold, last Duke of Burgundy, killed January 5, 1477, at the battle of Nancy; and the finer mausoleum of his danghter, the Archduchess Mary, wife of the Emperor Maximilian (died, 1482), both buried in this church. Some of the paintings in this church are of superior merit, two in particular, by Quellyn and Seghers. The once famous abbey of the Dunes, or Downs, is now occupied by the seminary or academy for young priests. In several parts of the city may be seen the buildings of suppressed monasteries, either in a state of dilapidation or applied to secular purposes. There is still a convent of about 40 British Augustine nuns, who are much employed in educating ladies of their own persuasion. Their church is small, and of showy circular Roman architecture. There is a Protestant chapel in the city for English, residents. Besides the theological seminary (pupils, 140 ; library, 7500 volumes), there are an Episcopal college, partly supported by the state; an athénée or college, for secondary education, with communal and infant schools; a school for the deaf and dumb (opened 1835); a school of surgery and obstctric practice; a museum, open to the public, and a botanic garden. Bruges has also some scientific and literary associations, and an academy of fine arts, with about 400 students. The picture-gallery of the mnseum contains some good early paintings, such as a Van Eyck, of 1440 ; also others of later date, but greater beauty, by Porbus, IIemling, \&c. As early as the year 1358, Bruges had a corporation of painters, architects, and sculptors; the labours of many of whom are still visible on the inner and outer walls of the city they lived in, and loved to adorn. The city likewise possesses many wellendowed charitable foundations, among which is the mendicant depôt for W. and E. Flanders, usually containing 500 to 600 inmates. It has also a mont-de-piété, or state pawn-brokery, a well-ordered prison, and a small theatrc. The stagnant water around the city renders Bruges rather unhealthy, notwithstanding its proximity to the sea; still many wealthy old-fashioned Belgian families make it their general residence. The sandy nature of the surrounding conntry makes good water searce; rain water is therefore carefully preserved, and the inhabitants likewise use the muddy waters of the canals, and the ditehes of the old fortifications.

The manufactures of Bruges are insignificant to what they were in former ages. They still, however, include linen of every sort and fineness, dainasks, lace, light woollen goods, mixed stuffs, \&c. In a recent year, 21,692 pieces of linen were sold in the cloth-hall. The lace-making employs several thousand women and girls; for instrncting the latter in fine work, schools have been opened. In the city are spinningfactories, dyeworks, bleachfields, calico printing-honses, several fulling, oil, tan, and paper mills, a great number of breweries and distilleries, sugar and salt refineries, soapworks, tanneries, curriers' shops, starching-houses, hat factories, roperies, potteries, \&c., and a building yard for the construction and repair of vessels. It was long famed for its tapestries; and furnished a part of those that graced the triumplal entry into London, of Edward III., after the battle of Poitiers, in 1357.

Through the means of canals, Bruges has direct, though limited, intercourse with several ports of general Europe, and may be considered as one of the Belgian entrepots. Hence it exports the native products of the soil, and goods of its own make; and imports colonial produce, spices, dyewoods, drugs, wincs, and brandy, olive-oil, dried fruits, soda, and
potash; likewise leather, furs, silks, metals, building-timber, cork, and a variety of other articles. The great basin or dock, which is the general receptacle for all water borne merchandise, brought in or taken away by means of the several canals, forms a convenient port, having warehouses, \&c., adjoining, and accommodation for some scores of vessels at 18 ft . draught. In a recent year, the value of the total entries, officially declared, was 864,577 francs ( $£ 34,580$ ); total exports, value 717,815 francs ( $£ 28,712$ ). The number of vessels arrived in the place was but 11, of 1640 tons in all. There are four annual fairs held here; one for every kind of goods, beginning May 3 , and continuing 15 days; with three others for horses, cattle, \&c., one immediately after Easter, and the two others July 25, and November 16. The State Railway, from the N. coast, at Ostend to Mechlin, and thence all over Belgium, and connected with the Prussian and French lines, passes through a portion of the W. side of Bruges.

In 837, Bruges was fortified by Count Baldwin of the Iron Arm; and was walled, first in 1053, and again in 1270, when the place was also mostly re-built. It suffered greatly from fire in 1184, 1215 , and 1280 ; in the latter disaster its records perished, and its charters wrenched or bought from its feudal protectors, or rather oppressors. For a time it had thus no acknowledged municipal privileges, which, however, were restored by Count Philip the Handsome, in 1299. Early in the 13 th century, Bruges had waxed rich and powerful. In the IIanse league, it took the leading rank as the central mart of middle N. Europe, and was frequented by Lombard mercliants. About that time, such was the extent of its commerce, there were 13 foreign consuls or agents permanently resident in the city. The progress of its manufactures was at least as great ; and its cloths, linen, and tapestrics, at last came to excel all others for quality and beauty. Under the House of Burgundy, Bruges still increased in riches and power. In 1430, Duke Philip the Good here instituted the order of the Golden Flecce-a title meant to bring honour to those of its traders who poured a floed of wealth into his coffers, through means of the chief manufacture of the locality; for, through its means, a ducal chief was raised above the generality of kings, in wealth and real power. Unhappily, the pride and turbulence of the citizens grew nearly commensurate with their prosperity. In 1488, they rose in rebellion against Dnke Maximilian, and laid hands on his person. The severe measures of repression which ensued, gave the first blow to the city's prosperity, from which time it declined; and its ruin was afterwards nearly completed by the oppressions and persecutions endured from the Duke of Alva and other myrmidons of Philip II., King of Spain. In these latter days of trouble, all trade was at a stand; as a consequence, crowds of the best artizans sought an asylum and occupation in England. From that time we may date the beginning of our own superiority in manufacturing, as well as producing wool, long the great staple of England.

The population of Bruges once exceeded 200,000 ; it now scarcely numbers a fourth of that amount, in 1845 being 49,764 ; and even this is a considerable increase, compared with what it had been many years before.

BRUGG, or Bruck, a par. and vil. Switzerland, can. of, and 10 m . N.E. Aargau, on the Aar, which is here crossed by an ancient bridge, supposed by some to be Roman. It was an ancient possession of the IIouse of Hapsburg, and is surrounded by walls with lofty conical towers and gates. Half a mile beyond the walls stands the abbey of Königsfelden, where many members of the IIouse of Austria are buried; and a little further off, on a wooded height called Wiilpelsberg, are the remains of the cradle of that House -the Castle of Ilapsburg. The village, abbey, and castle, are all included within the site of the ancient Vindonissa, the most important settlement, and strongest fortress of the Romans in IIelvetia. Zimmerman was born here; and Brugg, from having given birth to him, and several other individuals of talent and learning, is sometimes jocularly termed the City of the Prophets. Pop. 800.

BRUGUIERE (La). See Labruguiere.
BRU'HL, a tn. Prussia, prov. Rhine, gov. of, and 9 m . S. Cologue, on the railway to Bonn; on a spur of the Eifelberg. It is surrounded by ancient walls, is well built, and contains two churches, a normal school, and a magnificent palace, legun in 1725 by the Elector Clement Augustus, of Bavaria.

In the Franciscan convent, a normal school, for the education of R. C'atholic schoolmasters, was established in 1825. The town was of more importance formerly than now. Cardinal Mazarin took up his residence in Brüll when banished from France, in 1651. Pop. 2300.

BRUILLE (St. Amand), a tn. France, dep. Nord, 9 m. N.W. Valenciennes, near which are coal mines and brick ficlds. Pop. 2021.

BRUIS, par. Irel. Tipperary; 3699 ac. Pop. 1415.
BRULSYARD, par. Eng. Suffolk; 1330 ac. Pop. 29 G.
BRUMATII, a tn. France, dep. Bas-Rhin, 10 m . N. by W. Strasburg, on the Zorn; with cold acidulated springs, madder-grinding, and two annual fairs. It occupies the site of the ancient Brocomagus. Pop. 3701.

BRUMMEN, a vil. IIolland, prov. Gelderland, 13 m . N.N.E. Arnhem. For picturesque beauty, the excellence of its houses, its pleasant society, and the salubrity of its climate it ranks among the most agreeable villages in Holland. Bcsides a Reformed and R. Catholic church, it has a well-attendel school, and a branch of the public utility socicty. Pop. about 900.

BRUMSTEA1), par. Eng. Norfolk; 930 ac. Pop. 11 \%. BRUNAI, BhUni, or Borneo, a th. and river. See Borneo Proper.

BRUNDALL, par. Eng. Norfolk; 490 ac. Pop. 52.
BRUNDISII. par. Eng. Suffolk; 1380 ac. Pop. 525.
BRUNECKEN, or Brunecco, a tn. Austria, Tyrol, cap. of the Pusterthal, 16 m . N.E. by E. Brixen, on an elevate: 1 plain on the river Rienz. It comprises a handsome modern church, adorned inside with frescoes, pictures, and monnments; a townhall, school, convent, numery, and prison, formerly the bishop's castle; with some manufactures of woollen fabries. Pop. 1800.

BRUNI, or Borneo, a th. and river. See Borneo Prorer.

BRUNI ISLAND, Van Diemen's Land, Hobart 'Town district, separated from the mainland by D'Entrecasteanx Channel ; lat. (S. point or Tasman's Ifead) $43^{\circ} 32^{\prime} \mathrm{S}$. ; lon. $147^{\circ} 21^{\prime} \mathrm{L}$. (r.) It is of very irregular form; the main portion is about 22 m . in length, and about 9 in breadth, counected by a narrow istlmus with another portion of this island about 14 m . in length, with a breadth varying from 3 to 5 m . The length of the whole island in a straight line, from Tasman's Head to Cape Get Out, at the mouth of the river Derwent, is about 34 m . It has several bays, the principal of which is Adventure Bay, discovered by Furneaux in 1773, and visited by Cook in 1777.

BRÜNN [Latin, Bruna; Muravian, Brno], a fortified tn. Austria, Moravia, cap. gov. and circle of same name, 70 in . N. by E. Vienna, on the railway from Vienna to Prague, near the confluence of the Schwarza and the Zwittawa, which almost encircle it. It stands on the slope of a hill, is surrounded with walls which have four gates, and it has 10 suburbs. It is for the most part well bnilt, paved, and lighted, and from its elevated position commands many fine and extensive views. Behind the town is the castle of Spielberg, on a hill of same name, formerly a citadel, but since 1809 converted into a state prison and house of correction, and for eight years the prison-house of Silvio Pellico. Brïnn has seven public squares with fountains, six parish churches, a church of Minorites, one of Capuchins, and another belonging to the Augustine monastery, with some fine paintings, and a library attached, founded by Elizabeth, Queen of Bohemia; and many others. The other chief public buildings are-St. Peter's Cathedral, the bishop's palace, both built on the Petersberg, a commanding eminence in the $W$. part of the town; St. Jacob's Church, a handsome edifice in the Gothic style, with a stceple 276 ft . high, dating from 1315 ; the Landhaus, built in 1737 , formerly an Angustine convent, now the place of meeting of the Moravian Estates, containing the Governor's residence anl the Governmental offices; the military palace; the townhall, built in 1511; the theatre; the splendid mansions of the Dietrichsteins, Liechtensteins, Kaunitzes, and other nobles; and the Jesuits' college, a very spacious structure, enclosing seven different courts, now used as a barracks. The chief scientific and literary institutions are a philosophical institute, diocesan theological seminary, royal gymnasium, head normal school, and several other schools ; a national society for the encouragement of agriculture, natural history, and geography,

## BRUNSWICK

with its valuable maseum, botanic garden, and public library. Briinn is the centre of Episcopal jurisdiction, the seat of a Protestant consistory, a court of appeal, and of other criminal and military courts. It has numerous charitable institutions, zuch as the general infirmary, lying-in hospital, and lunatic asylum, orphan asylum, society for the suppression of public begging, foundations for pensioning the soldiers of the Brinn burgher guard, and the widows and orphans of teachers; asylums for the blind, the deaf and dumb, and for decayed livery servants. It contains also a bridewell, a workhouse, a fire insurance office, and a provincial bank. The number and extent of its woollen, silk, and cotton manufactories, have obtained for it the name of Austrian Leeds; its woollens are particularly prized. The other manufactured articles are chiefly silks, ribbons, cottons, yarns, glass, soap, tobacco, dyestuffs, leather, and vinegar. It surpasses every town in Moravia in the extent of its trade, being highly favoured by its central position in regard to Prague, Breslau, Pesth, and Vienna, with all of which it is now connected by railway. Its four annual fairs are much frequented by Austrian manufacturers. Brünn has several beautiful public walks; the most attractive are the Augarten, and the Franzensberg gardens, in which is an obelisk 60 ft . high, of Moravian marble, erected in 1818, in honour of the late Emperor, Francis I.

Brunn is old; its citadel was blockaded by the Hungarians in 947, and the town itself was besicged by the Swedes in 1645, and by the Prussians in 1742 . It has been repeatedly destroyed by fire, and as often rebuilt. In 1558 , it was visited by the plague, which carried off 4000 of the inhabitants, to whose memory a column has been raised in the great square. Bonaparte had his head quarters in this town before the battle of Austerlitz, December 1805; and in 1809, the chief defences of Fort Spielberg were demolished by the French. Pop. in 1846, exclusive of garrison, 45,189.

BRUNNEN, a vil. Switzerland, can. of, and 3 m . S.W. Schwytz, picturesquely situated on the banks of Lake Luzern, near the mouth of the Muotta. It has a good transit trade, being both the port of Schwytz, and the depôt for goods to and from Italy over the St. Gothard. After the victory of Morgarten, the confederates met here and swore their league. Brunnen suffered much from the French in 1799.

BRUNSBUUTTEL, a tn. Denmark, in the S. Ditmarshes, r. bank, Elbe, about 7 m . from its mouth; lat. $53^{\circ} 55^{\prime} \mathrm{N}$.; lon. $9^{\circ} 10^{\prime} \mathrm{E}$. Its harbour, which is a little to the E. of the town, has from 3 to 12 ft . water, is well sheltered, and is provided with commodious wharfs. Its export of grain is considerable. Steamers ply regularly between this place and Altona and Hambirg. There is also a ferry across the Elbe, which is here about 4 m . broad. The river is deep at this point, and the current so violent, that it has swept away the ground on which stood two older towns of the same name, and has caused very expensive erections for the protection of the present Brunsbiuttel. The town is extending and improving, and owns a corsiderable number of vessels, mostly of small size. Pop. 1200.

BRUNSWICK [German, Braunschweig], a duchy, N.W. Germany, forming the twelftli state of the German Confederation. It consists of three larger and six smaller divisions, detached from each other, and surrounded by foreign posses sions. The principal division, containing Brunswick, the capital, is of a compact and oval form, with the exception of a narrow stripe towards the N.E. On the N., W., and S.W., it is surrounded by Hanover, and on the S. and E. by Prussian Saxony. The second larger division is a long irregular belt, stretching from E. to W. across S. Hanover, which of course forms its N. and S. boundaries, while on the E. it is bounded by Prussian Saxony, and on the W. by Rhenish Prussia, IIanover, and Waldeck. To the S.E of thes division lies the third, also irregular in shape, traversed by the Harr. Mountains, and surrounded by portions of Prussia, Hanover, and Auhalt. Of the six smaller divisions, Thedinghausen, Bodenlerg, Haringen, and Oelsburg, are in Il anover ; and Kalvörde, and a patch of land near the village of Seinsfeld, government of Treves, are in Prussia. The united area of all these divisions is computed at 1134 geo. sq. m., of which nearly one-lialf is arable land, meadow, and gardens, one-tbird forest, and onefourth moorland. The surface is for the most part hilly, particularly the division which is traversed by the Harz. Brunswick Proper has a considerable extent of level land,
only a few low ridges appearing towarls the E. The principal rivers are the Oker, Leine, and Weser, to the basin of which last all the streams belong, with the exception of the Bodi, which falls into the Elbe. The principal mineral products are gold, silver, antimony, lead, zine, copper, sulphur, vitriol, and aluin. The mines are, in part, worked conjunctly with the Hanoverian Government, and, in part, independently. The duchy produces also marble, alabaster, limestone, and gypsum, potters' clay, asbestos, agate, jasper, \&c. There are within the territory, likewise, several saltworks of considerable extent. In the Harz Mountains, asphalt and other bitu minous substances are found. Game is not very abundant, though red deer, roebucks, hares, rabbits, and a few wild boars, are occasionally to be met with in the forests. Freshwater fish are rather more plentiful. The chief manufactures are of iron, linen (now, however, much fallen off), and camlets; dyeing and brewing are also carried on to a considerable extent ; and oil and saw mills are numerous on the different large streams. The spinning of yarn forms an important branch of industry all over the duchy. The industrial resources of the country are carefully and judiciously cultivated by the Government, which extends its protection and patronage also to its educational institutions. The constitution of Brumswick is a limited monarchy. The legislature is composed of the Duke, an upper chamber consisting of six prelatea and the 78 holders of equestrian estates, and a lower chamber composed of six prelates, 19 deputies from towns, and as many representatives of the land-holders who do not possess equestrian rights. The legislature must assemble at least once every three years, for which period the taxes are voted. The Duke appoints three ministers of state, and in each of the six circles into which the state is divided, there is a provincial board to conduct its municipal and local government. The revenue of the duchy is derived from the ducal domains, from land, personal and indirect taxes, from stanps, fees of court, post-office, tolls, and a lottery. In 1849, these amounted collectively to $£ 234,300$, the expenditure being about the same amount. Public debt (1845), £966,652, of which $£ 258,750$ was for railways. The quota of men which the duchy is bound to furnish to the army of the German Confederation, is 2096. The affairs of this little state are conducted with great prudence and judgment, and the consequence bas been, the securing for its population a degree of comfort and independence not equalled in any other part of Germany. Personal bravery, and an open unsuspecting nature, are the distinguishing characteristics of the Brunswickers. Pop. (1846), 268,943.

BRUNSWICK.-1, A city, Germany, cap. duchy of same name, and place of residence of the Dukes of Brunswick; 35 m. S.E. Hanover ; lat. $52^{\circ} 16^{\prime} 11^{\prime \prime}$ N. ; lon. $10^{\circ} 31^{\prime} 29^{\prime \prime}$ E. (L.) It is divided into six districts, and contains about 100 streets; most of them clean, and some of them spacious and imposing, though of somewhat antiquated appearance, many of the houses being of wood, and from 300 to 400 years old. The city was formerly fortified, but the ramparts have been levelled, planted with trees, and converted into pleasant promenades. The principal public buildings are-the new palace or schloss, a magnificent structure; the ancient cathedral of St. Blaize; the mansion-house, with statues of Guelphic princes in front; the chapter-house, chancery, house of legislative assembly, mint, arsenal, ducal exchequer, opera-house, townhall, trades'-hall, old Altdorf townhall, and a few others. Besides these, are the following objects of interest-an ancient bronze lion of Byzantine workmanship, brought from Constantinople; a Gothic fountain of bronze, dated 1408 , situated in the Alte Stadt-markt ; a cast-iron obelisk, 60 ft . high, erected by the citizens to the memory of their two Dukes who fell at Jena and Quatre-Bras; and a monument and chapel, erected to the memory of the patriotic Schill, who, with 14 of his companions in arms, was shot here by the French, in 1808, for rising against them. The muscuin possesses an excellent gallery of paintings, comprising many works of the greatest masters, and a good collection of classical antiquities, and works of art. The city contains 10 churches, including the cathedral, next to which the most remarkable are St. Andrew's, one of whose steeples is 318 ft . high; St. Catherine's, adorned with paintings by Diebrich, and some magnificent stained glass windows, and the church of St. Martin, in the pointed Gothic style. The educational institutions are the college, a gymnasium, a seminary for

## RRUSSELS

teachers, a college of anatomy and surgery, a real schule for practical acquirements, including mechanics, and commercial and agricultural studies; and several others. Amongst the charitable institutions, which are numerous, are a general
 From Lange, Ausichten von Deutschland.
and lying-in hospital, a deaf and dumb, and orphan asylums. The principal manufactures of the town are of linen, woollen, hardware, tobacco, chicory, Glauber-salt, mineral colours, china, papier maché, leather, \&c. Three railways now meet in Brunswick. The earliest and shortest, completed in 1839, leads to, and terminates in, Harzburg; the second goes E. to Magdeburg; and the third, N. and N.W. to Hanover. The railways promise to make Brunswick the entrepot of a very extensive trade. Pop. 42,000.-2, A vil. and par. Denmark, Holstein, near Kiel, with which it is connected by a handsome bridge. Pop. 1167.

BRUNSWICK BAY, Australia, N.W. coast; lon. $125^{\circ}$ E. The Prince Regent river, discovered by Capt. Stokes, falls into this bay.

BRUSA, Bursa, or Prusa [anc. Prusa ad Olympum], a celebrated city, Turkey in Asia, paslı. Anatolia, 62 m. S. by E. Constantinople, beautifully situated on a verdant plain, at the foot of Mount Olympus. Including the suburbs, it extends 2 m . E. to W., and lialf a mile N. to S. The appearance of

DRUSA.-From Texier, Deseription de 1'Asie Mineur.
Brusa, with its domes and minarets, the fruitful fields by which it is surrounded, diversified by magnificent scenery, and delightful solitudes, is singularly pleasing and picturesque. It is divided into two quarters, the Turkish and

Armenian, by a rapid stream, across which there are two stone bridges, each of a single arch. The houses, which are for the most part of wood, occupy the face of a declivity, and command a fine view of the plain below. The city is well supplied with fountains, and streams of water run through most of the streets, which are generally narrow, unpaved, and filthy, from the accumulations of mud caused by the water which, if properly managed, should cleanse them. Near the centre of the town, on a perpendicular rock, stands the citadel, occupying the site, it is supposed, of the Acropolis of ancient Prusa. The walls are of Greek construction, and of great solidity. Within its walls is a mosque, called Daoud Monasteri, in which is the tomb of Sultan Orkhan, son of Othman, who conquered Brusa in 1326. West of this mosque there is a ruined castle, and two gateways. The principal ornaments of the city are its mosques, of which there are said to be 365 , some of them magnificent, especially those of the Sultans Achmet and Osman; and the Oolah, or great mosque, in the centre of the city. The baths are handsome structures, contain a number of apartments, and are well supplied with both hot and cold springs; the Kalputcha Hammam, situated about $1 \frac{1}{2} \mathrm{~m}$. N.W. the city, is the principal. There is here, also, a circular pool, of 25 ft . diameter, and $4 \frac{1}{2} \mathrm{ft}$. deep, paved with marble, and lined with coloured tiles, in which swimming is practised. The khans and colleges are numerous and respectable. The bezestans, large buildings with shops and warehouses, and the bazaars, are filled with silk and cotton stuffs, manufactured for exportation, and of which large quantities are produced, especially of silk; Brusa silk being much esteemed both in Europe and the East. The cultivation and manufacture of this article is said to employ 30,000 persons. In 1848 there were $354,750 \mathrm{lbs}$. of raw silk produced in the city and neighbourhood. Brusa was long capital of Bithynia, and one of the most flourishing towns in the Greek empire of Constantinople. In 1356 it was taken by Orkhan, son of Othman, founder of the Ottoman dynasties; and from that epoch it was the residence of the Turkish sovereigns, until the seat of empire was transferred to Adrianople. Feb. 28, 1855, an earthquake injured or destroyed the chief public buildings, including 80 mosques, and a great part of the town, and killed 100 people. Pop. about 60,000 .

BRUSIIFORD, two pars. Eng.:-1, par. Devon; 1220 ac. Pop. 144.-2, par. Somerset; 4030 ac. Pop. 340.

BRUSSELS [Flemish, Brussel; French, Bruxelles], the cap. of Belginm and of prov. S. Brabant, the residence of the King, and the seat of Government. It is situate on the small river Senne, about 50 m . S.E. the German Ocean; lat. (observatory) $50^{\circ} 51^{\prime} 11^{\prime \prime}$ N.; lon. $4^{\circ} 21^{\prime} 55^{\prime \prime} \mathrm{E}$. (L.) ; nearly in the centre of the kingdom, in an agreeably diversified and fertile locality, and erected partly on a hill, and partly on flat ground, through the latter of which flow the turbid waters of the Senne, with a tortuous course, forming four islands in its way. Though the highest ground in the city is only about 220 ft . above the sea level, yet the general aspect of the whole, towards the W., is lofty and imposing. The city is about 3 m . in circumference, is shaped somewhat like a flat iron, and its walls, which are merely intended for fiscal purposes, the fortifications liaving been destroyed, enclose nearly 16,000 houses or other buildings, with about 500 streets, lanes, or alleys; the whole being divided, for municipal government, into eight 'territorial sections.' Between the city and the walls, and intermediate to the suburbs, are the broad promenades and drive, replacing former ramparts, called boulevards; these are nine in number, and shaded with double rows of lime-trees. There are 14 city gates, none of them note-worthy, except the antique Porte de Hal, a baronial-looking barbacan, erected late in the 14th century, which long served, in later days, as a prison,

The Brussels of early Christian tinies was little more than a group of huts on a marsliy island (Isle de St. Géry), surrounded by the Senne. During the Middle Ages, it never had the extent or importance of the great cities of the Low Countries, such as Antwerp, Ghent, or Bruges; but, in succeeding times, it became, as the political capital of the country, nearly as conspicuous in history. It has still much of the courtly air of other days, when the Spanish monarchy threw the mantle of its grandeur over the plainncss of Flemish thrift; and even in the commonest quarters of the lower or old town, there are many quaintly ornate buildings, once the mansions of Brabant nobles, but now occupied by very different tenants. In the high town, the buildings are generally modern, built of brick, and covered with cements.

Every part of Brussels exhibits a congeries of twisted streets, with exception of a few of those recently formed, mostly near the royal palace. One, the Rue Royale, is really handsome. Several irregular areas, called places or marchés, when used as markets, are to be found at intervals through the city, which, however, is, in gencral, far too closely built. The only exception is in the extra-nuural quarters lately formed, such as the new and regular quarters Leopold and Louise, beyond the Boulevard du Régent. Among the chief places, \&c., are the Place Royale, containing, in one of its sides, the church of St. Jacques; Place des Palais, hard by; Place du Grand Sablon, with the church of Notre Dame des Victoires; the Grande Place or Grand Marché, in front of the Ilotel de Ville, is a remarkable square, forming the finest feature in Brussels, at least in a pictorial point of view ; and containing, besides the beautiful Hotel de Ville, the front of which occupies much of one side, the brood or bread-house (called also Maison du Roi), and several antique and quaint edifices, most of which were the guild-houses of corporations of trades during the Middle Ages; in the open space the patriot nobles, Counts Egmont and Horn, were beheaded by Alva, in 1568; Place des Martyrs, named in memory of those who fell, on the Belgian side, in the Revolution of 1830 ; Place de la Monnaie, so called because the mint, in which money was struck as early as 1291 , forms a portion of one side; the opposite side being formed by the theatre royal, which is also the opera-house. The two chief open-air places of recreation in Brussels are, the Park, and the Allee Verte. The former, area $17 \frac{1}{2} \mathrm{ac}$., is on the high E. side of the city, in the court quarters, and is overlooked, on one side, by the royal palace; on another, by the prince royal's palace, \&c.; on the third, by the legislative palace; and on the fourth, a rectangle, by the edifices of the Rues Royale, Brabant, Ducale, \&c. The Allée Verte, which is outside the boulevards, and laid along the E. bank of the Willebroeck Canal, is a handsome and spacious ride or drive, with rows of fine old elms, and interveling footways, extending nearly $1 \frac{1}{2} \mathrm{~m}$.

Among the chief public edifices, the Hotel de Ville merits the first mention. It is a fine sample of Lombardo-Gothic, erected between 1401 and 1442. The open-work spire, especially, is lofty and elegant. Including the tower, it is fully 380 ft . high ; and with the figures of St. Michael and the Dragon, a group in copper, gilt, about 400 ft . high. The interior of the townhonse is mostly occupied by plain offices for municipal officials ; but one rather small saloon, quaintly decorated, is shown as that where the Emperor Charles V., in October 1555 , abdicated in favour of Philip II.

The King's palace is a respectable-looking edifice, separated from the closely contiguous houses, near the Place Royale, bf a small garden. At right angles with the King's palace, is that of the heir-apparent, or palace of Brabant, built for the Prince of Orange, the late King of IIolland, as a voluntary gift, by the Belgian people. The owner was driven from it, one year after its completion, at the Revolution of 1830 , since which time it has remained unoccupied. Opposite to the King's palace, is the palace of the Nation, or of the Belgian legislative chambers - an edifice originally built for the council of Brabant, with a Dorne façade. Close to the legislative palace are located the ministers of the Belgic home department, of finance, and foreign affairs ; and, hard by, the Palais du Consiel d'Etat.

The palace of the fine arts, also called the museum, one part of which was founded in 1346, and finished in 1520 , and another added in 1749 , contains a gallery of paintings (inferior, as a collection, to the one in Antwerp museum), of sculpture,
and of natural history ; with cabinets of curious antiquities, comparative anatomy, and gallery of ancient armour, library of 120,000 volumes, and abont $16,000 \mathrm{MSS}$; the latter forming the Burgundian library.

The museum of industry, contiguous to the foregoing, is built on the site of the old botanic garden. One of its main uses is the periodical exhibition of samples of Belgian industry, which takes place every four years. Among the permanent collections kept here, are, first, a depôt of models, and constructive machines; second, a depôt of plans, \&c.; third, a technological library. A portion of the establishment is called the college, in which gratuitous lectures on science, history, literature, \&c., are given daily, during appointed seasons, by state-paid professors.

A little way from the museums, lower down the city, at the Place de Sablon, is the palace of justice; where are the head courts of Belgium, law offices, \&c.

Churches.-The church of St. Gudule, the cathedral of Brussels, is a large and noble pile, of cruciform shape, situate

CATHEDRAL OF ST. GUDULE, BRUSSELS - From Coney's Ancient Cathetmb
on a slope, between the corner of the park and the botanic garden, formerly called the Moelenberg, or Mill-hill. The central doorway is flanked on either side by a massive square tower; each 226 ft . high ; these towers are more modern than the general pile, having been added to it in 1518; while the body of the edifice was built between 1226 and 1663 . Its architecture is of early pointed Gothic, and the material is mostly brick. The interior has the stamp of simple grandeur ; and, to the inside of the piers of the nave, are attached, on brackets, 14 colossal statues, representing Jesus, the Virgin, and the twelve apostles; works of Du Quesnoy, and other good artists. The pulpit is a remarkable piece of wooden sculpture, by Verbruggen. The windows have richly coloured glass, by Flors and others; comprising the likeness of the Emperor Charles V., and several other bistorical personages.

There are several other Gothic churches in Brussels, of which the most interesting are-the chapel church (église cle la chapelle), built on a lofty site, and dating from 1140; it contains a fine pulpit, sculptured tombs, and a few good paint ings; the church of the Sablon, bnilt in 1288, has an elegant interior, with a splendid mausoleum ; the church of St. Nicholas; and the church of St. Catherine, with a fine picture by Crayer. The French, German, and English Protestants, have each their places of worship, and the Jews have a synagogne.

Institutions-Benevolent, Educational, Literary, and Scien-tific.-Among the benevolent institutions of Brussels, are the hospital of St. Peter, and several other hospitals and places of refuge, the infirmary, philanthropic society, \&c. The free university of Brussels was founded in 1834 ; it is a proprietary rather than a state institution, and comprises four facultiesmathematical and physical sciences, belles lettres, law, medi
cins, with a special school of pharmaey attached. There are about 60 professors and assistant teachers in all. The athénée royal is a secondary institution, founded by the communal administration in 1842. It is under state control, and has 25 professors or teachers. The total number of students and pupils receiving their education, in the superior and middle class colleges and schools of Brussels, is nearly 4000. A school of geography, in the Flanders suburb, was founded in 1830, by M. Vandermaelen, for the public benefit. The extensive museum of this establishment is an admirable collection for the elveidation of physical sciences, as geology, chemistry, anatomy, and natural history in general. In the royal academy of the fine arts, refounded in 1836, gratuitons instruction is given in drawing, painting, sculpture, architecture, and engraving. The Belgian royal academy of seiences, letters, and the fine arts, has its seat in Brussels. It comprises three departments, general science, letters, and moral and political knowledge, and the fine arts. The royal school of medicine, founded in 1841, has also its seat here. Its main duties are, to report to the Government on all that concerns the public health, forensic medical science, and the veterinary art. It publishes its transactions periodically. Elementary education is well provided for in the capital, both by the municipal authorities and the statc. There are five large communal primary schools, and an extensive model elementary school (école primaire supérieure). The clergy, too, have a number of the children of the city under primary educational training. The total number of pupils in the authorized primary schools of Brussels, considerably exceed 6000. French is the common medium for instruction in nearly all the foregoing, with the exception of a very few of the lower class schools. Among the societies for the advancement of knowledge, located in Brussels, are the royal society of medical and natural sciences, royal society of horticulture, with a botanic garden, which is one of the most attractive places of resort about Brussels; royal floral society, royal council of agriculture, including a farming and agricultural school ; a royal antiquarian society, with a museum, which is open to the public; Brussels royal academy of the tine arts, with 15 professors of painting, drawing, sculpture, and architecture, who are paid by the state, and take no fees. The royal conservatory of music of Brussels has 28 professors of music, vocal and instrumental ; there are 19 elcmentary teachers besides. The observatory, in the N.E. quarter of the city, is a well-furnished and somewhat celebrated establishment.

Government, Health, dec.-The municipal administrative body of Brussels, called the regency, is composed of a burgomaster, and four shrieval functionaries, named échevins, with a communal council of 26 members. Upon most articles introduced for consumption in the city a special impost is levied, besides the tax that some of them may have paid to the state. The chief prison is the Carmes, so called from being built, in the S. W. quarter of the city, on a site formerly occupied by a Carmelite convent. It is a two-storied oblong square pile, with nine courts for air or exercise. At Vilvorde, 6 m . distant N., is the maison de réclusion, for convicts. The city is lighted with gas, and well supplied with spring water, brought in pipes from Etterbeck, and has several public wells within the walls, and a good many fountains for general use, of which may be specially noticed, the Manneken Pis, with its bronze statnette. The climate is salubrious, but moist ; and the weather proverbially fickle. The winters are more severe than those of London. The cemeteries are all outside of the town.

Manufactures.-The first well-repnted product of Brussels was lace, and some of the finer qualities are made there still. Carriage-making was, for a time, a considerable manufacture, but is on the decline. Printing, type-founding, paper and ink-making, and all that is needful in the manufacture of books, chiefly reprints of contemporary French works, give no small amount of employment. Some printed cottons, velvets, muslins, \&c., and light woollen fabrics, are made in and near the city. The minor articles of manufacture include china and stone ware, glass of several kinds, hats for both sexes, furniture, ornamental paper, hosiery, tallow and wax candles, oil, tobacco, chemicals, colours and varnishes, vinegar, chocolate, glue, horse hair and wire cloths, \&c. There are many breweries and distilleries, several sugar and salt refineries, some tanneries and curriers' works, several
dyeworks, bleacheries, and spinncries. A fow carpets aro made in Brussels, but most of those of Belgic make, to which it gives name, are really the produce of Tournai. Other products are, bronzed wares, ropes and twine, brushes, corks, nails, swords, cutlery, waxcloths, ribbons, gold and silver lace, knitted articles, gloves, buttons, combs, wadding, writing ink, chicory powder, playing and other cards, \&c. There are foundries of iron and brass, steam-engine factories, rollingmills, \&c. Among petty articles of luxury, formed in Brussels to a considerable extent, may be enumerated as the chiefgold, silver, and fancy stone trinketry; trimmings of dresses, \&c. Brussels is, indeed, the great depôt of all useful and tasteful products, in the small thriving kingdom of which it is the centre; and there is scarcely any trade or calling needful, in a state of advanced civilization, that does not find some who follow it here.

Trade.-Brussels carries on a brisk trade with every other part of Belgium, by means of railways, canals, and rivers. The Senne is not navigable, but the canals of Willebroeck or Antwerp, and Charleroi, serve as water roads. The former begins at Brussels, and terminates at the river Rupel, opposite Boom, the navigation being thus continued to the Scheldt; the latter connects Brussels with the S., ends at Martignies-sur-Sambre, and is 46 m . long. Trade is further promoted by the N. and S. railroads connecting Brussels with all parts of Belgium, with Prussia, and France. The chief offices of the two Belgian state banks are located in the capital. In Brussels are also a chainber of commerce, and a society of commerce, the aim of which is to forward trading interests under state auspices. A mont-de-piété was established as early as 1818. The profits arising from the interest on pawns, and their sale when forfeited, go to the funds of the hospitals. In a recent year, pawns to the value of $2,000,000$ francs ( $£ 80,000$ ) were taken.

Inhabitants.-Few of the best Belgian families reside in the capital, probably on account of the expense of living. The trading class is a sober-living, steady, and cautious, perhaps rather distrustful race. The working people are an industrious, patient, good-tempered race, but mostly improvident, and given to constant beer-drinking, and frequent holiday-making. The French language is nniversally spoken in the mixed society of Brussels, and French literature perfectly appreciated by its citizens. Most of the lower classes, who have had any education, also speak it, more or less correctly; but in their interconrse with each other, the vernacular, Flemish or Walloon, is still common. In the markets, however, many of the country dealers can speak no French. The horse races, which take place in the plain of Lacken every year in July and September, when prizes are given by the municipality, have irresistible attractions for all ranks of the inhabitants of Brussels.

History.-The Emperor Otho dated a decree, apud Brusolam, in 976. But the town was not of consequence enough to bo fortified till 1044, when Lambert Balderic, Count of Louvain and Brussels, built a wall, with seven gates, around it. A second wall was constructed in 1380 , which followed, pretty nearly, the line of the present boulevard. In 1405 , it lost 1400 of its houses by fire. In 1549, two earthquakes caused it much damage. But it was of small account, till Flanders passed into the hands of princes of the House of Austria; when it became, in 1507, the usual seat of government for the entire Low Countries. At Brussels, the Emperor Charles V. esfablished his vice-royalty; and here, in an assembly of the States, A.D. 1555, he solemnly divested himself of monarchical power, in favour of his son, Philip II., nnder whom it endured much, from his minion the Duke of Alva, and from the inquisition, here set up.

Brussels was taken by the French, in 1701, at the beginning of the Succession War. In 1706, it was taken by the Duke of Marlborough; and by the French, under Marshal Saxe, in 1747. The peace of Aix-la-Chapelle, in 1748, gave back Brussels to the Austrians. In 1794, General Dumouriez took possession of it for the French republic.

On the extension and re-constitution of the French territory, Brussels became the chief town of the department of the Dyle. Bonaparte, then first consul, made his ceremonial entry into Brussels, by the Allée Verte, Jnly 21, 1803. IIe was rather partial to this city, and bought the chateau of Lacken, as a palace for Josephine; and, under its roof, he signed his fatal
declaration of war against Russia. The Prussians took pos session of Brussels, February 1, 1814. September 11, 1815, Williain of Orange-Nassau was inaugurated at Brussels, as King of the Low Countries. It then became one of the two

capitals of the new kingdom, alternating with the Hague, in Holland, as the residence of the court, and the seat of the states (états généraux). At length, September 23, 1830, burst out, at Brussels, the revolution whieh separated Belgiun from Holland ; and Prince Leopold, of Saxe-Coburg, elected King of the Belgians, by the national congress, June 4, 1831, made his public entry into Brussels, as the sole capital of his new kingdom. Pop. (1846), 123,874; of whom 47,534 , speak French or Walloon ; and 74,680, speak Flemish or Dutch.(Meert's Belgique; Berghaus, Geographisches Jahrbuch; Murray's ITandbook; Private Information.)

BRUSTHEM, a vil. and com. Belgium, prov. Limburg, 10 m . N.W. Tongres ; with an old church, founded in 1449 ; and a tower, built in 1111. The village is noted for a signal defeat of the Liegeois, by Charles the Bold, in 1467. Pop. about 1000 .

BRUTON, a market tn. and par. England, co. Somerset. The town is $12 \frac{1}{2} \mathrm{~m}$. E. by S. Glastonbury, agreeably situate at the foot of a stecp hill, on the Bri or Bru, from which it derives its name, and which is licre crossed by a stone bridge. It consists principally of one well-paved and well-kept street; houses in general neat-looking and respectable; church, an elegant and spacious structure, in the later English style. It has also two chapels, and an Independent meeting-house, a free grammar-school, founded in 1519 ; and an hospital for 14 aged men, 14 aged women, and 16 boys, who are also educated and apprenticed. Manufactures, formerly extensive, now confined principally to stockings and machinery. Silk-throwing also affords a good deal of employment. Two fairs annually. Dampier, the celebrated navigator, was born bere. Area of par. 3520 ac . Pop. (1841), 2074.

BRÜX, or BuIx, a royal tn. Bohemia, circle, Saatz, 46 m . N.W. Prague, on the Bila, at the foot of the Schlossberg. It is walled, and well built, has several churches and convents, a gymnasium, an hospital, a normal school, a school of industry for girls, a townhouse, and a manufactory of cotton stuffs. In the neighbourhood are extensive coal mines, and the
springs of Pillna, strongly impregnated, like those of Seidlitz, with Epsom and Glauber salt, and yielding a better mineral water, which is largely exported. The inhabitants trade in corn and fruits. Pop. 3000.

BRUYERES, a tn. France, dep. Vosges, 14 m. E.N.E. Epinal, on the Arentelle, in the midst of the Vosges Mountains. It has manufactures of calicoes and cutlery, and a considerable trade in thread, linen, butter, cheese, and cattle. Pop. 2276.

BRYANSTON, or Blandford-Bhyan, par. Eng. Dorset; 1870 ac. Pop. 144.

BRYN-CROES, par., N. Wales, Carnarvon. Pop. 948.
BRYN-EGLWYS, par., N. Wales, Denbigh; 3000 ac. Pop. 449.

BRYNGWYN.-1, par., S. Wales, Radnor; 4000 ac. Pop. 281.-2, par. Eng. Monmouth; 1560 ac. Pop. 306.

BIRYN-LLY'S, or Bron-Llis, par., S. Wales, Brecon. Pop. 338.

BRZEZANY, a tn. Austria, Galicia, cap. circle of same name, gov. of, and 47 m . S.E. Lemberg, on the Zlota-Lipa. It has several churches, a castle, convent, gymmasium, and extensive tanworks. Pop. 5500, of which 1500 are Jews. -The cimcle, area, 1808 geo. sq. m., is somewhat hilly, well wooded, and watered by the Dniester and its affluents. It abounds in game and honey, and produces good crops of corn, flax, and hemp. Considerable numbers of horses, and neat cattle, are reared. The circle contains three towns, 14 market towns, and 390 villages. Pop. (inclusive of 16,000 Jews), 175,000.

BRZEZNITZ, a tn. Bohemia, circle, Prachin, 42 m. S.S.W. Prague, on the Wlzowa or Lomnitz. It has a palace and a parish church. Pop. 2000.-Two small places in Moravia have the same name.

BRZEZYN, a tn. Poland, gov. Moravia, on the Pilica, 61 m. S.W. Warsaw. It has some manufactures of woollen cloth. Pop. 3200.

BRZOZOW, a tn. Austria, Galicia, circle of, and 14 m . N.W. Sanok, on the Stebnica. It has an ancient castle, a parish church, and cloth manufactures. Pop. 2400.

BUA [anc. Doas], a small isl. in the Adriatic, Austria, Dalmatia, circle, Spalatro, and opposite to the town of Trau, with which it is connected by a mole or bridge. It is a long straggling islaud, about 10 m . long W. to E., and scarcely 1 m . in breadth. Its coast is formed by bold rocks of limestone, and has no proper harbour, but two promontories form a bay of a horse-shoe form, in which vessels can ride in safety. Little of its once boasted fertility now remains. The chief products are wine, olives, and almonds. Some asphalt is obtained from a cavern on the N. side. During the later period of the Roman empire, many state offenders and heretic's were confined here. Pop. 3349 , of whom 1380 live in the principal village, called Bua or Santa-Croce.

BUACHE ISLAND. See Garden Island.
BUBAK, a vil. Scinde, on the borders of Beloochistan, on the N.E. shore of Lake Manchur, and said to possess a good climate; lat. $26^{\circ} 26^{\prime} \mathrm{N} . ;$ lon. $66^{\circ} 52^{\prime} \mathrm{E}$. Pop. about 5000.

BUBBBENHALL, par. Eng. Warwick; 1290 ac. L. 262.
BUBBIO. See Bоввіо.
BUBENDORF, a par. and vil. Switzerland, can. BaselLandschaft, on a small tributary of the Erpez, $10 \mathrm{~m} . \mathrm{S} . \mathrm{E}$. Basel, in a grassy valley, in the midst of magnificent scenery. It contains an ancient church and handsome parsonage. In its vicinity are saline springs, which bear its name, and at a short distance to the $\mathrm{S} .$, a lofty peak is crowned by the old castle of Wildenstein, in which several interesting antiquities are scen. Pop. 1193.

BUBlON, a tn. Spain, Andalusia, prov. of, and 35 m . S.E. Granada, on an inclined plane; with steep, irregular, though paved streets, two squares, an ancient Gothic church, townhall, prison, endowed school, and several fountains. The inlabitants are principally engaged in agriculture and cattlerearing. Pop. 2697.

BUBLITY/, a tn. Prussia, prov. Pomerania, gov. of, and 23 m . S.E. Cöslin, in a valley, on the Gozel. It contains a parish church, and has some linen and woollen manufactitres. A good many of the inhabitants live by fishing and agriculture. Pop. 2095.

BUBWITH, par. Eng. York, E. Riding; 10,460 ac. Pop. 1370.

BUCCANEER ARCIIPELAGO, a group of islands ofr the N.W. coast of Australia, between Sunday Strait and Collier Bay; lat. $16^{\circ} \mathrm{S}$.; lon. $123^{\circ} 30^{\prime} \mathrm{E}$.

BUCCARI, a seaport tn. Austria, Croatia, in a bay of the Adriatic, 4 m . F. Fiume. It is finely situated on the shore between two hills, and is a royal free town, with a free harbour. It possesses a strong castle, and a parish church. Pop. 2200.

BUCCLNO, a tn . Naples, prov. Principato Citra, on the Rotto, here crossed by an ancient bridge of early Roman construction, 14 m . E. by S. Campagna. It is surrounded by walls, and defended by a strong castle, and contains five parish churches and several convents. In the neighbourhood fine marble is quarried. l'op. 4700.

BUCELLAS, a vil. Portugal, prov. Estremadura, 15 m . N. Lisbon, on the Francio, in a district that produces wine of good quality, known by the name of Bucellas.

BUCHAN, a dist. Scotland, a division of cos. Aberdeen and Banff, stretching along the E. coast, and forming the most E. land of the kingdom. Its limits are not certainly defined, the mouths of the Doveran and the Don liaving been assigned as its boundaries-the one on the N., and the other on the S. More recent opinion has fixed on the river Ythan as its S . limit. The whole district was at one time the property of the Cumines, Earls of Buchan, and is one of the oldest earldoms in Scotland. On Robert Bruce ascending the throne of Scotland, he denuded the Cumines, his most implacable enemies, of their property, and divided it amongst his friends. The Earls of Buchan have long ceased to have any property in the district. Cap. Peterhead.

BUCHANAN, par. Scot. Stirling; length, $20 \mathrm{~m} . ;$ breadth, 6 m. Pop. 754.

BUCIIANNESS, a promentory or headland, Scotland, coast of Buchan, co. Aberdeen, S. side of the Bay of Peterhead; lat. $57^{\circ} 9^{\prime}$ N.; lon. $1^{\circ} 45^{\prime}$ E.; the most E. point of the mainland of Great Britain. A lighthouse was erected here in 1824, height, 118 ft. , built of granite. It exhibits a flashing light, visible at a distance of 15 or 18 m . when the atmosphere is clear.

BUCHAREST, Bukaresht, or Bukorest [the city of enjoyment ; Latin, Bucaresta], a city, cap. of Wallachia, in a spacious plain, in which is neither tree nor stene, l. bank, Dumbovitza, which is crossed by a bridge; lat. (metropolitan church) $44^{\circ} 25^{\prime} 39^{\prime \prime} \mathrm{N}$. ; lon. $26^{\circ} 5^{\prime \prime} 23^{\prime \prime} \mathrm{E}$. (L.) It is irregularly built, the houses generally miserable mud cabins, and the streets mostly unpaved. Where it is othcrwise, they are merely boarded over or laid with logs, which half float in the liquid mud beneath. Mingled with this wretchednes3, and presenting a strange appearance by contrast, are a number of hand-

A STREET IN BUCLIAREST.-Ifter M. Doussuuta
some houses, hotels, and churches-a population in rags, and nobles tricked out in flaunting dresses and gaudy finery, with a curious and striking intermixture of Eastern and European dresses, which is to be seen, in fullest effect, on the corso or public walk, the great resort of the fashionable of the place. The town contains a palace, the residence of the hospodar or prince, a large old building; the metropolitan church, both situated in a spacious square in the centre of the town; 60 churches, each having from three to six steeples or towers;
a bazaar. several hospitals and infirmarics, 20 monasteries and convents, and about 30 khans or Oriental inns. From the centre of the town rises a tower 60 ft . in height, called the ' Fire Tower,' from which a complete view of the city is commanded. The consular residences, of which there are several, are also handsome buildings, especially that of the Austrian consul. The educational and literary institutions consist of a college, having 500 students; a lyceum, conducted by 12 professors, and a number of public schools, four of which afford instruction gratis; a public library, a society for belles lettres, and another for agriculture.

There are no extensive manufactures in the town, but it contains a great many artizans, particularly goldsmiths, jewellers, and watchmakers. Small quantities of woollen cloths, carpets, brandy, \&c., are made. Being situated in a fertile country, its trade, particularly in agricultural produce, is very considerable, exporting yearly large quantities of grain, wool, butter, honey, wax, and tallow, together with large herds of horned cattle and hogs, which are sent chiefly to Germany ; whence are imported, in return, many of the necessaries and luxuries of life. Bucharest has the unenviable reputation of being one of the most dissolute cities in Europe. It is filled with gambling-houses, and other resorts of vice and depravity. Of late years, however, it has improved in civilization, and an earnest and anxious desire for the diffusion of knowledge and education has begun to prevail. It is the scat of the Wallachian Government, and the place of residence of a Greek archbishop. In 1812, a treaty of peace was concluded here between Russia and Turkey, by which the latter yielded up to the former Bessarabia, and a portion of Moldavia; the river Iruth becoming the boundary between the two empires. In 1847, Bucharest suffered scverely from fire, which destroyed about a fourth part of the town, including the church and conven ${ }^{+}$of the Franciscans, and the palace of the R. Catholic bishop. Pop. 60,000.

BUCHARLA (Greit), a name for Bomitara, which see. now included in (Little), a former name of a district of Tibet, now included in Thian-chan-nan-loo, which see.

BUCHAU, a tn. Würtemberg, circle, Danube, 9 m . S.E. Riedlingen, S. side of Lake Feder, of which, at one time, it formed an island. It lies in a marshy position, has a fine church, a synagogue, and a castle. Pop. 1983, of whom 598 are Jews.

BUCHEN, a tn. Baden, circle, Lower Rhine, on the Morrebad, and on the highroad between, and almost cqually distant from Heidelberg and Würzburg. It stands 1130 ft . above the level of the sea, and has a Gothic church, built in 1498, numerous mills, several brewcries, and large stone quarries. The inhabitants live chiefly by agriculture and weaving. Pop. 2400.

BUCHHOLZ [beech-wood], the name of numerous places in Germany. The most important is in Saxony, circle, Zwickan, dist. of, and 8 m . S.E. Grünhain. Great part of the inhabitants are employed in mining. Pop. 2791.

BUCHLOWITZ, a market tn. Austria, Moravia, circle, Briim, at the foot of a mountain chain, 26 m . W.S. W. Olmiitz. It contans a castle belonging to the lords of Buchlau, a parish church, townhouse, and hospital, and has four fairs and cattle-markets. In the neighbourhood there is a sulphur bath. Pop. 1890.

BUCHLYVIE, a vil. and burgh of barony, Scotland, co. of, and 13 m . W. Stirling, on the road to Dumbarton. It has a chapel connected with the Established church, a U. Presbyterian church, and five annual fairs. Pop. 381 .

BUCINE, a tn . and com. Tuscany, prov. of, and 14 m . W. Arezzo, in a valley, on an affluent of the Arno. It is tolerably well built, having a spacious square, and a church, and is overlocked by a castle. Agriculture and cattle-rearing are the chief employments. Pop. 6326.

BUCKBY (Long), par. Eng. Northampton; 3900 ac. Pop. 2145.

BUCKDEN, par. Eng. Huntingdon; 3590 ac. P. 1209.
BƯCKEBUliG, a tn., W. Germany, cap. of the prine: pality of Lippe-Schaumburg, on the Aue, and at the foot of the Harrelberg, 6 m . E.S.E. Minden, in Westphalia. It is a walled town with five gates, and is well built, having handsome houses and spacious streets, with a palace in which the prince resides, three churches, and a synagogue; a gymnasium, a library, a normal school, and an orphan hospital. Pop. 3250 .

66

BUCKENUIIAM (New), a small tn. and par. England, co. Norfolk. The town is situated on a plain, 15 m . S. W. Norwich, and consists chiefly of two principal streets. Some of the houses are well built, but most of them indifferently. The better description are brick, the others clay lump. Supply of water ample. The town has been recently thoroughly under-drained, and the streets repaired, and put in good order. The church is a fine structure, in the perpendicular style. The other places of worship are three meeting-houses, belonging respectively to the Wesleyans, Ranters, and Free-Gospellers. There are several schools and minor charities, including some alms-houses. Area of par. 324 ac . Pop. 716 .-Two miles from New Buckenham, is the parish of Old Buckenham; area, 5520 ac. Pop. 1255.

BUCKENHAM, two pars. Eng. Norfolk:-1, 1020 ac. Pop. 60.-2, Buckenham (Little), 630 ac. Pop. 77.

BIC'KERELI, par. Eng. Devon; 2120 ac. Pop. 360.
BUCKFAS'lLEIGH, a market tn. and par. England, co. Devon; 3 m . S.W. Ashburton. The town is partly in a valley and partly on a hill, r. bank, Dart. It consists of five streets, somewhat tortuous and not very well kept; houses strongly built of marl, and slate-roofed. Places of worship: one church, a Wesleyan chapel, and an Independent chapel. The church is a handsome building, in the Auglo-Norman style, with a lofty tower and spire, and elegant stained glass windows. The schools are-a British, national, and several juvenile schools. The manufactures are woollens, leather, malt, and paper. The woollen trate employs gencrally from 1200 to 1400 hands. A considerable trade in blankets, blanketings, serges, and miners' cloth is also carried on. Area of par. 6270 ac . Pop. 2576.-(Local Correspondent.)

BUCKHAVEN, a fishing vil. Scotland, co. Fife, 10 m . S.S.W. Cupar. It consists of an assemblage of mean-looking cottages, seattered without order or arrangement, on the face of a steep ascent rising from the shore, without attempt at the formation of streets, or regularity, or system of any kind. It is, however, lighted with gas, and well supplied with water. The inhabitants are a peculiar race of people, believed to be the descendants of the crew of a Brabant vessel, wrecked on the coast in the reign of James V I. They were long reckoned the most ignorant and most uncultivated class of persons in Scotland, and were, on this account, made the subject of many humorous effusions, both in prose and verse, but they are now much improved, and not worse, in any respect, than other similar communities. They are an industrious hard-working class of men, and with exception of a few weavers, are all employed in sea-fishing. There are upwards of 100 fishing boats, of various dimensions, belonging to the village, manned by from six to eight men each; the value of which, with their nets, has been estimated at about $£ 20,000$. About a quarter of a mile from the village is a U. Presbytcrian church. Pop. (1850), estimated at 2000.- (Local Correspondent.)

BUCKIIORN-WESTON, par. Eng. Dorset; 2080 ac. Pop. 460.

BUCK1E, a considerable fishing vil. Scotland, co. of, and 16 m . W. Banff; at the mouth of the Burn of Buckie, between Speymouth and Cullen Bay, 5 m . E. the former. It has been a fishing station for many centuries; and has a tolerable harbour. About 145 boats, large and small, are employed in the various fisheries. A small manufactory of ropes is carried on here. In the village there is a chapel connected with the Establishment, a Free church, an Episcopal chapel, and a R. Catholic chapel. Buckie is famed for the curing of haddocks. Pop. 2165.

BUCKINGIIAM, or Bucks, an inland co. England; bounded, N. and N.W. by co. Northampton; N.E. and E. by cos. Bedford and Hertford; S.E. by Middlesex, S.W. by co. Berks, and W. by Oxford; its length, N. to S., is about 45 m. ; greatest breadth, E. to W., 23 m. ; area, $472,320 \mathrm{ac}$., of which 440,000 are supposed to be arable. The vale of Ayleabury, stretching through the centre of the county, and celebrated for its fertility, furnishes rich pasturage for vast numbers of cattle and sheep. The soil in this part of the county is a strong clay loam, varying in depth from 2 ft . of rich staple, to only a few inches incumbent on stiff clay. But though well adapted for grazing, it is not considered suitable for tillage, and the portion, therefore, under the plough, is very small. In this district the tenures are principally from year to ycar-a system which, notwitbstanding its obvious
disadvantages, is looked upon with considerable favour by most of the tenants. The average rent of land in the valo is from $25 s$. to 35 s . an acre, the farms averaging from 300 to 600 acres.

Agriculture is altogether in a very backward state in this county, chiefly owing to the reluctance of the landlords to be at any expense in effecting improvements. The order of cropping is not very definite, but generally consists of what is called 'three crops and a fallow,' which begins with bare fallow, then wheat, then beans, pease, and clover, and last, wheat or barley. In working the land, two different descriptions of ploughs are used - one an old-fashioned wooden plough, for winter, and the other, a more modern iron-wheel plough, for summer. The depth of furrow turned up is from $4 \frac{1}{2}$ to 5 inches. In winter, there are seldom fewer than four horses in a plough. The quantity of stock kept on these arable farms is quite inconsiderable. The average rent of arable land is about 30 s . an acre. The farm accommodation generally, as to dwellings and out-houses, \&c., is of the worst description, the latter being constructed mostly of rough timber, and thatched, with little regard to form or situation. Drainage, too, is much neglected. The labourers cmployed on grazing farms are from 10 to 14 , on farms of from 300 to 400 acres; wages, from 9 s . to 10 s . a week. In the S . parts are rich dairy farms. The stock of dairy cows, as estimated a few years ago, was about 27,000 , of which upwards of 21.000 are always productive. Between $4,000,000$ and $5,000,000 \mathrm{lbs}$., or about 1900 tons of butter, are annually made in this county, the greater part of which is sent, by contract, to London. It is made up into lumps of two lbs. each, and packed into osier baskets, called flats. Only a few cream cheeses, in summer, are made for the Buckingham, A ylesbury, and Wycombe markets. Hogs and ducks are reared in great numbers; the former more especially on the dairy farms, where they are fed on skim and butter milk. The fattening of cattle is almost wholly confined to the vale of Aylesbury.

The manufactures of Buckinghamshire are chiefly of thread lace, which furnishes employment to a great number of females and ehildren; paper, and straw plait. The former, however, has much declined since the rise of the machine lace manufacture of Nottinghain. The mineral productions of this county are of no great importance. The county is watered by the Ouse, the Thame, and the Thames; and is intersected by the Grand Junction Canal, and the London and Northwestern Railway, and by some branches of both. It is divided into eight hundreds, and 202 parishes, and returns three members to the House of Commons ; constituency (1850), 5733. It gives the title of Earl to the family of Hobart Hampden. Pop. (1851), 163,723.

BUCKINGHAM, a market tn., parl. bor., and par. Eng• land. The town, cap. of the co. of its own name, is 50 m . N.W. Londori, on the Bletchley and Buckingham branch of the London and North-western Railway; pleasantly situate on a peninsula formed by the Ouse, which almost cncompasses the town, and is here crossed by three stone lridges. The houses are mostly of brick; the streets straggling and irregular; paved, and lighted with gas. The townhall and jail are large and commodious buildings. The church, erected in 1781, is a spacious structure, with a square tower, surmounted by an elegant spire; and there are, besides, places of worship for Independents, Wesleyans, and the Society of Friends ; and a free grammar-school, founded by Edward V I. and several alms-houses. The manufacture of lace, formerly carried on here to some extent, of late years has greatly declined. Malting and taming are carried on to a considerable extent; and a good deal of business is done in wool and hops In the vicinity are several limestone quarries, and one of marble. The borough returns two members to the House of Commons-a privilege which it has enjoyed since the timo of IIenry VIII. Its municipal government is vested in a mayor, four aldermen, and 12 councillors. Weekly market on Saturday; and one on Monday, exclusively for calves. Numerous fairs, chiefly for horses, cattle, and sheep. Buckingham gives the title of Duke to the family of Temple. Area of par. 5330 ac . Pop. (1841), 4054.

BUCKINGHAM, a co. Van Diemen's Land, bounded S. by the river Huon, from its source near the Frankland range, to its mouth in D'Entrecasteaux Channel. Principal town, Hobart Town.

BUCKLAND, 19 pars. Eng.:-1, par. Bucks; 1290 ac. Pop. 537.-2, par. Hertford; 1590 ac. Pop. 435.-3, par. Kent; 850 ac. Pop. $14 i 2 .-4$, par. Kent; 1340 ac. Pop. 19.-5, par. Surrey; 2040 ac . BUCKNALL, par. Eng. Lincoln; 2490 ac. Pop. 303.
BUCKNELL, par. Eng. Oxford; 1670 ac. Pop. 287.
BUCKNILL, par. Eng. Hereford and Salop; 4160 ac . Pop. 532.

BUCKSPORT, a flourishing maritime tn., U. States, Maine, 1. bank, Penobscot river, with two academies, 15 schools, and a fine harbour, and considerable shipping. The harbour has sufficient depth of water for vessels of the largest class, and is not much obstructed by icc. Pop. 3015.

BUCKIVORTH, par. Eng. Iluntingdon; 2290 ac. P. 160.
BUCZACZ, or Butschatsch, a tn. Austria, Galicia, circle of, and 33 m . N.N. W. Zaleszcyry, traversed by the Seret. It contains a parish church, Basilian convent, and a gymnasium. Pop. of which 700 are Jews, 2200.

BUDA [Selavonian, Budin; German, Ofen], a free city, IIungary, co. Pesth, with the city of which name its connection across the Danube, formerly maintained by a bridge of boats 490 yards long, is now perfected by one of the most magnificent suspensiou bridges in Europe; 133 m . E.S.E. Vienna; lat. (new observatory) $47^{\circ} 29^{\prime} 10^{\prime \prime} \mathrm{N}$.; lon. $19^{\circ} 3^{\prime} 9^{\prime \prime} \mathrm{E}$. (L.) It is the residence of the viceroy or palatine, and the seat of government, and metropolis of Hnngary. It is built in the form of an amphitheatre, on the Schlossberg, the central part being included in the fortress (Festung) or upper town, surrounded by walls and bastions. It has five suburbs, Wasserstadt, Landstrasse, Neustift, Taban or Raizenstadt, and Christinastadt. The
the church of St. Anne's, and the church of the Capuchins. In the Neustift stands a column dedicated to the Holy Trinity, a memento of the plague of $1710,50 \mathrm{ft}$. high ; and in the Kaizenstadt are a R. Catholic church, a Greek church, and the mansion of the Greek bishop. The town contairs in all 13 churches and a synagogue. There are also an archi-gymnasium, four monasteries, two high-schools, and many other schools, including one of design; cabinets of natural history, a theatre, and public libraries. On the Blocksberg, an adjoining hill to the S ., stands the new observatory ( 300 ft . above the level of the Danube), supplied with the best instruments and apparatus. Buda has numerous charitable institutions, hospitals, infirmaries, asylums for orphans, \&c., a lazaretto, and house of refage for sailors; manufactories of silks, velvets, linens, woollens, leather, tobacco, earthenware, a cannonfoundry, and some coppersmiths' works, but it is by no means a manufacturing town, its chief trade being in the fine red wincs, produced in the adjacent country, to the amount, in favourable seasons, of four and a half million gallons yearly. There are here some celebrated hot sulphurous springs (temperature $118^{\circ}$ ), nsed as baths successively by the Romans, Turks, and Christians. Of these, three Turkish baths remain, and are much used by the common people.

Buda is supposed to be named from Buda, a brother of Attila, who resided in it occasionally, and greatiy improved it. O- Buda or Alt Ofen, a little further up the river, is the Sicambria of the Romans, and though not at any part in actual contact with the modern Buda, is undoubtedly its embryo, having been a Roman station of some importance in the early part of the third century. Many Roman antiquities still exist within it, and though not equal to Buda, it contains several handsome buildings, and a considerable population. After many vicissitudes, Buda was taken in 1541 by the Turks, under Sultan the Magnificent, who introduced a garrison into it of 12,000 Janissaries, and reduced a great part of the kingdom to the state of a Turkish province. It continued to be the seat of a Pasha until 1686, when it was re-taken by the Austrians, under the Duke of Lorraine and the margrave of Daden. Ifither, in 1784, Joseph 1I. transferred the seat of government. The greatest modern improvement which both Buda and Pesth have received, is the suspension bridge, completed in 1849 , at an expense of $£ 650,000$. Before the bridge was opened to the public, its stability was curiously and most severely tested, by the passage of the whole force of the Hungarians and Imperialists over it, the former hotly pursued by the latter. For nearly two days, the whole platform of the bridge was one dense mass of moving soldiers. Pop.
(1846), exclusive of military, 40,500 .

BUDBROOKE, par. Eng. Warwick; 3050 ac. Pop. 508.

BUDDEABAD, a strong Ghilji fort, Afghanistan, prov. Lughman; lat. $34^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $70^{\circ} 14^{\prime} \mathrm{E}$. It is a square of 240 ft . each side; and the walls, which are 25 ft . high, are protected by a deep ditch. In this fort the 63 British captives, who had been spared from the massacre on the attempted retreat from Cabool, were for a short time imprisoned.

BUDDU, a tn. Guinea, r. bank, Niger, 37 m . N.W. the junction of the Tchadda, and supposed to be chief town of the native state of Kakanda. The huts are circular, built of clay, and over the summit of the cone of grass which forms the roof is placed an inverted black polished earthen pot, about 1 foot in diameter and 2 ft . deep, irtended to prevent the huts from being struck by lightning. The
fortress is regularly planned and laid out, with numerous liandsome edifices and squares; among other palaces is that of the Viccroy. The other buildings of note in this quarter are the parish church, garrison church, arsenal, townhall, house of assembly for the estates, government-offices, and residences of the public servants of the crown, civil and military; the aniversity press. and type-foundry. In the Wasserstadt are
people seem idle, and their canoes are inferior. The men generally have their heads shaven, leaving two or three circular patches of hair, and the women arrange their hair in small plaits hanging round the ears, and some have the head entirely shaved. A man may have as many wives as he can keep. In the dry season, small-pox, fever, bowel complaint, and sore eyes, are prevalent. Pop. 3000 or 4000.-(Allen's Niger Expedition.)

BUDE, a vii. and small seaport, England, co. Cornwall, 2 m . W. Stratton. It has of late become a resort for bathing, and the Bude Canal has increased its trade. The harbour, on account of the sand, is only accessible to small craft.

BUDEAUX (St.), par. Eng. Devon; 2500 ac. Pop. 790.
BUDGE-BUD(iE, or Bhujabhus, a small tn. Hindoostan, prov. Bencal, I. bank, Hoogly, 10 m. S. W. Calcutta.

BUUDINGEN, a tn. Hesse-Darınstadt, on the Seemanbach, 25 m. N.E. Frankfort, with a palace of the Duke of Isenberg Büdingen, a chureh, synagogue, orphan hospital, gymnasium, and industrial school. It has also a paper-mill, a pin manufactory, and stone quarrics. Pop. 2850.

BUDISSIN. See Bautzex.
BUDLEIGH (EAst), par. Eng. Devon; 2490 ac. P. 2319.
BUDOCK, par. Eng. Cornwall; 3320 ac. Pop. 1979.
BUUDÖSHEGY, a mountain, Transylvan,ia, belonging to the Carpathians ; lat. $46^{\circ} 12^{\prime}$ N. ; lon. $25^{\circ} 40^{\prime} \mathrm{E}$. It is 7340 ft . high, stands completely isolated, being surrounded on all sides by valleys, is of a conical shape, rather steep, and on its lower sides densely wooded. Strong sulphur springs rise at its foot, and throughout it contains numerous caverns which emit sulphurous vapour. This condenses, and is deposited in solid sulphur on the sides.

BUDOSO, a vil., isl. Sardinia, prov. of, and 40 m . E. Sassari, in the midst of a mountainous but pastoral district. Pop. 2000.

BUDRAWAR [stronghold of Buddha], a tn. Punjab, delightfully situated in a picturesque and highly cultivated country, on the S. slope of the Himalayas, near l. bank, Chenab, 5000 ft . above the sea level ; lat. $32^{\circ} 53^{\prime} \mathrm{N}$. ; lon. $75^{\circ} 28^{\prime} \mathrm{E}$. It has a large square fort built of stone, and a well-supplied bazaar. A considerable portion of the inhabitants are weavers of the celebrated Caslmere shawls, about 250 looms being employed in the manufacture. Pop. about 2000.

BUDUKSHAN, Badakshan, or Fyzabad, a tn. Independent Tartary, cap. dist. of same name; depending on the khanate of Koondooz, r. bank of a river of the same name; 180 m . N.E. Cabool; Iat. $36^{\circ} 25^{\prime}$ N. ; lon. $71^{\circ} 37^{\prime}$ E. It was once capital of an independent sovereignty, and a place of great importance; celebrated in particular, from early times, for the valuable mines of ruby in its neighbourhood. Since its subjugation by the chief of Koondooz, it has been a prey to a lawless soldiery. In 1832, great part of it was destroyed by an earthquake; and scarcely a vestige of its former importance remains. Its walls are levelled, and even its ruins swept away. On a rock, on the opposite bank of the river, the dilapidated walls of a ruined fort are still standing. The district around is remarkably beautiful; and both natives and visitors give rapturous descriptions of its romantic vales and rivulets; its fruits, flowers, and nightingalcs. The inhabitants, said to have come originally from the city of Balkh, speak Persian; and were, at one time, so hospitable, that bread was never sold in their country. Their misfortunes, in drying up the sources, have also, in part, quenched the spirit of hospitality.

BUDWEIS, a tn. Bohemia, cap. circle of same name, 75 m . S. Prague, on the Moldau, at its junction with the Malsch. It is regularly built, and partly fortified; and is the see of a bishop, suffragan to Prague. It has a cathedral, founded in 1297, seven churches, a monastery of Piariste, a gymnasium, an extensive custom-house, a handsome townhouse, arsenal, a theatre, a diocesan school of theology, a philosophical institute, and several courts of justice. It possesses manufactures of woollens, muslins, damasks, and linseed oil ; dyeworks, saltpetre-works, a beet-root sugar, and a large wool-combing establishment. It has also a considerable trade in leather and shoes, sent to Vienna and Prague; and in wood, transported along the Moldau. A railway to Linz, completed in 1832, and subsequently carried on to Gmünden; originally intended only for the transport of salt, now amually conveys a large tonnage in general goods, and numerous passengers. Pop. 8135 .-The circle of Budweis is the most S., and the most elevated part of Bohemia. It is watered by the Moldau, and its tributaries, the Malsch and Luschnitz; contains extensive forests and pastures, and abounds in game. Cattle and sheep are reared in great numbers; and large quantities of grain produced; the mountains supply coals, iron, and other minerals. Manufactures :-cottons, woollens,
paper, glass, and ironware. The canal of Schwarzenberg connecta the Moldau with the Danube. The eircle contains eight towns, 29 market towns, and 897 villages. Area, 1665 sq. m. Pop. 212,540.

BUDWORTH, two pars. Eng. Chester:-1, Bulworth (Great), 36,450 ac. Pop. 17,103.-2, Budworth (Little), 2630 ac. Pop. 599.

BUENAVENTURA.-1, A tn. Mexico, State Chihuahua; lat. $29^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $106^{\circ} 30^{\circ} \mathrm{W} . ; 140 \mathrm{~m}$. N. W. the city of Chihuahua. It is small, but well built; and contains about 1500 inhabitants. About $10 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. from the town, there are very extensive ruins, called Casas Grandes. An area of several square miles is covered with the remains of buildings, which, from their number, are supposed to have contained a population of at least 20,000 or 30,000 . Fine earthenware jars lave been excavated here, as well as images, made of baked earth.- 2, A tn. on the coast of Upper or New California, in Santa Barbara Channel, opposite isl. Santa Cruz; lat. $34^{\circ} 15^{\prime} \mathrm{N}$. ; lon. $119^{\circ} 5^{\prime} \mathrm{W}$. It has a tolerably good roadstead. A great variety of fruits are produced in the vicinity-the soil and climate both being favourable to their production. The town was founded in 1782.--3, A seaport, New Granada, prov. Buenaventura, dep. Cauca, Bay of Choco, on a small island called Kascakral, near the mout! of the Dagua, at the head of a bay or harbour ; lat. $3^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $77^{\circ} 18^{\prime} \mathrm{W}$. It is very insignificant as a town, consistin only of a small assemblage of huts, inhabited by negroes and mulattoes ; a small barrack, and a battery, a custom-house and the residence of the governor; the latter constructed of straw and bamboo. It has, however, a considerable trade, importing salt, onions, garlic, straw hats, and hammocks ; and exporting rum, sugar, and tobacco. The harbour or bay has a considerable extent and depth of water, a good bottom, and offers ample accommodation and safe anchorage for ships of war. But the climate is unhealthy, and provisions scarce and dear. - 4 , A river, Mexico. See Sacramento.

BUENAVISTA.-1, A vil., isl. Teneriffe; lat. $28^{\circ} 16^{\prime}$ N. ; lon. $16^{\circ} 58^{\prime} \mathrm{W}$. ; on an elevated plain, 925 ft . above the sea; it is well built, has a spacious square, several wide and straight streets, a parish church, several chapels, and three schools. Manufactures:-ribbons, and silk stockings. Ex ports:-manufactured goods, wine, and fruits. Imports :wearing apparel, bardware, agricultural implements, \&c. Pop. 2205.-2, A tn. Mexico, prov. Sonora, r. bank, IIuaqui, about 98 m . from its embouchure in the Gulf of California; lat. $27^{\circ} 35^{\prime} \mathrm{N} . ; \operatorname{lon}, 110^{\circ} 7^{\prime} \mathrm{W}$.

BUEN AYRE. See Bonaire.
BUENOS AYRES, one of the 13 united provs. of La Plata, or the Argentine Republic, lying between the rivers Negro on the S., and the Parana on the N. It is bounded, N. by provs. Mendoza, San Luis, Cordova, Santa Fe, and Entre Rios, from the last of which it is separated by the Parana, E. by the river La Plata and the Atlantic Ocean, S by Patagonia, from which it is separated by the river Negro, and W. by the Andes, which separate it from Chili. It extends thus from about lat. $33^{\circ} 10^{\prime}$ to $40^{\circ} \mathrm{S}$., and from lon. $56^{\circ} 33^{\prime}$ to about $71^{\circ} 80^{\prime}$ W., measuring, N. to S., about 540 m ., and E. to W. about 750 . The coast line, exclusive of minute sinuosities, is about 750 m . The province presents, nearly throughout, one vast level or slightly undulating surface, known as the pampas of Buenos Ayres, a large portion of which has a fertile soil for arable culture or pasturage; but little of the former is attempted, although grain, fruit, and vegetables thrive well, and with proper industry might be produced in great abundance. The rich pastures of the pampas are covered with long, tufted, luxuriant grass, intermixed with brilliant flowers, affording an inexhaustible subsistence to several millions of cattle and horses. The S. and less favoured parts are sandy, with patches of saline plants, stunted trees, and numerous salines. Having little slope, the pampas have few running waters, the only streams of any magnitude being the Negro and the Colorado in the S., and the smaller river Salado in the central parts. There are, however, a vast number of salt pools and lakes, of various dimensions, dispersed over the country, the salt in which forms with extra ordinary rapidity in dry weather, and is beautifully white and finely crystallized, requiring no purification before being carried to market. About 450 m . S.W. by W. from Buenos Ayres, there is a very large salt lake, called Urre Lauquen
[bitter lake], about 30 m . long, and 15 broad, from which that city drew its annual supplies of salt, before the port was thrown open to foreigners.

The climate of the province is generally healthful, being in the S. parts similar to that which prevails in Europe, above lat. $50^{\circ} \mathrm{N}$. In the N . districts it is warmer, the thermometer in summer rising to about $90^{\circ}$. Both regions have sufficient rain for vegetation. The N. winds are unpleasant, resembling the sirocco of Italy, and those from the S.IW. sometimes extremely violent, and accompanied by thunder and lightning. The extremes of heat and cold are considerable, and the changes of temperature often sudden and violent.

Cattle and agricultural produce form the chief sources of wealth. Hides, horns, hair, tallow, salt beef, peltry, and wool, are the principal exports. Bullocks and horses are the main articles of trade in the country, constituting its legal tender. The former are worth from 20 s. to 40 s., according to age; wild horses, $8 s$. or $13 s$., and if broken to the saddle, 40s. or 60 s. For commercial statistics, see following article on the city of Buenos Ayres; see also Plata (la) Republic of. Pop. about 200,000 .

BUENOS AYRES [good air], cap. of the above prov., and seat of the general government of the republic ; lat. $34^{\circ} 36^{\prime} 29^{\prime \prime}$ S. ; lon. $58^{\circ} 23^{\prime} 34^{\prime \prime}$ W.; S.W. shore of the estuary of the river La Plata, which is here about 30 m . in breadth, and at the distance of about 150 m . from the point where the latter joins the sea. The city stands on a slightly elevated ridge, running parallel with the river, and is built with great regularity and neatness, but is somewhat monotonous. The streets intersect each other at right angles at

every 150 yards, and form numerous squares of considerable extent, but of little architectural beauty. They are also broad, spacious, and now pretty well paved, but were formerly all but impassable with mud in wet weather, and with dust in dry. The granite with which the strects are paved, is obtained from some islands in the river above the town. The houses-which are built, the older of sun-dried, the more modern of burnt brick-have been greatly improved of late years. Almost every house has a garden before, and another behind; and many have balconies, with lattice-work for containing shrubs and flowers. The windows of the houses towards the street, generally two in number, are often without glass, having, instead, an iron grating, called reja, which gives them a gloomy and prison-like appearance. The floors are generally paved with brick, the use of wood in their construction being avoided as much as possible. The principal square or plaza faces the La Plata, and is surrounded by handsome buildings, including the palace of the Viceroy, the townhall, and the cathedral, a structure with a cupola and portico of good workmanship. The other public buildings are the churches of St. Francis and St. Johm, the latter situated on the skirts of the town, being appropriated exclusively for the use of the Christian Indians; the Convent of Mercy, and several other convents and nunneries; two hospitals, one for men and one for
women; an orphan hospital, a foundling hospital, and a college, possessing a library of 20,000 volumes. Connected with the college are a collection of objects of natural history, an observatory, a mathematical school, a public school, and a school for painting and drawing. Several other literary and scientific institutions have been established since the Revolution, including a society for the promotion of natural philosophy and mathematics, two academies (one of medicine, the other of jurisprudence), a normal school, and an association for the promotion of agriculture. The town is but indifferently supplied with fresh water, there being no public cisterns, and the wells, though numerous, being all brackish. The only supply is from the river, the water from which is carried about in butts, mounted on bullock carts, and sold at a high price. It is at first hot, muldy, and undrinkable, but after being allowed to settle for 24 hours, it becomes very excellent. Most of the wealthier families have large deep tanks, in which the rain that falls on the flat roofs of the honses is collected. The environs of the city, for a distance of 8 or 10 m ., are very beautiful, consisting of a well-cultivated country, interspersed with gardens and groves, and enlivened by numerous country residences, called quintas; every person in competent circumstances having his country scat, with a large and well-stocked garden attached. The trade, and consequently the prosperity of Buenos Ayres, is much impeded by the difficulties of the navigation of the La Plata, and the want of a safe and commodious harbour. Large vessels, drawing 16 or 17 ft . water, cannot approach nearer than from 8 to 10 m ., and even the lighters employed to unload them are often swamped in crossing the bar between the onter and inner roads. The surf on the beach is also very heavy when it blows frcsll. Another danger arises from the pamperos, sudden and violent gusts of wind, which sweep across the pampas from the Andes with tremendous fury. The vessels entered and cleared, in the following years, were:-

Buenos Ayres imports cotton, linen, woollen, and silk manufactured goods, hardware, jewellery, earthenware, glass, leather, hats, wines, \&c.; and exports ox and horse hides, sheep, chinchilla, nutria, otter, and other skins, tallow, salted beef, horse hair, horns, wool, \&c., the last being greatly on the increase; but its trade has been much damaged by the unsettled state of political matters, and by the long blockade it sustained in recent years. The following Tables convcy some idea of the extent and nature of the export trade, representing, of course, nearly the total exports of the whole republic of La Plata, which possesses no other seaport of any note:-

Total Exports. | Amount of Exports |

The majority of the inhabitants of Buenos Ayres, who are said to be observant and intelligent, are the descendants of

Spaniards, who have settled in the country during the last three centuries. The elimate is said to be healthy, but variable, the temperature rising as high as $90^{\circ}$ in the shade, and sinking as low as $35^{\circ} 40^{\prime}$, and subject to sudden and violent elianges. Deaths in the eity estimated at 1 in 32 , and in the country at 1 in 40 . The town was founded in 1580 by Don Juan de Garay, and in 1776 was made the scat of a viceroyalty, and in 1778 the port was thrown partially open by the Spaniards, from which time the city inereased rapidly. Pop. about 80,000 or 100,000 , of which probably one-fifth are foreigners, chiefly English and French.-(Sir W. Parish's Bueuos Ayres, de.; Nopitsch, Kaufmännische Berichete gesammelt auf einer Reise um die Welt; Parl. Papers.)

BUFFALO, rivers, lakes, \&e. :-1, A river, S. Africa, British Kaffraria, formed by the junction of several streams, and so called from a point about 4 m . below, or S.E. King William's Town ; lat. $32^{\circ} 53^{\prime}$ S.; lon. $27^{\circ} 30^{\prime}$ E.; and which, after a course of about 25 m ., falls into the Indian Ocean at lat. $33^{\circ} 7^{\prime}$ S.; lon. $27^{\circ} 45^{\prime}$ E.-2, A river, S. Africa, Cape District, falls into the Atlantic, $18 \mathrm{~m} . \mathrm{N}$. Cape Town.- 3 , A vil. in the same dist., 50 m . N.N.E. Cape Town.- 4 , A river, Cape Colony, dist. Graff Reynet, has its sourees in the Snow Mountains of that territory, about lat. $32^{\circ} 2^{\prime} \mathrm{S} . ; \operatorname{lon} .24^{\circ} 17^{\prime}$ E. ; and after a course of about 60 m ., first W., and latterly S. and S.E., falls into Karreeka, in lat. $32^{\circ} 28^{\prime}$ S.; lon. $23^{\circ} 28^{\prime}$ E.

5 , A river, Texas, dist. Harrisburg, formed by several streams W. and S.W. Houston, formrely the eap. of Texas, and to which town it is navigable by steamers from the Bay of San Jacinto, communicating with the Gulf of Mexico.6, A small lake, U. States, N.W. territory; lat. $43^{\circ} 45^{\prime} \mathrm{N}$.; lon. $89^{\circ} 10^{\prime}$ W.-7, A lake, Sioux territory, U. States, in lat. (centre) $45^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $96^{\circ} 30^{\circ} \mathrm{W} . ;$ about 28 m . in length, and 5 in breadth. In high floods, boats can pass from this lake to Big Stone Lake, situated a little S.E.- 8, A lake, British N. America, dist. Saskatchawan ; lat. $51^{\circ} 45^{\prime}$ N.; lon. $113^{\circ} \mathrm{W} . ;$ about 20 m . in length, and 10 in breadth. $-9, \mathrm{~A}$ lake, British N. America, dist. English River; lat. $5 \overline{5}^{\circ} 40^{\prime}$ N.; lon. $108^{\circ} \mathrm{W} . ;$ about 30 m . in length ; broadest part, 20 m. ; it is connected by small rivers with scveral other lakes.10 , A lake, British N. America, about 100 m . E. of Great Bear Lake, in the territory of the Copper Indians, in lat. (centre) $67^{\circ} 10^{\prime} \mathrm{N} . ;$ lon. $111^{\circ} \mathrm{W}$. ; length, 21 m. ; breadth, 20 m.

BUFFALO, islands, eapes, rocks, \&c.:-1, An isl., off E. coast, Cochin China; lat. $14^{\circ} 11^{\prime}$ N.; lon. $109^{\circ} 16^{\prime}$ E. (r.); it is a convex rock of sloping form, and moderately elevated.

2, Two or three small islets, Mindoro Sea, eentre of the Philippine group, a little N.W. of Point Potol, N.W. extremity of isl. P'anay; about lat. $11^{\circ} 53^{\prime} \mathrm{N} . ;$ lon. $121^{\circ} 50^{\prime} \mathrm{E}$. They are called also the Caravaos.-3, A point or cape. W. coast, isl. Sumatra ; lat. $3^{\circ} 58^{\prime} \mathrm{S}$.; about $2 \frac{1}{2} \mathrm{~m}$. S. of the W. point of Pulo or Poolo Bay. Coast here generally bold, with high mountains inland. -4, A group of detached rugged rocks, Bay of Bengal, off the W. coast of Burmah, about 20 m . due N. Cape Negrais; lat. $16^{\circ} 19^{\prime}$ to $16^{\circ} 22^{\prime} 30^{\prime \prime}$ N. lon. $94^{\circ} 12^{\prime}$ E. They extend nearly N. and S., about $3 \frac{1}{2}$ m., and are about 3 m . from the shore. 5, A small isl., E. Sea, off the E. coast of China, Chusan Archipelago; lat. $29^{\circ} 42^{\prime} \mathrm{N}$. ; lon. $121^{\circ} 15^{\prime} \mathrm{E}$. Its E. shore is roeky, and on its W. side are scveral steep inlets, one of which nearly separates the island in two parts. It rises into three peaks, one of whiel is 500 ft . high. Fresh provisions and water may be obtained here, but the supply of the latter is not always certain. The island is familiarly known by the name of Buffalo's Nose, from a large perforation near its $N$. extremity.

BUFFALO, a city, port of entry, U. States, state of New York, on the nutlet of Lake Erie, at the head of the Niagara river, on Buffalo Creek, which constitutes its harbour, $22 \mathrm{~m} . \mathrm{S}$. the Falls of Niagara. It is a pleasant and thriving town, the houses in general well-built, and the streets broad and regular. Main street is 2 m . long, and 120 ft . wide. The hotels are numerous and handsome. It contains a court-house, a jail, three banks, 17 churches, a literary and scientine academy, a lyceum, and two theatres. The harbour is spacious and safe, having 12 or 14 ft . water 1 mile from its entrance into the lake, but is not unfrequently choked up with iee. There are 50 or 60 steamers, 300 schooners, and other eraft, engaged in the commerce between Buffalo and the W., by Lake Erie and the connected lakes. The tonnage, in 1840, was 4916.

Buffato is connected with Black Rock and with Niagara Falls by railways. Pop. (1840), 18,213; (1845), 29,773. Euffalo is also the name of a number of small rivers, towns, villages, \&e., in the U. States.

BUG, or Boa, two rivers, Russia:-1, A tributary to the Vistula, falling into it on its r. bank, at Modlin, in Poland. It rises near the village of Harbuzow, in Galicia (Austria), and proceeding N. along the E. fronticrs of Volhynia and Grodno, which it separates from the kingdom of Poland, reaches BrestLitov, where, on its r. bank, it receives the Pena, its most important affluent. Thence entering the kingdom of Poland first, it proceeds N. W. to Nur, where it reeeives the Nurtschik. From this point it flows almost due W., and, shortly after receiving the Narew, falls into the Vistula, near Modlin, abont $20 \mathrm{~m} . \mathrm{N} . \mathrm{N} . W . W$ arsaw. It has a course of 434 m ., and is navigable for nearly $300 .-2$, [anc. Mypanis], A river which rises near the confines of Volhynia, in the N.W. of gov. Podolsk, and proceeds first E., and then S.E., through that gov. to Oliviopol, where it enters gov. Kherson, which it traverses almost centrally from N. to S., and falls into the estuary of the Dnieper, near Kherson. Its ehief affluents are the Ingul, Balta, Tehertal, and Solonieha. The chief towns on its banks, besides those mentioned, are Bratslav, Voznesensk, and Nikolaev. It has a course of above 400 m ., but its navigation is greatly obstructed by rocks and sandbanks.

BLGBROOK, par. Eng. Northampton; 2420 ac. P. 953.
BUGGENHOU'T, a vil. and com. Belgium, prov. E. Flanders, and 4 m . E. Termonde, on the railway between that place and Mechlin; with breweries, vinegar-works, a ropery, and a snuff, a lint, and a corn mill. Pop. 3761.

BLGGIA, or Boujeiah. See Bovolaif.
BUGIS, a people, Indian Arehipclago, chiefly inlabiting Macassar and Boni, in isl. Celebes. They are museular, middle-sized, and of a light brown colour, some being even fair. Their dress consists of a piece of red or blue striped cotton, which they wrap about their loins, and pass between their legs. They bind their jet black hair very tastefully, in a red or blue cotton handkerchief. They pluck out the hair of their beards, and ornament their arms and legs with brass wire above the wrists and ankles, and to these the children attach bells. They are, to the last degree, sanguinary, revengeful, crafty, and treacherous, and it is rarely that they see an enemy without circumventing him, and depriving him of his life. On the other hand, under good treatment, they have often been found, even as slaves, faithful and obedient. Their weapons are the creese and the assagay, a club of the hardest wood, 8 ft . long. The original country of the Bugis of Wayu, who are the most enterprising navigators of the Indian Islands, is the banks of the great fresh-water lake TaparaKaraja, in the N. part of the S.W. peninsula of Celebes, and communicating by rivers navigable for the largest native craft, both with the Bay of Boni on the E., and with the sea on the W. The voyage from the shores of the lake begins with the E. monsoon, the prahus trading as they proceed W., until they reach Rhio, or even Malacea and Acheen, when they are prepared to return with the change of the season. They take with them native cotton eloths, gold-dust, nutmegs, Spanish dollars, birds' nests, camplior, benzoin or frankineense, and tortoise-shell; and return with European broadcloths and cottons, opium, unwrought iron, and tobacco, which they partly sell at the intermediate ports as they sail homewards. This is their most important voyage, but they make many subordinate ones for colleeting birds' nests, feathers, tortoise-shell, trepang, \&e.

BUGTHORIE, par. Eng. York, E. Riding; 1990 ac. Pop. 296.

BUGUE (Le), a tn. France, dep. Dordogne, 23 m . S.E. Perigueux, r. bank, Vezere, ncar its confluence with the Dordogne. It has blast-furnaces, malleable ironworks, manufactures of nut-oil, serges, bombazines, and woollen goods; and is the entrepot for the wine and prodnce of the basin of the Vezere, which are shipped here for 13ordeaux. In the vicinity is the extensive grotto of Miremont. Pop. 1240.

BUGULMA, or Bougoulma, a tn. Russia, gov. Orenburg, cap. dist., and on a small river of same name, 130 m . W.S.W. Oufa. It is well and regularly built, and contains two churehes. Its trade, which is extensive, is chiefly in cotton and woollen goods, and it has two important aunual fairs. I'op. 4700.

BÜHL, a tn. Baden, circle, Middle Rhine, on the Bühllot, and on the railway from Carlsruhe to Freiburg, 20 m . N.E. Strasburg, with a considerable stocking factory, and dyeworks both of blue and Turkey red. The weekly market of Biihl is important. At Sasbach, about 3 m . from Bühl, is an obelisk of granite, marking the spot where the celebrated Marshal Turenne was killed. Pop. 2800. - Numerous places in Germany have the name of Bühl.

BUILDWAS, par. Eng. Salop; 2950 ac. Pop. 273.
BUILTII, or Llanvair-yn-mualle, a tn. and par., S. Wales, co. Brecon. The town is $12 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. New Radnor, delightfully situated on the Wye, here crossed by a bridge of six arches. It consists of two parallel streets, and a few lanes, forming irregular terraces on the side of a declivity; and has a parish church, and chapels for Baptists, Independents, and Calvinistic and Wesleyan Methodists; several schools, and the remains of an ancient castlc. Weekly market on Monday ; four cattle-fairs are held annually. - In the PARISH are several mineral springs, which are a source of great attraction to visitors. Llewelyn, the last of the native sovereigns of Wales, was slain in the neighbourhood, in an engagement with the English, in 1282. Pop. 1203.

BUIRONFOSSE, a vil. France, dep. Aisne, 9 m. N.N.W. Vervins, and the centre of a considerable manufacture of sabots. Pop. 1465.

BUIS (Le), [box-tree], a tn. France, dep. Drome, 48 m. S.S.E. Valence, of the Ouvèze. It is meanly built, but has some fine promenades, and a public market-place, planted with a double row of trees; silk-mills, oil-works, and tanneries, with trade in wool, cloth, and silk. In the vicinity the boxtree grows in great quantity. Pop. 1928.

BUITENPOS'T, a vil. Holland, prov. Friesland, 16 m. E. by N. Leeuwarden. It is a pleasant-looking village, has a Calvinistic church, and a school; and its inhabitants subsist chiefly by agriculture and cattle-rearing. Pop. 800.

BUITENZORG, a prov., dist., and tn., isl. Java. The province or residency is bounded, N. by that of Batavia, E. by Krawang, S. by the Preanger Regencies, and W. by Bantam; and forms an oblong of 747 sq . m., with 900 villages, and 270 hamlets. The S. is mountainous, of which the highest peaks, Sulak and Pangerango, are 8000 ft . above the sea. To its innumerable streams, many canals have been added for the increased irrigation of the soil. The climate is mild, and the higher grounds much resorted to by European invalids. The tiger and rhinoceros abounds in the S. and W. The useful products are, horses, buffaloes, and oxen ; rice, coffee, sugar, edible birds' nests, hides, potatoes, and grcen vegetables for Batavia. The great Java highway crosses the residency N. to S. - The district, still called by the natives Bogor, which was changed into Buitenzorg by Sir T. S. Raffles, after the name of a country house, first erected by General Van Imhoff, and enlarged by Marshal Daendels, is proved, by numerous ancient remains, to have been in a highly prosperous condition previous to the civil wars, which convulsed that part of Java at the first introduction of Mahometanism. These made it a wilderness in the strictest sense of the word; its temples and useful constructions were left in ruins, and tigers, wild boars, and other dangerous animals so multiplied, that prayers were put up at Batavia for the Gover-nor-General's safety whenever he ventured into it. Its fine climate and fertility, however, togetler with its nearness to Batavia, pointed it out, alove a century ago, as peculiarly adapted for European residences; and an express grant was then made of it to Imhoff, and his successors in the government, for that purpose. A plain house was erected by Imhoff limself, and was soon followed by many more, by other functionaries and wealthy persons; so that a fine village or small town rose, at length, in the bosom of the wilderness, while, at the same time, the cultivation of the ground was sedulously resumed.-The town is 30 m . S. Batavia, and 600 ft . above the level of the sea. Anong other handsome buildings, the present palace of the Governor-General is particularly distinguished. It presents a central pavilion, surmounted by a dome and two long wings, ornamented with peristyles. Close by there is a large garden, in which all the most useful and curious vegetable productions of the Indian Archipelago are to be found, arranged and tended by a highly scientific botanist. - (Van der Aa; Haussman, Voyage en Chine, \&ic.)

BUITRAGO, a tn. Spain, New Castile, prov. of, and $40 \mathrm{~m} . \mathrm{N}$. Madrid. It was formerly walled, and has two squares, a parish church, chapel, townhouse, two schools, and an hospital. Pop. 1506.

BUITTLE, par. Seot. Kirkcudbright; length, 8 m. ; breadth, 3 m . Pop. 1059.

BUJALANCE, a city, Spain, Andalusia, prov. of, and 21 m . E. by N. Cordova, on an elevated plain in a mountainous district. It has two squares, and numerous wide and paved, though crooked streets; a parish, and several conventical churches; a Latin, and two other schools; and a ladies' college ; townhonse, storehouse, two hospitals, a prison, several fountains, and, overlooking the town, an Arab castle, surrounded by an embattled wall and moat, flanked with seven dilapidated towers, in one of which is its portal. Manufac-tures:-cloth and woollen fabrics, earthenware, and glass. Trade:-exporting wheat, oil, and industrial produce, and importing wool. A large cattle-fair is held in August and September. Pop. 8936.

BUK, or вUCK, a tn . Prussia, cap. circle of same name, gov. of, and 17 m . W.S.W. Posen, with five churches, and considerable manufactures of linen, leather, and shoes. It has also several distilleries. Pop. 2298.-The circle, area, 268 geo. sq. m., is level, well watered, well wooded, and fertile, producing good crops of corn, flax, hops, and gardenfruits, and rearing great numbers of catile. Pop. 44,594.

BUKKEN, an isl. Norway, W. coast, prov. Christiansand, bail. Stavanger, in the Bukke-Fjord; lat. $59^{\circ} 12^{\prime} \mathrm{N}$. ; lon. $5^{\circ} 22^{\prime} \mathrm{E}$. ; with a vil. of same name. The Bukke or Bukken-Fjord, is an arm of the sea, extending about 35 m . inland, with a breadth of 10 to 15 m ., and is covered with numerous islets. Its N.E. part is called the NærstrandsFjord, and its N. part the Skjolds-Fjord.

BUKKUR.-1, A fortress, Scinde, on an isl. of same name, in the Indus; the channel which divides it from Roree, on the l. bank of the river, being 1200 ft . wide, and 35 deep; and that which divides it from Sukkur, on the r. bank, being 294 ft . wide, and 15 deep; lat. $27^{\circ} 41^{\prime} \mathrm{N}$.; lon. $68^{\circ} 52^{\prime}$ E. The island is a limestone rock, 2400 ft . long, 900 wide, and 27 high. It is almost covered by the fortress, which has double walls of brick, from 30 to 35 ft . high, with bastions, loop-holes, and a parapet.-2, A tn. Puijab, on a small offset of, and about 3 m . E. the Indus; lat. $31^{\circ} 39^{\prime}$ N.; lon. $71^{\circ} 7^{\prime}$ E.; in a fertile district, and abundantly supplied with cheap provisions. Pop. 5000.

BUKOWINA, a duchy, Austria, in E. Galicia, and recently called the circle of Czernowitz, between lat. $47^{\circ} 20^{\prime}$ and $48^{\circ} 40^{\prime} \mathrm{N}$. ; and lon. $24^{\circ} 45^{\prime}$ and $26^{\circ} 20^{\prime} \mathrm{E}$. ; greatest length, N. to S., 104 m . ; average breadth, about 65 m. ; area, 2944 geo. sq. m. The whole circle is traversed by ramifications of the Carpathians, and much of the surface is occupied by swamps and forests. The principal rivers are the Prath, Dniester, Suczawa, Seret, Moldawa, and Bistritza. The climate is, on the whole, mild and salubrious. The chief mineral production is salt. Gold is found in the sands of the Bistritza. Not much corn is grown, but great attention is paid to the rearing of cattle and bees. The trade, chiefly in the hands of Jews and Armenians, is confined to horses, horncd cattle, hides, wool, wax, and honey. The capital of the circle is Czernowitz. Bukowina was united to Galicia in 1777, and from 1786 to 1849 it formed the circle of Czernowitz. In the latter year it was re-constituted a duchy. Pop. 208,498.

BULACAN, a prov. and tn. Philippines, isl. Luzon, at the head of the Bay of Manilla. The Province is the smallest in the island, but the most productive, the best cultivated, and said to be the healthiest place in the whole archipelago. It is intersected by numerous small rivers, the banks of which are extremely fcrtile, and are covered with trees; all these streams fall into Manilla Bay. Gold, iron, the latter said to be of excellent quality, and inexhaustible in quantity; coal, alabaster, limestone, and building stone, are found. Amethysts, topazes, and emeralds, are said to exist ; and good slate is to be obtained, but is not wrought to any extent. The principal agricultural productions are rice, maize, sugar, indigo, and some tobacco. The forests are inhabited by wild boars, oxen, buffaloes, wild horses, and a great variety of birds, including turtle doves. A large portion of the population on the coast is employed in fishing: and of those in the interior, a number

## BULTI

eke ont a scanty subsistence by washing the auriferous sands of the rivers. A still greater number are engaged in weaving, and in manufacturing various fabrics. -The tows, cap. of the prov., is about $22 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Manilla; lat. $14^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $120^{\circ} 50^{\circ} \mathrm{E} . ;$ and is connected with the latter by an excellent road. The streets are spacious, and the houses of wood, with exception of the cluurch, the residence of the chief magistrate, and the government-house, all of which are of stone. Among the inhabitants are many wealthy sugar-manufacturers ; a great number are also employed in manufacturing various kinds of fabrics, particularly mats or carpets of silk. The environs of Bulacan are extremely picturesque. Pop. of tn. 9803; of the entire prov. 179,000.-(Mallat's Philippines.)

BULAMA, one of the Bissago Islands, W. coast, Africa, 18 m . long, and generally about 9 broad, although, in many places, a good deal more; lat. (W. point) $11^{\circ} 31^{\prime} 18^{\prime \prime} \mathrm{N}$. ; lon. $15^{\circ} 37^{\prime} 8^{\prime \prime} \mathrm{W}$. (c.) The land rises gradually from the shore to the centre of the island, where it attains the height of 100 ft . In 1792, an attempt was made by an English company, called the Bulama Association, to establish a colony in this island; but the colomsts, about 275 persons, dissipated and unprincipled, were cut off by disease, except a miserable remnant, who, in 1793, sailed for Sierra Leone.

BULAVADIN, a tn. Asiatic Turkey, pash. Anatolia, 25 m . E. Afium-Kara-1Iissar ; lat. $38^{\circ} 44^{\prime} \mathrm{N}$. ; lon. $31^{\circ} 7^{\prime}$ E. Pop. 3000 .

BULFORD, par. Eng. Wilts; 4160 ac. Pop. 367.
BULGARIA [anc. Mosia Inferior], a prov. Turkey in Enrope, between lat. $42^{\circ} 8^{\prime}$ and $44^{\circ} 10^{\prime} \mathrm{N}$.; and lon. $22^{\circ} 14^{\prime}$ and $29^{\circ} 36^{\prime}$ E. ; bounded, N. by the Danube, which scparates it from Wallachia, the S.E. corner of Moldavia, and Bessarabia; E. the Black Sea, S. the Balkan Mountains, which separate it from Roumelia and Macedonia; and W. by Servia; length, from E. to W. about 320 m .; average breadth, about 100 m. ; area, 27,840 geo. sq. m. The whole province may be regarded as consisting of a vast inclined plain, descending N. with more or less abruptness, from the ridges of the Balkan to the banks of the Danube, and of a smaller and much lower inclined plain which slopes E. to the Black Sea, to the basin of which the whole province belongs, to a small extent directly, but by means of the Danube and its tributaries, to a much greater extent indirectly. The most important of these tributaries are the Timok, Isker, Vid, Osma, Lom, and Taban. The interior is only indifferently wooded, but magnificent forests clothe the lower terraces, and rise almost to the highest summits of the Balkan. The prevailing strata belong to the upper part of the secondary formation, and of course are chiefly cretaceons. The soil is of remarkable fertility, and produces so much more corn and rice than the inhabitants consume, that the Turks regard Bulgaria as their most important granary, and derive from it large supplies of all kinds of agricultural produce, including honey and wax. The minerals are probably of considerable importance, but as yet, the only one which has been worked to any extent is iron. For administrative purposes, Bulgaria is placed under the Beglerbeg of Roumelia, whose residence is in the capital Sophia, and is divided into forr sanjaks-Sophia, Nicopolis, Silistria, and Widdin. The greater part of the inhabitants belorg to the Greek church. They generally understand Turkish, but their vernacular tongue is a dialect of Sclavonic, bearing a considerable resemblance to the Russian. They are more industrions than is usual with the inlabitants of Turkish provinces, and, showing little inclination to break the yoke of their masters, are in return treated by them with tolerable mildness. Pop. $1,800,000$.

BULKINGTON, par. Eng. Warwick; 4600 ac. P. 1831.
BULKWORTHY, par. Eng. Devon; 6050 ac. Pop. 196.
BULLAS, a tn. Spain, prov. of, and 33 mi . W. by N. Murcia, on an eminence 1840 ft . above the sea level. It has steep and unpaved streets, two squares, a parish chureh, townball, endowed school, prison, storehouse, and extramural cemetery. Manufactures:-linen, and hempen fabrics, earthenware, and brandy. Trade:-manufactured goods, grain, \&c. Pop. 5145.

BUlLLE, a tn. Switzerland, cap. dist. of same name, can. of, and 14 m . S. by W. Freiburg. It stands in a fertile valley 2340 ft . above the sea level. In $1 \delta 05$, almost every building, witls exception of the old castle and Capuchin cloister, was
burned down. The greater part of the town is now new and regularly built. The parish church, which is very handsome, has a marble chancel, and possesses a fine organ hy Moser. Six yearly markets are held here. One in May is the largest in the canton, and at the two in October and November the price of Gruyère cheese, for which Bulle is the great depôt, is fixed. Pop. 1432.

BULLERS of BUCHAN, a small fishing vil. Scotland, co. Aberdeen, on a gentle slope terminating on the brink of a high cliff, 22 m. N.N.E. Aberdeen. It consists of two or three rows of houses, straight and running parallel to eacli other, but hardly deserving the name of streets. The houses are supcrior to those commonly to be met with in fishing villages, and are kept remarkably clean by their ocenpants. Water is abundant, but all hard. The male portion of the population are all fishermen, and carry on the trade of whitefishing, in small boats, during 10 months of the year, never going further than 10 or 12 m . from land. They likewise engage to some extent in the herring-fishing. Close by the village is the remarkable natural curiosity called the Bullers of Buchan, consisting of a group of singular rocks and seaworn caverns. The principal of these chasms or excavations is called the Buller (or Booter) of Buchan. It resembles an immense well, whose perpendicular walls are of the living rock, with the sea rushing violently in through an opening at the bottom, and having an aperture at the ton of about 50 ft . in diametcr, from which the visitor contemplates the tumultuous waters below at a depth of 150 ft . Boats enter by the same passage with the tide, affording the curious an opportunity of visiting the interior, which, however alarming the adventure appears, is accomplished without risk.-(Local Correspondent.)

BULLES, a vil. and com. France, dep. Oise, 6 m . N.N.W. Clermont, on the Bresche. It was formerly noted for its manufacture of linen, called demi-Hallande, still carried on to a limited extent. The goods were sold cliefly at Beauvais. Pop. 1071.

IBULLEY, par. Eng. Gloucester; 780 ac. Pop. 229.
BULLINGHAM, par. Eng. Hereford; 1700 ac. Pop. 412. BULLINGTON, par. Eng. Lincoln; 760 ac. Pop. 52. BULLOCK, par. Irel. Dublin; 3331 ac. Pop. 1385.
BULLOMS (Nortil and South), two maritime districts, W. Africa, both in the country of the Timmanees. N. l3ulloms is bounded S. by the Sierra Leone, and N. by the Little Sarcies river, intersected centrally by the meridian of $13^{\circ} \mathrm{W}$. S. Bulloms is situated S. of the peninsula of Sierra Leone, between lat. $8^{\circ} 9^{\prime}$ and the river Kates or $8^{\circ} 28^{\prime} \mathrm{N}$. ; and lon. $12^{\circ} 15^{\prime}$ W., and Yavry Bay.

BULL'S BAY, or Bahoul Bay, a bay, E. side of Newfoundland; lat. $47^{\circ} 25^{\prime} \mathrm{N}$. ; lon. $52^{\circ} 20^{\prime} \mathrm{W}$.

BULLUMGHUR, a tn. and fortress India, prov. of, and 21 m . S. Delhi ; lat. $28^{\circ} 23^{\prime}$ N.; lon. $77^{\circ} 10^{\prime} \mathrm{E}$. The fort has lofty brick walls, a deep ditch, and high mud bastions; and the town, though small, is tolerably well built, with lofty houses and numerous temples.

BULMER, two pars. Eng.:-1, par. Essex ; 2880 ac. Pop. $775 .-2$, par. York, N. Riding; 3800 ac. Yop. 983.

BULOLA, a tn. and river, Senegambia; the town stands on the r. bank of a tributary of the Bulola, about 5 m . S. from its junction with the latter, and 60 m . from the sea; lat. $11^{\circ} 31^{\prime} \mathrm{N}$. ; lon. $14^{\circ} 20^{\prime} \mathrm{W} .-$ The river, the sources of which are not well ascertained, traverses the country of the Biaferes, and falls into the Atlantic about lat. $11^{\circ} 30^{\prime} \mathrm{N}$., being separated from the embouchure of the Jeba or Rio Grande, by a peninsula about 11 m . broad.

BULPHAN, par. Eng. Essex ; 2020 ac. Pop. 2 irt.
BULSAUR, a seaport, Hindoostan, on the highroad to Bombay, 42 m . S.S.W. Surat ; lat. $20^{\circ} 36^{\prime}$ N.; lon. $73^{\circ} 5^{\prime}$ E. It carries on a considerable trade in grain and timber. The chief manufactures are of cotton; rice and sugar-cane are cultivated in the vicinity; but a large portion of the land is still waste.

BUL'TI, Baltee, Bultistan, Iskardor, or Little Tinet, the various names of a small state in Central Asia, occupying on the maps the S.W. corncr of the Chinese empire, though not subject to that power, and lying between lat. $34^{\circ} 40^{\prime}$ and $35^{\circ} 30^{\prime} \mathrm{N}$. ; and lon. $74^{\circ} 40^{\prime}$ and $76^{\circ} 20^{\prime} \mathrm{E}$. Greatest length, S.E. to N.W., about 170 m. ; breadth, between 50 and 60 m . ; area, $12,000 \mathrm{sq} . \mathrm{m}$. It is enclosed by lofty rugged mountains, rising to a height of 6000 and 8000 ft ..
and is traversed by the Indus during the earlier course of that river, and has several other inferior, but still considerable streams, numerous mountain torrents, and five pretty large lakes. Little is known of its minerals, but arsenic is met with; sulphur abounds, and thermal springs are numerous. As might be expected from the inequalities of its surface, its climate presents the extremes of heat and cold in accordance as well with its elevations and depressions as with its seasons. In the elcvated parts, the cold is intense in winter; while in the lower districts, the heat in summer ranges from $70^{\circ}$ to $90^{\circ}$ in the shade at noon. Rain is here almost unknown, but snow falls frequently, and lies to a depth of from 1 to 2 ft . The country is not naturally fertile, but, through the industry of its inhabitants, is made to yield tolerable crops of wheat, barley, millet, buck-wheat, turnips, and a little rice. Fruits of various kinds are abundant, including apricots, peaches, apples, pears, grapes, mulberries, walnuts, and melons. The principal wild animals are a species of sheep with cuormous horns, a large kind of goat, muskdeer, marmots, hares, leopards, bears, wolves, and foxes. The chief domestic animals are the grunting ox, which attains the size of our large ox; the cow, the bzho, a hybrid between the former and the latter; sheep, and goats. Eagles are frequently seen, more rarely vultures; and red-legged partridges, together with another species, as large as a common hen, are plentiful. The rivers abound with trout, but have scarcely any other fish. The inhabitants are of the Mongolian race, are peaceable and well-intentioned; they labour hard and live poorly; have a sallow, thin, and care-worn look, and are seldom long-lived. Their dress is a long, full tunic and cap, generally made of the wool of their sheep and goats. Their religion is Mahometan, and their language Tibetian. Pop. estimated at 75,000 .

BULWELL, par. Eng. Notts; 1210 ac. Pop. 3157.
BULWICK, par. Eng. Northampton; 1910 ac. Pop. 487.
BUMLIN, par. Irel. Roscommon; 6582 ac. Pop. 5257.
BUMPSTED, two pars. Eng. Essex :-1, Bumpsted Helton ; 2790 ac. Pop. 906 . - 2, Bumpsted-Stceple; 3460 ac. Pop. 1212.

BUNARBASHI, a tn. and river, Turkey in Asia, pash. Anatolia. The town is in lat. $39^{\circ} 52^{\prime} \mathrm{N}$. ; lon. $26^{\circ} 15^{\prime}$ E. ; 46 m . N.W. Adramyti, and is supposed to occupy a part of the site of ancient Troy. - The RIVEr Bunarbashi is formed by the junction of several warm springs, and is conjectured to be the Scamander of Pliny.

IBUNBURY, par. Eng. Chester; 17,600 ac. Pop. 4678.
BUNDELCUND, a dist. Hindoostan, part of it in the British province of Allahabad, and part under the rule of native chiefs, protected by the British Government. It lics between lat. $24^{\circ} 3^{\prime}$ and $26^{\circ} 26^{\prime} \mathrm{N}$.; and lon. $77^{\circ} 48^{\prime}$ and $81^{\circ} 33^{\prime}$ E. ; area, 23,817.sq. m. ; and is watered by the Betwah, Desan, and Cane, all affluents of the Jumna, which forms the N. boundary of Bundelcund. It is hilly; contains the almost exhausted diamond mines of Panna, and has soil of every variety, and yields almost every grain and plant of India. Principal towns, Bandah, Callinjer, and Jhansi. In 1804, it was oceupied by the British; and in 1817, the portion now belonging to the presidency of Bengal was finally given up by the Peishwa, and formed into the two districts of N. and S. Bundelcund. Pop. 2,500,000.

BUNDER ABBAS. See Bender-Abbaz.
BUNDERPOOCI [monkey's tail], the native name of the loftiest peak of the Jumnowtry, one of the Himalayas; lat. $31^{\circ} 1^{\prime} \mathrm{N} . ; \operatorname{lon} .78^{\circ} 33^{\prime}$ E.; height, 21,155 ft.

BUNDLEY, par. Eng. Devon; 2410 ac. Pop. 342.
BUNGAY, a market tn. and par. England, co. Suffolk, r. bauk, Waveney, 30 m . N.E. Ipswich. It occupies the sides and summit of a gently rising hill, and is neatly and well built ; streets spacious, and well paved, diverging from a moderatesized area in the centre of the town, forming a market-place, in which is a handsome market-cross. The town is lighted with gas, and well supplicd with water. Its churches are, St. Mary's, an clegant structure, with a beautiful steeple; and the Holy Trinity Church, a small ancient building, with a round tower, and an ancient elaborately-carved pulpit. Adjoiuing St. Mary's Church are the pieturesque ruins of a Benedictine nunnery. It also has Independent, Wesleyan, and R. Catholic chapels; and the Baptists have three separate congregations, but no chapel. The corn-hall is neat and Vor I.
commodious, attached to which is the public dispensary. There are 23 daily, and five Sabbath schools, and several charities. Petty sessions weekly; market-day, Thursday; and two annual fairs for horses, \&c. The principal trade is in corn, coals, flour, lime, and malt, in which a considerable amount of business is done. There is also an extensive printing-office, and stereotype-foundry. Adjoining the town is a very spacious common, on which is a good race-course, where the races are held in September. Area of par. 2090 ac . Pop. 4109.-(Local Correspondent.)

BUNGELOW ISLAND, an isl., N. Pacific Ocean, about 140 m . N.E. Great Loo Choo Island; lat. $28^{\circ} 25^{\prime}$ N. ; lon. $130^{\circ}$ E.

BUNKLE and Preston, a united par. Scotland, ec. Berwick. Mean length, $4 \frac{1}{2} \mathrm{~m}$. ; mean breadth, $3 \frac{1}{4} \mathrm{~m}$. Pop. 748.

BUNNY, par. Eng. Notts; 2000 ac. Pop. 360.
BUNOL, a tn. Spain, prov. of, and 27 m . W.by S. Valencia; with remains of ancient fortifications. It has stcep streets, two squares, a parish church, two schools, townhall, prison, and public storehouse. Manufactures:-cloth, paper, and woollen fabrics. Trade:-wine, oil, silk, and maize. Pop. 2473.

BUŇOLA, a tn. Spain, isl. Majorea, 10 m . N.E. Palma. It is tolerably well built, and has a parish church, two schools, a townlall, and cemetery. Manufactures:-soap, oil, lime, gypsum, and charcoal, which are exported; grain and wine being imported. Pop. 1936.

BUNPOOR, a small, ill-built tn. Beloochistan, prov. Kohistan; lat. $27^{\circ} 45^{\prime}$ N.; lon. $60^{\circ} 5^{\prime}$ E. ; on a streamlet, and in a district or desert of same name; arid and sterile; defended by a fort.-T The district of Bunpoor is inhabited by the principal tribe of the Nharoes, who speak mixed Persian and Belooche; possess about 300 cavalry, and 2500 infantry, and support themselves chiefly by predatory inroads into the neighbouring countries, especially Persia.

BUNRATTY, a tn. and par. Ireland, co. Clare. The town lies r. bank, Ougarne, at its confluence with the Sliannon, 8 m . W. by N. Limerick; and has an old castle, erected in 1277, now used as a constabulary barrack. The anchorage in Bunratty roads, off one of the nnmerous islands in the Shannon near this town, is considered the best in the river, and is used by large vessels to discharge their cargoes for Limerick. Five fairs are held annually for cattle, sheep, and pigs. Area of par. 2755 ac. Pop. 1320.

## BUN'TING ISLANDS. See Boonting.

BUNTINGFORD, a market tn. England, co. of, and 10 m . N.N.E. Hertford, consisting of one long street ; houses generally well built; water abundant; business in malt and leather. It has a large commodious church, and places of worship for Friends and Independents, a free grammar-school, alms-houses, and other charities. Pop. 581.

BUNWELL, par. Eng. Norfolk; 2280 ac. Pop. 1001.
BUNZLAU [Latin, Boleslavia].-1, A tn. Prussia, prov. Silesia, gov. of, and 25 m . W. Liegnitz, r. bank, Bober, on the railway between Frankfort and Breslau, surrounded by a double line of walls flanked with bastions, and by a deep ditch. It contains three churches, one Lutheran, and two R. Catholic; a synagogue, some charitable and educational institutions, several manufactories of woollens, linens, stockings, and earthenware; and extensive potteries. In the market-place is an iron obelisk to the memory of the Russian general Kutusow, who died here in 1813. Opitz, the father of German poetry, who died in 1639, was born here. Pop. (1846), 6677 .-The circle, area, 306 geo. sq. m., is generally level and well wooded, but the soil is of a sandy texture, and not very favourable for the production of corn. The cliief erops are flax and potatoes. Iron and potter's clay are extensively worked and manufactured. Topazes, agates, chalcedonies, carnelians, and jaspers, are also found. Pop. 56,624.-2, Bunzlau (Jung), [Bohemian, Mlada-Boleslaw], a royal tn. Bohemia, cap. circle of Bunzlau, 31 m . N.E. Prague, l. bank, Iser. It is well built of stone, with several churches, a synagogue, a neat townhouse, barracks, an lospital, a court of criminal jurisdiction for the district, a royal gymnasium of Piarists, and manufactures of cottons, printed calicoes, muslins, woollens, soap, and leather. It has an old fort, built by Duke Boleslaw (A.D. 973), the reputed founder of the town. Pop. (1844), 5074. The CIrcle, area, 1642 sq. m., is intersected by the Iser, and, in the W. and N.W., by offshoots tersected by the Iser, and, in the W. and N.W., by
of the Riesengebirge. In general, the country is arid, excepting in the watered valleys, which yicld large crops of rye, barley, oats, flax, fruit, and hops. In the mountain districts, the manufacture of linens, cottons, woollens, ironware, glass, crystal, and paper, is carried on. The circle contains 16 towns, 30 market towns, and 1032 villages. Pop. 413,233. -3, Bunzlau (Alt), a tn. Bohemia, circle, Kaurzim, 15 m . N.W. I'rague, near r. bauk, Elbe. It has a collegiate school, and a church much resorted to by pilgrims. Pop, 2000.

BUOCHS, a vil. and par. Switzerland, can. Unterwalden, near S. bank, Lake Luzern, and r. bank, Aa, 8 m . S.E. Luzern. It stands on the slope of the Buochserlorn, and contains a very handsome church, an orphan and a poorhouse; and is much exposed to inuudation. Pop. 1107.

BUOLICK, par. Irel. Tipperary; 7116 ac. Pop. 2660.
BUONABITACOLO, a tn. and com. Naples, prov. Principato Citra. 12 m . S. Sala, in a mountainous district, on a tributary of the Sele. Pop. 5475.

BUONALBERGO, a tn. and com. Naples, prov. Principato Ultra, 7 m . N.W. Ariano. Pop. $376 \overline{5}$.

BUONCONVENTO, or Bonconvento, a tn. and com. Tuscany, prov. of, and 16 m . S. by E. Siemma, near the confluence of the Arbia and Ombrone; walled, flanked with towers, and overlooked by the castle of Percenna. The church, an extensive edifice, contains some valuable works of art. Silk is manufactured, good grain grown, and a considerable number of cattle fed. Pop. 2736.

BURANO, an isl. and tn. Austrian Italy, gov. of, and 6 m . N.E. Venice, lying among the lagoons. The inhabitants are chiefly employed in fishing; part, also, in building boats and making lace. Near the town there is an extensive ropework. Pop. 8000.

BURBAGE, par. Eng. Wilts; 3530 ac. Pop. 1455.
BURCOMBE (South), par. Eng. Wilts; 3090 ac. P. 402.
BURCOTT, par. Eng. Oxford; 1550 ac. Pop. 183.
BURDEKIN, a river, Australia, New S. Wales, between lat. $19^{\circ}$ and $20^{\circ} 20^{\prime}$ S.; it flows, in a S.E. direction, to lat. $20^{\circ} 15^{\prime} \mathrm{S}$., when it suddenly bends round, and, running N.E., falls into a bay near Cape Upstart.

BURDUR, a in. Asiatic Turkey, pash. Anatolia, 65 m . S. Afium-Kara-Hissar; lat. $37^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $30^{\circ} 25^{\prime} \mathrm{E}$. In its vicinity is a lake of same name.

BURDWAN, $a \mathrm{tn}$. Hindoostan, presid. and prov. Bengal, cap. dist. of same name, l. hank, Dummoodah, 50 m. N.W. Calcutta. The titular rajah of Burdwan resides here, and has a large palace, with spacious gardens, \&c. Pop. 540,000. -The district lies between lat. $22^{\circ}$ and $24^{\circ} \mathrm{N}$.; and lon. $87^{\circ} 20^{\prime}$ and $88^{\circ} 25^{\prime}$ E.; bounded, N. by Beerbhoom, E. by Nuddea, S. by Midnapore and 1Iooghly, and W. by Midnapore and Ramghur; area, about $2400 \mathrm{sq} . \mathrm{m}$. It is level, and is one of the richest and most productive districts of Hindonstan. The chief river is the Dummoodah, which, for a short time during the rainy season, is not navigable; the district is well supplied with roads. The chief crops are sugar, indigo, betel, tobacco, cotton, the usual cereal grains of Bengal, and mulberry-trees. Coal of good quality is plentifully obtained, and is preferred, in the Calcutta market, to any other excepting English; and some is exported to Madras, Singapore, Penang, and Ceylon. Fine iron ore is found near the coal, and abundance of stone. The native zemindars are usually rich; the more wealthy portion of them reside in Calcutta, leaving their estates to be managed by resident agrents. There are few villages in which there is not a school for the rudiments of education. Burdwan was formerly an independent state, and, with the rest of Bengal, was ceded to the British in 1760 . Pop. 1,487,300.

BUREN [anc. Buyren], a tn. Holland, prov. Gelderland, about half way between Tiel and Culenborg. It has three gates, and consists of two streete, crossing each other at right angles. The council-house, with a handsome tower, and the leformed church, with a very fine spire, are both in the mar-ket-place. There are also a R. Catholic church, and a small synagogue; an orphan-house, of some architectural note; and a Dutch and French school. The old castle of Buren, where Prince Philip William of Orange was born, in 1554, stands close to the town on the W. Pop. above 1000.

Bi') REN, two vils. and a tn. Switzerland:-1, Büren-Ober. a well-built vil., can. of, and 10 m . W. St. Gall, on the Thur, trom whose inundations it has often suffered. Pop. 1410.-

2, Büren-Nieder, on the same river, a little below the former, and containing a handsome church, and good school. Pop. 1090.-3, Büren, a tn., can. of, and 14 m. N. N. W. Bern, cap. dist. of same name, on the Aar. It has a court-house, and a new brilge over the river, and carries on a good general and transit trade. Pop. 1147.

BUUREN, a tn. and circle, Prussia, prov. Westphalia, gov. Minden. The town stands at the confluence of the Alte and the Alme, is walled, contains a handsome church, a normal school, and an asylum for deaf and dumb. The staple trade of Buiren is linen-weaving. Pop. 1800.-The circle, area, 195 geo. sq. m., is hilly, almost mountainous, in the S. and S.E. ; flat and covered with extensive moorland wastes, in the N.E. and N. In Salzkotten there is a salt spring, which yields annually 500 tons of salt. In other parts of the circle the linen manufacture is carried on to a great extent, and there are numerous oil-mills, several paper-mills, glasworks, and potash-works. Pop. $34,000$.

BURENDO PASS. See Brooang.
bureng, Bereng, or Breng.-1, A valley, Cashmere, extending S.E. to N.W., between lat. $33^{\circ} 20^{\prime}$ and $33^{\circ} 30^{\prime}$ N.; and lon. $75^{\circ} 10^{\prime}$ and $75^{\circ} 26^{\prime}$ E.; containing numerous subterraneous water-channels, and abounding in springs of great force and volume. -2 , A river, flowing N.W. through the above valley. Shortly after the junction of the two streams of which it is composed, a great part of the water suddenly disappears, by an opening in the bed of the river, the remainder being conveyed, by a canal N.W., towards Islamabad, beyond which it joins Jailum ; lat. $33^{\circ} 42^{\prime} \mathrm{N}$. ; lon. $75^{\circ} 2^{\prime}$ E. ; whole course, about 40 m .

BURES (St. Maty), par. Eng. Suffolk and Essex; 4220 ac. Pop. 1596.
buresmount, or Little Bures, par. Eng. Essex ; 1430 ac. Pop. 282.

BURFORD.-1, A market tn. and par. England,co.Oxford. The town is 16 m . W. by N . city of Oxford, on a steep acclivity, r. bank, streamlet Windrush. It consists of three principal streets, straight and well kept, but badly paved; houses of stone, and mostly very old. The church is a handsome structure of Saxon architecture, with Norman tower and spire. There are chapels, besides, for Wesleyans, Baptists, and Quakers, a grammar-school, formerly of considerable, but. now of little repute; and several alms-houses for poor and aged wilows. An ancient priory in the vicinity is an object of some interest. Three fairs amually for cattle, horses, sheep, cheese, \&c. Area of par. 2170 ac. Pop. 1862 ; of tn. 1644. -(Local Correspondent.)-2, par. Salop; 8370 ac. Pop. 1031.

BURG.-1, A tn. Prussia, prov. Saxony, gov. of, and 12 m. N.E. Magdeburg, on the Ille, surrounded by a wall with several gates. It has three churches, a grammar-school, an hospital, and a workhouse, and is the seat of civil and judicial administration for the circle. Its manufactures are extensive, and consist chiefly of woollens, yarns, linen, pottery, steel, and leather. It has also an iron-foundry, dyeworks, tileworks, numerous mills and distilleries, and likewise a pretty extensive trade in hops, chicory, tobacco, cattle, and wool, great numbers of shcep being reared in the vicinity. Pop. (1846), 14,779.-2, A tn. Denmark, isl. Femern, prov. schleswig;lat. $54^{\circ} 30^{\prime} \mathrm{N}$.; lon. $11^{\circ} 10^{\prime} \mathrm{E}$. Its trade and shipping were at one time considerable, but have both been nearly extinguished by the filling up of the harbour, which is now accessible only to boats. The steeple of the church of Burg forms a conspicuous landmark for mariners. The inhabitants live chielly by agriculture and weaving. Pop. $1800 .-3$, A th. Denmark, in the S. Ditmarshes of Holstein, dist. Meldorf, with a very old church. Pop. 1129.

BURG (De), or Burgt, a vil. Holland, prov. N. Holland, isl. Texel, 7 m . N. the Helder; the principal village in the island, and so much improved of late years, as to rival, in the beauty of its streets and trees, the neatest villages in Holland. The Reformed church, with its lofty spire, stands in the centre, and around it are 10 streets, and three squares. A handsome new council-house was built in 1840. The R. Catholics have a neat church, and the Baptists a plainer one. Burg has a French and Dutch, and a Dutch school, and, besides, an institution chiefly for poor and infirm persons, who lave no direct claim for support on the island, four benevolent boards for aiding the poor, a sub-committee of the society of beneficence, district branches of the Netherlands Bible, missionary, and
tract societics, a savings'-bank, and a branch of the public utility society. The inhabitants, generally in a thriving condition, are occupied in trade or the rearing of cattle. Pop. 1100.

BURGAGE, par. Irel. Wicklow; 1877 ac. I'op. 506. BURGAS. Sce Bourgas.
BUlRGATE, par. Eng. Suffolk; 1830 ac. Pop. 369.
BURGAU, several places, Germany. The chief is a tn. Bavaria, circle, Swabia, cap. dist. of same name, 24 m . W. Augsburg, on the Mindel, over which there is here a bridge. It contains a castle and an hospital, and has manufactures of leather and glue, and three annual fairs. Pop. 2063.

BURGDORF, or Berthoud, a tn. Switzerland, can. of, and 12 m . N.E. Bern, r. bank, Emmen, with a townhouse, hospital, several public educational institutions, and a public library of 4000 volumes. There are manufactures of ribbons, chocolate, tobacco, and some breweries. Large fairs are also held. In the vicinity are the hot mincral baths of Lochbad. Pestalozzi laid the foundations of his educational system here, and had a school in the old castle. The town disputes with Basel the honour of having established the first printing-press in Switzerland. Pop. 2417.

BURGDORF, a tn. and bail. Hanover, dist. Luneburg, on the Auc, 12 m. N.E. Hanover, partly surrounded with a wall and ditch. It has manufactures of cotton and leather, and several distilleries. Pop. of tn. 2322; of bail. 45,703.

BURGEO ISLANDS, a group of islands, British N. America, off E. coast Newfoundland; lat. (S.W. point) $47^{\circ} 33^{\prime}$ N.; lon. $57^{\circ} 44^{\prime}$ W. (R.) The fishing is extensively prosecuted by the inhabitants of these islands, and, according to the report of Captain Loeh, yielded $1,323,000 \mathrm{lbs}$. between October 1847 and June 4, 1848. The fish are sent principally to the markets of Spain and Portugal. The fishermen, with very few exceptions, are all Protestants. They have two churches, and a small school-house; but their dwellings are miserable huts. The settlement, however, appears to be in a flourishing condition, and the people, notwithstanding the discomfort of their dwellings, contented and happy. Pop. 700. - (Parl. Papers.)

BURGESS, par. Irel. Tipperary; 4980 ac. Pop. 2782.
BURGH, 14 pars. Eng.:-1, par. Suffolk; 780 ac . Pop. 266.-2, Burgh-Apton, par. Norfolk; 1620 ac. Pop. 564.3, Burgh-next-Aylesham, par. Norfolk; 540 ac. Pop. 258.4, Burgh-Castle, par. Suffolk; 1210 ac. Pop. 327.-5, Burgh-with-Grisby, or Burgh-upon-Bane, par. Lincoln; 1870 ac. Pop. 155.-6, Burgh-Mattishall, par. Norfolk; 690 ac. Pop. 230. -7, Burgh (St. Margaret), par. Norfolk; 2160 ac. Pop. 506. -8, Burgh (St. Peter), or Wheatacre Burgh, par. Norfolk; 1970 ac. Pop. 312.-9, Burgh (South), par. Norfolk; 1260 ac. Pop. 307.-10, Burgh-upon-the-Sands, par. Cumberland; 6380 ac. Pop. 1003. - 11, Burgh Wallis, par. York, W. Riding; 1700 ac. Pop. 245.-12, Burghclere, par. Hants; 3560 ac. Pop. $845 .-13$, Burghfield, or Burfield, par. Berks; 4700 ac. Pop. 1115 .-14, Burghill, par. Hereford; 3170 ac . Pop. 863.

BURHAM, par. Eng. Kent; 1630 ac. Pop. 380.
BURGHAUN, a small tn. Hesse-Cassel, prov. of, and 11 m . N. Fulda, on the Haun. It is surrounded by a wall and ditch, is a place of great antiquity, and had a church in 1093. Its markets are impertant, and it has a good deal of linen-weaving. Pop. 1362.

BURGHAUSEN, a tn. Bavaria, on the borders of Austria, 27 m . N.N.W. Salzburg, on the Salzbach; with a palace, six churches, a monastery, an English female institute, and a grammar-school. It has also a powder-mill, a bell-foundry, and some trade in salt and leather. Pop. 2476.

BURGHEAD BAY, Scotland, co. Moray, S.E. coast of the Moray Frith; an excellent roadstead ; lat. $57^{\circ} 42^{\prime} \mathrm{N}$. ; lon. $3^{\circ} 35^{\prime} \mathrm{W}$.

BURGM-in-the-Marsif, a vil. and par. England, co. Lincoln. The village, $6 \frac{3}{4} \mathrm{~m}$. E. by S. Spilsby, has a commodious parish church, with a lofty tower, and chapels for Baptists and Wesleyans; an endowed school, and two annual fairs. Area of par. 4240. Pop. 1095.

BÜRGLEN, three vils. and pars. Switzerland:-1, Bürglen, can. Uri, on a small tributary of the Reuss, and the birthplace of William Tell. On a height where his house stood is a chapel, painted over with scenes from the patriot's life. Nicar Tell's chapel is a new and handsome parish church, with
a subterrancous chapel beneath. Pop. 1215.-2, [supposed anc. Petenisca], can. Bern, r. bank, Zihl, not far from the Lake of Bienne or Biel. A great number of coins and Roman antiquities have been found in the neighbourhood. Pop. 1926. -3 , can. Thurgau, r. bank, Thur, 11 m . E. Frauenfeld. It was once a place of some importance, and part of the walls and ditches by which it was surrounded still remain. A considerable quantity of fruit is grown in its vicinity. Pop. 1076.

BURGO (EL), a tn. Spain, Andalusia, prov. of, and 35 m . W. by N. Malaga. It is tolerably built, and contains a parish church, townhall, two schools, prison, and cemetcry. The inhabitants are exclusively agricultural, raising grain, wine, oil, fruits, and vegetables; and rearing sheep, goats, and horned catcle. Pop. 2113.

BURGO de-Osma, a tn. Spain, Old Castile, prov. of, and 33 m . S.W. by S. Soria, 1. bank, Uscro. It has four squares, a cathedral, episcopal palace, ecclesiastical court-house, seminary of arts, three endowed schools, foundling and general hospital, townhall, three fountains, and a cemetery. Manu-factures:-linen, hemp, shoes, leather, and chocolate. Trade: -export of wine, fruits, cattle, and industrial and agricaltural produce. Pop. 1790.

BURGOS, a prov. Spain, Old Castile, between lat. $41^{\circ} 32^{\prime}$ and $43^{\circ} 19^{\prime} \mathrm{N}$. ; bounded, N. by prov. Santander. E. by Alava, Logroño, and Soria, S. by Segovia, and W. by Palencia and Valladolid; arca, 7082 sq. m. The surface is very elevated, and consists of a series of mountain ranges, with intervening valleys. The mountains belong to the great systems of the Pyrences, and the Iberian Mountains; two branches, one from each system, meeting and almost melting imperceptibly into each other near the centre of the province, on the banks of the Arlanzon. The principal chain is tho sierra de Oca. They are gencrally well wooded with oak, pine, chestnut, beech, and other timber. Gold, silver, iron, lead, copper, quicksilver, sulphur, gypsum, and lignite, are found, but mineral operations are carried on very imperfectly, and to a limited extent. Marble, and good stone for building and pavement, abound. The soil of the valleys usually consists of a blackish loam, which, though sometimes shallow, is fertile, and produces good grain, fruits, and vegetables; the higher districts afford excellent pasturage for cattle, sheep, goats, horses, mules, and pigs. The chief rivers are the Ebro, Duero, Arlanzon, Nagarillo, Oca, \&c., chiefly affluents of the Ebro. They abound in fish. The climate is cold and damp, liable to sudden changes of temperature. Spring is boisterous and short, and is suddenly succeeded by scorching heat. Snow frequently covers the summits of the loftier hills eight months in the year. Manufactures:-linen, woollen, and cotton fabrics, hats, paper, leather, hardware, cutlery, fine delft and coarser earthenware, bricks, tiles, and brandy. Trade is wholly inland, and very insignificant. Education is advancing, numerous schools, benevolent institutions, aud scientific associations, having been recently established; but matters in this respect are still on an unsatisfactory footing. One-half of the villages of the province have no school, and the attendance is only 1 to $6 \cdot 6$ of the population. Crime is comparatively rare. Pop., as given by census in 1844, only 171,189; but Madoz, founding on statistical data, maintains that it is 234,022.-(Madoz.)

BURGOS, a city, Spain, Old Castile, cap. prov. of same name; on a declivity, sloping towards the Arlanzon, here crossed by three stone bridges, 112 m . N. Madrid. It forms an irregular quadrangle, of which the longer side, E. to W., is about 2 m ., and the shorter 1 m . It is walled, but its chicf defence is its castle, seated on an adjacent rugged hill, which is wholly enclosed by its works. The houses are in general well built of stone or brick; but most of the streets are narrow and winding, and badly paved, with large cobbles, fixed in their places by a whitish kind of stone, which gives the whole an appearance of Mosaic. The principal squares are the Plaza Mayer or De la Constitucion, the centre of which is adorned by a statue of Charles III.; the Plaza de la Libertad, lined with good houses, many of them recent, but some also interesting from their antiquity; and the Plaza del Mercado, in the centre of which is a beantiful fomntain, with a pilaster adorned with gilded stone figures, and surmounted by a lofty obelisk, which terminates in a star of gilded rays. This is only one of 10 fountains from which Burgos derives copious supplies of water. The finest street, in every respect,
is that called Huerto del Rey. All the strects have good side pavement. Places of promenade are numerous; but the one most frequented, and justly forming the boast of the town, is the Espolon, which is laid out in spacious walks, and has a Gine vista opening to the Arlanzon. Burgos, up to the commencement of the 16 th century, shared with Toledo the alternate honour of being the royal residence; and hence, its public buildings, several of which have a greater magnificence than usual in a provincial town, are not so much attestations to its present, as memorials of its former, greatness. The
silk stufts. There is a little inland trade, chiefly in agricul tural produce. Burgos is the residence of a captain-general, the seat of an archbishop, and of a high court, whose jurisdiction extends over the provinces of Alava, Biscay, Burgos, Guipuzcoa, Logroño, Santander, Soria. Before the removal of the court to Madrid, Burgos was in a very flourishing condition, and contained thrice its present population. Since then it has continued to sink gradually, and exhibits in every quarter indications of decay. The peninsular war, during which the possession of it was repeatedly and keenly contested, added greatly to its disasters. Pop., including the suburb of Vega, on the opposite side of the Arlanzon, 15,924.

BURGS'ADT, a tn. Saxony, circle, Leipzig, 7 m. N.N.W. Chemnitz; with a handsome Gothic chureh, and considerable manufactures of chintz and printed stufls, and hosiery. It also spins a good deal of flax. Pop. 2700.

BÚRGSTEIN, or Birkstein, a tn. Bohemia, circle, Leitmeritz, about $48 \mathrm{~m} . \mathrm{N}$. Prague. It contains a handsome palace, with gardens, a parish church, an hospital, and a manufactory of mirrors. In the neighbourhood, on the summit of a remarkable precipice of sandstone, are the remains of the old castle of Bürgstein. Pop. 1000.

BURGUNDY [anc. Burgundia; French, Bourgogne], one of the largest and most important of the for
most remarkable structure is the cathedral, one of the finest buildings of the kind, not only in Spain, but in Europe. It was commenced in 1221, on the site of a royal palace, which Ferdinand III. gave up for the purpose, but was not finished for several centuries. It is built of white marble, in the form of a Latin cross, and is about 300 ft . long by 200 broad. Its principal entrance, on the W., las a finely decorated façade, and is flanked by two towers, which have a height of 300 ft ., and terminate in spires of filigrane-work, exquisitely chiseled. The interior is of corresponding magnificence, is adorned with fine carvings and paintings, and contains numerous interesting monuments, in particular the tombs of Don Fernando, and the Cid, botb natives of Burgos, and celebrated throughout Spain for their heroic achievements in the wars with the Moors. Besides the cathedral, there are numerous other churches, some of them of great extent, and considerable pretensions, but generally exhibiting much bad taste either in the style of their architecture, or grotesque finery of their ornaments. San Lorenzo, one of the largest, has a front of Corinthian pillars, and an interior of a circular form, lighted from above by a handsome dome. None of the other public buildings within the city are deserving of notice. The theatre in use is small and insignificant; and a new one, commenced on a most magnificent scale, remains unfinished from want of funds. Outside the city is the nunnery of Las Huelgas. The buildings are of mean appearance; but the endowment was one of the richest in Spain, and all the nuns were of noble descent. The castle, which is situated to the N. of the town, was the palace of the early kings. It is now almost a ruin, but must have been of great strength, if we may judge from its successful resistance to the repeated attempts of the British to take it. The failure of one of them, and the disastrous retreat which ensued, are too well known. The beneficent and educational establishments of Burgos are numerous. Among the former may be mentioned the royal, military, and foundling hospitals, savings'-bank, and mout-de-piété, which seems to combine a mutual assurance and loan society for working inen; among the latter, the Seminario Conciliar of San Geronimo, the Colegio of San Nicolas, and four primary schools, supported by municipal funds. The chief criminal establishment is a house of correction, called Presidio Peninsular, not only for Burgos, but also Logroño, Pampeluna, and Santona. The manufactures of Burgos are few and unimportant. That of fine woollen cloth, and harness trappings, which once had an European reputation, are all but extinct. The only other articles worth mentioning are paper, lats, linen, and
mer provinces of France, and now forming deps. Côte-d'Or, Saône-et-Loire, Yonne, part of Ain, and part of Sube. In more ancient times Burgundy was the name of a kingdom, and included several districts in addition to the above province, occupying the whole basin of the Rhone. Its most ancient inhabitants were the AEdui, fully described by Cæsar ; but its name of Burgundy is derived from one of the northern nations, called, in Latin, Burgundi or Burgondiones, who established themselves there in the beginning of the fifth century. At a later period, after the subversion of their kingdom, the province was erected into a dukedom, and long made an important figure in history, under a race of Dukes of Burgundy. The male line laving become extinct in 1477, on the death of Charles the Bold, at the siege of Nancy, Louis XI., who had married his daughter, succeeded to the dukedom, which has ever since formed part of France.

BURHANPORE. See Boorhanpoor.
BURIAS, an isl. Indian Archipelago, Philippines, between Masbate and Luzon ; lat. $13^{\circ} 11^{\prime} \mathrm{N}$. ; lon. $123^{\circ} 5^{\prime} \mathrm{E}$. (r.) ; area, about $327 \mathrm{sq} . \mathrm{m}$. The coast is rocky, but the island has some good harbours, and excellent anchorage. The interior is fertile.

BURITON, par. Eng. Iants; 6840 ac. Pop. 993.
BURKA, a tn. Arabia, E. coast, Oman, 60 m. W.N.W. Muscat, with a fort built by the Portuguese. This fort, which is mounted with cannon, was once the usual summer residence of the Imam, and still has a garrison of about 200 men. The inhabitants live chiefly by fishing, and the raising of dates. The bazaar is much frequented by the Bedawin. The harbour is merely an open roadstead, accessible only by vessels of 30 to 50 tons. Pop. 4000.

BURKHARDTSDORF, a tn. Saxony, circle, Zwickau, 7 m. S. Chemnitz. It has manufactures of hosiery, cotton and linen cloth, and lace; but the inhabitants depend chiefly on mining. Pop. 1850.

BURLESCOMBE, par. Eng. Devon; 4210 ac. Pop. 958. BURLESTONE, par. Eng. Dorset; 750 ac. Pop. 65.
BURLEY, par. ling. Rutland; 3390 ac. Pop. 252.
BURLINGHAM, three pars. Eng. Norfolk:-1, Burlingham (St. Andrew), 730 ac. Pop. 214.-2, Burlingham (St. Edmund), 480 ac. Yop. 98.-3, Burlingham (St. Peter), 690 ac. Pop. 91.

BURLINGTON.-1, A city and port of entry, U. States, New Jersey, pleasantly situated, 1. bank, Delaware, 17 m . N.E. Philadelphia; lat. $40^{\circ} 5^{\prime} 10^{\prime \prime} \mathrm{N}$. ; lon. $72^{\circ} 52^{\prime} 37^{\prime \prime} \mathrm{W}$. It is encircled, on the S. and E., by a small stream, and con-
nected with the mainland by four bridges and several causeways. It has six churches, a city hall, lyceum, bank, library, and several schools. The bishop of New Jersey resides here. It has some considerable manufactures, and a pretty extensive shipping trade. Tonn. (1840), 3851. Pop. 3434. 2, $\Lambda$ township and port of entry, Vermont, beautifully situate on a bay of the same name, Lake Champlain; lat. $44^{\circ} 28^{\prime} \mathrm{N}$.; lon. $73^{\circ} 15^{\prime} \mathrm{W}$. The village contains many elegant houses, and a handsome public squarc. It has a court-house, jail, an academy, six churches, two female seminaries, and a university, called the university of Vermont. Pop. (1840), 4271.

BURLINGTON, a tn. England. See Bridlington.
BURMAH, the Birman or Burman Empire, or the kingdom of Ava [Burmese, Myamma, Byam-ma, or Bram$m a$; Chinese, Meën-teën], the most W. of the three great states of the Indo-Clinese peninsula, capital, Monchobo, and formerly Ava. Its extent, limits, capabilities, \&c., are very imperfectly known, the country never having been fully explored by Europeans. It is bounded, N. by Assam; E. by the Chinese province Yun-nan, by independent Laos and the Tenasserim Provinces; S. by the Gulf of Martaban; W. by the Bay of Bengal, Aracan, Chittagong, and Cassay, Kathee, or Munipoor; and it appears to extend from lat. $15^{\circ} 45^{\prime}$ to between $26^{\circ}$ and $27^{\circ}$ N.; and from lon. $93^{\circ}$ to about $98^{\circ} 40^{\prime}$ E.; estimated area, $184,000 \mathrm{sq} . \mathrm{m}$. According to Dr. Francis IIamilton, - 'In fertility, beauty, and grandeur of scenery, and in the variety, value, and elegance of its natural productions, Burmah is equalled by few (countries) on earth;' aud 'it is occupied by a people of great activity and acuteness, possessed of many qualities agrceable to strangers.' The mountains are covered with fine timber, and the vallcys with jungle, spots here and there being cleared and cultivated; but the proportion of cultivated land is small, and the greater part of the country is uninhabited.

Physical Features.-Burmah is composed of a serics of longitudinal valleys, sloping N. to S., and flowed through by the Irawadi and its affluent the Kyen-dwen, by the Setang, and the Saluen, which last stream forms the E. boundary. These valleys are formed by spurs of the Himalayas, which lower in height as they proceed S. The most important are the clain of Amoopectoomoo, forming the W. frontier, and terminating S. in Cape Negrais; lat. $16^{\circ} 1^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $94^{\circ} 12^{\prime}$ E., between the Gulf of Martaban and the Bay of Bengal, eulminating point, 8202 ft ; and the chain which scparates the basin of the Irawadi from that of the Saluen, terminating S. at the Gulf of Martaban, culminating point, Phoongan, $12,434 \mathrm{ft} .$, near lat. $27^{\prime} \mathrm{N}$., covered with perpetual snow. From the Gulf of Martaban N. to lat. $17^{\circ} 30^{\prime} \mathrm{N}$., Burmah is low, champaign, interspersed with numerous small lakes, and intersected in all directions by branches of the Irawadi and Setang, within the deltas of which all this district is included, forming the most extensive plain in the kingdom. From lat. $17^{\circ} 30^{\prime}$ to about $22^{\circ}$ N., the country is hilly and clevated, but intersected by numerous fertile and well-wooded valleys; and N. of that parallel it is decidedly mountainous, the lighest ranges being $N$. and N.E. of the capital.

The sea-coast of Burmah is above 400 m . in length. Its most important portion is along the Gulf of Martaban, which is the termination of the mountain-ranges of the country, the receptacle of all the great streains, and the means of access to all the ports, namely, Rangoon, Martaban, and Bassain.

The Irawadi, the greatest stream in the empire, rises, as far as known, in the Himalayas, flows S. through Burmah near its E. frontier, till it reaches Bhamo, where it takes a S.W. course to Ava, below which, about lat. $21^{\circ} 35^{\prime}$ N., it receives, on its r. bank, its chief affluent, the Kyen-dwen, which, in part of its course, forms the W. fronticr line towards Cassay. The Irawadi's course continues from Ava still S.W., till it approaches the Aracan frontier, after which it flows S.S.E. and falls, by numerous mouths, into the Gulf of Martaban. These mouths afford admirable means of internal water communication, and the main river itself is navigable, at all seasons, for sailing vessels of 200 tons, as far up as Ava, and, during the rains, as far as Bhamo, a distance of about 800 m . from the sca. The other affluents of the Irawadi worth noting are the Bhamo, Lungtchuen, Mukiaung, and Myeenguga, all of which it receives above the confluence of the Kyen-dwen, and all navigable to a greater or less extent. The Setang rises in Lake Gnaungrue, lat. $20^{\circ} 30^{\prime} \mathrm{N}$. , and is a comparatively small
stream. Its total course is about 250 m . direct distance to the Gulf of Martaban, which it reaches through a broad estuary, and several small offsets; but is not very navigable, there being no continuous channel deeper than 4 ft . The Saluen or Thanluyn (which see), is next to the Irawadi in size, and falls into the sea between the ports of Martaban and Moulmein. The lakes of Burmalı are numerous, especially in the S. part, as already stated, but small. The only ones of any considerable size, as far as known, are Nandokando, N. of Ava, above 40 m . long by about 12 broad; and Gnaungrue, already noticed, about 10 m . long by half that breadth.

Geology and Minerals.-The N. and E. part of Burmah, as far S. as about lat. $17^{\circ} \mathrm{N}$., appears to be of crystalline schistous formation. From N. of Ava, stretching S.E. into the Tenasserim Provinces, is a band of tertiary formation. Near the junction of the Kyen-dwen with the Irawadi is a patch of the transition series, including the carboniferous formation; all the rest of the country S . and W . seems to be composed of alluvium, covering, apparently, limestone in various states; blue near Ava, and dark, bituminous, and slaty between that city and Paghan; and near Prome, coarse grained and sandy. The low hills in the delta of the Irawadi are composed of blue limestone, calcareous sandstone, breccia, quartz, and orange-coloured iron ore. In the lower part of the course of the Saluen, are abrupt hills of the finest blue limestone. In these are numerous extensive and magnificent stalactitic caves, many of which, from time immemorial, have been devoted to religious purposes, and are still adorned with countless numbers of images of Guadama, of different sizes and materials, some covered with gold, and some formed merely of burnt clay. The minerals known to exist, and most of which are wrought to a greater or less extent, are gold, silver, tin, iron, antimony, lead, arsenic, and snlphur, all, except the first two, said to be abundant; besides these, there are limestone; marble, near Ava, equal to that of Carara, and monopolized by the Government, for the manufacture of images of Guadama; nitre, natron, salt, and precious stones, including rubies, sapphires, amethysts, garnets, chrysolites, and jasper, most of which are sent to China. Coal is said to be abundant in some quarters, but is not used. Petroleuin is obtained to the extent of upwards of $80,000,000 \mathrm{lbs}$ annually, a quantity that might be greatly increased; and is used as an oil for burning all over the country, and also for paying boats, and other purposes; and in the N. parts of the empire, more especially on the banks of the Kyen-dwen, in the valley of Hukong, on the Assam frontier, are mines of very pure amber.

Climate.-In general healthy where cleared, even in the delta of the Irawadi, excepting during the rainy scason, when the swampy parts become unhealthy for foreigners; but event then the courses of the great rivers and cleared parts remain salubrious. In this district there are two seasons similar to those in Hindoostan, a dry and a wet; the latter, from April to October, during which 150 to 200 inches of rain fall; and the former, from November to April. N. of the delta, or lat. $18^{\circ}$ N., there are three seasons; cold, from November to February; hot, from March to June, and rainy the rest of the year. The delta, and all the lower parts of the valley of the Irawadi, are subject to annual inundations, which continue from May to October. Earthquakes are frequent in the S . parts of the country.

Vegetation.-A considerable portion of Burmah lying within the tropics, and many parts, more especially in the N., being considerably elevated, its vegetation is rich and varied. In marshy places, in the valley of the Irawadi, rice, of excellent quality, which constitutes the favourite food of the people, is produced in abundance; and, on the drier grounds, maize and millet are raised. Around Ava, and some of the other larger towns; and in the more elevated spots, wheat and excellent tobacco are grown; besides which, are cultivated kidney and French beans, sesamum, mistard (Sinapis orientalis), from which is obtained an oil, used instead of butter black and red pepper, indigo, and sugar to a small extent; and two kinds of cotton, one red, the other white; but all the processes of agriculture are performed in a most primitive manner. The lapet, a Burman tea-plant, is grown on the hills of Ava; but its leaf is used only as a pickle. Turmeric, used chiefly as curry, and various dye-stuffs, are in good variety. Among the fruits may be named the mango, orange, pine-apple, custard-apple, lemon, lime, durian, betel-nut, olive,
\&c.; and among the edible roots, the ginger, cassia, liquorice, arrow-root, yam, batatas, onion, garlic, \&c. Timber for ship and house building is abundant, including teak, though not so good as that found in Malabar; soondry, oak of several kinds, fir, and ebony. Of other useful trees and plants may be noted sandal-wood, sycamore, and Indian fig; several kinds of palms, the tamarind, aloe, camphor, sappan, catechu, cinnamon, laurel, nutmeg, spikenard, bamboo, sago palm, plantains, and, on the sea-coast, the cocoa-nut.

Zoology.-Elephants are numerous in the lower parts of the country, and commit great devastation among the rice tields, but are never used as beasts of burden. The white elephant, apparently an albino, is also at times found, and is an object of superstitious veneration, but only among the lower classes. The king always possesses one, who is considered the second dignitary of state; and has a regular calinet of ministers, with numerous attendants and guards. Other animals, more or less prevalent, are rhinoceroses, tigers, leopards, buffaloes, hogs, civets, wild cats, apes, deers, antelopes, otters, but no jackals or wolves; perroquets, and other lirds of rich plumage ; jungle-fowl, pea-fowl, pheasants, partridges, quails, geese, ducks, and snipes. Alligators, of two kinds, crocodiles, and sharks, abound in the river mouths; turtles and tortoises, are very common on the coasts; the cobra da capello, and other serpents, but not generally venomous, are numerous ; as are also scorpions, centipedes, lizards, leeches, and destructive insects. The domestic animals are oxen and buffaloes, uscd extensively for agricultural purposes; horses small, but vigorous, and only used for the saddle; pigs, very few sheep and goats, or common fowls.

Manufactures, Trade and Commerce, Money, Weights, and Mfasures.-The manufactures of Burmalı are, as a whole, unimportant and inferior. The females, who are the weavers, make cotton cloths, but not so good as those of IIindoostan and China. Durable, though coarse silks, are also made, and pottery-ware, unglazed and glazed. Of the latter kind, large jars have long been used in India, under the name of Pegu jars. The only steel of consequence is made in the Shan country, chiefly sword blades; coarse cutlery is made in some of the villages, and clumsy gold and silver jewellery is mannfactured in most of the large towns. Boat-building is carried on to some extent at Rangoon; this branch of business is important, in proportion to the paucity of good roads, and the great nuinber of excellent water-ways. The vessels built are sometimes 200 and 250 tons burden, and admirably adapted for inland navigation. The Burmese excel in gilding, which they make to withstand damp, apparently by means of repeated coats of wood-oil. They understand dyeing, but their colours are generally fugitive ; they make paper, umbrellas, cordage, sandals, and inferior gunpowder; but are famous as bell-casters. The bells they make are said to be of delightful tone, but disproportionately thick; and some of them are of enormous size. One at Mengoon, near Ava, is said to be 20 inches thick, 20 ft . ligh, and 13 ft .6 inches in diameter; estimated weight, $500,000 \mathrm{lbs}$; that of the great and useless bell at Moscow being $443,772 \mathrm{lbs}$. It is suspended a few inches from the ground, and has no tongue. Little attention seems to le paid to the kind or proportion of the metals used, the materials being supplied by the multitudes who come to witness the casting, during the time the process is going on. An eye-witness describing the casting at Moulmein, March 1849 , of a bell 7 ft . high, and $4 \frac{1}{2}$ in circumference, to be used in the service of Guadama, says there were employed 40 furnaces, all containing crucibles, holding about 20 lbs . of metal cach. "These furnaces were supplied from a heap of charcoal, which, although diminishing, was still kept up by voluntary donations. An uninterrupted stream of men, women, and clildren, each with an offering, either of gold, silver, copper, or precious stones, were continually feeding the crucibles by casting in their gifts. We ourselves saw, during the short time that we were present, about 70 precious stones, consisting of rubies, diamonds, sapphires, and emeralds, thrown into the crucibles, besides large quantities of gold and silver ornaments and coins.' An interval of two or three minutes elapsed between the emptying of the crucibles; and the whole smelting process occupied 14 hours.

The commercial transactions of the Bnrmese are, individually, on a small scale, although the aggregate is considerable. In the lower provinces, the internal traffic is conducted
chiefly by water conveyance; in the hilly districts, by lani communication; the means of transport, in the latter case, being earts drawn by oxen, and sometimes small horses. The lower provinces supply the higher with rice, salt, pickled and dried fish, and various foreign commodities from the different sea-ports, while the former reccive in return petroleum, saltpetre, lime, paper, lacquer ware, cotton and sill; fabrics, iron, cutlery, brassware, catechu, palm-sugar, onions, tamarinds, \&c. The foreign trade of the Burmese seaward, is almost wholly concentrated in Rangoon (which see). From this point a considerable trade is carried on with Chittagong, Dacca, and Calcutta, in Bengal; Madras, Masulipatam, on the Coromandel coast; the Nicobar Islands, and Penang; and occasionally with Bombay, and the Persian and Arabian Gulfs. The principal articles of export are teak wood, catechu, stick lac, bees'-wax, elejhants' teeth, raw cotton, orpiment, gold, and silver. Of teak wood, the quantity exported annually is equal to 7500 full-sized trees-Calcutta being the principal market for this article. Large quantities of raw cotton, of a superior quality, are sent from Ava, to the city of Dacea, in the province of Bengal, where it is wrought into the fine muslins of that place.

The prineipal imports are cotton piece goods, British, Bengal, and Madras; British woollens, iron, stecl, quieksilver, copper cordage, borax, sulphur, gunpowder, saltpetre, firearms, coarse porcelain, English glassware, opinm, tobacco, cocoa and areca nuts, sugar, and spirits. The Burmese carry on a pretty extensive traffic besides, through Bhamo, as the entrepot with the Chinese of Yun-nan, from whom they reccive copper, orpiment, quicksilver, vermilion, iron pans, brass wire, tin, lcad, alum, silver, gold and gold leaf, earthenware, paints, carpets, rhubarb, tea, honey, raw silk, velvets and other wrought silks, spirits, musk, verdigris, dry fruits, paper, fans, umbrellas, shoes, and wearing apparel; giving in return for these, raw cotton, ornamented feathers, edible birds' nests, ivory, rhinoceros and deers' horns, sapphires, rubies, \&c. The quantity of raw cotton, sold annually to the Chinese merchants, averages about $14,000,000 \mathrm{lbs}$. The whole export and import trade with China has been estimated at $£ 400,000$ to $£ 700,000$ sterling. The only coins in circulation are of lead, there being none of either copper, silver, gold, or any other metal. Gold and silver, however, are used as mediums; but always in the shape of ingots, which must be weighed on every occasion of exchange ; they are also of different degrees of purity, which must also be ascertained by tlee receiver. The pieces of silver used in trade are generally of a tical weight, or of the value of $2 s .81_{9}^{1} d$. Gold is reckoned about seventeen times the value of silver. The principal measure of capacity for rice is the basket, $58 \frac{3}{4} \mathrm{lbs}$. avoirdupois; of length, the finger-breadth, hand-breadth, span, and cubit. The weights mostly in use are the tical, about $\frac{1}{2}$ an ounce avoirdupois; and the viss, cqual to 100 ticals, or $3 \cdot 65$ lbs.

Religion, Language, Education.-Excepting some of the barbarous mountaineers, the inlabitants of Burmah are half civilized, and adhere to the Buddhist religion, worshipping Guadama, one of the incarnations of Buddha, whose images are generally of marble, though sometimes of bronze. The priests are numerous, bound to celibacy, and eat but once a day. There are monasteries, and both monks and nuns or pricstesses; the latter generally old women, though some are young, and at liberty to marry, when they must quit the sisterhood. British and American missionaries, and all religions, are tolerated, but departure from the national religion is prohibited. To the priests is committed, exclusively, the charge of public instruction, and nearly every person learns the first elements. The two principal spoken idioms are Burman and Peguan; but Pali is the language of religion and literature.

People, Manners, Customs, Dress.-The inhalitants of Burmah belong to a common stock, the Indo-Chincse, and are divided into several tribes, some say as many as 18 . The most important of these are the Burmans, occupying the middle part of the basin of the Irawadi, and the Peguans, its lower basin; the Shans, in the E. and N.E. provinces; the Khyens, spread over the centre of the country; and the Karians, between the Setang and the Saluen. Tartar and Tibetan tribes occupy the N. purts. Siamese slaves are numerous, and the mines are wrought by Chinese. The Burmeso are short, stout, active, and well-proportioned; of dark brown colour; black, lank, coarse, abundant hair: said to be hardy,
docile, industrious, lively, fond of musie and poetry, but treacherous, cunning, and avaricions, though hospitable and courteous to strangers, feeding and lodging the traveller gratis. They are good mimics; and they love theatrical amusements, boxing, coek-fighting, games of chance, and athletic exercises. The Burman marries early, and though polygamy is permitted, has only one wife, whom, with the other females of his family, he compels to do all the work. Divorces by either party are easily arranged, and are exceedingly common. Among the common people, the prineipal part of the male dress, called a Pus'ho, covers the loins, and reaches half way down the leg. It consists of a double piece of silk, cotton, or a mixed fabric, about ten cubits long, and is loosely wrapped round the body. Over this a froek, of white cotton cloth, in winter quilted, called an in-gee, with sleeves, is worn reaching below the knees, and tied in front. The head is covered with a small square handkerehief, commonly of British book-muslin, or English or Madras printed handkerchiefs, worn like a turban, but leaving the upper part of the head bare. The lower classes of women wear only a single petticoat, called a te-mine, more or less open in front, according to the condition of the wearer. Those of the better orders wear also an in-gee or frock, somewhat different in form, and shorter than that of the men. They wear long hair, but no head-dress. Sandals are frequently worn by both sexes; and umbrellas are in gencral use, being among the principal insignia of rank or office; the colour indicating the quality of the possessor. A nobleman's dress consists of a long robe of flowered velvet or satin, reaching the ankles. A mantle or scarf, thrown over this, hangs from the shoulders. On the head is a high velvet or silk cap, plain or embroidered, aceording to his rank. Females of the higher elasses generally wear a loose jacket with tight sleeves. A piece of silk or cloth encircles the waist, and descends to the feet. When they go abroad, a silk sash crosses the bosom, while the ends are thrown over the shoulders. The priests have the head closely shaved and uncovered, and only protected by a small fan of palmyra-leaf. The colour of the dress of the priesthood is yellow, and is held so saered that it is sacrilege for any one else to wear it. Tatooing, chiefly on the legs and lower parts of the body, is practised by the Burmese and some of the other tribes, and the chewing of betel, and the smoking of tobacco, are universal. The houses are made of timbers or bamboo, and have thatched roofs and doors, and windows of mat; none are of stone or brick, the use of these materials being prohibited, exeept for pagodas, \&e. Rice, eaten with curry and sauces of stewed melons, vegetables, \&e., is the principal food. Oil made from sesamum seed, and Chili pepper, are greatly used as 3casoning. Animal food is eaten by those who can afford it, though the law forbids the taking of life.

Government, Laws, Revenue, Military Force.-The government is despotic; the King is styled 'Lord of life and property;' his office is hereditary, and he rules by a council, called Lut-d'hau, eomposed commonly of four officers, but sometimes of five or six, which exercises legislative, executive, and judicial functions, acting for the King, whose name never appears. The laws are taken from the celebrated Manu or Menu code, and are, in many respects, distinguished for the wisdom of their provisions; but the punishments, in general, are cruel. Justice is easily purchased. The only hereditary public officers are the Saubwas, the tributary princes of the conquered provinces. The revenue is derived from a tax upon cultivated land, fisheries, mines, petroleum wells, exports, \&e.; and the King's whole ineome probably does not exceed $£ 25,000$. Officers are paid by gifts of public lands, and not in money. There being no military class, and the standing army being small, general levies of men are made in time of war. The troops have no regular pay, but are maintained at the public expense. The main army is infantry, but there is also a small body of cavalry, and a flotilla of boats. Clumsy two-handed swords, named Dás, spears, matchlocks, European muskets, \&c., are their arms.

Divisions.-Burmah is divided into several provinecs, of which the most important are Ava Proper or Mranna Pyee, in the centre of the kingdom; Pegu or Talainpyee, formerly an independent kingdom, which, with prov. Bassain, occupies the deltas of the Irawadi and Setang; Mrelap-shan on the E., and Jo or Yo Pyee on the W. fronticr, and the country of the Shan in the N.

Calendar.-The Burman year is divided into 12 months, of 29 and 30 days alternately, rectified by an intercalation every third year. Each month is divided into an increasing and a waning moon. The week is divided into seven days; and time is kept by a kind of clepsydra, consisting of a copper cup perforated at the bottom, and placed in a vase of water. The Burmese have four epochs, but the one in common use commences with A.D. 639.

History.-The Buddhist religion was probably introduced into Burmah about the year B.c. 301. At this period, the government was permanently fixed at Prome, where it continued for 395 years, during which there reigned 24 princes. After this, it was removed, under a new dynasty, to Pugan, where it continued for nearly 12 eenturies, during which there reigned 55 princes. In A.D. 1300, the seat of govern. ment was established at Panya, where it continued 56 years, under three successive princes. In 1364, it was removed to Ava, where it contimned for 369 years, and where, in the 16 th century, Europeans first became aequainted with the Burmese. Towards the commencement of the 18 th century, the Burmese were conquered by the Peguans, a people whom they had overeome, and kept in subjection for nearly two eenturies before. At this period arose Alompra, the founder of the present dynasty. After a reign of eight years, Alompra was succeeded by his son Uparaja, who made Sagaing his capital. Uparaja reigned three years only when he died, and was succeeded by his brother Sembnen, who removed the capital to Ava. In 1776, Sembuen was succeeded by his son Sen-Ku-sa, who, after a reign of five years, was sueceeded by Paong-Ka-cha, who removed the seat of government to Amarapura. After a reign of 38 years, Paong-Ka-cha was succeeded (1819) by Nun-sun, who removed the court once more to Ava; but that town having been almost entirely destroyed in 1839 by an earthquake, Monchobo has become the seat of government. In 1837, Nun-sun died, and was succeeded by his brother, Ser-a-wa, to the exclusion of the proper heir.

The first English writer who notices the Burman dominions, is Ralph Fitch, a London merehant, who travelled in India towards the end of the 16 th century. He represents the eountries, especially the cities, to have been then in a flourishing condition, and the trade and shipping of the seaport towns to be very extensive. At the elose of the 17 th century, the Governor of Madras, Mr. N. Higginson, made certain friendly overtures to the King of Ava, which were graciously received; and in 1709, the Burman dominions were visited by Captain Alexander Hamilton, who wrote a New Account of the East Indies. In 1757, the East India Company obtained a site for a factory, and other advantages. Subsequent aggressions on the part of the Burmese, accompanied by insolence to our ambassadors, led to hostilities, which terminated, in 1826, in the eurtailment of the Burmese power, and the establishment of British rule in the provinces of Aracan, Yé, Tavoy, Mergui, and part of Martaban. Pop. (1826), 4,230,558, though estimated by some at $8,000,000$.- (Crawford's Embassy to Ava; Dubois de Jancigny, Japan, Indo-Chine, et Ceylan, 1850 ; Malcom's Travels in S.E. Asia; Journal of the Indian Archipelago, 1849.)

BURNHAM, several vils. and pars. England:-1, A vil. and par. Bucks; 6740 ac . ; three annual cattle-fairs are held here. Pop. 2284.-2, A vil. and par. Essex ; 5050 ac . Pop. 1735.-3, A par. Somerset ; 4270 ac. 1'op. 1469.-4, Burn-ham-Deepdale, a small vil. and par. Norfolk; 960 ac. Pop. 109. -5, Burnham-Norton, a small vil. and 1'ar. Norfolk; 1480 ac. Pop. 166.-6, Burnham-Overy, a small seaport and par. Norfolk; $1920 \mathrm{ac} . ; 1 \frac{1}{2} \mathrm{~m}$. N.E. Burnham-Westgate; has some trade in corn and oyster-dredging. 1'op. 613.-7, BurnhamThorpe, a vil. and par. Norfolk; 2200 ac. Pop. 396.8, Burnham-Ulph-and-Sutton, a par. Norfolk; 1220 ac . Pop. 355.-9, Burnhain-Westgate, a small market tı. and par., co. Norfolk. The town lies 37 m. N.N.W. Norwich, on the

Burn, within 3 m . of the sea, and has a good harbour. It consists of one principal street, with several smaller diverging from it, and is tolerably well supplied with water. The church, situated about 1 m . from the village, is a neat Gothic structure. There are, besides, several chapels, belonging respectively to Baptists, Irvingites, Methodists, and Antinomians. Schools :-seven dame schools, one day-school for boys, and two national schools. Considerable quantitics of corn, hay, and straw are shipped for London, \&c.; and oysters, the trade in which forms the chief support of the inhabitants, are exported to various quarters, including France, Holland, and Belgium. The chief imports are coals, oil-cake, and timber. Area of par. 2930 ac. Pop. (1841), 1126.-(Local Correspondent.)

BURNLEY, a market tn . England, co. Lancaster, on a tongue of land formed by the confluence of the Burn and Calder, $21 \mathrm{~m} . \mathrm{N}$. Manchester. It comprises six principal streets, one or two of which are handsome, and lined with excellent shops; all are well kept; houses chiefly of a whitishcoloured freestone, which abounds in the vicinity, and well built ; lighted with gas, and abundantly supplied with water from springs in the neighbourhood. An old Saxon cross, which occupies the centre of an area, is an object of some interest. The church of St. Peter's is an ancient building, with a massive tower and peal of bells; but has undergone so many alterations, that scarcely any traces of its antiquity remain. Trinity Church and St. James's are both neat edifices-the one in the Gothic, and the other in the Tudor style. There are, besides, a Wesleyan chapel, a large and handsome structure; two Independent, one Association Methodist, one Primitive Methodist, and chapels for Particular and General Baptists. The schools consist of a free grammar-school, which has existed since the Reformation; four national schools, in a flourishing condition; a large infant school, recently built; Independent and Wesleyan day-schools, two R. Catholic schools, but only one commercial school of importance. A dispensary has recently been established, and there are a mechanics' institution, a Wesleyan institution, somewhat resembling the latter, but more of a religious character; and the Church of England literary institution, the most flourishing of the kind in Burnley, and for which a new and spacious building has been lately built, the only important one of the kind in the town. Cotton spinning and weaving, and worsted spinning, are carried on here to a great extent; the former employing 1680 horse power, and the latter 80 horse power. There are also corn-mills, employing 96 horse power; a large cloth-printing establishment, and several iron-foundries and machine shops. The Leeds and Liverpool Canal, and the East Lancashire Railway, both pass through the town; which is also connected, by a branch, with the Lancashire and Yorkshire Railway. Market, every Monday; six fairs annually. Pop. (1841), 18,735; estimated (1850), at 28,000.-(Local Corresponient.)

BURNSALL, par. Eng. York, W. Riding ; 25,950 ac. Pop. 1484.

BURNTISLAND, a small seaport and par. Scotland, Fife, N. shore estuary of the Forth. The town is $7 \frac{1}{2} \mathrm{~m}$. N. by W. Edinburgh, in lat. $56^{\circ} 4^{\prime} \mathrm{N}$.; lon. $3^{\circ} 13^{\prime} \mathrm{W}$. ; mostly on level, but partly also on sloping, ground, which rises to a considerable height behind. It consists of one long and spacious street, macadamized, and well kept; a back strcet, ruming parallel to the latter, also tolerably clean; and a number of diverging lanes and alleys. Some of the older houses in the main street are in the Flemish style, with their gables to the front; but many of the more modern are handsome and commodions buildings; and the town is every year improving as sea-bathing quarters, and is lighted with gas. It has three churches-an Established, U. Presbyterian, and Free church-the first a large edifice, in the old Dutch style; a townhall, a modern Gothic structure, with a handsome steeple; several schools, including burgh school, and Free church school; two or three benevolent societies, a reading-room, and scientific lecture association. The fisheries are considerable; shipbuilding and distillation are carried on, the latter to a great extent. The harbour is capacions, of great depth, and of casy access. Burntisland is the steamboat ferry station on the passage of the Edinburgh and Northern Railway. It unites with Kinghorn, Dysart, and Kirkaldy, in sending a member to the Ilouse of Commons.

Registered clectors, 52. Area of par. 2900 ac . Pop. of par. (1841), 2210 ; of bor., 1959.-(Local Correspondent.)

BURPHAM, par. Eng. Sussex ; 3150 ac. Pop. 280.
BURRA, three islands, Scotland:-1, Two isls. Shetland, W. of Mainland, and separated from it by Cliff Sound; lat. $60^{\circ} 8^{\prime} \mathrm{N}$.; lon. $1^{\circ} 21^{\prime} \mathrm{W}$. The E. island is also called House, and on its S. side is a peninsula 1 m . long, chiefly consisting of pasture. The coast of both is rocky.-2, An isl. Orkney, separated from S. Ronaldshay by Water Sound ; lat. $58^{\circ} 50^{\prime}$ N.; Ion. $2^{\circ} 52^{\prime} \mathrm{W}$. It is composed of sandstone and darkblue slate, is about 4 m . long and 1 m . broad, and inhabited by fishermen. Pop. 532.

BURRA LAKE, a lake, Australia, New S. Wales, on the N.W. margin of co. Argyle; lat. $34^{\circ} 18^{\prime}$ S.; lon. $149^{\circ} 45^{\prime} \mathrm{E}$.
bURRIANA, a tn. and port, Spain, Valencia, prov. of, and 8 m . S. Castcllon-de-la-Plana, r. bank, Bechi, 1 m . from the sea. It is well built, has three squares, a parish church, townhouse, two endowed schools, an hospital, prison, and a cemetery, with chapel attached. The inhabitants are chiefly engaged in agriculture, though some are likewise employed in fishing, and the usnal industrial occupations of a seaport. Trade:-exports-fruits, wine, and oil ; imports-sugar, brandy, salt fish, and iron. Pop. 6203.

BURTON-in-Kendal, a small market tn. and par. England, co. Westmorland. The town is $10 \mathrm{~m} . \mathrm{S}$. Kendal, well built, and clean, with regular and well-kept streets; a spacious market-place, a fine old church, grammar school, and several charities; flax-mills, and well-attended market on Tuesday. Area of par. 9170 ac. Pop. 2387.

BURTON-Upon-Trent, a market tn. and par. Fngland, co. Stafford, and partly in co. Derby. The town is pleasantly situated 20 m . E. Stafford, in a fertile vale, l. bank, Trent, which is here erossed by a fine old bridge of 36 arches, 1545 ft . long. The streets, several of which are of considerable extent, are well paved, and lighted with gas; water abundant. The places of worship are three churches, all of them elegant and ornamental structures; and chapels belonging to General and larticular Baptists, Independents, and Primitive and Wesleyan Methodists. There are, besides, a free grammar school for 50 boys, a school for 550 children, several other schools, alms-houses for 11 poor women, a dispensary, a savings'-bank, a subscription library, a news-room, ard a union workhouse. Malting, rope-making, tanning, and iron-forging are carried on to a considerable extent; but the chief business consists in the brewing of ale, for which the town has been long celebrated, large quantities being sent, not only to London and other parts of England, but to India and China. The town is governed by a high steward, deputysteward, and bailiff appointed by the Marquis of Anglesey. The bailiff, who is a justice of peace, acts also as coroner. There is a weekly market on Thursday, and six fairs are held aunually. The Trent is navigable to Gainsborough, a distance of nearly 60 m ., from whence there is a branch to this place of the Grand Trunk Canal, between the Trent and Mersey. The Birmingham and Derby Junction Railway has a station about half a mile W. the town. In 1322, a battle was fought on the bridge at Burton, between Edward II. and the Earl of Lancaster, in which the former obtained a decisive victory. Area of par. 7730 ac. Pop. (1841), 8136.

BURTSCHEID, or Borcette, a tn. Prussia, and properly a suburb of Aix-la-Chapelle, with which it is connected by an avenue of trees, being not half a mile distant from it. It contains a townhouse, and three churches (two R. Catholic and one Protestant), and carries on extensive manufactures, particularly of woollens and cassimeres. Its thermal springs, which rise in the hill immediately above the town, are celebrated. Pop. 5200.

BURUDDA, or Jaitwar, a dist. Hindoostan, S. W. coast, Goojerat, principally between parallels $21^{\circ}$ and $22^{\circ} \mathrm{N}$. It is bounded, N. by the Sertceannee, E. by the Burudda hills, and W. by the sca. It is generally flat, of a light soil, indifferently wooded, and in many places the water is brackish. Its chief town is Poorbunder.

BURUM, or Berum, a vil. IIolland, prov. Friesland, 11 m. S.E. Dockum, and communicating with the Lauwer Zec. A large but quiet and sequestered village, surrounded by a fat clay soil, known by the name of Burumerland. It has a handsome Reformed chureh, and a school. The people live wholly by raising corn, and rearing cattle. Pop. 1500.

BURW ANNEE, a tn. Hindoostan, Candeisli, dist. of same name; lat. $22^{\circ} 4^{\prime} \mathrm{N}$.; lon. $74^{\circ} 58^{\prime} \mathrm{E}$. ; surrounded with a double wall. It has an extensive palace, but is generally in a ruinous condition. The district extends along l. bank, Nerbudda, and is about 65 m . long by 40 bread; but the greater part of it is covered with jungle.

BURWARTON, par. Eng. Salop; 1170 ac. Pop. 151.
BURW ASH, or Burghersh, par. Eng. Sussex ; 6840 ac. Pop. 2093.

BURWELL.-1, A vil. England, co. Cambridge, containing the united parish of St. Andrew and St. Mary; 4 m . Vol I .
N.W. by W. Newmarket. It is composed chiefly of one irregular street; and possesses a handsome Gothic church. the ruins of an ancient castle, several schools, and an Independent chapel ; area of par. 6505 ac. Pop. (1841), 1820.2, par. Eng. Lincoln; 2190 ac. Pop. 174.

BURIVIA, a negro tn. Central Africa, kingdom, Bornou, W. bank, Lake Tehad, 80 m . N.N.W. Kouka; lat. $13^{\circ} 52^{\prime}$ N.; lon. $13^{\circ} 58^{\prime}$ E. It covers an extent equal to $3 \mathrm{sq} . \mathrm{m}$. , and being surrounded by a wall 13 or 14 ft . high, fronted by a dry ditch, may be considered, with reference to the practices of war in that country, a place of some strength. The town is entered by two gates, which are nearly E. and W., and are defended by two mounds of earth, with perpendicular fronts. Each principal hut in the town has a little enclosure, with a cow or two, and some goats and fowls. Pop. about 5000 or 6000.

BURY.-1, A bor., market tn. and par. England, co. Lancaster. The town, which is agreeably situated on rising gronnd, between the Irwell and Roche, 6 m . E. Bolton, consists of three principal streets and a commodious inarket-place. It is abundantly supplied with water, well lighted, and has within the last few years been greatly improved. The parish ehurch, which was rebuilt in 1776, is a substantial structure, with a beautiful tower and spire, which were erected in 1844. There are, besides, three other churches, and chapels for Independents, Primitive and New Connection Methodists, Wesleyans, Presbyterians, Baptists, Unitarians, and R. Catholics, the last a chaste Gothic building, with an elegant tower. There are several excellent schools, including a free grammarschool, and national schools, to the first of which are attached two exhibitions of from $£ 30$ to $£ 35$ each, to the colleges of St. John's, Cambridge, and Brasenose, Oxford. There are also three news-rooms, a mechanics' institution, a subscription library, a dispensary, and savings'-bank. The woollen manufacture, which was introduced here in the reign of Edward III., is still carried on to a great extent, and forms the staple of the place. Thero are, likewise, numerous factories for spinning and weaving of cotton, together with iron-foundries and paper-mills; calico bleaching and printing, dycing and logwood grinding, are also carried on to a great extent. There are stations here belonging to the Liverpool, Wigan, Bolton, and Bury Railway; the East Lancashire; and the Bury and IIeywood branch of the Manchester and Leeds Railway. By the Reform Act, Bury was constituted a borough, with the privilege of returning one member to the House of Commons. Registered electors (1849), 903. Its local affairs are under the jurisdiction of the county magistrates, who hold petty sessions twice a weck. The weekly market is on Saturday, and three fairs are held annually, in March, May, and September. The late Sir Robert Pcel was born at Chamber Hall, within the parish, in 1788 . Area of par. 22,240 ac. Pop. (1841), 62,125; of bor. 24,759 . - (Local Correspondent.) -2, par. IIuntingdon ; 2480 ac. Pop. 359.-3, par. Sussex; 3340 ac. Pop. (1841), 611.

BURY ST. EDMUNDS, a tn. England, co. Suffolk, $26 \frac{1}{2} \mathrm{~m}$. N.W. Ipswich, on a slope, I. bank, Bourne or Larke; streets straight, at right angles, clean, and well lighted; water abundant ; houses (of brick) plain, but generally well built. It has three churches, two of them fine old Gothic edifices; seven chapels, two Independent, two Baptist, a Wesleyan, a Unitarian, and a R. Catholic ; also, a Friends' meeting-house. Other public buildings are an hospital, concert and assemblyrooms, theatre, county-hall, guildhall, King Edward's school, and jail. Public institutions:-a free grammar, commercial, and five charity schools; an asylum for twelve poor persons; an hospital, admitting upwards of 1000 patients yearly ; 98 alms-houses, and several minor charities, mechanics' and young men's institutes, archæological society, and public library. Soap and candle manufactured to a small extent.

The borough returns two members to the House of Commons, and its municipal government is vested in a mayor, six aldermen, and 18 councillors. Bury St. Edmunds formerly had one of the largest and wealthicst abbeys in England. Of the many fine remains still existing, the gate, built in 1377, 62 ft . high, 50 long, and 41 broad, is one of the best specimens of early Gothic. In part of the abbey grounds is a botanic garden, tastefully laid out. The Eastern Union Railway has a station here. Pop. (1841), 12,538.

BURYAN (St.), par. Eng. Cornwall; 6970 ac. Pop. 1911.

BURYTIIORPE, par. Eng. York, E. Riding; 1020 ac. Top. 226.

BUSACHI, a tn. and prov., isl. Sardinia, dist. Cagliari. The town lies 1. bank, Tirsi, 11 m . N.E. Oristans; between two mountains, in a district which is unhealthy but fertile, yielding good crops of grain, and excellent pasture. Pop. 1562 .

BUSACO [Portuguese, Busaco], a hill of Portugal, formerly called serra d'Alcoba, prov. Beira, 18 m . N. Coimbra. Near its top, in a kind of hollow, stands a Carmelite monastery, commanding a magnificent view, and near which, on September 27, 1810, the French army, under General Massena, was repulsed by the English and Portuguese, under Lord Wellington.

BUSACQUINO, or Bussacmino, a tn. Sicily, prov. of, and 29 m. S. by W. Palermo. It stands upon a height, contains eight churches, and some manufactures of linen. Pop. 8000.

BUSCA, a tr . Sardinian states, Piedmont, prov. of, and 9 m . N.W. Coni, eap. dist. of same name, l. bank, Maira, an affluent of the Po. It is well situated at the foot of a hill, and contains two handsome churches and a convent. The wine made in the neiglibourhood is excellent. Pop. 7900.

BUSCOT, par. Eng. Berks; 2910 ac. Pop. 405.
BUSIIBRUY, par. Eng. Stafford; 7610 ac. Pop. 1509.
BUSHEAB, or Sheik Shaib [properly Khoshaub, good water], a low and narrow but well-peopled island, about 18 m . long, Persian Gulf, lying about 10 m . from the Persian coast; lat. (E. point) $26^{\circ} 48^{\prime} \mathrm{N}$. ; lon. $53^{\circ} 24^{\prime} \mathrm{E}$. (r.) On the E. point is a neat-looking village, surrounded with date-trees, which are generally plentiful.

BUSHEY, par. Eng. Hertford; 3130 ac. Pop. 2675.
BUSIIIRE [properly, Abu Shelr-the father of cities], the principal seaport of Persia, prov. Fars, $118 \frac{1}{2} \mathrm{~m}$. W.S.W. Shiraz; lat. $29^{\circ} \mathrm{N}$. ; lon. $50^{\circ} 50^{\prime} 15^{\prime \prime} \mathrm{E}$. (r.) ; on a low sandy point running N.W., on the side of a bay, N.E. coast, Persian Gulf. The town lies on the edge of a desert, is of a triangular form, having the sea on two sides, and fortified, on the land side, by a high wall, nearly. 1 m . in length, flanked, at every 200 yards, by a round tower, with loop-holes for musketry. It has seven mosques, a few hummums or baths, two caravansaries, and an Armenian church. A large palace, built by the late Sheikh, stands about the centre of the town. The houses are flat-roofed, two stories high, and constructed chiefly of clay, or of a soft sandstene obtained from the ruins of Reshire, a decayed town 4 m . to the S . From a distance, Bushire has rather an inposing appearance, the square funnels or 'wind climneys,' crected on the tops of a few of the principal houses, for conveying air into the interior during the hot weather, appearing like so many minarets or towers; but, on a near approach, the town is found to be a mean and dirty place; with streets, as in most Eastern towns, mere narrow and intricate lanes, from 6 to 8 ft . wide, half choked up with filth or sand, and infested with crowds of mangy dogs. The bazaar is large and well supplied. Fruit, chiefly brought from Shiraz, may be obtained here all the year round. In the hot season, water melons, grapes, peaches, plums, apricots, \&c., are abundant; as are also oranges, apples, pears, and pomegranates, in the cold season, with several kinds of dried fruits. Bushire is famous for the fineness of its poultry, and the delicate flavour of its mutton. The sheep, principally bronght from the interior, are of a small breed, with immense tails.
Bushire carries on a considerable traffic with India; its merchants, who are principally Armenians or Persians, supplying the greater part of Persia with Indian and European goods, for which silk and bullion are the principal returns. From Bombay, Masulipatam, and Bengal, it imports chintzes, woollen cloths, muslins, and picce goods; with hardware and cutlery, indigo, sugar, rice, pepper, and other spices; cloves, \&c. ; and from Europe, by way of India, English cotton prints, and other goods. Among its exports are Cashmere and Persian shawls, dates, and dried fruits; tobacco, carpets, pearls, Shiraz wines, grain, and wool ; with various drugs, dye-stuffs, and perfumes. An active trade is carricd on with Shiraz by means of caravans. The anchorage is indifferent, but is the best on the coast. It consists of an outer road, exposed to the N.W. winds, and a safe inner road, with $4 \frac{1}{2}$ fathoms water, muddy bottom, $2 \frac{1}{2} \mathrm{~m}$. from the town. In 1831, the plague carried off more than a third of the inhabitants. P'op. (1835), estimated at 20,000 .-(Kempthorne's Notes of a Survey on
the E. Shores of the Persian Gulf, in London Gco. Jour.; Foutanier, Voyage dans l'Inde.)

BUSIILEY, par. Eng. Worcester; 1740 ac. Pop. 334.
BUSHMAN'S RIVER, S. Africa, Cape Colony, rising in the S. of Somerset co., flowing generally S.E., forming the boundary hetween Uitenhage and Albany, and falling into the Indian Occan, $28 \mathrm{~m} . \mathrm{S}$. Graham's Town; lon. $26^{\circ} 37^{\prime} \mathrm{E}$.

BUshimen. See bosjesmanso
BUSHMHLLS, a market tn. Ireland, co. Antrim, 6 m . N.E. Coleraine; on a plain, bounded W. by the Bush-W'ater, celebrated for its fine salmon, and which falls into the sca a little below the town. It is the general place of resort for persons visiting the Giant's Canseway, about 2 m . distant; and consiste of one principal strect, well kept; houses of whinstonc; abunlantly supplied with water; one Episcopal chnreh, two Preshyterian, in connection with the Irish General Assembly; one Covenanting, one Methodist meetinghouse, and one R. Catholic chapel, all plain buildings; two schools, one male and one female, under the national board; two large corn-mills, two distilleries, one flax-mill, and a manufactory of spades, shovels, \&c. 1'op. 788.

BUSIGNY, a tn. France, dep. Nord, on the rivulet Riot, and at the foot of hills covered with wood, about 12 m . fron: Cambray. It was once a place of considerable importance, and was defended by a castle and several towers. Its manufactures are merinocs and Caslımere shawls. Pop. 2234.

BUSK, a tn. Austria, Galicia, gov. of, and 27 m . N.E. Lemberg, on the Bug. It has several churches, a tannery, and manufactures of paper and iren. The inhabitants live chiefly by fishing in the adjoining lakes. Pop. 2981.

BUSKERUD, a bail. Norway, prov. Aggershuus; area, 4813 sq. m. It lies N. of Bradsberg, W. of Aggershuus bailiwick, and E. of Bergenhuus, and contains the towns of Drammen and Kongsberg. Pop. (1845), 86,113.

BUSLINGTHORPE, par. Eng. Lincoln ; 1220 ac. P. 50.
BUSSAIIER, a Sikh state in N. India, under lBritish protection, occupying a mountainous tract, bounded on two sides by the Sutlej and Jumna, stretching N. into the 1limalayas; cap. Rampoor ; lat. $31^{\circ} 28^{\prime} \mathrm{N}$. ; lon. $77^{\circ} 36^{\prime} \mathrm{E}$. It contains some fertile well-cultivated tracts, which produce grain and fruits in abundance. The main articles of traffic are sheep, wool, cattle, ghee, opium, tobacco, and musk. Manufac-tures:-blankets, and woollen cloths for plaids, trousers, \&c. Bussaher has, at all times, carried on a considerable trade with Hindoostan and Tibet; receiving from the former, sugar, cotton cloths, iron and brass ware, and indigo, in return for blanketz, opium, tobacco, and turmeric ; and exporting, to the latter, grain, ghee, opium, tobacco, \&c., in exchange for wool, salt, Chinese silks, and tea.

BUSSETO [anc. Buxctum], a tn. Italy, duclyy of, and 20 m. N.N.W. Parma, r. bank, Ongina, an affluent of the Po. It is tolerably built, surrounded by walls, and contains a col legiate church, in which are some fine pictures; another parish church, a townlouse, Jesuits' college, several schools, a palace, public library, hospital, theatre, and barrack. Mannfac-tures:-silk, woollen, and linen fabrics, earthenware, and wax. Pop. 2200.

BUSSOLENGO, a tn. Austrian Italy, gov. Venice, 9 m . W.N.W. Verona, near r. bank, Adige. It is rather well built, contains two churches and six oratorics, has some linets manufactures, and is the centre of an important transit trade between E. Lombardy and the Tyrol. l'op. 3000.
bussorail, bassora, Balsora, Basra, or Bazra, a city, Turkey in Asia, pash. Bagdad, and principal port of the Persian Gulf, r. bank, Euphrates or Schatt el Arab [river of the Arabs], 70 m . from its mouth, and 44 below the junction of the Tigris, 270 m . S. E. Bagdad ; lat. $30^{\circ} 27^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $47^{\circ} 53^{\prime} 12^{\prime \prime}$ E. (r.) It is about 3 m . in length, 1 in brealth, and about 7 in circumference, which, however, includes some corn ficlds and gardens of date-trees. The town contains abont 6000 houses, is ill built, the strects narrow, unpaved, and extremely filthy; houses mostly constructed of sun-dried bricks, as is also the miserable wall by which the town is surrounded, and in which there are five gates. The only buildings having an appearance of respectability are the English factory, the residence of the governor, one or two of the principal mosques, and a few of the mausions of the wealthiest inhabitants. Bussorah bas a vast number of khans and cof-fee-bouses, with about 40 mosques; and is intersected by a
cunal, which, besides conveying goods to the city, supplies the inhabitants with water for donestic purposes. Other two canals surround the town, forming a ditch to the fortification. The bazaars are wretehed structures, but are, in general, spacious and well stocked, particularly with fruits and vegetables. The Euphrates is tidal as far up as Bussorah, and is navigable, to this point, for slips of 500 tons burden; but there is a bar at its mouth, on which there is generally but 12 ft . water, so that only during spring tides can vessels pass drawing more. Its current is about 2 m . per hour during the flowing, and 3 m . during the ebb tide. A few British ships from India visit Bussorah amnually, but the principal trade is carried on by Arabian vessels. The ehief articles of import are, muslins, spices, drugs, rice, sugar, indigo, silk, cotton yarn, dye-woods, coffee, \&e., from India; the returns for which are mostly made in the precious metals, Arabian horses, pearls, dates, copper, gall-nuts, raw silk, gold fringe, corals, gums, rose-water, dried fruits, \&c. The horses from Bussorah, of which great numbers are exported to India amnually, are of extreme beanty, and capable of enduring much fatigue. Besides its shipping trade, Bussorah carries on an extensive traffic with Aleppo and Bagdad, by means of cara vans. The elimate is said to be salubrious during winter and spring, but is certainly very unhealthy in summer, when the town is for months surrounded by water from the overflowing of the Euphrates, which, on its retirement, leaves marshes and ponds, from whose stagnant waters the most noxious exhalations arise.
The country around Bussorah is flat and fertile, more especially on the banks of the river; in many respects, indeed, it resembles Egypt, both in elimate, fruitfulness, and in the overflowings of the great river, to which mueh of its fertility is due. The cultivated grounds yield corn, dates, olives, pomegranates, vegetables, and pot herbs. Fruits of all kinds abound. There are, besides, entire fields of roses grown for the distillation of the attar of roses, and for the manufacture of rose water. Bussorah belongs to the Turks, having been taken by them from the Arabs, in 1787. It is governed by a mutselim or lieutenant, in the name of the pasha of Bagdad. Pop. 60,000.-(Chesney's Euphrates Expedition; Fontanier, Voyage dans l'Inde.)

BUSSUM, a vil. IIolland, prov. N. Holland, 13 m . S.E. Amsterdam, on a dry sandy soil, which cultivation has elothed with useful erops. It has a small R. Catholic ehureh, a Reformed chapel, and a school. Owing to the healthiness of the neighbourhood, many handsome lodging-houses have been erected here for strangers. Besides agriculture, the inhabitants are engaged in the making of ships'-bisenit, soap, paint, linen fabries, such as towelling, pack-sheet, bed-covers, and floor-cloths, and in bleaching. Pop. 740.

BUSTAR [ane. Wasatairee], a tn. and dist. Hindoostan, in the Deccan, prov. Gundwana. The town is in lat. $19^{\circ} 31^{\prime}$ N.; lon. $82^{\circ} 28^{\prime}$ E.; 300 m . N.E. Hyderabad.-TThe nistrict is difficult of access, and has a very insalubrious climate, and is oceupied by a branch of the range of mountains that runs N. and S. parallel to the Bay of Bengal, in the rear of Cuttack and the N. Circars. Teak-wood abounds here, and through the rivers Inderowty and Godavery it is floated down to the Bay of Bengal; but it is only of size sufficient for the construction of such vessels as navigate the Coromandel coast. Nearly the whole country consists of jungly hills, and of pestilential morasses; the remainder is badly cultivated. The natives live almost in a state of nature, and are extremely ignorant and superstitious.

BUSTARD [BAY, a bay, Australia, E. coast; lat. $24^{\circ} 4^{\prime}$ S.; lon. $151^{\circ} 50^{\circ}$ E.; discovered by Capt. Cook, in 1770 , and named by him from a species of bustard which he found there. The country around is dry and sandy, but the hills are covered with trees, growing separately and without underwood.

BUSTO-ARSIZIO, a tn. and com. Austrian Italy, gov. of, and 19 m . N.W. Milan, cap. dist. of same name, in a fertile plain, which produces mueh exeellent wine. It contains two churehes, one of them an octangnlar edifice, with numerous statues and fine paintings, by Daniel Crespi, a native of the town; and has manufactures of fustian and dinity. The remains of aneient buildings found in the neighbourhood, show that Busto was formerly a place of considerable importance. --The district produces corn, wine, mulberry-trees. and
fodder, but great part of it is barren heath. Pop. of th. and com. 10,025; of dist. 29,342.

BUSULUK, or Bouzoulouk, a tn. Russia, gov. of, and 150 m . W.N.W. Orenburg, eap. dist. of same name, l. bank, Samara. It is fortified, has straight regular strects, and contains two churehes. It manufactures leather, trades in wood, and has an important annual fair. Pop. about 1500.

BUSVAGON, an isl. Indian Arelipelago, one of the Calamianes, a group of the Philippines, S. side of the Mindoro Strait ; lat. (W. point) $12^{\circ} 8^{\prime}$ N. ; lon. $120^{\circ} 2^{\prime}$ E. (r.), separated S. by a narrow strait from the island of Calamianes, and having numerous small islets off its $\mathbf{N}$. coast. It is about 50 m long, E. to W., and about 13 m . broad, mountainous but fertile. Birds, deer, wild hogs, apes, and rats, are very numerous, and commit great devastation on the cultivated lands.

BUTCHER'S ISLAND, a small green isl. India, in the harbour of liombay, between the islands Caranja and Salsette.

BUTCOMBE, par. Eng. Somerset; 2010 ae. Pop. 256.
BUTE, a co. Scotland, Frith of Clyde, comprising the islands of Butc, Arran, Inchmarnock, and the two Cumbraes (which see). Pop. 16,608.

BUTE, an isl. Scotland, W. coast, co. of same name, at the month of the Frith of Clyde, the N. W. portion being indented into the mainland of Cowal, Argyleshire, from whieh it is separated by a narrow strait called the Kyles of Bute, and the S.E. stretching out into the open Frith, between the peninsula of Cantyre on the W., and the coast of Ayr on the E. Its centre is in about lat. $55^{\circ} 50^{\prime} \mathrm{N}$.; lon. $5^{\circ} 4^{\prime} \mathrm{W} ., 40 \mathrm{~m}$. W. Glasgow, and 18 m. S.W. Greenock. Extreme length, abott 15 m . ; greatest breadth, 5 m . Its coast line, which, exclusive of minute sinuosities, is about 35 m . in length, is indented by several bays and good natural harbours, the principal of which are the bays of Rothesay, Kilchattan, Kames or Port Bannatyne on the E.; and those of Dungoil, Stravannan, Scalpsie, St. Ninian's, and Ettrick, on the W The island has little of what is called romantic scenery to boast of, but is distinguished in many parts for its quiet pieturesque beauty; besides commanding, althongh it does not in itself possess, some of the most magnificent views in Scotland, especially towards the Kyles. It has no remarkable elevations, its highest summit, Kames Hill, being only 875 ft. high; but it has several pretty little lakes, the principal and most beautiful of whieh is Loch Fad, $2 \frac{1}{4} \mathrm{~m}$. long by a quarter in breadth, on the lanks of which is the favourite villa of the late celebrated tragedian, Edmund Kean. The other lakes next in extent, are Ascog and Stack. All the three lakes lie within less than half a mile of eaeh other. Bute is naturally, and geologically divided into four distinct portions. The Garroch Head, forming the extreme S. portion, is ridgy and hilly, and is composed almost entirely of trap rocks ; proceeding N., the next division, between Kilchattan Bay and Rothesay Bay, on the W., and Scalpsie Bay on the E., is composed, with slight exeeptions, of red sandstone ; the third portion, extending from Scalpsie Bay to Ettrick Bay, consists of chlorite slate; and the fourth and last division, between Ettrick Bay and the Kyles of Bute, of micaceous schist. Lime, coal, and slate, are found in the island, but they are all of inferior quality. The climate of Bute is so remarkable for salubrity, as to have obtained for the island the appellation of the Montpellier of Seotland. It is on this aecount mueh resorted to by invalids.

Agrieulture is in an advanced state, and is yearly improving. A complete system of draining lias been introduced, and the most approved rotation in erops is observed. The more recently built farm-houses are neat and commodious, and the grounds generally well enclosed, chiefly with thorn hedges. There are 10,541 acres under cultivation. Average ycarly rent of land, about $18 s .6 d$. per acre. Great attention is paid to the dairy, and the cheese made is of excellent quality. The cows are all of the Ayrshire breed. The agricultural interests of the island have been greatly promoted by the Bute farmers' soeiety, which grants yearly premiums for the best ploughing, for the best cattle, cheese, bitter, seeds, roots, \&c., and for the encouragement of cleanliness among the cottagers. The sea-coast abounds with fish, ineluding salmon, cod, haddock, whitings, \&c. The means of education are ample, there being many well-eondueted schools throughout the island. The consequence is, that there is scarcely a native inhabitant above 15 years of age, who cannot read and write.

This island was long a favourite resort of the Kings of

## BUXTON

Scotland, who resided in their Castle of Rothesay (which see), now a stately and interesting ruin. Bute gives the Scoteh title of Earl, and the British title of Marquis, to a branch of the family of Stewart, descended from a younger son of liobert II. Mount Stuart, the family seat, is beautifully situated, 4 m . from Rothesay. The Marquis of Bute is principal proprictor, six-sevenths of the island being his property. Pop. 10.661.

BUTERA, a tn . Sicily, prov. of, and 21 m. S.S.E. Caltanicetta, near r. bank, Menfra. Pop. 4081.

BUTI, a tu. Tuscany, dist of, and 9 m . E. Pisa, in a narrow dell of the same name, formed by a spur from the E. side of Mount Pisano, and traversed by a rapid mountain-torrent, an affluent of Lake Brentina. It is surrounded by a castle, and contains a parish church. The climate is cold and moist, and the ground not favourable to cultivation. Still, by industry, it yields excellent olises, from which is obtained the best oil in Tuscany. Pop. 4091.

BU'TLEIGII, par. Eng. Somerset; 4670 ac. Pop. 872.
BUTLERS-MARSTON, par. Eng. Warwick; 1620 ac. Pop. 313.

ISUTLEY, par. Eng. Suffolk; 1690 ac. Pop. 364.
BƯTOW, a tn . Prussia, Pomerania, gov. of, and 50 m . E. Koslin, on the Bütow; in a valley, surrounded by hills of considerable elevation; with three churches, woollen and linen manufactures, and a wool fair. A height in the neighbourlood is crowned with the ruins of an old castle. Pop. 2150.

BUTRINTO, a fortified tn. and bay, Turkey in Europe, Albania, $15 \mathrm{~m} . \mathrm{S} . W$. Delvino, opposite the island of Corfu. The town is in lat. $39^{\circ} 44^{\prime} \mathbf{N} . ;$ lon. $20^{\circ} 2^{\prime}$ E. Shallow water extends all across the head of the bay; but in the mildle, large ships find good anchorage, with 20 fathoms water. The town is fortified, and is the residence of a Greek bishop. In its vicinity are the ruins of the Buthrotum of the ancients. Pop. 2000.

BUTSCHOWITZ, a market tn. Austria, Moravia, circle of, and 21 m . E.S.E. Briinn, on the Littawa. It contains a large and strong castle, belonging to Prince Liechtenstein, and has woollen and linen manufactures, particularly one of cassimeres. Pop. of tn. 2000.

BUTTERLEIGH, par. Eng. Devon ; 2520 ac. Pop. 155.
BUTTERLEY, a hamlet, England, co. Derby, 3 m. S. Alfreton. It is the seat of extensive ironworks. In the neighbourhood is a large reservoir, for supplying the Nottingham Canal.

BUTTERMERE, par. Eng. Wilts; 1340 ac. Pop. 130
BUTTERWICK, par. Eng. Lincoln; 1370 ac. Pop. 579.
BUTTES, a vil. and par. Switzerland, can. of, and 19 m . S.W. Neufchatel, in a valley so narrow and hemmed in by mountains, that from part of the village the sun is not visible during three winter months. The Fairies' Grotto, in the vicinity, is one of the most remarkable in Switzerland. A great number of the inliabitants are clock and watch makers. Pop. 1000.

BUTTEVANT, a tn. and par. Ireland, co. Cork. The town stands on the Awbeg, 23 m . N.W. Cork. Having been the seat of a number of opulent monastic communities, it was at one time a place of considerable importance, but has now fallen into utter decay. The houses are of the humblest description, intermingled with the ruins of churches and monasteries. The town contains extensive barracks for infantry, a fever hospital, a dispensary, and two R. Catholic chapels. A little to the E., is the castle of Buttevant, on a high rock, overhanging the Awbeg. Spenser, the poet, resided in the vieinity; and there, it is said, wrote the Faëry Queen. Buttevant gave the titlc of Viscount, in the Irish peerage, to the Barrymore family. Fairs are held on March 27, and October 14. Pop. of tn . 1524. Area of par., including Ballybeg, 11,583 ac. Pop. 5042.

BU'T'TING'TON, par., N. Wales, Montgomery. Pop. 826.
BUTTISIIOLZ, a vil. and par. Switzerland, can. of, and 11 m . N.W. Luzern, on a tributary of the Wigger, and remarkable for a mound in its vicinity, called the Engländerlubel or English barrow, from containing the bones of 3000 Englishmen, followers of Ingelram de Coucy, son-in-law of Edward III., and Duke of Bedford, who, having a feud with Leopold of Austria, was devastating the Swiss cantons, when the peasants attacked and defeated him. Pop. 1708.

BUTTTOLPHS, par. Eng. Sussex ; 910 uc. Pop. 48. BU'VION NESS, a prominent headland, Scotland, co. Forfar, N. side the entrance into the Frith of Tay; lat. $56^{\circ} 28^{\prime} \mathrm{N}$. ; lon. $2^{\circ} 40^{\circ} \mathrm{W}$. There are two lighthouses here, with bright fixed lights, on separate towers.

BUTTSBURY, par. Eng. Essex; 1440 ac. Pop. 521.
BUT'TSTÄDT, a tn. Saxe-Weimar, cap. bail. of same name, 11 m . N.N.E. Weimar. It contains a handsome chureh, and five schools; has manufactures of woollens and hosicry; also a potash-work, and mills; and five large fairs, chiefly for horses. Pop. 2164.—The bailiwick, area, 48 geo. sq. m., eontains three towns and 20 villages. I'op. 13,500.

BÜTY, a vil. Switzerland, can. Aargau, 7 m. N. Aarau. Pop. 250, R. Catholics.

BU゙TZOW, a town, Mecklenburg-Schwerin, on the Marnow, and in the neighbourhood of a lake. It is walled, and well built. The town church, built in 1229 , has some fine wood carvings; and the Reformed church is the only one of that denomination in the duehy. Bützow has a paper-mill, worked by steam; and numerous manufactures-linen cloth, soap, and candles, playing cards, straw liats, and shoes. It has also numerous breweries, and a stone quarry. The town owes much of its prosperity to the exiles driven from France by the persecutions of the 17 th century. Pop. 3894.

BUVIESCA, a tn. Spain, Old Castile, prov. of, and 20 m. N.N.E. Burgos, in a plain, 1. bank, Oca. It has clean, paved, and spacious streets, two squares, two churehes, of which the collegiate one is a beautiful edifice, containing some fine sculptures; two well-attended schools, a townhall, prison, hospital, public storehouse, two fountains, and a cemetery. Cattle-rearing and agriculture are the chief employments. In 1388, Juan I., at the instance of John of Gaunt, here gave his son the title of Prince of the Asturias Pon. 2064.-(Madoz.)

BUTZBACH, a vil. Hesse-Darmstadt, gov. Friedberg, 20 m . N.N.W. Frankfort-on-the-Main. It is walled, and has two parish churches, and an old castle, now used as barracks. Its chief manufactures are hosiery, leather, and locks. It has seven annnal fairs. Pop. 2300.

BUXAR (Bagsai), a fortified tn. Hindoostan, prov Bahar, r. bank, Ganges, here 1 m . broad, 60 m . E.N.E. Benares; lat. $25^{\circ} 33^{\prime} \mathrm{N}$.; lon. $83^{\circ} 57^{\prime} \mathrm{E}$. It is rather large; houses of the nsual charaeter in India, mud and thatch, with a few good bungalows, inhabited by Europcans. The small fort is built on an eminence near the river; and is surrounded by a broad deep ditch. It is kept in good repair, and garrisoned by sepoys. The Mogul chiefs, Shuja ud Dowlah, and Cossim Khan, were encamped here with an army computed at 40,000 men, when, on October 23,1764 , they were attacked and completely routed, by 856 European, and 6215 native troops, under Major Munro.

BUXHALI, par. Eng. Suffolk; 2120 ac. Pop. 533.
BUXTED, par. Eng. Sussex ; 7020 ac. Pop. 1574.
BUXTEHUDE, a tn. Hanover, duchy of Bremen, dist. Stade, 12 m. S.W. Hamburg, r. bank, Este, about 7 m . above its junction with the Elbe. It has walls, with several gatcs; and its houses, though indifferently built, are lofty. It is the seat of a civil and criminal court ; and contains a gymnasiun, a handsome parish church, a townhall, and court-house. Its chief manufactures are white iron, soap, candles, wax, starch, chicory, and tobacco. It has also oil and tan mills, and limekilns; exports :-timber, oak bark, honey, and wax ; and has several annual fairs. Some of the inlabitants are employed in fishing. Pop. 2223.

BUX'TON.-1, $\boldsymbol{A}$ tn. and fashionable watering-place, England, co. of, and 29 m . W.N.W. Derby, in a deep hollow, surrounded by lills. It has two principal streets, straight, clean, and lighted with gas ; several handsome ranges of houses, and a fine crescent, all of stone; two churches, and Wesleyan, Independent, and Presbyterian chapels ; two schools (one endowed), and a bath charity. The accommodation for visitors, who come to drink the waters, and amount to many thousands annually, is very complete; excellent hotels and lodginghouses, baths, assembly-rooms, and pumproom. Races in June. The vicinity abounds in fine scencry; and there is a vast stalactitic cavern, called Pool's IIole, adjacent. Public walks, provided by the Duke of Devonshire, 14 acres in extent. Pop. (1841), 1569.-(Local Correspondent.)-2, par. Norfolk; 1460 ac. Pop 713.

BUZANÇAIS, a tn. France, dep. Indre, 14 m . N.W Chateauroux, r. bank, Indre, here crossed by five bridges. The town is fincly situate on an acclivity, and in a beautiful distriet; but its streets are narrow, dark, and crooked, and the houses indifferent. It bas manufactures of woollen goods, a worsted, and some extensive flour mills; and trades in wool and leeches. There are ironworks in the neighbourhood. Pop. 3139.

BUZEN, a prov. Japan, in N. of isl. Kiusiu, and separated from Niphon by the Strait of Van der Capellen, here scarcely 1 m . across. It is bounded, N. by the sea, and at the other points by the provs. of Tsikuzen and Bungo; is in the form of a fan; lies between lat. $33^{\circ} 23^{\prime}$ and $34^{\circ} \mathrm{N}$.; lon. $130^{\circ} 40^{\prime}$ and $131^{\circ} 23^{\prime}$ E.; and comprises 23 islands, all unimportant. The principal mountains are-Fikosan, Ohotake, Kwansan, Tensan, Mikunijama, Kawarajama, Firatojama, and Kuratôge. The mountain-chains of three adjacent provinces converge at the S. border of Buzen, thence traversing the province of Bungo, in an E. direction, to the shores of the sea. The principal valley is that of Sakaigawa, besides which there are those of Siwagawa, Wogawa, Uigawa, Takescgawa, and Mumajagawa; the rivers bearing the four last-mentioned names take their rise in Fikosan, and fall into the sea at Nakat's Creek, between the point IIajatomo and Cape Nagasakihana. The cap. of Buzen is Kokura. Dairi, Tanöura, Matsjama, Kanda, Imai, Sita and Nakat's, are excellent ports. Buzen is extremely fertile; principal products - wheat, barley, buckwheat, silk, wax, and honey. Charcoal is made; copper and antimony are found. At Kokura there is a manufactory of cottons of superior quality; and a syrup, called ame, is made from wheat. Buzen is divided into cight districts; and has 54 towns, villages, and ports. Two of the towns are fortified.

BUZZARD'S BAY, U. States, S. coast, Massachusetts, opposite Barnstable Bay; lat. $41^{\circ} 25^{\prime}$ to $41^{\circ} 42^{\prime}$ N. ; lon. $70^{\circ} 33^{\prime}$ to $71^{\circ} 10^{\prime} \mathrm{W}$. It is 30 m . long, and 7 broad, and separated from Cape Cod Bay by an isthmus only 5 m . across

BYAM MARTIN.-1, An isl. Arctic Ocean, one of the N. Georgian group; lat. $75^{\circ} \mathrm{N}$. ; lon. $104^{\circ} 8^{\prime} \mathrm{W}$. (R.) ; between Melville and Bathurst Islands. Discovered by Parry, 1819-20.-2, An isl., S. Pacific Ocean, one of the Low Islands ; lat. $19^{\circ} 40^{\prime}$ S. ; lon. $140^{\circ} 29^{\prime}$ W. (r.) ——3, A cape, W. coast, Baffin's Bay, near the entrance of Lancaster Sound; lat. $73^{\circ} 20^{\prime} \mathrm{N} . ;$ lon. $78^{\circ} \mathrm{W}$.

BYFIELD, par. Eng. Northampton; 2760 ac. Pop. 1079.
BYFLEET, par. Eng. Surrey; 2060 ac. Pop. 672.
BYFORD, par. Eng. Hereford; 910 ac. Pop. 236.
BYGRAVE, par. Eng. Hertford; 1860 ac. Pop. 154.

BYKHOV, several places, Russia: particnlarly - 1 Bykhov-Staroi, gov. of, and 30 m . S. Mogilev, a little W. of r. bank, Dnieper. It is defended by ancient fortifications, and has several churches, convents, and a synagogue. Pop. 3900. -2 , Bykhov-Novo, at a short distance from the former.-3, Bykhov, gov. Tchernigov, and not far from Kroloveton.

BYLAND (OLD), par. Eng. York, N. Riding; 3120 ac. Pop. 185.

BYLAUGII, par. Eng. Norfolk; 1580 ac. Pop. 85.
BYRON'S ISLAND, a small isl., S. Pacific, about 12 m . in length, abounding in cocoa trees. Discovered by Commodore Byron in 1765 ; lat. $1^{\circ} 18^{\prime}$ S.; lon. $177^{\circ} 45^{\prime}$ E. (r.)

BYSKE, a river, Sweden, which falls into the Gulf of Bothnia in lat. $64^{\circ} 57^{\prime}$ N., after a direct S.E. course of 110 m . At its mouth is the small town of Byskea.

BYTHAM, two pars. Eng. Lincoln:-1, Bytham (Castle), 7760 ac. Pop. 855.-2, Bytham (Little), 1010 ac. Pop. 311. BYTHORN, par. Eng. Huntingdon; 1510 ac. Pop. 322. BYTON, par. Eng. Hereford; 1030 ac. Pop. 172.
BYTOWN, a tn. Upper or W. Canada, dist. town of Dalhousie district, 92 m. N.E. Kingston, r. bank, Ottawa, at the junction of the Rideau Canal with that river; lat. $45^{\circ} 23^{\prime}$ N.; lon. $75^{\circ} 38^{\prime}$ W. It is divided into two portions, called Upper and Lower Bytown; the former, which is situated half a mile higher up the river, and on considerably higher ground, is the most aristocratic, the latter the most business portion of the town. Bytown is rapidly improving in appear ance, and now contains several handsome stone buildings, including the jail and court-house. There are five churches and chapels in the lower town, namely, one Free church, two Methodist, one Baptist, and one 12. Catholic. In the upper town there are three, namely, one Episcopal, one Presbyterian, and one Methodist. The town is supported principally by the lumber trade. The scenery about Bytown is, next to Niagara, the finest of the inhabited portion of Canada. The Chaudiere Falls, a short distance above the town, are beautiful. A handsome suspension bridge has been erected across the Ottawa below the Falls, joining Upper anc Lower Canada. Pop. (1849), about 7000.

BYTURNEY, or Vaiturani, a river, Hindoostan, rising in the mountainous region of Chuta Nagpoor, prov. Bahar, and, after a S.E. course of from 300 to 400 m ., and receiving varions tributaries, falling into the Bay of Bengal, a little N. Point Palmyras, near Doomrah; lat. $20^{\circ} 37^{\prime}$ N.

BYWELL, two pars. Eng. Northumberland:-1, Bywell (St. Andrew's), 3680 ac. Pop. 452.-2, Bywell (St. Petcr's), 21,780 ac. Pop. 1512.

For Articles not found in C, look K, S, Tch, or Z.

CAACATY, an Indian vil., state of, and 77 m. E. by S. the tn. of Corrientes, republic of La Plata. It lies in the Maloya marsh, and its houses are low, small, and each furnished with a gallery on cither side. Caacaty means 'stinking wood,' a name derived from the odour of a wood in the vicinity. Pop. 800.

CABABURI, a river, Brazil, a tributary of the Rio Negro, formed by the junction of the Mataraca and Baria, which unite at lat. $1^{\circ} 25^{\prime} \mathrm{N}$. ; lon. $66^{\circ} 15^{\prime} \mathrm{W}$. From this point, the river pursues a S . course for 120 m ., and falls into the Rio Negro at lat. $0^{\circ} 10^{\prime}$ S.; lon. $66^{\circ} 30^{\prime}$ W.

CABAGAN, a tn., isl. Luzon, prov. Cagayan; it is the second largest town in the prov., containing a pop. of 11,185 .

CABALABA, a river, Dutch Guiana, a tributary of the Corentyn, which it joins about lat. $5^{\circ} \mathrm{N}$. ; lon. $57^{\circ} 3^{\prime} \mathrm{W}$. It is about 100 yards wide at its mouth, but is broader 6 m . higher up. It is extremely winding in its course, and its water is of an ochreous colour. The banks exhibit all the luxuriance of a rich soil, and the wild Arnotto grows plentifully along its margin, with the splendid flowers of the Cassia Calyantha towering over them. About 17 m . above its junction with the Corentyn, a cascade occurs of 20 ft . in height, called,
by the Indians, Itáfe or Itaffa Falls. ITere blocks of a fine grained whitish sandstone are found, which are used by the Indians as grindstones, and are of excellent quality. The Cabalaba is frequently visited by the Maroons on fishing expeditions.-(Schomburgk.)

CABANES, a tn. Spain, Valencia, prov. of, and 14 m . N. by E. Castellon-de-la-Plana. The streets are well built and regular, and the town possesses a handsome parish church two schools, a townhall, and a prison. Domestic weaving, distilling brandy, expressing oil, and husbandry, employ the inhabitants. Some trade is carried on in grain, fruits, cattle, \&c. Pop. 1916.

CABAPUANA [called also, erroneously, Campuan, Reritigba, and Muribeca], a river, Brazil, prov. Espirito Santo. It rises in the N. slopes of the sierra de Pico, flows S.E., and falls into the Atlantic in lat. $21^{\circ} 25^{\prime} \mathrm{S}$., after a direct course of 80 m ., of which about 30 are navigable for canoes. A kind of bay is formed at its mouth, in which there is anchorage in 7 to 8 fathoms water.

CABECO de vide, a tn. and par. Portugal, prov. Alemtejo, dist. Portalegre, on a height, 27 m . N.N.W. Evora. It contains a church, two hospitals, and a poorhouse. Pop 1043.

CABELLO (Puerto), a considerable seaport tn. Venezuela, on the Caribbean Sea; lat. $10^{\circ} 39^{\prime} \mathrm{N} . ;$ lon. $68^{\circ} 8^{\prime} \mathrm{W}$. It has a good harbour, and a large trale, but is in a very unhealthy situation; and has a pop. of only 3000 .

CABELLOS da velia, a bay, Brazil, prov. Maranhão. It is about 8 m . square, and is interspersed with islands and sandbanks, rendering it difficnlt of access. It is intersected by lat. $1^{\circ} 40^{\prime} \mathrm{S}$.

CABENDA, or KAbinda, a seaport tn. Africa, Lower Guinea, cap. of the En-Goyo or Angoy territory, on the Atlantic, about 40 m . N. the mouth of the Zaire; lat. $5^{\circ} 33^{\prime} \mathrm{S}$. ; lon. $15^{\circ} 40^{\circ}$ E. ; on the side of a hill which is of a conical form, and clothed to the top with fine timber. The anchorage here is good, and there was long a considerable trade in slaves, ivory, wax, and honey. The territory around is fertile, and the whole district is justly regarded as the finest on this coast.

CABES, or KAnEs.-1, A tn. and port [ane. Tacapa], N. Africa, regeney, Tunis. The town stands at the foot of the mountain called Jebel Hamarra, in a low situation, r. bank, Wad-er-rif; lat. $33^{\circ} 45^{\prime} \mathrm{N}$.; lon. $10^{\circ} \mathrm{E}$. It has some export trade in dates and henna, the latter for dyeing.- 2 , The Gulf of Cabes [Syrtis Minor], at the head of which the town is situated, lies between the islands of Kerkenna and Jerba.

CABESA del nuer, a tu. Spain, Estremadura, prov. Badajoz, 20 m . E.S.E. Castuera, on the N. slope of the sierra Pedregoso. It is tolerably built, and possesses two parish chnrehes, several chapels, a townhall, two schools, a small damp prison, hospital, public storehouse, and three fountains. The inhabitants manufacture serge, baize, cloth, linen fabrics, tiles, and bricks; and carry on some trade in grain, cattle, and manufactured goods. Pup. 5395.

CAbEZAS de san Juan, a tn. Spain, Andalusia, prov. of, and 24 m . S. by W. Seville, on the slope of a hill. It has steep, irregular, and ill-paved streets; two small squares, a parish chureh, three chapels, two schools, a townhouse, small prison, asylum for destitute poor, and an extensive and substantial storehouse. Limited trade in wine, cattle, and agricultural produce. Pop. 2421.

CABEZON DE LA sAL, a tn. Spain, prov. of, and 24 m . W.S.W. Santander, situate in a plain. It has mean streets, two squares, a parish church, townhall, two sehools, prison, cemetery, and several fountains. The inhabitants are engaged in weaving, refining salt, and in husbandry. An annual fair is held on the 16 th of April. Pop. 2047. _-Several other small towns in Spain have the same name.

CABEZUELA, a tn. Spain, Estremadura, prov. Caceres, 16 m . N.E. Plasencia, 1. bank, Jerte. The streets are clean and paved, and the town possesses a church, townhouse, two schools, and a prison. The people are chiefly engaged in oilk-spinning, expressing oil, and tillage; they also trade in grain, wine, fruit, and cattle. Pop. 2328.

CAI3O no кorte, a cape, Brazilian Guiana; lat. $1^{\circ} 51^{\prime}$ N.; lon. $50^{\circ} 10^{\circ} \mathrm{W}$. It is the E. point of the marshy island of Coelhos, formed in the delta of the river Araguari.

CABO FRIO, an ancient tn. and port, Brazil, prov. of, and 80 m . E. Rio de Janeiro, and about 8 m . N.N.W. the cape of same name. It is composed of two parts; the most inconsiderable, called Passagem, lics on the mainland, while the principal part of the town lies on a kind of island. Between the two parts, which are united by a stone bridge, flows a canal, connectmg the neighbouring lake-Ararauna-with the sea. The strects are broad, but crooked; the prineipal part of the houses are built of earth; and the most note-worthy edifices are the townhall, with the prison underneath, a convent, a parish, and two other churches. Cabo Frio has a Latin school, one of philosophy, and several other schools; and its climate is unhealthy, agues being frequent. The bay and port are well protected. Coffee, sugar, and building
timber, are exported to Rio de Janeiro, whence, in return, are brought jerked beef, salt fish, and general stores. Pop. 3500 .-The care is in lat. $23^{\circ} 1^{\prime} 18^{\prime \prime}$ S.; lon. $41^{\circ} 58^{\prime} 15^{\prime \prime}$ E. (R.)

## CABOOL (Kingdom of). Sce Afgimanistan.

C $\triangle B O O L$, i prov. in the N.E. of Afghanistan, extending N. to S. from the Hindoo Koosh to Ghuznee; and W. to E. from Bamian to tho Khyber Mountains. It is about 200 m . in length, E. to W., and 150 in breadth; area, about 10,000 sq. m. Its principal towns are Cabool (the capital), Istalif, Ghuzuce, and Jelalabad.

CABOOL, Caubul, or Kabool, a city, Afghanistan, cap. of the above prov., at the W. extremity of a fine and spacious plain, on the 1 . bank of the Cabool river, immediatcly above its confluence with the Logurh, 6000 ft . above the sea; lat. $34^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $69^{\circ} 10^{\prime} \mathrm{E}$. The city is about 5 m . in circuit, and is defended merely by a line of weak ramparts, incapable of suceessfully resisting the attack of an enemy, although formerly surrounded by a strong wall of burnt bricks and mud. lts length, E. to W., is a little upwards of $2 \mathrm{~m} . ;$ and its breadth, at the widest part, about 1200 yards. The houses are but slightly and indifferently built, generally of mud and unburnt bricks. They are mostly two or three stories in height, with flat roofs, made of boards, coated with mud, and surrounded by a coarse framework of wood, and having the windows, notwithstanding the severity of the weather in winter, unglazed, and closed merely by lattices or shutters. The houses of the wealthier classes lave extensive courts and gardens, ornamented with fountains. Few of the houses of Cabool have chimneys, the centre of the room being held the proper place for the firc, although in some of the better dwellings there are especial winter apartments, heated by flues. The streets are, in general, extremely narrow, in many cases so contracted that two horsemen
fore the shops in the bazaars are a kind of counters, on which the shopman sits with his wares displayed. The manufactures of Cabool are trifling, and are confined chiefly to iron, leather, and the weaving of cotton, and shawls in imitation of Cashmere, the principal support of the town being derived from a considerable transit trade. The artisans, generally, are but indifferently skilled in their trades. In Cabool, the several descriptions of traders and artisans congregate, as is usual in Eastern cities, and together are found the shops of drapers, saddlers, braziers, ironmongers, armourers, bookbinders, venders of sloes, \&e. But besides the shopkeepers, or fixed tradesmen, there are vast numbers of itinerant traders who parade the bazaars, 'and it is probable,' says Masson, 'that the cries of this city equal in variety those of London. Many of them are identical, and the old clothes-man of the British metropolis is perfectly represented by the Moghat of Cabool.' Besides the bazaars, there are several market-places in the town. These are the cattle-market on the N. side of the river, where salcs of all sorts of animals are effected daily; the grain-markets, of which there are two, and the fruit-market, into which large quantities of the finest, the most beautiful, and the most various fruits are daily poured, to be afterwards dispersed amongst the retail venders of the city. There are likewise markets for wood and charcoal. Water is abundant, the S. part of the city being supplied by a canal from the river, and the other parts by numerous wells. Cabool is divided into districts, and these are subdivided into sections, each well enclosed and acecssible only by small gates, which are walled up in time of siege or intestine war, and thus each seetion becomes a fortress. On the S.E. side of the city, but connceted with it by streets and lanes, stands the Bala IIissar on the acclivity of a hill, a citadel and residence of the Sovereign. It is about half a mile long and a quarter broad, enclosed by lofty stone walls, strengthened at intervals by towers, and the whole surrounded by a broad stagnant moat. Within this circuit is a town containing nearly 1000 houses, and a good bazaar. The royal palace, which occupies the summit of the hill, has a sombre external appearance, but commands several beautiful views, particularly towards the N., where the distant snowy masses of the Hindoo Koosh terminate the prospect. It is substantially constructed, and contains several suites of apartments, on a commodious and magnificent seale. In the S. W. quarter of the town is a strongly fortified district, called Chandol, inhabited by Kuzzulbaushes, or Persians, to the number of 10,000 or 12,000 . Pushtoo is the vernacular dialect of Cabool, but is spoken, for the most part, by the lower classes only, the higher orders speaking Persian. The people of Cabool are generally tall, with dark black eyes and marked features. The women are said to have both beauty of face and elegance of form, but they are rarely seen abroad; and when they do appear out of doors, they are so enveloped in a peculiar dress called the boorku, that neither feature nor form are distinguishable. In fine weather the men live much abroad, bnt in winter all whe can afford to remain within doors do so during the whole season. As Cabool stands at an elevation of 6396 ft . above the sea, the winters are very severe, setting in at the beginning of October, and continuing to the end of March. In summer, again, the heat is considerable, the thermometer in the shade at noon being found to range, on different days in August, from $91^{\circ}$ to $75^{\circ}$. During the summer and autumnal months, but chiefly during the latter, the city is visited cvery evening by a khâk-bâd or whirlwind, somewhat impetuons, but of short duration.
Attached to the city are several places of burial, the larger without the walls, which, in general, much resemble European localities of similar character. In summer, from the influx of merchants, and people from all parts of the country, the city is densely inhabited, and the streets and bazaars crowded with strangers. The general appearance of Cabool is by no means particularly attractive; but this circumstance is in part compensated by the singular beauty of the surrounding scenery, composed of delightful gardens, orchards, and groves. In 1839, Cabool was taken possession of by a British army, which, in 1842, was eutirely anniliilated by the perfidy of the Afglans, one man only, out of 3849 soldiers and 12,000 camp followers, having escaped. It was, however, recaptured in the same year by the British, when the treachery of the Afghans was amply avenged. Pop. about 60,000 .

CABOURN, par. Eng. Lincoln; 2860 ac. Pop. 166.

CABRA, or Kabra, a tn., N.W. Africa, Soudan, 5 m . S. Timbuctoo, 1. bank, Niger ; lat. $17^{\circ} \mathrm{N}$. ; lon. $2^{\circ} 58^{\prime}$ W. Pop. about 1200.

CABRA [anc. Rgabrum], a tn. Spain, Andalusia, prov. of, and 29 m. S.S.E. Cordova, in a valley almost environed by mountains. It bas wide, and, with few exceptions, clean and paved strcets; a large, irregular, but imposing-looking square, with four smaller ones; two large and handsome parish churches, containing tine monuments and pictures; and numerous conventual churches; a richly endowed college; Latin, normal, and many other schools; an hospital, poorhouse, and orphan asylum, united in a Dominican convent ; a theatre, town and court houses, prison, and, on the W ., overlooking all, an ancient castle and palace of the Dukes of Sessa, within whose ruined walls is an extensive cemetery. Manufactures :-linen fabrics, soap, hats, cloth, earthenware, hardware, lime, and gypsum. There are also brandy distilleries, dyeworks, tanneries, stone and marble works, and oil-mills. Trade:-iron, timber, manufactured goods, rice, paper, silk, and potatoes. An annual fair is held for cattle, grain, and general merchandise. Pop. 9576.-(Madoz.)

CABRA del santo cristo, a tn. Spain, Andalusia, prov. of, and 28 m . S.E. Jaen, on the E. slope of the sierra Cruzada. It possesses a square, several wide, straight, well-paved streets; a parish church, townlall, two sehools, a prison, publie storehouse, and cemetery. The inhabitants are chictly engaged in domestic weaving, expressing oil, and lusbandry. Pop. 2000.

CABRACH, par. Scot. Banff. Pop. 827.
CABRAS, a vil., isl. Sardinia, prov. Busachi, 2 m. W.N.W. Oristano, on a lagoon which furnishes the best fish in the island. Corn, wine, and excellent raisins are produced in the neighbourhood. Pop. 2800.

CABRERA, an isl. Greece. See Kabrera.
CABRERA, an isl. belonging to Spain, in the Mediterrancan, one of the Balearic group, 10 m . S.W. by S. Cape Salinas, in Majorea; lat. $39^{\circ} 7^{\prime} 30^{\prime \prime}$ N. ; lon. $3^{\circ}$ E.; 33 m m. in length, S.W. to N.E., and $2 \frac{3}{4}$ in breadth. It is mountairous and rugged; the hills are covered with pine, box, \&c. The only buildings are the old castle, inhabited by a governor, a captain, surgeon, and 14 men, detached from Palma as a garrison, with a few household scrvants.

CABRIEL, a river, Spain, which rises near the sources of the Tagus and the Jucar, in the sierra Molina, New Castile, and pursuing a circuitous S. course of about 130 m .; during which the only tribntary, of any consequence, which it receives, is the Moya, on its l. bank; it joins l. bank, Jucar, near the borders of Valencia.

## Cabul. Sce Cabool.

CAÇAPEBA, a tn. Brazil, prov. São Pedro, 70 m . S.W. Pardo ; with a church and school. The inhabitants are chiefly Indians, engaged in rearing cattle, which they sell in the province of São Paulo. Pop., tn. and dist., 3000 .

CACCAMO, atn. Sicily, dist. Termini, 18 m . W. Palermo. Pop. 6394.

CACCAVONE, a tn. Naples, prov. Sannio, 3 m . S.W. Agnone. It has three churehes, and a house of refuge. Good wine is produced in the neighbourhood. Pop. 2247.

CACCURI, a vil. Naples, prov. Principato Ultra II., dist. of, and 20 m . N.W. Cotrone. It stands on a sandy knoll, and contains a landsome collegiate, and two other churches, a Dominican convent, and two monts-de-piété. Rock-salt is mined in the neighbourhood. Pop. 935 .

CACERES, a prov. Spain, Estremadura, cap. Caceres, bounded, N. by prov. Salamanca; E. by Avila, Toledo, and Ciudad Real ; S. by Badajoz; and W. by the kingdom of Portugal ; area, $10,917 \mathrm{sq} . \mathrm{m}$. It belongs wholly to the basin of the Tagus; which river, intersecting the prov. E. to W., divides it into two nearly equal portions, both mountainous, but that to the N . the more rugged of the two. Slate and granite are the prevailing formations; and silver, copper, iron, and lead, appear to exist, but are mueh neglected. The mountains yield pine, oak, beech, chestnut, and other usefnl timbers; and the extensive and well-watered plains and valleys are naturally fertile, though little attended to by the agriculturist. The inhabitants, comparatively few in number, are chiefly engaged in rearing merino sheep and swine, for which the rich pastures, and the plentiful supply of mast, renders the province well-adapted. Honey and wax are gathered to a considerable extent, though bee-culture is little
pursued, the produce being mainly obtained from wild becs. Manufaetures are confined to the principal towns; and the only trade is in wool and bacon ; much retardd by miserable roads. Education is at a low ebb; even the schools in the towns being inefficiently conducted. The people are honest, kind-hearted, and, when roused, energetic and persevering. Cortez, and the two Pizarros, were natives of this province. Pop. 264,988.-(Madoz.)

CACERES.- 1, A tn. [anc. Castra-Ccecilia], Spain, Estremadura, eap. of above prov., 24 m . W. by N. Truxillo, on elevated ground. It is divided into two parts, called the old and the new towns. The old town occupics the top of the hill, and is surrounded by a strong wall, defended by towers, and laving five gates. The new town is built round the old, and forms the larger and more important portion of the two. The houses are, in general, tolerably well constructed; the streets steep, and, with few exceptions, narrow, and ill paved. Its principal square is lined with good houses, shops, and public buildings; and in the centre is a handsome paseo or promenade. There are seven other squares, but all small. The public edifices are four parish clurches, a townheuse, session house, four hospitals, two prisons, a theatre, university, normal, and several other schools; besides which, there are a Jesuits' college, of great celebrity; some convents, one of which is now used as a barrack; an episcopal palace, one belonging to the counts of Torre Mayoralgo; an alcazar or castle of the ancient rulers of Caceres; and the largest bull-ring in Spain. Linen, eloth, baize, hats, leather, ropes, soap, earthenware, wine, and oil, are manufactured; many of the inhabitants are also engaged in dyeing, washing wool, tillage, and as herdsmen. Considerable trade is carried on in cattle, pigs, delicious bacon, merino-wool, manufactured goods, \&e. An annual cattle-fair is held in April. Pop. 12,051.-(Madoz.) -2, Caceres (Nueva), a tn. Philippines, isl. Luzon, cap. of prov. S. Camarines ; lat. $13^{\circ} 40^{\circ}$ N. ; lon. $123^{\circ} 22^{\prime} 23^{\prime \prime}$ E. It lies on the river Naga, or Santa Cruz, which flows cireuitously N., to the Bay of San Miguel, distant from Caceres about 10 m . It is the seat of the bishop of the province, is regularly built, and the governor's house is elegant. Pop. 12,000.(Mallat.)

CACHAO, Ke-Crio, or Kaciao, a large city, Anam, cap. Tonquin, r. bank, Song-ca, 90 m . W. the Gulf of Tonquin, 335 mm . N.N.W. Hue; lat. $21^{\circ} \mathrm{N}$. ; lon. $105^{\circ} 33^{\prime}$ E. The principal streets are broad, and paved with brick or pebbles; in the centre an unpaved passage is left for the elephants and beasts of burden. Most of the houses are of mud or wood; some of brick and stone; all are covered with leaves, straw, or reeds. The ancient royal palace was of vast extent, as appears from its ruins. The trade is considerable; and there were here, formerly, French, Dutch, and English faetories. The exports are gold, fine silk stuffs, and lacquered wares, the most beautiful of the E.; imports:cloths, chintzes, arms, \&e. The Song ea or Tonquin river, was formerly much frequented by European navigators, and was accessible to ships of 500 tons; but now, the mouth is so much sanded up, that vessels of more than 200 tons cannot enter it. Pop. 100,000.

CaCHAO, or Cacheo, a tn. Portuguese Africa, in Senegambia, on the river Cachao or St. Domingo, a few miles above its estuary ; lat. $12^{\circ} 13^{\prime} \mathrm{N}$. ; lon. $16^{\circ} 17^{\prime} \mathrm{W}$. It is a military post, a fortified port, and carries on trade in gold-dust, wax, and ivory. It is the principal Portuguese establishment in Senegambia, and is under the government of the Cape de Verde Islands. Pop. 500.-The river Cachao is one of the mouths of the Jcba or Rio Grande, but receives also, through several small branches, part of the waters of the Casamanza.

CACHAR, Katschar [anc. Haïrumbo], a territory, India beyond the Ganges; bounded, N. by the Brahmapootra and by Assam, E. by Munipoor, S. by Silhet and Tiperah, and W. by the prineipality of Jynteah, between lat. $24^{\circ}$ and $27^{\circ} \mathrm{N}$., and lon. $92^{\circ}$ and $94^{\circ}$ E.; length, N. to S., 140 m .; breadth, E. to W., 100 m. ; area, abont $6564 \mathrm{sq} . \mathrm{m}$. It comprehends two divisions-Cachar Proper, and Dharmapoor; the former oceupying the S ., and the latter the N. part. The country in general is mounitainous, and covered with forest trees, bamboos, and jungle, which afford shelter to great numbers of elephants, buffalocs, wild decr, \&c. There is a great want of practicable roads; but this want is to a considerable degree
compensated by the river Barak, which affords good internal communication during the greater part of the year. From June to November large tracts of the country are inundated, rendering it tedious and difficult to pass from one plaee to another. The mountain-streams are serviceable for floating down timber, ratans, bamboos, \&c. During the S. W. monsoon, which begins in February or March, rain is frequent and heavy, causing a rapid and vigorous vegetation. The climate is unhealthy, owing, in a great measure, to the large surface of stagnant water giving rise to the jungle fever, and to ague and dysentery. The soil is extremely fertile; the chief products are rice and other grain, sugar, and cotton. A considerable revenue is derived from salt pits, the produce of which not only satisfies the home consumption, but is to some extent exported. The other exports consist of coarse silk, wax, cotton, timber, and iron ore. The inlabitants are robust, of fairer complexion than the liengalese, and resembling the Chinese in cast of countenance. The original Hairumbian dialect is now nearly extinct ; the language and written character of Bengal having taken its place.

In 1774, Cachar was invaded by the Bnrmese army, whiel. however, was destroyed by the jungle fever; but a second expedition reduced the Rajah to submission, and foreed him to become a tributary to the King of Ava. In 1810, the Bur mese placed Marjeet, the Rajah of Mumipoor, on the throne, and for five years a civil war for pre-eminence between him and his brothers, Choorjeet and Gumbheer Singh, harassed the province. The latter laving been deposed in 1824, a British detachment entered Cachar, and expelled the Burmese, who, by the treaty of Yandaboo, in 1826, gave up all claims in favour of the legitimate Rajah; but on his death, in 1830, without heirs, it became, in 1832, a constituent part of the British territory. Pop. 70,000 .

CACIIIMAYO, a river, Bolivia, an affluent of the Pilcomayo; its sources are in dist. Chayanta, about 80 m. N.W. Chuquisaca, in lat. $19^{\circ} \mathrm{S}$.; lon. $67^{\circ} 50^{\prime} \mathrm{W}$. ; whence, after making a bend N.E., it flows in a S.S.E. direction, joins the Pilcomayo in lat. $21^{\circ} 10^{\prime} \mathrm{S}$.; lon. $63^{\circ} 50^{\prime} \mathrm{W}$.; total length of course, about 340 m .

CACHOEIRA, numerous tns., vils., pars., \&c., Brazil : of which the only two important ones are-1, A large commercial city, prov. of, and 62 m . N.W. Bahia, on the Paraguassu, which divides the city inte twe unequal parts. The larger is traversed by two small streams, the Talheiro and Pitanga, across which there are bridges, and which propel several sugar-mills. It has a municipal hall and prison, three churches, a convent of bare-foot Carmelites, and an ornamental fountain. The smaller part of the eity, called São Felix, is on the r. bank of the river, which is liere crossed by a bridge. It has two churches, and is inhabited by the poorer classes. Cachoeira is the depôt for the products of a considerable tract round abont, and the market where the inhabitants purchase general stores, implements, \&c. The principal articles of export are coffce and tobacco. This city is much exposed to inundations; one which took plaee in December 1839, destroyed a great many of the honses. Pop. $15,000 .-2$, A small tn., prov. São Pedro, 57 m . N.W. Pardo, 1. bank, Jacny. Its streets are broad, straight, and of an agrecable aspect. It lias a chureh and school, a municipal hall, and prison. The river is navigable for canoes. Cattle-rearing is the principal oceupation.

CACONDA (New), a tn. Africa, Bengucla, belonging to the Portugucse possessions, on the Cotape, 170 m . S.E. St Philip-de-Benguela. It is situated in a hilly distriet, and used to be regarded as one of the healthiest Portuguese establishments in Guinea. About 50 m . N.W. stands old Caconda on the Caporare.

CaCongo, or Mallemba, a kingdom, Africa, in Lower Guinca, to the S. of Loango. A small part of it lics along the S. Atlantic, in lat. $5^{\circ}$ S., and it extends S.E. as far as the river Bell. It widens considerably towards the interior, but its extent is not well known. The surface is generally flat, and the soil fertile. The interior gradually becomes elevated, and the climate is said to be hcalthy. The chicf town is Kinguele. The other towns of any note are Cacongo, and Mallemba, which is on the coast, and was once a great slave market.

CADAMSTOWN, par. Irel. Kildare; 5033 ac . Pop. 1180.

CADAQUES, a tn. and port, Spain, Catalonia, prov. of, and 30 m . N.E. Gerona, extreme E. of the province. It is tolerably well built, and has a church, townhall, three schools, a prison, and public fountain. Manufactures :-brandy, soap, paint, potash, wine, and oil. The trade of the port is unimportant. Pop. 2787.-(Madoz.)

CADBURY, three pars. Eug.:-1, par. Deven; 2620 ac. Pop. 251.-2, (North Cadbury), par. Somerset; 2630 ac. Pop. 254.-3, (South Cadbury), a small vil. and par. Somerset. In the neighbourhood of the village are the remains of one of the strongest fortifications in England, supposed to be a work of the Romans. Area of par. 800 ac . Pop. 254.

CADDER, or Calder, a par. Scotland, co. Lanark, N. of Glasgow; 14 m . in length, and about 4 in breadth. Within a few yards S. of the mansion-house of Robroyston, in this parish, stood the house in which the celebrated Scotch patriot, Sir William Wallace, is said to have been betrayed to the English, on September 11, 1303. No vestige of the house now remains. Pop. (1841), 4425.

CADDINGTON, par. Eng. Bedford; 4500 ac. Pop. 1747.
CADEBY, par. Eng. Leicester; 2130 ac . Pop. 387.
CADELEIGH, par. Eng. Devon; 2020 ac. Pop. 403.
CADENET [anc.Cadenetum], a tn. France, dep. Vaucluse, 31 m . E.S.E. Avignon, in a fertile district, r. bank, Durance, supposed, from the antiquities found in the vicinity, to have been a Roman station. The baptismal fonts of the parish church are amongst the finest and most ancient of the kind in the kingdom, and the church itself is a remarkable edifice. Cadenet has silk-mills, and some trade in silk. Pop. 2195.

CADEREITA, a small tn . Mexico, cap. dist. of same name, prov. or state of, and $74 \frac{1}{2} \mathrm{~m}$. N. the city of Mexico, on a small island formed by the Silla and the Santa Lucia. It is agreeably situated; well supplied with water from a distance, by a fine aqueduct; has a good parish church, and a Franciscan convent. The district contains silver mines, grows a great deal of wheat, maize, French beans, and pulse, and is famous for its breed of horses and mules. Pop. 3000.

CADER-IDRIS, a mountain, N. Wales, co. Merioneth, about $3 \frac{1}{2} \mathrm{~m}$. S. Dolgelly; highest peak, 2914 ft . above the sea.

CADEROUSSE, a tn. France, dep. Vaucluse, 3 m . S.W. Orange, 1. bank, Rhone. It occupies the site of the ancient Vindale, where the Romans bad a temple to Jupiter Ammon. It has manufactures of serge, silk-mills, and some trade in silk, grain, wine, \&c. Madder is extensively cultivated in the environs. Pop. 1809.

CADIAR, a vil. Spain, Andalusia, prov. of, and 45 m . S.E. Granada, at the W. base of the sierra Nevada, I. bank, Cadiar. The streets are well built, and the town possesses two squares, a parish church of Doric architecture, endowed school, chapter-house, prison, and cemetery. The inhabitants are engaged in agriculture, grinding corn, expressing oil, and distilling brandy. Pop. 2126.

CADIERE (La), a tu. France, dep. Var, 10 m. N.W. Toulon; once a place of great strength, being encircled by three walls, and defended by a large castle flanked with towers, but its fortifications were demolished at the commencement of the 18th century. It has some trade in oliveoil, walnnts, figs, and capers, the last two of excellent quality. Pop. 1240.

CADILLAC, a tn. France, dep. Gironde, 18 m. S.E. Bordeaux, in a fertile plain, r. bank, Garonne. It is remarkable chiefly for the old castle of the Dukes of Epernon, which was long regarded as second only to the royal palaces, and is now used as a fenale penitentiary. There is here a large prison, in which from 200 to 300 prisoners are asually detained. The chief manufactures are wine-casks and agricultural implements. The trade is considerable, Cadillac being the entrepot for the produce, and particularly for the wincs of the district. Pop. 1164.

Vol. 1.

CADIZ, a prov. Spain, Andalusia, one of the three pro vinces into which the ancient kingdom of Seville has been divided. It lies between lat. $36^{\circ} 2^{\prime}$ and $37^{\circ} \mathrm{N}$. ; and lon. $4^{\circ} 7^{\prime}$ and $6^{\circ} 22^{\prime} \mathrm{W}$.; area, 3905 sq . n . ; bounded, N . bs provs. Huelva and Seville, E. by Malaga, S. and W. by the strait of Gibraltar and the Atlantic. The mountains of Ronda traverse a part of it in the E., and ramify in different directions towards the sea. The principal rivers which water and fertilize the province are the Guadalete and the Guadiaro, and their affluents. Both these streams rise N. of Ronda, the former falling into the Atlantic in the Bay of Cadiz, and the latter into the Mediterrancan N. of Gibraltar. Timber of various kinds, lime, sulphur, building-stone, and grindstones are obtained from the hilly districts, which also depasture numerous herds of cattle, flocks of sheep, and some horses. The warm and fertile, and in many places well-cultivated valleys, yield the usual cereal crops and legumes. olives, fruits of different descriptions, and excellent grapes. from which are made the famed sherry wines of commerce. Formerly the breeding of horses constituted the principal riches of the proviuce, but this branch of business, as well as commerce gencrally, has greatly fallen off; the latter being limited chiefly to the wines of Jerez and Rota, with legumes, a small quantity of oil, spirits, and home-manufactured goods, chiefly woollens, and salt. Besides those employed in agriculture, a small portion of the inhabitants are engaged in various manufactures, which are carried on to a limited extent; and others of them are engaged in fishing tunnies and sardines, and in preparing salt, which is of good colour and quality. Education is much neglected, only about 20 in 100 being able to read and write; but as to crime, Cadiz contrasts favourably with many of the other provinces of Spain. There are many traces in this province of the Phenician colonists; and here, in 711, King Rodrigo Iost his life and throne in a battle, the loss of which opened the ports of the country to the Arabs. Off Cape Trafalgar, also in this province, Nelson gained his famous victory over the combined French and Spanish fleets. Pop. 358,446.

CADIZ [anc. Gades], a city and scaport, Spain, cap. of above prov., in the Isle of Leon, off the S.W. coast of Andalusia ; lat. (obscrvatory) $36^{\circ} 32^{\prime} \mathrm{N}$. ; lon. $6^{\circ} 17^{\prime} 15^{\prime \prime} \mathrm{W}$. (r.) ; 60 m. N.W. Gibraltar, and 64 S. Seville. It stands on a narrow tongue of land which projects about 5 m . N.N.W. from the isle; it is surrounded on three sides by water, and is strongly defended both by nature and art. The entrance to its capacious bay is completely commanded by the forts St. Sebastian, Santa Catalina, and Metagorda; while ou the

other sides, the beach is so precipitous, or so surrounded by sandbanks and sunken reefs, that large vessels cannot approach within three fourths of a mile of the city. Hence a hostile attack by sea may be regarded as almost hopeless. On the land side the only access is along a belt of land, in some places not more than 200 yards wide, and bristling with cannon. The city itself, which is nearly in the form of a square $1 \frac{1}{2} \mathrm{~m}$. each way, is surrounded by walls of great height and thickness, flanked with towers and bastions, and is entered 69
by five gates. It is divided into the four quarters of Santa Cruz, Kosario, San Antonio, and San Lorenzo, and is built with so much regularity and uniformity, that a stranger, from want of distinguishing features, is very apt to lose his way. The houses are solidly built of frecstone, and are generally of three, sometimes of four stories. They have flat roofs, with gutters to carry away, or rather to collect the water in reservoirs prepared for it, as water is scarce, and the inhabitants depend on the rain for their principal supply. The houses in general have handsome fronts, are well arranged internally, and are often surmounted by lofty towers, open to the sea brecze, and commanding fine views of the bay. The strects are somewhat narrow, but are remarkably well paved, and are uniformly provided with foot-pavement. The finest streets are the Ancha
lomeo; several superior sebools, also in connection with the ahove university; and a school or academy of the fine arts. Besides the Alameda, which is well planted, though not laid out with much taste, the ramparts afford agrecable promenades, commanding a beantiful prospeet of the bay and country beyond, and are much frequented in the evenings by the inlabitants, who repair thither to enjoy the luxury of the cool sea breeze. But the absence of trees, to the growth of which the sea air is unfavourable, is greatly felt. The bay, which is formed by the peninsula and the mainland, is spacious, and affords good anchorage. It is divided into the outer and inner bays. 'The former is exposed to a heavy and dangerous sea during the prevalence of N.W. winds; the inner is protected by an extensive mole, but is accessible to small vessels only. The larger ships are obliged to anchor at a distance of three-quarters of a mile from the shore, where there is from 5 to 7 fathoms water. Opposite to Cadiz is the town of Santa Maria, the principal depot of the wines of Xeres. La caracca, or the royal dockyard, is situated at the bottom of the inner bay, about 6 m . from the city, and is defended by the cross-fire of two forts. It contains three spacious basins, and 12 docks or slips; but the whole establishment is now going to decay.

The trade of Cadiz is greatly less than it was at one time. The principal part of what remains is with England, and the ehicf article exported is sherry wine. This state of matters is attributed to the want of a commercial treaty with England, and to the enormous prohibitory dutics on imports, which have given rise to an extensive system of smuggling, subjecting the Government to a great expense in maintaining the [spacious], and San Raphael. The public squares are few, and some of them so small as scarcely to deserve the name. The finest-not so much from its extent, as the elegance of its buildings-is San Autonio, nearly a perfect square, and the great place of resort in mild wintry days, and moderate evenings in spring. It is considerably surpassed in extent by the Plaza de Abastos, or, as it has been named, Plaza de la Libertad, which was onty commenced in 1837 . The Plaza de San Juan de Dios, now called Plaza de Isabella II., is of considerable extent, but irregular in its shape. It contains several handsome buildings, particularly the consistory, now chiefly used for municipal and public purposes. Its front, towards the square, consists of a portico, above which rises a row of Ionic columns as high as the roof, which is surmounted by a tower, in three divisions-the first square, surrounded by a marble balustrade, the second octagonal, and the third circular, supporting a cupola. One of the most conspicuous objects in Cadiz is the lighthouse of San Sebastian, 172 ft . above the ground, and visible 20 m . off at sea. The other principal edifices are-the old cathedral, now used merely as the parish church of Santa Cruz, and though of small size, one of the most regular buildings in Cadiz; the new cathedral, still unfinished, of larger dimensions than the other, though small for a cathedral, built wholly of white marble, except the bases of the pillars, which are variegated. and surmounted by a dome, the interior of which is of great beauty; three other churches, several nunneries and convents, particularly the convent of the Capuchins, which is said to possess two of Murillo's finest pietures ; and two theatres, one capable of containing 1400 persons. Among benevolent establishments are the Casa de Miscricordia, a magnificent edifice, and a well-arranged and richly endowed establishment, used partly as an ordinary hospital and ahns-house, and partly as a lunatic asylum; the female hospital, next in importance to the Casa; the foundling hospital, and the hospital of San Juan de Dios, or general infirmary, which annually receives about 700 patients; and the house of refuge of San Servando and San German, where destitute children or young criminals are instructed and reclaimed. The principal educational establishments are the Cadiz medical school, in counection with the university of Seville; the seminary of San Barto-
preventive service, while it derives no benefit from the importation of articles of foreign manufacture.

The following Table exhibits the number, tonnage, and value of cargoes of vessels which entered and cleared at the Port of Cadiz, in the years 1841 to 1846:-

|  | $\begin{aligned} & \text { Entered. } \\ & \text { Vescels. } \end{aligned}$ | $\begin{aligned} & \text { Vatue } \\ & \text { of carzocs. } \end{aligned}$ | Vesselseared. Tons. | $\begin{gathered} \text { Value } \\ \text { of cargoes. } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: |
| 1841. | .631.....106,583. | £506,6×0 | 5i8......101,156.. | £1,124,393 |
| 1842. | .646.....120,020. | 575,8.31 | 585......109,270.. | 952,914 |
| 1813. | $635 \ldots . .120,485$ | 525,872 | 556.....107,56?.. | 1,018,842 |
| 1814. | 809 .. . 155,749 | 654,469 | $705 . . . .143,149$. | 1,303,564 |
| 1815 | 734 ....134,363. | 562,786 | 681......132,635. | 1,121,807 |
| 1846. | $678 \ldots . . .140495$. | 632,396 | 590......124,766.. | 973416 |

In the year 1847, the total exports of wine were 31,602 butts, being a decrease, as compared with 1846 , of 1094 butts. Salt is another chief article of export. Of this commodity considerable quantities are exported from Cadiz, in British vessels, to the Newfoundland fishery, and also to the river Plata, and the Brazils ; and large quantities are also shipped on board Russian, Swedish, and Norwegian vessels. The chief imports are staves and tobacco, from America; hides, cocoa, indigo, cochineal, dyewoods, sugar, and other colonial produce, from Cuba, Pnerto Rico, the Philippine Islands, Mexico, and Columbia; cod-fizh from Newfoundland, and coals from England.

Cadiz has been often besieged. It was taken in 1596 by Lord Essex, and again attacked by the English in 1628. In 1656 it was blockaded by Blake, who captured two rich galleons, and sunk cight others. Another English expedition was undertaken against it in 1702, but failed. In 1809 the Cortes took refuge here; on that occasion the town was blockated by the French till 1812. In 1823 it surrendered to the French under the Duc d'Angoulême. Pop. 53,920.(Murray's IIandbook of Spain; Willkomm's Zwei Jahre in Spanien; Maloz, Jiccio de España.)

CADNEY, par. Eng. Lincoln; 5100 ac. Pop. 438.
CADORE, or Pieve-di-Cadore, a tn. Austrian Italy, gov. Venice, 22 m. N.N.E. Belluno, r. bank, Piave, among high mountains. The inhabitants are chiefly employed in agriculture, cattle-rearing, and mining. It has some trade in wood and iron. In the vicinity, in 1797, the Austrians do-
feated the French; but the place derives its chief interest from being the birthplace of Titian, who was born here in 1477. Pop. 1600.

CADOXTON, two pars. Wales, Glamorgan :-1, 32,000 ac. Pop. 5794.-2, (Juxta Barry), 900 ac. Pop. 242.

CAEN [anc. Cadomus, Cadetum], a tn. France, cap. dep. Calvados (Normandy), $123 \mathrm{~m} . \mathrm{N}$. W. Paris, in a valley, between two extensive meadows, at the confluence of the Orne with the Odon, and 10 m . from the embouchure of the former; lat. $49^{\circ} 11^{\prime} 12^{\prime \prime} \mathrm{N} . ;$ lon. $0^{\circ} 21^{\prime} \mathrm{W}$. (1.) The streets are broad, regular, and clean; two of them cross each other at right angles, and extend nearly to the extremities of the town, which is also traversed by a canal supplied by the Odon, and employed to drive the machinery of ntmerous manufactories. The houses are generally well built, of an excellent freestone which is extensively quarried in the vicinity, and imported into England under the name of Caen-stone. There are four squares, the principal of which, the Place Royal, is ornamented with a statue of Louis XIV. The public walks are beautiful, especially the cours, a splendid avenue about a mile in length, lined with elm-trees. Some fine promenades also extend along the banks of the new canal. It has numerous fine churches and other buildings, of which the following may be noticed:the cathedral of St. Etienne, one of the finest in Normandy; the monastic buildings of the Abbaye aux hommes, a large plain edifice, now occtupied as the royal college, and containing the tomb of William the Conqueror; the church of the Trinity, in the Norman style; the Abbayc aux Dames, founded by Matilda, wife of William the Conqueror, and converted into an hospital in 1828 ; the church of St. Nicholas, now con-

CAEN, APsIS OF THE CHIRCII OF ST. PIEHRE, \& From France 3onumentale et Pittoresque.
verted into a shot-manufactory, and perhaps the only one in Normandy which presents the French style of the 11 th century in all its purity; no mixture of ornament, and no modern additions having defaced the original. One of the finest clurches
in Caen is that of St. Pierre, whose tower, terminated by a spire, is exceedingly elegant, and, as well as part of the nave, and the three porches, was built in 1308 . The great porch, finished in 1384, is irregular, but picturesque; and the apsis is justly regarded as a work of the greatest taste and elegance, and as one of the most curious and the happiest efforts of the revival of the arts in France. Five centuries have not in the smallest injured this beautiful specimen of architecture Other buildings and institutions are-the hôtel of the prefecture, a handsome building in the Italian style; the Palais de Justicc, the remains of the castle built by William the Con queror; the Hôtel-Dieu; the Hôtel-Valois, where the exchange and chamber of commerce are held; the public library, with 47,000 volumes ; museum, cabinet of natural history, botanical garden, with 3000 species of plants; custom-housc, house of correction, \&c. Caen is the seat of the royal court for the departments of Calvados, la Manche, and l'Orne; and has a court of first resort, and of commerce, an academy of arts and sciences, and an academie universitarie (the representa tive of the university founded by Henry VI. of England, in 1431, and re-modelled at the Revolution), a secondary school of medicine, school of hydrography, societies of medicine, agriculture, and commerce ; deaf and dumb institution, norma school, school of design, and numerous other institutions for the promotion of the arts, sciences, and literature. Indeed, the advantages possessed by Caen, in respect of cducation, \&c. have induced many English families to take up their residence in it.
The manufactures of Caen are considerable, and consist of hats, lace, eloth, fiannels, linen, cotton goods, druggets, Angora and thread gloves, straw hats, shot, porcelain, earthenware, paper-hangings, cutlery, oils, \&c.; there are also some cotton nills, dyeworks, breweries, tanneries, and establishments for bleaching wax; some shipbuilding is also carried on. From time inmemorial, the town has been celebrated for its manufacture of Angora and woollen gloves, with which it supplies most of the country districts of France. In this manufacture, indeed, Caen has no rival ; and immense numbers of Angora rabbits are reared in the neighbourhood, for the purpose of being plucked, which operation they undergo once a year The fur thus obtained is used without dye, and the gloves are cither gray or white. There is a considerable trade in grain, wine, brandy, cider, clover seed, hemp, cattle, horses of good quality, poultry, butter, fish, salt provisions, iron, steel, hardware, grindstones, freestone, and paving stones. Six fairs are held annually, and are well attended.

The port formed by the river is of little importance, on account of the dangers attending the entrance to the Orne, obstructed as it is by sandbanks. At high water, however, vessels of 150 or 200 tons can reach the town. Nothing certain is known of the origin of Caen. In 912, when Neustria was ceded to the Normans, it was a place of importance, and increased rapidly under the Norman Dukes. William the Conqueror, and his wife Matilda, adorned it with many edifices. It became the capital of Lower Normandy-a distinction which more than once exposed it to the miscries of war. In 1346, it was taken and pillaged by Edward III. of England. It was again taken by the English in 1417, and wrested from them in 1450 by Dunois, who captured the Duke of Somerset and 4000 troops, who had retreated to the castle. Malherbe, commonly regarded as the father of French poetry, Huet, the celebrated bishop of Avranches, and Auber, the composer, were born in Caen. Pop. 38,267.

CAENBY, par. Eng. Lincoln; 1760 ac. Pop. 185.
CAERHUN, par., N. Wales, Caernarvon. Pop. 1257.
CAERLAVEROCK, a par. Scotland, co. Dumfries, about 6 m . in length, and nowhere exceeding 2 in breadth. It con tains the ancient castle of Caerlaverock, a magnificent ruin, celebrated in history, and famous for its warlike associations, and for the many dceds of violence and bloodshed it has wit nessed. Pop. 1297.

CAERLEON, an anc. tn. England, co. of, and 18 m S.W. Monmouth, on a gentle eminence, r. bank, Usk, which is here crossed by a handsome stone bridge. It consists principally of two ill-paved streets, houses irregularly built, old and dilapidated; and has a chapel of ease, and chapels for Baptists, Independents, and Wesleyan Methodists; a free school, and an alms-house for aged widows. In the neighbourhood are extensive iron and tin works. Caerleon was
at one time the metropolis of Wales, and a place of great wealth and importance, being reckoned the third city in Britain; it is now rapidly hastening to decay, and presents but few traces of its ancient grandeur. It was also a prineipal and permanent Roman station, as many interesting remains sufficiently prove. These consist of a part of a wall by which the town was surrounded, and the site of an amphitheatre; fragments of Roman armour, stone coffins, coins, and ringe, have also been found. Pop. 1174.

CAERMARTIIEN, or CARMarthen, a maritime co., S. Wales, and the largest of all the Welsh eounties, having Cardigan on the N., the Bristol Chamel and part of Glamorgan on the S., Pembroke on the W., and Brecknoek on the E.; extreme length, 53 in ; breadth, 35 ; area, $634,360 \mathrm{ac}$. lt is of a mountainous character generally, but not so rugged as some of the other Welsh counties, neither are the mountains so high. Some of the vales are beautiful and extensive, particularly that of Towy, which is 30 miles in length. The prineipal river is the Tywi or Towy, which rises in Cardiganshire. This river and the Tave are the only navigable streams in the county. A large part of the county is waste; but the valleys are fertile, and numerous herds of small black cattle are reared on the hills. Agriculture, however, is extremely backward, and drainage altogether neglected. The mineral products of the county are iron, lead, coal, and limestone. There are no manufactures of any consequence. The county returns two members to the Honse of Commons; constitueney (1850), 4969. Pop. 110,632.

CAERMARTHEN, or Carmarthen [Welsh, Caer Fryddym], a tn., S. Wales, eap. of above co., 9 m . from Caermarthen Bay, Bristol Chamnel, and 14 m . N.W. Llanelly, on a moderate eminelice, r. bank, Towy; over which there is a spacious bridge of seven arches. It has nine principal streets, tolerably straight, well paved, and lighted with gas; houses well built, some of stone, and some of brick. The principal buildings are-the county-hall; St. Peter's Chureh, an aneient edifiee, containing numerous antique and curious monuments; St. David's Chureh, a plain substantial structure ; a monument to Sir Thomas Picton, and a well-execnted statue of General Nott, a native of the place. Besides the two Established churches, there are two Independent ehapels, two Baptist, two Wesleyan, one Unitarian, and two Calvinistie Methodist. Of public and private sehools, about 20 in number, the most prominent are the S . Wales training college, Sir Thomas Powell's free grammar-school, Queen Elizabeth's grammarschool, \&c. There are also two infirmaries, and a literary and seientific institution. The shipping of the port is considerable, and it has recently deelared an independent customs station. Tin-plate and iron works are carried on to some extent, but the bulk of the inhabitants are employed in such handicraft oceupations as are likely to be most in request in an agricultural distriet. With Llanelly, it returns a member to the House of Commons; constituency (1850), 718. Pop. 9526.-(Local Correspondent.)

CAERNARVON, or Carnarvon, a maritime co., N. Wales, laving Caernarvon Bay, W.; and co. Denbigh, E.; the island of Anglesey, and the Irish Sca, N.; and Cardigan Bay, S. Its extreme length, S.W. to N.E., is about 52 m. ; extreme breadth, 20 m ., although the greater portion of it does not exceed 7 or 8 m . on an average ; area, $348,160 \mathrm{ac}$. This connty is traversed throughout its whole length by lofty mountairs, including the Snowdon range, whose highest peak is 3557 ft . above the sea. There are other summits varying from 1500 ft . to between 3000 and 4000 ft . Although, however, the most mountainous county in Wales, there are many tracts of low and fertile land, some of it affording rich pasturage, and other parts bearing large crops of barley and oats. Dairy farming, and cattle, horse, and sheep breeding, are, however, the prineipal occupations of the farmer. The cattle and sheep are of a small breed. Lead and copper ores have been found in the mourtainous distriets, and some attempts have been made to work them, but with little suceess. It has been otherwise with the slate quarries in the neighbourhood of Bangor, whielı have been extensively and profitably worked. Large quantities of this slate, which is of the finest quality, are exported. Agriculture, though not so far behind as in some of the other counties of Wales, is still in an extremely backward state. Farm buildings and cottages are generally in a bad condition, and the implements employed rude and inefficient. It sends
one member to the House of Commons ; conatitnency (1850), 1983. Pop. 87,870.

CAERNARVON, or Carnarvon, a seaport tn. and parl. bor., N. Wales, S.E. side of Menai Strait, and cap. of above co., $209 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. London. The ancient walls thrown around it by Edward I., and flanked by round towers, are still pretty entire. Within there are ten narrow, but regular streets; outside, many new and handsome houses have been built of late years, and some spacious streets formed. The town is well lighted with gas, and is abundantly supplied with water. The magnifieent castle or palace of Edward I., and in whieh Edward II. was born, stands at the W. end of the town, and is still externally entire, though mueh dilapidated inside. Ineluding its court-yards, \&c., it is about 1 m . in circumference. On the $N$. and $W$. the sea dashes against the rock on which it stands, adding an appropriate feature to the imposing fortress. The parish chwreh is half a mile from Caernarvon, but there is a commodious chapel of ease in the town, with four dissenting ehapels, and several sehools. $A$ number of wealthy families reside in the neighbourhood, and the town is much frequented in the season by sea-bathers. A beantiful promenade stretches along the Menai, which is mueh frequented, partieularly in the summer evemngs. Caernarvon has no manufactures, but its shipping trade is considerable; the port admitting vessels of 400 tons. The principal exports are slate and copper ore; the imports, eolonial produce, Manchester and Birmingham goods, \&e. The eoasting trade is chiefly confined to Liverpool, Bristol, and Dublin, although occasionally extending to Glasgow, Cork, and Waterford ; constituency (1850), 861. Pop. of bor. 8001 .

CAERPHILLY, a market tn., S. Wales, eo. Glamorgan, agreeably situate $6 \frac{3}{4} \mathrm{~m}$. N. by W. Cardiff. It is embosomed among hills, and the scenery in the neighbourhood is picturesque and grand. The houses are neatly but irregularly built. An ancient eastle, contiguous to the town, was one of the most magnificent struetures in the kingdom. It has a chapel connected with the Established church, and places of worship for Baptists, Wesleyans, and Calvinistic Methodists, and an endowed school for girls. Caerphilly, which appears formerly to have been a place of considerable extent, had been gradually declining till the beginning of the present century, when it began to increase and prosper. The manufacture of woollen eloths, eheeks, and linscy-woolsey is carried on. Weekly market, Thursday, well supplied with corn and all kinds of provisions; six fairs are held annually for corn, cattle, cheese. and other articles. Pop. 634.

## CAERWENT, par. Eng. Monmou h; 1900 ac. l'op. 446.

CAERWYS, par. Wales, Flint; 1600 ac. Pop. 987.
CALAAREA, Kaisariah, or CAesarea Palestina, a sinall haven, Asiatic Turkey, Palestine; lat. $32^{\circ} 23^{\prime}$ N.; lon. $34^{\circ} 44^{\prime}$ E. ; 55 m . N.N.W. Jerusalem. It was once a place of considerable note, but is now a mass of shapeless ruins, encompassed by a low wall of gray stone, and tenanted only by jackals, snakes, lizards, scorpions, \&c. A great extent of ground is covered by the remains of the eity, the most conspicuous rnin being that of an old castle, at the end of the aneient mole. Water being good and abundant, coasting vessels often put in here. The ancient city was founded by Herod the Great, b.c. 22; he then raised some magnificent edifices, and caused a semicireular mole to be construeted for its port, which is said to have been 'one of the most stupendous works of antiquity,' and has been compared, as to design and execution, to the breakwater at Plymouth. Cæsarea is the scene of several interesting events mentioned in Seripture. Eusebius, the early chureh historian, probably a native, was also some time bishop of Cæsarea. In A.D. 635, the Saracens eaptured it, and retained the place till 1101, when it was taken by the Crusaders; after the latter left, it soon fell into decay.-2, Cosarea Philippi, the same as Banias, which sce.

CAFFA. See Kaffa.
CAFFARELLI ISLANDS, N.W. eoast, Australia, Buccaneer Archipelago, at the entrance of King's Sound; lat. $16^{\circ} 3^{\prime}$ s. ; lon. $123^{\circ} 16^{\prime}$ E.

CaFFRARIA. Sce Kaffraria.
CAFFRISTAN. Sce Kafiristan.
CAGAYAN, a prov., isl. Luzon, the largest of the Philipr pines, occupying its s . extremity. It is mountainous, and contains numerous extensive primitive forests. Cultivation is carried on to some extent, but the seantiness of its popula-
tion prevents a full development of its capabilities. Its principal vegetable production is tobacco, which is exported in considerable quantities. Cattle and timber, the latter comprising a valuable species of ebony, are the next chief articles of export. Gold, iron, and a red ochre are found in the province, the last in great abundance. The mountains are inhabited by numerous and various animals, particularly buffaloes, stags, boars, cattle, and horses. The rivers teem with fish, which form a large portion of the subsistence of the natives. The climate of Cagayan is rendered very unhealthy by dense and tangled forests; but the practice of cutting down the trees in the vicinity of the villages and towns, has considerably improved the salubrity of these localities. The inhabitants are generally honest and well disposed, and theft is nnknown. The province comprises 21 towns and villages, which contain, together, 58,580 inhabitants.-(Mallat.)

CAGAYAN SOOLOO, three islands, Sooloo Sea; lat. $6^{\circ} 58^{\prime} 6^{\prime \prime} \mathrm{N}$. ; lon. $118^{\circ} 28^{\prime} \mathrm{E}$. (r.) ; one of which is large, high, and well wooded, and may be discerned at a distance of 23 or 24 m .

CAGAYANES ISLANDS, three islands, one large and two small, in the Sooloo Sea. The larger is of considerable size, very high, aud covered with trees, and apparently of volcanic origin. The small islands are situated 5 m . S. of the former; they are of moderate elevation, and are also well chothed with timber. The large island is surrounded by a reef. Its centre is in lat. $9^{\circ} 35^{\prime} \mathrm{N}$.; lon. $121^{\circ} 23^{\prime} \mathrm{E}$. (R.)

CAGGIANO, a tn. Naples, prov. Principato Citra, 12 m . N.N.W. La Sala, on a mountain. It has three churches and an hospital. Pop. 4429.

CAGLI [anc. Callis], a tn. Papal States, at the confluence of the Cantiano and Basso, foot of Mount Petraro, 13 m . S. Urbino. It has a cathedral, four monasteries, four nunneries, and is the seat of the bishopric of Cagli and Pergola. Pop. 3000.

CAGLIARI (Capo di, or Divisione di), one of the two military divisions of Sardinia, comprising the S. half of the island. It is divided into the six provinces of Cagliari, Inglesias, Isili, Lanusei, Nuoro, and Busachi. The sea-coast from Tortoli on the E. side, to Oristano on the W. side, is flat, with a rich and productive soil, hut, from June to December, the air is infested by vapours from the numerous marshes and lagoons. The interior, on the contrary, is mountainous, with a pure and healthy atmosphere; and snow lies in the higher districts for a considerable portion of the year.

CAGLIARI (Gulf of), a gulf, S. end of isl. Sardinia, extending from Pula on the W., to Cape Carbonara on the E., nearly 30 m . across. The entrance is easy, and there is an excellent roadstead, with good anchorage, after getting into soundings.

CAGLIARI [anc. Calaris], a maritime city, Sardinian States, cap. isl. Sardinia, and of the division of Capo-diCagliari, situated on a slope on the gulf of same name, S. shore of the island, and backed by exceedingly jagged mountains; lat. (St. Pancras Church) $39^{\circ} 13^{\prime} 12^{\prime \prime} \mathrm{N}$. ; lon. $9^{\circ} 7^{\prime} 45^{\prime \prime} \mathrm{E}$. (R.) It is surrounded by a single wall, defended by some bastions, and a broad but shallow ditch, neither of which are in a state of efficiency. The streets in general are broad, but the houses are very poorly built. The original part of the town, now called the 'castle,' occupies the summit of a hill about 400 ft . above the beach. This portion was built, and regularly fortified, by the Pisans, and a citadel has been added to it by the Piedmontese Government. The Viceroy and principal authorities inhabit this quarter, which contains the cathedral, also built by the Pisans, and partly faced with marble; the vice-regal palace, the university, three square towers called St. Pancras, the Elephant, and the Eagle, the mausoleum of Martin, King of Sicily, and the residences of the nobility. The next quarter is the Marina, extending from the middle of the castle hill to the sea-shore. The Marina is the commercial quarter of the town, and contains a bonded warehouse, an arsenal, and a lazaretto. Here also is the mole. Another quarter, called Stampase, extends W. from the castle, and contains the corn market, and storehouses for grain. The quarter of Villanova extends E., and is the poorest part of the town. Cagliari has a suburb nearly a mile long, called St. Arandino. Besides the cathedral, the town contains 38 churches, 21 convents, a seminary, a university, founded 1626, and re-established in 1764 , with faculties of theology,
law, medicine, and philosophy, attended by between 200 and 300 students; an agricultural society, a college for nobles, a school of medicine and surgery, a mathematical school, a museum of antiquities, a cabinet of natural history, a library of 18,000 volumes, a mint, a theatre, and several hospitals and other beneficent institntions. The town is badly supplied with water, although an ancient aqueduct remains, which could be restored at a moderate expense. It is reputed healthy, notwitlsstanding the proximity of the extensive marsh of the same name to the W., and the frequency of droughts. Cagliari is the seat of government for the island, and of the high court of appeal for both civil and criminal cases, of an admiralty court, court of first resort, tribunal of commerce, and fiscal court. It is also the residence of an archbishop, who takes the title of Primate of Sardinia.

Consuls from most of the European states reside here, this being the port through which most of the foreign trade of the island is done. The manufactures of the town are of little importance. They include cotton, soap, gunpowder, arms, leather, and jewellery. There is also a royal tobacco manufactory. The salt marshes in the neighbourhood afford large quantities of salt, which forms a principal article of trade. The port is one of the best in the Mediterranean, and the road. stead has good anchorage ground. Grain, vegetables, salt, oil, wine, cheese, flax, hides, saffiron, and rags are exported.

Vessels Entered and Clfared at the Port of Cagliari,

The ancient Calaris is supposed to have been founded by the Carthaginians. During the Middle Ages, the Pisans built the 'castle,' with its three square towers. The King of Sardinia resided here from 1798 to 1814 , during which period the French had possession of his continental dominions. Pop. (1845), 30,063.

CAGNANO, two tns. Naples:-1, In prov. Abruzzo Ultra, 5 m . N.W. Aquila. Pop. $5187 .-2$, In prov. Capitanata, 18 m . N.W. San Severo. Pop. 4590.

CAGNES, a tn. France, dep. Var, on a hill near the coast of the Mediterranean, about 10 m . E. Grasse. Good red wine is grown in the neighbourhood, and forms almost the only article of trade. Pop. 2036.

CAGSANA, a tn., isl. Luzon, one of the Philippines, prov. Albay, near the S. extremity of the island, the second largest town in the province. Pop. 12,755.

CAGUA, a tn. Venezuela, prov. Caracas, 1. bank, Araguay, and a little E. of Lake Tacarigna, about 50 m . S.W. the town of Caracas; lat. $10^{\circ} 18^{\prime}$ N. ; lon. $67^{\circ} 38^{\prime}$ W. Pop. 5200.

CAGUAN, a tn. New Granada, near the sources of a river of same name, in the Llanos of Caguan; lat. $2^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $74^{\circ} 30^{\prime} \mathrm{W}$. It has a church containing an image of San Roque, which is held particularly sacred, and to which numerous pilgrimages are made. The climate here is warm, and the country around productive in maize, plantains, sugarcane, \&c. Gold is also obtained. The river Caguan falls into the Caqueta or Japura, in lat. $0^{\circ} 17^{\prime} \mathrm{N} . ;$ lon. $73^{\circ} 25^{\prime} \mathrm{W}$.

CAHAW1BA, a river, U. States, Alabama. It rises in the N. part of that state, whence it flows S. to the town of Cahawba, where it unites with the Coosa river, and forms the Alabama.

CAHER, two pars. Irel.:-1, par. Kerry; 19,100 ac. Pop. 6135.-2, par. Tipperary; 13,647 ac. Yop. 8801.

CAHERNARRY, par. Irel. Limerick; 2478 ac. P. 1388.
CAHE'TE, or Villa da Rainifa [New Queen's town], an old tn. Brazil, prov. Minas Geraes, 15 m. S.E. Sabara; lat. $19^{\circ} 50^{\prime} \mathrm{S} . ;$ lon. $45^{\circ} 10^{\prime} \mathrm{W}$. Its streets are broad and straight, and its houses in general well bult, though partly of earth. It possesses a fine parish church and two plainer churches, an hospital, and a primary school. Agriculture, cattle-rearing, and mining, are the chief occupations. Pop. 6000.

CAIIIR, or Caher, an inland tn . Ireland, co. Tipperary, on the Suir, about 9 m . W. by N. Clonmel. It is well built, and exceedingly neat and clean; its gencral appearance being greatly improved by the Suir, here a clear and beautiful stream, passing through it. The public buildings are all bandsome, and, being placed, most of them, in conspicuous situations, have a very fine effect. They include a markethouse, bridewell, fever hospital, dispensary, and several schools. About 1 m . from the town is a barrack, eapable of accommodating a regiment of cavalry, and which, being gencrally occupied, adds much to the gaiety and bustle of the place. The old picturesque castle of Cahir, an object of considerable interest, occupies the summit of a rock, which rises over the left bank of the river. A considerable trade is done here in corn, and its various fairs and markets are well attended. The mansion of the Earl of Glengall is in the town, its beautiful and finely-wooded domains embracing both sides of the Suir. Pop. 3668.

CAIIIRCIVELN, a to. Ireland, co. Kerry, l. bank, Cahir, 29 m . W. by S. Killarney, at the foot of a hill, consisting of one main street, with two others at right angles. It has an Established church, and R. Catholic chapel, a Protestant parochial school, and one connected with the National Board of Education, a fever hospital, and dispensary. Charran House, now in ruins, the birthplace of the late Daniel O'Connell, is about 1 m . from the town. Pop. 1492.

CAHIRCONLISH, a par. and tn. Ireland, co. Limerick. The town, which is 7 m. S.E. Limerick, has a parish church, dispersary, and a zchool. Pop. of tn. 562. Area of par. 8173 ac.; pop. 3925.

CAIILORE, a small principality in N. Hindoostan, on both banks of the Sutlej; the cap. of which, Belaspoor, is in lat. $31^{\circ} 19^{\prime} \mathrm{N} . ;$ lon. $76^{\circ} 47^{\prime} \mathrm{E}$.

CAIIORS [anc. Cadurcum], a tu. France, cap. dep. Lot, 60 m. N. Toulouse, r. bank, Lot ; lat. $44^{\circ} 25^{\prime} 59^{\prime \prime}$ N.; lon. $1^{\circ} 27^{\prime} 25^{\prime \prime} \mathrm{E}$. (c.) It stands on a slope, almost surrounded by the river, and is divided into the upper and lower town. Some old ramparts defend the istbmus on the land side. Most of the streets are narrow, crooked, and steep; some improve ments, however, have recently been made, by the formation of several new streets and quays. There are three bridges across the Lot, one of which, believed to have been built in the 13 th century, has a square tower at each end, and one in the centre. The cathedral is a spacious edifice, built apparently at different periods. The most ancient portion has been attributed to the Romans; and the cupola above the choir is referred to the beginning of the seventh celitury. The bôtel of the prefecture, formerly the episcopal palace, is a fine structure, forming the principal ornament of the square in which it stands. Amoug the other public buildings are-the ancient seminary, now converted into barracks; the ancient charter-house, occupying the site of one of the houses of the Knights Templars; the finc cloister of the cathedral, the theatre, public library containing 12,000 volumes; the obelisk to the memory of Fenclon, \&c. The town is the seat of a bishopric, tribunals of commerce and of first resort, a royal college, with about 300 pupils; and a primary normal school for the department. The university, founded by the Pope in 1321, was united to that of Toulouse in 1751 . The celebrated jurist, Cajas, was a professor, and Fenelon a student here. Manufactures inconsiderable, being limited to some woollen goods, nut and seed oil, and paper. A good trade, however, is carried on in the red wine of the neighbourhood, called vin noir, on account of its dark colour. Brandy is also distilled here; and coal is wrought in the vicinity.

Cahors is supposed to have been the capital of the Cadurei before the conquest of Gaul by Cæsar. It was afterwards the Divona of the Romans, who adorned it with a theatre, temple, and forum. The Roman roads, of which vestiges remain, have been attributed to Agrippa. The aqueduct, intended to convey water from the valley of St. Martin de Vern, was about 15 m . in length. Clement Marot, the well-known French poet, contemporary of Francis I., was born here. Pop. 10,594.

CAICOS, Cayos, or Tire Keys, one of the island groups comprehended under the general name of Bahamas, consisting of six islands, besides some uninhabited rocks; between lat. $21^{\circ}$ and $22^{\circ} \mathrm{N}$., and lon. $71^{\circ}$ and $73^{\circ} \mathrm{W}$. The largest of them, called the Great Key, is about 30 m . long. When
seen from the E., they appear like low rocks; they consist of corals or madrepores, which are covered with a thin layer of sand, intermixed with shells ; are fertile, and produce cotton, grain, \&c.

Callas, or Kailas Mountains, a range of mountains in Tibet, Central Asia, situated in abont lat. $31^{\circ} \mathrm{N}$. ; and stretching N.W. and S.E., almost parallel to the Himalayas. Nothing is known of either its E. or W. limit. Some of its peaks attain a great elevation; that called Kailas Peak reaching the height of $21,000 \mathrm{ft}$. The sources of some of the largest rivers in India, the Brahmapootra, Sutlej, and Indus, are in the vicinity of these mountains.

CAINHAM, par. Eng. Salop; 3040 ac. Pop. 973.
CAINO, a com. and vil. Austrian Italy, gov. Milan, prov. of, and 9 m. N.N.E. Brescia, in a pleasant valley traversed by the Garza, which lere furnishes water power to several paper and spinning mills. Pop. 781.

CAIPHA, a tn. Syria. See Kaiffa.
CAIRA, or CAlRAW, par. Wales, Glamorgan. Pop. 80.
CAIRIRIS, or JAbitaca.-1, A mountain range, Brazil, prov. Pernambuco, running N.W. to S.E., and forming the N. boundary of the basin of the Rio São Francisco in this province. Its total length is about $300 \mathrm{~m} .-2$, Cairiris-Novos, a mountain range, Brazil, forming part of the boundary between provs. Rio Grande do Norte and Paraiba.-3, CairirisVelhos, a similar range, forming part of the boundary between provs. Paraiba and Pernambuco.

CAIKN, a maritime vil. Scotland, co. of, and 22 m . W.N.W. Wigton, on the E. shore of Loch Ryan. It is a regular place of call for the steamers from Stranraer to Glasgow and Belfast. Pop. 196.

CAIRNGORM, a mountain, Scotland, S.W. extremity co. Banff, one of the highest summits of the Grampian range ; height, 4050 ft . above the level of the sea. This mountain has been long celebrated for its crystals or topazes, which are now, however, becoming scarce. They are of various colours -pink, white, brown, or black.

CAIRNIE, par. Scot. Aberdeen. Pop. 1638.
CAIRO, or Grand Cairo [Arabic, El-Masr, El-Kahirah, ' the victorious capital;' French, Le Caire; German, Kairo], cap. Egypt, situate near r. bank, Nile, 15 m . above the commencement of the delta, 120 m . S.E. Alexandria, and 84 m . W. Suez ; lat. $30^{\circ} 2^{\prime} 1^{\prime \prime}$ N. ; lon. $31^{\circ} 15^{\prime} 5^{\prime \prime}$ E. (r.) It is almost square, and, after Constantinople, is the largest city in the Ottoman empire, being 3 m . in length, and about 2 broad. It is built partly on the slope, partly at the foot of the last

height of the hill range of Mokattam, and is enelosed with antique battlements and stone walls, having several gateways, and lofty towers at intervals. Within the walls there are about 30,000 inhabited houses, including several palaces, 400 mosques, 240 streets, and several public squares, many fountains, and 300 cistern3, or reservoirs; and the city is intersected by a canal communicating with the Nile, and supplying water to the inlıabitants. Cairo is built in old Arabian Saracenic style, withont any mixture of Western forms. The honses are lofty, flat-roofed, and lave numerous projections, and windows with narrow wooden gratings. No two are
alike. No attempt is made at symmetry, yet the whole is most barmonious. Most of these houses are built of air-dried bricks, few are of stone, and none of wood; and many present in their interior a true picture of Oriental luxury. The numerous beautiful minarets with which the city is adorned, contribute greatly to heighten the general impression in favour of Cairo.

The city is divided into several quarters, separated from each other by gates, which are regularly closed at night. The public streets are merely crooked lanes, few of them being 10 ft . broad. The bye-streets, and those in the interior quarters, are still narrower; and, in consequence of the manner in which the houses are built, each story projecting beyond that immediately below it, two persons may shake hands across the streets from the upper windows. The streets are not paved, but they are kept extremely clean. They are constantly obstructed by caravans of camels, riders on assback and horseback, little regarding the pedcstrians, who are few in number, and composed wholly of the poorcr classes, The chief square of Cairo is the magnificent area El-Esbekiah, which is annually inundated by the overflowing of the Nile, and the centre of which is laid out as a garden ; it is surrounded with many of the finest mansions, several of which belong to Government officials, including the palaces of Ali Pasha and Amet Pasha. In this square there is a monument to General Kleber, who was assassinated there on June 1t, 1800.

The buildings in the citadel merit first mention, from their prominence, in a general view of the city, no less on account of the interest which attaches to several of them. This fortress, founded A.D. 1176, by Saladin, is built on a calcareous rock, in the S.E. quarter of the city, of which it forms the abrupt termination; within its walls, March 1, 1811, the massacre of the Mamalukes took place. It contains the mint, an arsenal, the Pasha's marble palace, his new mosque, $\& c$. To make room for the latter, a lofty antique edifice, called Youssouf's or Joseph's Hall, was removed in 1829. The vice-regal palace is small, but has had some showy additions made to it of late years. Joseph's Well still remains; it is dug in the rock, and consists of two parts, the upper and lower well; and a winding staircase leads to the bottom, a depth of 260 ft . The fortress is further supplied with water from the Nile, by an aqueduct, formed by Saladin. But the most remarkable building of the citadel is its new mosqueperbaps one of the most splendid in the world-built of Egyptian marble, and really wonderfnl, considering that it has been got up by native architects and workmen, without any fixed plan, almost without any measurement, and, as it were, only in imitation of other buildings of the same style. Behind the citadel is a fort, upon a rock, called the Jebel el Jooshée, the ascent to which is by a long causeway. It was on the site of this fort that Mahomet Ali erected a battery against the citadel, then in possession of Khoorshid Pasha, by which he obtained the surrender of the place.

The most interesting edifices of Cairo are, undoubtedly, its mosques; and though many of the 400 it possesses are in ruins, yet the number in repair and in daily use is very great. The oldest mosque, as well as the oldest building in Cairo, is the mosque of Almed-ebn-el-Tooloon, generally known as the Jama Tayloon, of unknown date, but evidently anterior to 879, and though not remarkable for beanty, it is of high interest in the history of architecture. The finest mosque is that of Sultan Hassan, immediately below the citadel, and built of blocks obtained from the pyramids. Its porch is lofty and beautifully ornamented, the cornice of its towering walls is rich, and its minarets, and the arches of its spacions courts, are striking. Near the bazaar of the Khan Khalcel, is the mosque of Sultan Kalaoon, to which is attached the Morastan or mad-house, founded by that prince, in A.D. 1287, and the only one in Egypt, till the erection of the new lunatic asylum by Mahomet Ali, in 1844. In the mosque is the handsome tomb of the founder, who died, A.D. 1200. Not far from this mosque is that of Sultan Berkook, with his tomb attached. This potentate was the first sultan of the Circassian Mamaluke dynasty, and was renowned for having twice repulsed the Tartars under Tamerlane. Besides those named, the other principal mosques are the Ezher, Hassanin, El Hakem, and those of Sultans El Ghoree, the Sharawee, Moaiuid, and Sitteh Zayneb. The tombs of the Egyptian Caliphs, which occupied
the site of the bazaar of Khan Khalcel, are all destroyed but that of E1 Saleh Eiyoob, who died in 1250. Near them are the tombs of Sultan Baybers, Naser Mohammed, Baharite Mamaluke princes, and various others, some of them remarkably elegant. The largest convent of derwishes existing is at Cairo; it was bnilt in 1174; and between the city and Old Cairo is another. There is also an hospital for the sick poor, with 500 beds, 200 of which are for women.

The principal bazaars of Cairo are the Ghoreah and Khan

mosque of sultan berkook, and fountiln of ismail paslia. From Hay's Sketches of Cairo.
Khaleel ; in the former, cottons, silks, tarbooshes (Fez caps), \&c., are sold; in the latter, cloths, dresses, swords, silks, embroideries, \&c. ; and in both goods are disposed of by public ery or auction. In the IIamzowee, silks, crape, cloth, \&c., and most European tissues, are sold; the dealers are all nominal Christians. Some of the bazaars are well covered over, and all their passages are kept cool by watering; and each one is confined to certain classes of goods or wares. The same observation applies to the shops. Those of the Svokeréẻh, for instance, or sugar quarter, are for sugar, almonds, dried fruit, \&c. ; the Nahasin, full of coppersmiths ; the Khordukléeh, where hardware, cups, coffee-pots, \&c., are sold; the Suovjah, occupied by sword-momnters; the Sagha, by gold and silver workers; and the Gohergéeh, by jewellers. The Okalet-el-Gelab or slave market, in the centre of the city, is a large old building, surrounding a large court. The slaves exposed for sale are chiefly from Abyssinia, Nubia, Dongola, and Senaar. Circassians of both sexes are also sold, but these are usually only procured to order.

Public baths are numerous, but none are remarkable. The largest is the Tumbalee, near the Bab-el-Shareéb. Many of the sibeels or public fountains are curions specimens of the peculiarities of Oriental taste, abounding in great luxuriance of ornament. The most remarkable are those of Tossoom and Ismail Pashas, the sons of Mahomet Ali; and some others, of older date, in the centre of the town. There are several hotels for strangers from the West, with a number of Frank lodging or boarding-houses, a few of which are specially for British or Americans.

The climate of Cairo is esteemed healthy. It is dry, though in winter heavy rain is frequent. At that period, also, the nights are cold. From July to November N. winds prevail, and in general are favourable to the country and the traveller; but they bring with them from the Mediterranean heavy and cold dews, which lower the temperature suddenly, and render it dangerous to be out at night without being warmly clad. In April and May the hot S. winds prevail, and no dew falls. The medium temperature is about $70^{\circ} 25^{\prime}$ Fah., varying from $95^{\circ}$ the maximum, or $86^{\circ} 50^{\prime}$ the medium of August, to $52^{\circ}$ the minimum, or $56^{\circ} 50^{\prime}$ the medium of January. It is in order to form a shelter from the great heats of summer, and the cold winds of winter, that the strcets are built so crooked and so narrow.

Besides the usual Moslem festivals (see Constantinople) held in Cairo, it is the scene of two great events, annuallythe ceremonial departure and return of the Haj or Mecca pilgrims through the Bab-el-Nasr or 'Gate of Victory,' on the
before the judicial divans in the citadel, or submits them for the consideration of the viceroy or his resident deputy. Questions of property, family disputes, and all proper cases of law, come under the jurisdiction of the Mehkemeh or Cadi's court: the operations of this tribunal are ordinarily slow, hut may be quickened, it is said, by bribery. No foreigners can legally buy real property in Cairo. Europeans and Americans are judicially subject to the consuls or envoys of their several Governinents, and cannot be punished by Turkish law. Tho Cadi's court used to be held in the decayed buildings of the old Sultan's palace; but a new legal edifice, with courts and offices, has lately been opened.

To Mahomet Ali, Egypt owes the introduction of elementary and sl ecific education. In Cairo there are three primary schools, with 400 pupils, where reading and writing, and the four rules of arithmetic are taught. There are, besiles, several primary schools here and elsewhere, for the soldiery, besides scientific academies for cadets, \&c. From 4000 to 5000 pupils are educated in the schools of The city mosques. The Church of England Missionary Society has a school connected with the British chapel in Cairo, for young male Orientals ; and another for 100 native girls.

Omnibuses run to Boulac, and across the desert to Sucz. In March 1851, the Pasha officially announced his intention of constructing a railway between Cairo and Alex-andria-an undertaking expected to be proceeded with in the same year, and which will afford a much more speedy means of transit than the water-way of the Nile and the Mab moodiah canal connecting those two cities.

Environs of Cairo.-The following general view of the exterior features of the city is given by Dr. Hoffmeister (1846) :-' Palmtrees and mimosas rise in grand pieturesque groups above the city walls. The central part of the background is filled by a wood of palms, stretcling into the distance; near to this, on the right, rise the giant structures of the pyramids of Ghizeh. These supply the place of mountains, which would other-
E. or desert side of the city; and the opening of the caral at Old Cairo, which is also an annual ceremony of great import. There are few places of amusement. Within the last few years a theatre has been set on foot in the Frank quarter, with amateur actors, who play gratis. A more useful institution, in the same locality, is the library and reading-room of the Egyptian Society. In 1842, another society for respectable Europeans, called the Egyptian Literary Association, was founded here. Ibrahim Pasha commenced a public library in 1830 ; and both he and his father made beginnings towards forming a museum of antiquities, in whieh, however, little progress has been made.

In Cairo there are nine cotton-spinning factories, 10 for weaving silk and cotton, 13 for manufacturing cloth, 14 calico printing-works, 18 dyeworks, 15 bleacheries, 16 ironfoundries, \&c. In the citadel are a factory of small arms and cannon, the latter bronze, and of small calibre; an iron rolling-mill, and the mint.

There were in Cairo, in a recent year, about 24 Moslein foreign merchants; 15 European, but no British, houses; 10 Catholic Greeks', and six Schismatics' establishments. In the city were 164 corporated bodies for the regulation or advancement of native trades. But the commerce of Cairo is much diminished. It has ceased to be a depôt, as it formerly was, for cither articles of export or import. Alexandria, from the greater facility which its position affords, has supplanted it in importance. It is still, however, a great market for gums and some other secondary articles. The stocks of goods in Cairo are consumed principally by the inhabitants of the city, the buyers for the interior finding it more advantageous to supply themselves from the warehouses of the importers at Alexandria. At Cairo are resident consuls from France, Sardinia, and the U. States.

The police of Cairo is superintended by a bash-aga, with an office near the Frank quarter; this functionary decides slight cases summarily, but sends those of a graver character
wise be wanting to complete the picture, the foreground of which consists of a thick wood of acacia. In the interspace are fields of maize; in the midst of the plain a small lake, embowered with rows of the Labekacacia. On the horizon the desert may be distinctly perceived, by the yellowish-gray of the atmosphere which hangs over it.' The cemeteries or 'cities of tombs,' are situated outside the walls. Among them are the sepulchres of the Mamaluke kings, of the Circassian dynasty (reigned 1382-1517), on its E. side, beyond the gate Bab-el-Nasr. To each tomb a mosque is attached.

The palace and gardens of Shoobra lie about 4 m . to the N. of the city, the road to which, along the banks of the Nile, is shaded with lofty sycamores. This splendid country•seat of Mahomet Ali is begirt with a fine pleasure-garden; more than 30 Persian wheels are employed in irrigating its grounds. In its immediate vicinity are some other villas; and adjoining them, a row of extensive manufactories. Between Bonlac and Cairo are the fine palace and magnificent gardens of Ibıahim Pasha.

Old Cairo [Musr-el-Ateekeh], called Fostat by the Arabs, is the S . or upper port of Cairo, where all duties on goods destined for the latter are levied ard paid. It presents some objects of interest, including an old Roman fortress, and the splendid mosque of Amer. The inlabitants are mostly Copts, and here are several convents of that sect of Oriental Christians. Seven antique corn stores, popularly called the granaries of Joseph, have lately been demolished. The aqueduct which conducts the waters of the Nile to the citadel of Cairo, by a winding course of 2 m ., here commences. In the Isle of Roda, opposite Old Cairo, is the famed Mekkeeás or ancient Nilometer, for measuring the rise of the Nile, upon which the fertility of Egypt depends. Boulac, already referred to, is the lower port of Cairo.

The site of the city of Cairo is said to be that of the Balylon of Camhyses, built on the ruined site of the pre-existing Latopolis of the Egyptians. The present city was founded
by the Arabs, about A.D. 970 ; and its citadel, as we have scen, was raised by Sultan Saladin, in 1176. From that period till the year 1517, when it was taken by the Turks, it was the capital of the Saracenic Sultans of Egypt. The former governed it by Pashas, these being latterly controlled by the Mamalukes, to whose massacre, followed by the resumption of rule by the Pasha, we have already adverted. Pop. of Cairo and its suburbs, about 300,000 ; of which 190,000 are Egyptians, 10,000 Copts, 4000 Jews, 5000 Syrians, 5000 Greeks, 2000 Armenians, and a varying number of Franks or Europeans.-(Quetin, Guide en Orient; Russegger, Reise in Egypten; Wilkinson's Modern Egypt ; \&c.)

CAIRO [anc. Crixia], a tn. Sardinian States, prov. of, and 10 m. N.W. Savona, l. bank, Bormida. The French defeated the Austrian army here in 1794. Pop. 4500,

Cairoan, or Kairtan, a tn. Tunis. See Katrouan.
CAITHNESS, a maritime co. Scotland, occupying the N.E. extremity of that kingdom, bounded, W. by co. Sutherland, and by the N. Atlantic Ocean on all other sides. It is about 43 m . long, S.W. to N.E., and about 30 broad ; area, 446,080 ac., of which about 100,000 are cultivated and in pasture, the remainder is moor and hill. The general appear ance of the country is flat and uninteresting, having neither trees nor eminences to break the dreary monotony of the scene. It contains no navigable rivers, nor lakes of any consequence; the shores are bold and rocky. Until of late years, the dwellings of the tenantry were, in general, extremely poor; but great improvements in this respect, and also in the various branches of agriculture and husbandry, especially in the rearing of cattle, have recently taken place, so that the country already presents a much more cheerful and thriving appearance than it did formerly. The soil, where duly cultivated. is extremely fertile, yielding luxuriant crops; and the sheep and lambs reared in this county command the lighest market prices. On the coasts, herring-fishing is prosecuted with great success, about 120,000 barrels being taken yearly. There are about 700 boats, manned by five men each, all belonging to the county, engaged in this fishery. There are also two considerable salmon-fisheries, one on the river Thurso, another on that of Berriedale. Caithness contains 10 parishes. It sends a member to Parliament; and its principal town, Wick, unites with Kirkwall, Dornoch, Tain, Dingwall, and Cromarty, in choosing a representative; constituency (1850), 651. Annual value of real property in $1815, £ 34,469$; and in 1842-43, $£ 65,869$. Its chicf towns are Wick and Thurso, the former being the more important. The natives are of Scandinavian origin, the country having been colonized by that people from the Orkneys, where they had been previously settled. Pop. (1841), 36,343; being less, by ncarly 200 , than it was 10 years before; the deficiency is accounted for by emigration, and the incorporation of small farms. Pop. (1851), 38,709.

CAISTOR.- 1 , A small market tn. and par. England, co. of, and 21 m . N.E. Lincoln, pleasantly situate on the slope of a hill; has an Established clurch, several places of worship for dissenters, and a free grammar-school. It is, however, chiefly noticeable on account of its antiquity, having been a Roman station, as numerous relics, indicative of the presence of that people, are dug up from time to time; area of par. 6490 ac. Pop. 2033.-2, Caistor-next-Yarmouth, par. Eng. near Yarmouth, Norfolk; 2920 ac. Pop. 909.-3, Caistor-St.-Edmunds, par. Eng. Norfolk; 910 ac. Pop. 147.

CAJAHIBA, a small isl. Brazil, W. side Bahia de Todos-os-Santos, opposite the mouth of the river Serigi. It is low, cultivated, and has a primary school.

Cajano (Poggro à). See Poggio à Cajano.
CAJARE, a tn. France, dep. Lot, 20 m. E. Cahors, r. bank, Lot; in a large and fertile valley, surrounded on all sides by hills clothed with vincs. The streets are narrow and irregular, and the houses indifferently built, with exception of some along the old ramparts, now converted into a promenade. The only buildings of interest are the parish church, built in 1289; and the remains of an ancient fort, apparently of a very remote antiquity. Numerous fairs are held here. Pop. 1074.

CAJAZZO, a tn. Naples, prov. Terra di Lavcro; on a hill, near the Volturno, $10 \mathrm{~m} . \mathrm{W} . \mathrm{N} . \mathrm{W} . \mathrm{Capua}$. It is very ancient, is defended by a citadel built by the Lombards, and has a handsome cathedral, several churches and convents, a

Vol., I.
seminary, college, and an hospital. Good wine is produced in the neighbourhood. Pop. 3891.

CALABAR, a maritime dist. Upper Guinea, W. Africa, intersected by two rivers, called, respectively, Old and New Calabar. The limits of the district are not well as certained, but may be said, generally, to lie between the river Benin or Formosa, and the Rio del Rey, with the Kong Mountains in the rear, and thus having the Niger passing through its centre. The coast here, a projecting line between the Bights of Benin and Biafra, is uniformly low and flat, unbroken by the slightest elevation, and closely intersected by rivers, most, if not all of which, with exeeption of Old Calabar, being branches of the Niger. Much vegetable matter and silt are discharged at every ebb tide by these mouths, which discolour the ocean with a filthy scum of a brown colour, and give forth a sickening smell, for the distance of several miles. The climate of Calabar is extremely deleterious, and the coast generally inhospitable; there not being a lighthouse or single harbour of refuge throughout its entire length. Tornadoes are frequent, and of the most violent character, accompanied by vivid lightning, and tremendous peals of thunder, with rains so fierce and heavy that it is impossible to look to windward, or discern anything beyond a few yards' distance, while the noise so overcomes the loudest voice, that all orders must be conveyed by messengers. A large portion of the population of this district are slaves, and are employed chiefly in cultivating the provision grounds, or in the various kind of labours connected with the palm-oil trade, in which the chiefs are engaged. Oid Calabar or Bongo river is situated about 90 m . nearly due W. from New Calabar. The entrance of its estuary, which is nearly in the centre of the Bight of Biafra, is in lat. $4^{\circ} 35^{\prime} \mathrm{N}$. The latter is a considerable expanse of water, about 9 m . in breadth, with a strong current. The traders ascend the river about 30 m . New Calabar enters the Bight of Biafra at lat. $4^{\circ} 30^{\prime} \mathrm{N}$.; lon. $7^{\circ} 7^{\prime} \mathrm{E}$. Its course is from the N.W., and its depth, 20 m . from the sea, 6 fathoms. This river is believed, on good grounds, to be one of the numerous terminating branches of the Niger, the power and volume of its current showing that it must be the embouchure of a great river.

CALABOZO, a tn . Venezuela, prov. of, and 120 m. S.S.W. Caracas, between the rivers Guarico and Urituco, in the midst of the Llanos. It is tolerably well built, and has rather a pleasing appearance. Its church, though not very handsome, is commodious. The principal wealth of the inhabitants consists of cattle. The neighbouring ponds abound in electrical eels, which Humboldt describes as being from 5 ft .4 inches to 5 ft .7 inches in length, and capable of kill: ing a horse. Calabozo, formerly only an Indian village, owes its existence, as a town, to the Biscay Company. Pop. 5000.

CALABRIA, an extensive territory, kingdom of Naples, comprising all the S.W. peninsula in which Italy terminates, from about lat. $40^{\circ} \mathrm{N}$. to the Strait of Messina; area estimated at $7000 \mathrm{sq} \cdot \mathrm{m}$. It is divided for administrative purposes into three provinces-Calabria Citra, the most northerly; Calabria Ultra I., the most southerly; and Calabria Ultra II., between the two former. The central region is occupied by the great Apennine ridge, wild and black, to which, however, whole colonies, with their cattle, migrate in the summer. The dats near the coast are marshy and unhealthy, and inhabited by herds of buffaloes; but the valleys at the foot of the mountains are delightful, and rich with the most luxuriant vegetation. The vine, the orange and lemon trees, the fig, the olive, and all the fruits of S. climes, grow there to perfection. The climate was reckoned salubrious in ancient times; but in some places the accumulation of stagnant water produces disease in the hot season. During the remainder of the year the heavy dews preserve a delightful verdure, increased by numerous springs and streams. Corn, rice, saffron, anise, liquorice, madder, flax, hemp, olives, almonds, and cotton, are raised in abuudance. The sugar-cane also comes to perfection here. Sheep, horned cattle, and horses, are numerous. Near Reggio, a kind of mussel is found, called Pinna marina, from whose silky byssus or beard a beautiful fabric is manufactured, remarkable for its extreme lightuess and warmth. Coral is also fished. The quarries and pits afford alabaster, marble, gypsum, alum, chalk, rock-salt, lapis lazuli, and the fine copper renowned since the time of Homer.

A melaneholy temperament, a concentration of feelings, and a sullen distrust, render the Calabrian formidable when irritated. Even their women seem endowed with a masculine spirit; their features, harsh though regular, are scowling and wrinkled even in youth, and their uneouth dress leaves them little of that delicacy which is considered elsewhere natural to the sex. They marry early, and soon fade. The men, with their short jackets, close trowsers, leather gaiters, and sandals of undressed skin, tied by thongs, and a rusty conical hat, with narrow brim and trimmed with ribb ons and images of the Virgin, may be seen skulking about behind their olivetrees, or some loose stone wall, as if in wait for some passenger to fall upon. The peasant labours little, subsisting almost entirely on the spontancous productions of nature, and his habitation is of the most wretched description. Hereditary hatred divides most of the families, and an individual never goes abroad unarmed. In the night they barricade their houses. They have little or no idea of social intercourse, and seldom visit each other. The language of the people is a corruption of Italian, difficult to be understood, but full of original and pointed expressions. The natives are well formed, muscular, and of a brown complexion, with animated countenances, and eyes full of expression. Like the Sardinians and Corsicans, they murder without remorse when instigated by cupidity or revenge. The robber carries religious relics in his bosom, and trusts to them for the success of his nefarious enterprises. The towns in this country are built on steep conical hills, crowned with houses to the very top, the outer or lower buildings being joined together by walls, so as to form a sort of rampart. They are generally in the lowest state of wretchedness.

The arts and manufactures of Calabria are in an extremely backward state. There are some silk manufactures at Monteleone, and olive-oil is manufactured to a large extent. Silk is produced in tolerable quantity, although of a darker shade than that of the other provinces, from the red mulberry being employed to feed the silk-worms.

Calabria las long been subject to devastation by earthquakes, I0 years having seldom elapsed, during the last century and a half, without a shock; but the more severe convulsions have always been separated by mueli wider intervals. The last remarkable visitation of this kind occurred in 1783 , when about 40,000 persons perished in the Calabrias and Sieily, and 20,000 more, shortly after, by causes resulting from it. By far the greatest number who died at the moment, were buried in the ruins of their houses, but numbers also were ingulfed in the dcep fissures into which the earth was rent. It is said that the conduct of the Calabrian peasants on this dreadful occasion was singularly atrocious; they abandoned the farms and flocked into the towns in great numbers, not to resene their countrymen from a lingering death, but to plunder; and were seen stripping the wounded and half buried, while yet living. Pop. (1844), $1,074,558$.

CALABRITTO, a tn. Naples, prov. Principato Citra, on the Sele, 10 m. N.E. Campagna, with several churehes, anit a convent. Large fairs are held here. Pop. 2420.

CALACEITE, a tı. Spain, Aragon, prov. Teruel, 28 m . N.N.W. Tortosa, in a plain at the base of a mountain. It is tolerably well built, and possesses a parish eliureh, two endowed schools, a townhall, prison, cemetery, and several fountains. Wine and oil are expressed, and some trade is earried on in grain and cattle. A eattle-fair is held in December. Pop. 2404.

CALAHORRA.-1, [anc. Calagurris], a city, Spain, Old Castile, prov. of, and 24 m. E.S.E. Logroño, l. bank, Cidacos, 2 m .from its confluence with the Ebro. It has several squares, an ancient cathedral, four churches, four chapels, four schools, an episcopal palace, townhall, hospital, and a large Francis. can convent, which now serves the triple purpose of schoolhouse, prison, and theatre. Weaving, expressing oil, and agriculture, are the chicf occupations. Annual fair in August. Calahorra is famous for the siege it sustained from Cneus Pompey, B.C. 72, by whom it was taken, after an obstinate resistance, and the most dreadful suffering from famine. Portions of its ancient walls, towers, and aqueducts, still remain. Y'op. 5994.-2, A tn. Spain, Andalusia, prov. of, and 35 m . E. Granada. It has a parish cluurch, two endowed sehools, a townhouse, prison, and a magnificent palace of the Marquis of Cenet, of Doric architecture, built in the 15 th century.

Some little trade is earried on in wine, oil, and grain. In former times, numerous iron mines, and two of silver, were wrought in the adjacent hills, near one of which is a mineral spring. Pop. 1993.

CALAIS, a seaport tn ., and fortified place of the first elass, France, dep. Pas-de-Calais, 20 m . N.E. Boulogne, on the strait of, and 27 m . S.E. Dover ; lat. $50^{\circ} 57^{\prime} 36^{\prime \prime}$ N.; lon. $1^{\circ} 51^{\prime} 15^{\prime \prime}$ E. (r.) It has a tolerable port, at the junction of several canals, which facilitate communication with Gravelines, Arras, Dunkirk, and St. Omer; and is the terminus of the railway from Lille, through which it is dircetly connected with the metropolis. The town is nearly square, is walled, well fortificd, and has a citadel on the W. side, and several forts commanding the town, harbour, and approaches. On the land side, the country is flat, and can be laid under water, with the exception of an approach about 200 yards wide, protected by a cross fire. The ramparts are planted with trees, and afford an agreeable promenade. The strcets are broad and well paved, the houses substantially built of brick, and the hotels in general excellent. Still the town has on the whole a dull aspect, and evidentally owes its importance rather to the number of travellers who pass through it, than to any peeuliarly favourable circumstance pertaining to the place itself. The place d'armes, near the centre of the town, has some good houses, and here the Hotel de Ville, built in 1740, is situated. The cathedral contains a fine altar-piece in Genoa marble, and above the altar is a magnificent painting of the Assumption, by Vandyke. Other noteworthy objeets are, the cours de Guise, the column erected to commemorate the landing of Louis XVIII. in 1814 ; the public library, with 12,000 volumes; theatre; barracks, containing an enormous water cistern; and the hôtel Dessin, which combines a hotel, theatre, garden, and public baths. The town is so ill supplied with spring water, that the inhabitants are obliged to content them selves with the rain collected in cisterns. Calais is the seat of a tribunal and chamber of commerce, the residence of several foreign consuls, and has an agricultural socicty, school of design, and school of hydrography.

The harbour is formed by two moles, which are continued seaward by wooden piers, the whole being about threc quarters of a mile in length. At ebb tide it is nearly dry, and has

the belfry and liguthoues, calals. From Voyages dans $1^{1} A$ ncienne France.
not a greater depth than 15 or 18 ft . at high water, according to the wind. A tower in the centre of the town serves as a lighthouse, the light of which is revolving, and is 118 ft .

## CALATAGIRONE

above the sea level. A stationary tidal light at the red fort, announces when the port is accessible; good anchorage ground from 2 to 3 m . N. W. the harbour. Calais is well known as one of the principal ports for the debarkation of travellers from England; there being daily communication with Dover by steamboat, and several times a week with London and Ramsgate. In 1849, the number of travellers that arrived by sea was 35,411 , and in 1850 it reached to 53,864 . The manufactures of the town, formerly inconsiderable, have risen of late to some importance. The bobbin-net trade employs 782 looms, and from 4000 to 5000 artisans. Numerous mills have been erected, steam-engines are multiplying, and the inner ramparts have been removed to make way for the factories. There are also some oil and soap works, tanneries, and a salt-refinery. Vessels are built here, and fitted out for the cod, mackerel, and herring fisherics. A considerable trade is carried on in spirits, salt, oil, grain, wine, hemp, wood, coal, $\& c$. , and not less than 55 millions of eggs are aunually exported to England.

In 1347, Calais was taken by Edward III. of England, after a siege of 11 months. The story of his determining to execute six of the principal burgesses, with the heroic Eustache lle St. Pierre at their head, and of his sparing their lives at the intercession of his wife, Queen Philippa, is too well known to require repetition. Calais remained in the hands of the English from 1347 to 1558 , during which time they improved the town, and strengthened the fortifications. In 1558, it was taken by the Duke of Guise, and was the last relic of the Gallic dominions of the Plantagenets, which at one time comprehended the half of France. Pop. 10,673.

CALAIS, a tn., U. States, Maine, r. bank, St. Croix, (nearly opposite St. Andrews in New Brunswick), 140 m. N.E. Augusta; lat. $44^{\circ} 7^{\prime} \mathrm{N}$. ; lon. $69^{\circ} 5^{\prime} \mathrm{W}$. It has an upper and lower village, 2 m . apart, connected by a railroad; 10 schools, and a grist and 20 saw mills, propelled by the falls, which afford excellent water-power. Below the lower falls is a bridge across to the British side of the river. The tide rises here 20 ft ., and vessels of the largest size can ascend to the lower village. Pop. 2934.

## Calais (Pas de). See Pas-de-Calais.

CALAMATA, or Kalamata [Greek, Kalamai], a seaport, Greece, Morea, cap. gov. Messenia, at the head of the Gulf of Koron. It stands about 1 m . from the sea, 1. bank, Nedon, a torrent which emerges from a rocky gorge in Mount Taygetum ; and has a small suburb on the other side of the torrent, with mills and gardens supplied from it, by an artificial channel. It is the seat of the bishopric of Messenia, of a court of first resort, and has a busy trade. Its exports consist of wool, oil, raw silk, and figs of the first quality; and is noted for a particular kind of handkerchief, which, from the brilliancy of the colours, and moderate price, is in great demand throughout the Levant. In 1847, the arrivals in the harbour were 1108 vessels; tonn. 13,024;-departures, 1098 ; tonn. 12,430. The town was burnt by Ibrahim Pasha, in 1825. Almost every house in Calamata contains a chamber for the rearing of silkworms. The pop. consists of 400 families; of which only six are Turkish.-(Leake.)

CALAMIANES, an island group and prov. Philippines. The group comprises the islands Calamianes, Busvagon (which see), Coron, Linacapan, and Iloë or Yloë; between the islands of Palawan and Mindoro, besides numerous small islets. They lie between lat. $11^{\circ} 25^{\prime}$ and $12^{\circ} 20^{\prime} \mathrm{N}$. ; and three of them are intersected by meridian $120^{\circ} \mathrm{E}$. The island Calamianes, having Busvagon N., and Linacapan S., is about 36 m . long by about 17 broad; hilly, fertile, and abounding in wild animals, such as deer, hogs, and rats, which commit great ravages on the crops. The province includes the island group whence it is named, the N. portion of island Palawan, and several islets adjacent. It is thinly inhabited, and produces gold, rice, legumes, excellent wax, honey, fruits, beautiful pigs, and fowls. It is hilly, well wooded, and fertile; its coasts yield turtle and pearls; and, though in general dangerous, yet possesses some good harbours and anchorages. Pop. of prov. 16,028.-(Mallat.)

CALAMO, or KaLamo, one of the smaller of the Ionian Islands, between the S. end of Santa Maura and the coast of Greece, from which it is separated by a narrow channel ; lat. (E. end) $38^{\circ} 16^{\prime} \mathrm{N}$. ; lon. $20^{\circ} 54^{\prime} \mathrm{E}$. It is about 7 m . long by $2 . \frac{1}{2}$ greatest breadth; partially covered with olives and
vines, but pasturage indifferent. There is a little harbour named Geroglimione, on the S.E. side, affording good shelter, where fresh water is to be obtained.

CALAMOCHA, a tn. Spain, Aragon, prov. of, and 38 m . N. Teruel, in an extensive plain, near r. bank, Jiloca. It has a parish chureh, chapel, two endowed schools, a townhall, prison, and cemetery; and some trade in cattle, wine, and grain. Pop. 1400.

CALAMOTTA, an isl. Austria, Dalmatia, 7 m . W. by N. Ragusa, in the Adriatic. It is highly cultivated, producing excellent wine and oil. With the neighbouring islands, Giupan and Mezzo, it was either given or sold to Ragusa, in 1080, by Silvester, king of Dalinatia. Pop. 500.

CALANDSOOG, a vil. Holland, prov. N. Holland, on the N. Sea, 9 m. S. the Helder. It has a Reformed church and a school. This is the third church-two former ones, at considerable distances towards the W., having been swept a way by the sea, with a large tract of cultivated ground. Near Calandsoog, the combined British and Russian forces landed, August 27, 1799, and defeated a Duteh army with great loss.

CALANAS, a vil. Spain, Andalusia, prov. of, and 20 m . N. Huelva; with a church, two chapels, a townhouse, school, hospital, and cemetery; and some trade in grain, flax, and cattle. Pop. 1948.

CALANTAN, or Kalantan, a principality, Malay peninsula, E. coast, tributary to Siam, with river and town of same name.-The Privcipality is bounded, N. and S., by the petty states, Sungora and Tringano, from which it is separated by the rivers Banara and Basot; parallel $6^{\circ} 15^{\prime} \mathrm{N}$., which interscets the mouth of the river Calantan, may be taken as the centre line of the territory, which probably extends on either side about 30 m . The country is composed of vast plains, and its soil is elay mixed with sand. It is fertile, and produces rice, coffee, pepper, legumes, sugar-cane, bananas, \&c. The principal mineral products are gold and tin.-The RIVER has a tortuous course, is neither very broad nor very deep; has beautiful limpid water, and sandy banks; well stocked with a great variety of fish, and abounds in crocodiles.-The Town, which lies near the mouth of the river, is composed of irregularly built huts, interspersed among groves of cocoa-nut, banana, durian, and other fruittrees. The houses, both inside and outside, are filthy in the extreme.-The rort is small, shallow, and flanked on either side by a sand-hill. Pop. of principality estimated at 50,000 . -(Nouvelles Annales des Voyages, \&e.)

CALANTIGA ISLANDS, a group of islands, N.E. coast, Sumatra; lat. $0^{\circ} 29^{\prime}$ to $0^{\circ} 31^{\prime} 30^{\prime \prime} \mathrm{S} . ;$ lon. $104^{\circ} 5^{\prime} \mathrm{E}$. The three principal islands are high, and may be seen 24 m . from the deck.

CALAP, a small isl., N. Pacific Occan, Gillolo Passage, W. end, isl. Popa; lat. $1^{\circ} 15^{\prime} \mathrm{S} . ;$ lon. $129^{\circ} 30^{\prime}$ E.

CALAPAN, a tn., N.E. wast, isl. Mindoro, one of the Philippines; lat. $13^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $121^{\circ} 10^{\prime} \mathrm{E}$. It is a poor place, and badly built; has two small forts, but no port. The houses are covered with the bark of a species of palm, called Cabonegro, remarkable for its durability. Pop. 2790.

CALARY, par. Irel. Wicklow ; 19,564 ac. Pop. 2954.
CALASCIBE'T'TA, or Calataschbetta, a tn. Sicily, prov. of, and 14 m. N.E. Caltanicetta; with numerous caverns and sulphurous springs in its neighbourhood. Pop. 4788.

CALASPAKRA, a tn. Spain, prov. of, and $40 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Murcia; with streets badly paved, and having two squares, a parish church, chapel, council-liouse, four schools, a poorhouse, and a public fountain. Weaving, grinding corn and rice, expressing oil, tillage, and tending cattle, occupy the inhabitants, who also trade in cattle. Pop. 5275.

CALA'TABELLO'I'A, a tn. Sicily, prov. of, and 27 m . N.W. Girgenti, near r. bank river of the same name-the Crimisus of the Romans. The ancient Triocala-the principal fortress occupied by the insurgents in the war of the slaves-was situated in the vicinity of the town. Pop. 4768.

CALATAFIMI, a tn . Sicily, dist. of, and 21 m . E.S.E. Trapani. It is badly built, has a ruinous castle on the summit of a neighbouring hill; environs well cultivated, and extremely fertile. It occupies the site of the ancient Longarium. Pop. 8376.

CALATAGIRONE, or Caltagirone [anc. Galata Hieronis], a tn. Sicily, prov. of, and 32 m. S.W. Catania, on the slope of a hill, and with its suburbs occupying a considerable extent of ground. It is reputed one of the wealthiest towns
in the island, has spacious and clean streets; and its municipal regulations are judicious, compared with those of the generality of southern towns. It contains several churches and convents, a royal college, hospital, and orphan asylum; is the seat of a bishop, and has an academy with four professors. The inhabitants are esteemed the best workmen in Sicily, in the useful arts, and manufacture good pottery-ware and cotton fabrics. Several fairs annually. It was fortified by the Saracens, and taken from them by the Genoese. The famous Roger Guiscard accorded extensive privileges to the town. Pop. 21,700.

CALATAVOTURO, a tn. Sicily, prov. Palermo, 27 m. N.N.W. Caltanicetta, on the Grande. Jasper is found in the neighbourhood. Pup. 3408.

CaLATRAVA (Santiago de), a tn. Spain, Andalusia, prov. of, and 20 m . W. by S. Jaen. It is composed of a square, and some ill-made streets; and contains a parish church, small townhall, prison, endowed school, public storebonse, and cemetery. The people are engaged in tillage and cattle-rearing. In the vicinity is a quarry of white marble, of superior quality. Pop. 1014.

CALATRAVA la vieja, in Spain, the remains of the ancient city of Calatrava, on the S . bank of the Guadiana, 65 m. S.E. Toledo ; known as the Oretum or Oria of the Oretani, under the Romans. In the Middle Ages, it was strongly fortified, and was considered the key of the sierra Morena, the lofty barrier between Castile and Andalusia. The military order of Calatrava was founded here in 1158; the Knights at first retained the Cistertian habit, but afterwards shortened it, to make it more suitable for the field. They subsequently adopted a secular dress for common use, and one for ceremony, consisting of a mantle of white silk, tied with a cordon and tassels. The Knights rendered themselves famous in their contests with the Moors. The institution gradually degenerated, and, in 1485, the grand mastership was united to the crown. About 80 commanderies remain to the order, which was distinguished, in the days of its glory, by the title of 'the gallant order.'

CALATAYUD [anc. Bilbilis], a city, Spain, Aragon, prov. of, and 45 m. S.W. Saragossa, 1. bank, Jalon, near its junction with the Jiloca. It lies in a plain at the foot of two rocky ridges, the summits of which exhibit remains of several Arab fortifications. The city is divided into two parts, high and low. The former, or old Moorish town, called Moreria, is chiefly inhabited by a poor and miserable race of people, living in caves and hovels. The latter or modern town, contains numerous clean, well-paved streets, and 22 squares, lined with commodious houses, and handsome public buildings. Calatayud possesses in all 13 churches; those of Sta. Maria and St. Sepolcro, are collegiate, and deserve especial notice. Sta. Maria was formerly a grand Arab mosque, built prior to the conquest of the city by Alonzo the Brave, in 1120; it has a lofty octagonal tower. St. Sepolcro, built in 1613, on the site of an earlier edifice bearing date 1156 , is in the Doric style, and contains many curious relics. Of the remaining churches, two or three are handsome Gothic structures, and that of Santiago was also once a mosque. The other noteworthy public edifices are -a spacious guild-hall, with session-house and jail attached, three hospitals, a theatre, barrack, bull-ring, workhouse, college, several primary and other schools, an episcopal palace, and extensive and magnificent old castle; in the environs many agreeable public walks and pleasure-gardens. Manufac-tures:-linen and hempen fabrics, canvas, ropes, soap, paper, wine, oil, \&e. Considerable trade is carried on in cattle, grain, fruit, hemp, and manufactured goods. An annual and wellattended fair for cattle and agrieultural produce is held in September. ( Calatayud is the birtlplace of the poet Martial, and the painter Vera. Pop. 7125.-(Madoz.)

## CALAURIA. See Poros.

CaLavritlia. See Kalavryta.
CALAYAN, an isl. Indiar: Archipelago. See Babuyanes.
CALBE, or Kalbe, a tn. Prussia, gov. of, and 15 m . S. Magdebnrg, cap. circle of same name, on the Saale; here crossed by a bridge 1370 ft . in length. It has walls, with five gates; contains two parish churehes, several hospitals, and other endowments; and has manufactures of woolleus, paper, chicory, oil, and beet-root sugar. The railway between Leipzig and Magdeburg passes the town at the distance of a mile, where there is a station. Pop. 6000.-The crrcle,
area, 161 geo sq. m., is level, and tolerably furtile. Pup. 50,175.

CALBOURNE, par. Eng. Iants ; 5090 ac. Pop. 750.
CALCA, a prov. Peru, dep. Cuzco, and N. the city of that name. The surface is broken and uneven, but the temperature mild, excepting on the heights, where it is very cold. The soil is extremely fertile, producing in great abundance sugar-canes, wheat, maize, \&c., and a great variety of fruits. The sugar made here is the finest in Peru. Three considerable rivers have their sources in and around this province; these are the Paro or Beni, the Yambari or Paucartambo, and Urubamba.

CAI.CAR, a tn. Prnssia, gov. Dusseldorf, circle of, and 8 m . S.E. Cleves, on an island formed by the little river Ley. It contains two churches (a Protestant and a R. Catholic, tho latter possessing some fine paintings), and a handsome townhouse ; has manufactures of cloth, flamel, hosiery, and hats ; a tannery, brewery, potash-work, and some trade in wood and coal. It has also four cattle and two general markets. Pop. 1800.

CALCASIEU, or Calcasu, a river and lake, U. States, Lonisiana. The former rises in lat. $31^{\circ} 25^{\prime}$ N., and, after a S.S.W. course of about 110 m ., falls into the N. extremity of the lake of the same name, which, again, discharges itself into the Gulf of Mexico.-The Lake is upwards of 30 m . inlength, about 10 m . in breadth, and is distant from the sea 9 or 10 m . At the N. end of the lake, and stretching from it N.E., is an extensive prairie, called the Great Calcasieu Prairic.

CALCEBY, par. Eng. Lincoln; 430 ac. Pop. 52.
CALCETHORPE, par. Eng. Lincoln; 710 ac. Pop. 69.
CALCI, a vil. and com. Tuscany, prov. of, and 7 m . E. Pisa, near r. bank, Arno. It is well built, commanded by a castle belonging to the Archbishop of l'isa, and possesses a handsome parish chureh, which has a fine marble font and granite pulpit. A considerable quantity of oil is manufactured here. Рор. 2000.

CALCINAJA, a tn. and com. Tuscany, prov. of, and 12 m. E. Pisa, in a plain, r. bank, Arno. It is well built, and possesses a fine church. The vicinity is fertile, and the inhabitants are chiefly engaged in husbandry. Pop. 3222.

CALCINATE, a vil. Austrian Italy, gov. Milan, prov. of, and 10 m . E.S.E. Bergamo, on the post road to Brescia. It is tolerably well built, and possesses a handsome parish church, school, hospital, and poorhouse. The inhabitants are mostly engaged in husbandry and cattle-rearing. Pop. 1806.

CALCINATO, a tn. and com. Austriau Italy, gov. Milan, prov. of, and 12 m . S. E. Brescia, on a gentle declivity, l. bank, Chiesa. Here the Austrians were defeated by the French, A pril 19, 1706. Pop. 3693.

CALCIO, a tn. and com. Austrian Italy, gov. Milan, prov. of, and 18 m . S.S.E. Bergamo, r. bank, Oglio, on the highroad from Milan to Brescia. The streets are well made and clean, and the town possesses two handsome clurches, an hospital, and a brandy distillery; woollen, linen, and hempen fabrics, oil, and wine, are mannfactured ; and considerable attention is paid to the rearing of silkworms. Calcio was formerly the capital of a small province called Calciana, when its importance and population were much greater than at present. Pop. 2906.

CALCKEN, a tn. and com. Belgium, prov. E. Flanders, $8 \mathrm{~m} . \mathrm{E}$. Ghent, l. bank, Scheldt. It has breweries, bleachfields, flour, oil, malt, lint, and saw mills, and an annual loorse fair. Pop. 4952.

CALCUTTA [Kallee Ghattah, the ghaut or landingplace of the goddess Kallee; in aets of Parliament, called 'tho Town of C'alcutta, and Factory of Fort-William'], a wellknown city, Hindoostan, cap. of presid., and prov. Bengal, and seat of the supreme government of British India; lat. $22^{\circ} 33^{\prime} 5^{\prime \prime}$ N.; lon. $88^{\circ} 19^{\prime} 2^{\prime \prime}$ E. (n.), situate on a level tract, 1. or E. bank, 1 looghly, a branch of the Cianges, about 100 m . from the sea. It is about $4 \frac{1}{2} \mathrm{~m}$. in length, S.E. to N. W., along the course of the river ; and in breadtl, E. to W., from $1 \frac{1}{2}$ to $1 \frac{3}{4} \mathrm{~m}$. at the broadest part, which is about the centre. At cither extremity, the width does not exceed half a mile. leyond these limits, however, there are numerous suburbs, villages, and detached residences. A spacious way, called Circular Road, encompasses it on the land side, following the line of the ancient entrenchment called the Mahratta ditch; and marks the boundary of the liberties of the city, and
of the administration of English law. On the W. side, or that next the river, is an extensive quay, or breast-work, about 2 m. long, called the Strand, 40 ft . above low-water mark, and having landing-places or ghauts, at intervals throughout its

entire length. The river, opposite the city, varies in brcadth, from about two furlongs at the narrowest part, to about threequarters of a mile at the broadest. The approach to the capital of British India, by the Hooghly, is thus described by Davidson :-' On arriving at Garden Reach, the stranger may begin to imagine, that, not wholly without reason, Calcutta has acquired the title of the "city of palaces." From the lower part of this Reach, on the right, the river bank is laid out in large gardens, each with a handsome mansion in its centre; and the whole scene speaks of opulence and splendour. On approaching the head of Garden Reach, the stranger all at once beholds Fort William, and the town of Calcutta spread out before him, and a splendid view it is. Should lie arrive in the month of November or December, he will behold, perhaps, the finest fleet of merchant slipping the world could produce.'

Calcutta is divided into two distinct portions, the one, the N. portion, is occupied by natives ; the other, the S., by Europeans. In the former, the streets are narrow and dingy, the shops and warehouses mean-looking. The lower parts of the louses contain the bazaars, and the upper the dwelling-houses. This department of the city is crowded with a low and heterogeneous population; many being half naked, numbers entirely so, while others are bedizened in tawdry and fantastic garments; discordant noises of all sorts, and most offensive smells, complete the repulsive character of this portion of Calcutta. It is different with the S . or European portion. Here the streets are spacious; the bouses, most of them detached, large and handsome, built of brick, and stuccoed, which gives them the appearance of marble palaces.

Chowringhee, which lies E. of the fort, is the fashionable
and favourite quarter of the town, being apart from the quarter of trade and commerce. The streets there are wide, the houses handsome, and detached in their own grounds. Both the Episcopalian and Presbyterian burying-grounds are in this quarter of the city. The road which bounds Chowringhee on the $W$. is about 80 ft . wide, and runs along the E. side of the Maidan or plain, from N. to S. The new theatre, called the Sans Souci (an elegant Grecian structure), and the Asiatic Society's House (a plain building), are the only public edifices in this quarter. The ornamental character of some of its private houses, with their garden enclosures, is in some degree marred by the incongruous proximity of native huts, and open patches of unoccupied ground, which are, however, diminishing as building extends in this direction.

The suburbs of Calcutta are extensive; and Garden Reach, about 3 m . S. of the town, is the most striking as to architectural and park-like features, which are seen and admired from on board the ships, while sailing up the river. The houses are occupied by Europeans. The grounds are extensive, and laid out with fine trees, and parterres of shrubs interspersed with the bright colours of tropical plants, while the scene is enlivened by the ships constantly passing up and down. On the opposite bank are the botanical gardens, remarkable for their extent and beauty, and for the noble banyan and other trees which adorn them; and lower down is seen, on the same side of the river, the elegant Gothic structure of Bishop's College. Allipore and Ballygunge are other suburbs to the E., both healthy; and having also garden houses of Europeans, but without the river view. East of Calcutta lies the suburb of Entally, chicfly inhabited by Eurasians or half castes, and natives. Further towards the N. are the populous suburbs of Sealdah and Simleal, running into other like suburbs, containing the houses of wealthy natives, and the lhuts of their poorer countrymen; showing-what is so common in Eastern cities-a commingling of the stately mansions of the wealthy with the wretched hovels of the poor.

The houses of British residents in Calcutta have the forecourt or garden surrounded by a wall; the dining-room on the ground floor; the middle story, surrounded by a verandah supported by pillars, occupied with the sitting-rooms of the family; and in the upper stories, the bed-chambers. Bathrooms are universally introduced; and all the apartments are supplied with a punkah, moving noiselessly by means of a silk cord led into an adjoining apartment. Europeans, early in the morring, take out-of-door exercise, the air being then cool. At nine o'clock, after bathing, they take breakfast; when, in the case of a family, they disperse for their several avocations. At the approach of sunset, every one seeks recreation on horseback or in carriages, till eight o'elock, when dinner is served; everything being conducted on the most splendid scale, and including every attainable luxury. The ice used is brought in large blocks from America, and is preserved in ice-houses. In the cooler scason, theatricals, concerts, balls, and horse-racing, give a variety to the social entertainments.

Trades, Bazaars, \&ec.-The want of expensive outward decorations of the shops, and the absence of all show of goods in their windows, must strike a stranger forcibly. But some improvements in these respects are now beginning to be made; and within, no disappointment will be met with, either as to the quality of the goods, or as to the skilfulness of the European tradesmen, by whom they are manufactured. Everything, in short, may be obtained here, which money can purchase, as readily, and as good in quality as in England. Several English firms have carriage manufactories, and turn out, in a stylo equal to that of Long-Acre, barouches, phætons, chariots, and other descriptions of carriages adapted to the climate. The taste for the more elegant and expensive European equipages is extending among the rich natives. The principal trades practised by Europeans are those of hotel-keepers, jewellers and silversmiths, watchmakers, cabinet-makers, carvers and gilders, fancy stationers, dealers in objects of vertu, booksellers and bookbinders, boot and shoemakers, tailors, mantuamakers, milliners, ironmongers, apothecaries, confectioners and pastry cooks, grocers, dealers in oilmen's stores, tea, wine, and spirit dealers, coach-makers, livery-stable keepers and horse-dealers, house-builders, shipbuilders, iron-founders, and lastly undertakers.

The native shops are in what are called bazaars, being

## CalCUTTA

houses in close narrow streets, in the native town, where the rooms in the different floors are appropriated to the selling of all deseriptions of goods. Ameng these, the principal are Burra bizaar, and the old and new China bazaars. In the two latter, the native shopkeepers sell imported European goods. In the Chitpore Road are found numerous stores of

Within its walls are store-rooms, ordnance-yards, powder-magazines, barracks, a church, \&c. Around the E margin of the Maidan, are a series of walled tanks. At the S. extremity is the grand jail, and the race-ground, of a triargular form, with a course of about $1 \frac{1}{2} \mathrm{~m}$. in length. At the N. side, which is called the Esplanade, is the Government-house, the place of the Governor-general, a magnificent pile, built by Marquis Wellesley. It has four wings, with a stupendous dome in the centre; and is surrounded by a colonnade of Ionic pillars. In a line with the Government-house, and fronting the Esplanade, are splendid mansions, with handsome verandahs, supported by lofty columns. This is one of the healthiest localities in the eity; it is also a favourite resort of the fashionable world, being the IIyde Park of the Indian capital. Another favourite promenade is the Strand, where both Europeans and Indians go to enjoy the cool of the evening; and where, on sueh occasions, is to be seen an imposing display of handsome equipages, with crowds of ladies and gentlemen on horsebaek, all attended by a horse-keeper to each horse, called a Syce. After the Government-house, the principal cdifices worth noticing are the townhall, supreme court, Government treasury, writers' buildings, the Metcalfe Hall, the mint, where it is said, 500,000 coins can be struck off in 24 hours, and in which nearly 300 workmen, native-made furniture (after European models), of mahogany, toon wood (a red wood resembling mahogany), and teak-wood; but inferior both in elegance and durability to that manufactured in the workshops of European tradesmen, and thercfore sold at much lower prices. The natives who practise trades on their own aeeount cannot compete, in finish and exactitude, with the well turned out articles of the European workshops, where natives also labour, but under the direction and guidance of the European head, whose better training, and habit of working by rule, correct their faults and defects. The butcher, poultry, fish, fruit, and vegetable markets are all designated bazaars, and are admirably supplied. The mutton of Bengal is equal to the best Highland mutton; and the beef of the small Bengalee cow is sweet and delicate.

Public Buildings.-At the S.W. extremity of the city is a large space of verdant, level ground, about $1 \frac{3}{4} \mathrm{~m}$. in length, and about 1 in breadth, called the Maidan, bounded, E. by the Chowringlee Road, and W. by the Mooghly. In this cliiefly natives, are employed; the Hindoo college, the Madrussa or Mahometan college, the General Assembly of the Established Church of Scotland's institution, the Free Church of Scotland's institution, the Bengal Club, the theatre, the medical college, the general hospital, the native hospital, the mechanies' institute, the orphan-school, the ice-house, the Martinière, the race-stand, the Asiatic Society's rooms, and the Ghaut, for burning the dead bodies of Hindoos.

The monuments are, General Sir David Ochterlony's pillar, on the Maidan; the statue of the Marquis of Wellesley, in an open Grecian building, in Tank Square; Prinsep's ghaut, S. of the fort; the bronze statue of Lord William Bentinck, in the esplanade; and the bronze statue to Lord Auckland, on the S. of Government-house; the marble statues of the Marquis of Cornwallis, and others, within the townhall; and to Bishop Heber, and others, in the new and old eathedrals; and the monument between the W. gate of Fort-William and the river, erected by Lord Ellenborough in commemoration of
the vietory gained at Gwalior, during his government.

The religious editices are, the new cathedral of St. P'aul's, the old cathedral or St. John's Church, the old Mission Chureh, St. James's Church, St. Thomas's Cliurch or Freeschool Church, St. Peter's, within the fort; all these belong to the Chureh of England. St. Anplain, about 1 m . from the city, and commanding the river, being separated from it only by the Strand Road and the Wet Ditch, stands Fort-William, one of the largest and most regular fortresses in India. It was constructed by Lord Clive, after the battle of Plassey (1757); and has cost altogether $£ 2,000,000$ sterling. It mounts 619 guns, from 12 to 32 pounders; will hold, for the purposes of defence, 15,000 men; contains 80,000 stand of arms, and is usually garrisoned by one European, two native regiments, and a detachment of artillery.
drew's Kirk, con-
nected with the Established Chureh of Scotland; the Free Kirk, built since the Disruption by voluntary contributions. Three R. Catholic ehurehes, the Greek chureh, the Armenian church, two Baptist chapels, the Independent Union Chapel, the Hirdoostanee church, the Simleah ehurch, in which a converted, educated, and episcopally-ordained Hindoo officiates; besides Mahometan mosques, IIindoo temples, and a Chinese temple. The churches connected with the English Establishment are under the Bishop of Culeatta, and Metropolitan of India: and
the archdeacon and clergy are all salaried chaplains of the Company, appointed by the Court of Directors. Calcutta was made a bishop's see in 1814; and on the ereation of Madras and Bombay into bishopries in 1833, the Bishop of Caleutta became Metropolitan of India, with jurisdiction over them, but subject himself to the Archbishop of Canterbury. The new cathedral is a splendid Gothic building, on the E. of the Maidan or plain. It was erected by voluntary subseription. The old cathedral was begun in 1784, and was built by voluntary subscriptions also, under the auspices of Warren Hastings, Governor-General.

St. Andrew's Chureh was built, soon after the appointment of the first chaplain of the Church of Scotland, in 1814; and two ordained ministers of the Established Chureh of Scotland now officiate thercin. They are, like the ministers of the sister establishment, salaried chaplains of the East India Company. The kirk-session in Calcutta, and that of each of the two other presidencies of Madras and Bombay, are subject to the ecelesiastical jurisdiction of the presbytery of Edinburgh. These three kirk-sessions jointly clect and send one minister and one elder, as their representatives, to the General Assembly of the Established Chureh of Scotland. In 1834, a presbytery was established at Calcutta by the General Assembly, with power to license and ordain native preachers in connection with their literary institution. The Greek chureh was built in 1781, and the Greeks declare the crown of England the protector of their chureh. The ministers are taken from Greece by permission of the Patriarch of Constantinople. The Armenian church was built in 1724, but has since been added to. The Armenians were invited, as far back as 1689, by Job Charnock, then Governor, to settle and trade in the Company's factories; and a written agreement was exeeuted between them, giving them exelusive privileges for trade, and the protection of the company.

Educational Institutions.-The educational institutions, not affording religious instruction, are-the college of FortWilliam, for the members of the Company's civil scrvice; the Hindoo college, the Madrussa or Mahometan college, and the Sanscrit college, all supported by Government, and managed through their 'committee of general instruction.' The first two are intended to bestow (through the medium of English) instruction in the sciences and literature of the W. world, apart from any religious instruction. There are several schools, taught by natives, for instruction in English, and in the vernacular languages; and a native female sehool has been lately established by Mr. Bethune, member of council.

The edncational institutions affording rcligious instruction are, Bishop's college, founded, in 1820, by the society for the propagation of the gospel in foreign parts, at the instance of Bishop Middleton, the first bishop of Calentta. It has been munificently supported by the Church of England at home. It has a principal and two professors, from the English universities, and is intended for the education of missionaries, catechists, and sehoolmasters.

The General Assembly's institution, established in the year 1829: its object is to spread, among the native youth, a knowledge of the evidences and doetrines of the Christian religion, by means of a sound and liberal education, under ordained missionaries of the Established Church of Seotland. It is divided into the normal school, and college department; and a theological course is now added, to prepare native youths for becoming licensed ordained preachers, under the authority of the Established Church of Seotland.
The Free Church institution was established, on the Disrnption, on similar principles, and with similar objects, by the able missionaries, Dr. Duff and the Rev. Wm. Mackay, who raised the other institution to its high place in public estimation.

The high school, the free school, the parental academic institution, the Christian instruction society, the infant school society, several ladies' socicties for native female education, the Christian tract, and book society, and the Armenian philanthropic society, are other institutions of a religions character. St. Xavier's Collcge, and Loretto IIonse, are institutions established and conducted by Jesuits; and the latter is an establishment for the edueation of young ladies, conducted by nuns of the Ursuline order, who caune from England for that purpose.

The Martimère, founded under the will of General Claude

Martin, a Frenchman, who had been in the Company's service, and died at Lucknow, was opened in 1836. The original bequest, with its accumulation of interest, amounted, in 1830, to nearly $£ 100,000$. The building cost about $£ 23,000$. It provides gratuitous board, \&ce, and a liberal education, to a certain number of both sexes, on the foundation, of indigent Christian children above the lowest class of the population, without respect to religious denominations. Boys, in better circumstances, are adnitted as boarders and day scholars, to receive a superior education, at a fixed monthly fee. A course of religious instruction, and a form of prayers, were, it is worthy of remark, framed by the praiseworthy and united efforts of the Protestant bishop of Calcutta, Dr. Wilson; the R. Catholic vicar-apostolic, Dr. St. Leger; and the senior minister of the Scotch Chureh, Dr. Charles, which are used by all in the school, while the children of each denomination receive private religious instruction from their respective pastors.

The Benevolent Institutions are-Governmentsavings'-bank, the general hospital, the native hospital, the fever hospital, the police hospital, the Ilowrah seamen's hospital, the leper asylum, dispensaries, public lunatic asylum, distriet charitable society, Dwarkanath Tagore's fund for blind poor, Bengal military orphan institution, European female orphan institution, the sailor's home, and some others.

The Religious Societies are numerous. The most important are the Church missionary assoeiation, the diocesan committee of the society for the propagation of the gospel in foreign parts, the diocesan committee of the society for promoting Christian knowledge, the auxiliary Bible society, the Church missionary association, Christian institution of the London missionary society, the seaman's friend, or Bethel society, and native Christian protection socicty.

The Literary and Scientific Institutions are-the Asiatic society, the mechanics' institution, the publie library, the medical and physical society, and the native medieal college. The last is a most admirable Government institution, for training the natives to become efficient and skilful surgeons, and medical practitioners. There the highest caste Hindoo, whose religion makes it pollution and sinful, may be seen handling the dead subject, and using the scalpel like a European, without being excluded by his countrymen from the privileges of his caste-a wonderful victory gained over their religious prejudices! There are also the agricultural and horticultural society; and in connection with them, may be mentioned the beautiful and extensive botanic gardens of the company, a little S. of Calcutta, on the W. bank of the river.

Commercial Companies and Corporations.-The bank of Bengal, the bonded warehouse, and the Assam tea company, are corporations; branches or agencies of the Agra, and united service bank, the oriental bank, and of the Northwestern bank, are established in Calcutta. There are also the chamber of commerce, the trade association, indigo planter's association, the docking company, the steam-tug company, and several river navigation companies, marine, and life insurance offices, and provident societies.

The Newspapers published in Caleutta are-the Murkaru, Englishman, Morning Chronicle, Eastern Star, and the Government Gazette; besides several native newspapers, in the vernacular languages.

Courts of Law. -Her Majesty's supreme court of judicature, at Fort-William, was established by eharter, 13 Geo. III., in 1774; which vested in it eriminal, civil, admiralty, and ecelesiastical jurisdiction, subject only to an appeal to Her Majesty in her privy council. It has a chief, and two puisue justices, appointed by the Crown, who must be barristers of a certain standing, at the Finglish or Irish bar; and either practising in that court, or in the courts at home. It has exclusive criminal jurisdiction (with jury trial), over all the inhabitants of Calentta who are placed under the protection of British law. The civil jurisdiction of the court is equally extensive ; but with this reservation, imposed by the statute 21 Geo. III., cap. 70 ; namely, that the court shall administer their own respective laws of inheritance, succession, and marriage, and of contract to Hindoos and Mahometans. The entire common law of England, and the statute law then existing, so far as applicable to the state and condition of the settlement, were transferred to Caleutta, by
virtue of the charter of 13 Geo. I., in 1726; establishing the first legal tribunal, called the mayor's court. Acts of Parliament passed sinee, do not affect India, unless India be specially mentioned. Beyond the limits of Calcutta, both the criminal and civil jurisdiction of the supreme court, extends over all British-born subjects of Her Majesty, and their lawful descendants, residing within the presidency of Bengal, and the provinces from time to time annexed thereto; and itz civil jurisdiction extends also over native, and all other inhabitants of India, residing within these extended limits, who enter into written contracts with any Britisl-born subject, and agrecing therein, that if dispute should arise, the matters between them should be determined by the supreme court. The practitioners in the supreme court are divided into two distinct branches, as in England, namely, barristers, called advocates, and attorneys. An insolvent court, connected with the supreme court, was established in 1829. The present insolvent act is the English statute, 11 Vict., cap. 21 ; and, in respect of traders, it has provisions similar to those of the English bankrupt acts. A court for small causes (one of the judges in which is a Hindoo), exereises jurisdiction, in some respects subject to, and confined within nearly the same local limits as the supreme court.

The police courts in Calcutta are presided over by paid magistrates-justices of the peace-who exercise a crininal jurisdiction, auxiliary and subordinate to the criminal jurisdiction as exercised by Her Majesty's judges in the supreme court. The Calcutta courts of Suduler Dewaney and Sudder Nizamut, being the chief civil and criminal comrts of appeal from the East India Company's local courts, in the provinces of Bengal, established under Government regulations, have no original or other jurisdiction within Calcutta. The Board of Revenue in Calcutta is invested with certain original and appellate judicial, as well as with ministerial functions, created and defined by the Government revenue regulations, in relation to the Company's revenue courts and officers, and the collection of the territorial revenue within Bengal.

Factories.-The factories in the city and neighbourhood using English machinery are-the Government foundry at Cossipore, having beautiful machinery for easting and boring brass ordnance; the Gloster mills, for making cotton twist ; the sugar manufactory at Seebpore, using vacuum pans and steam machinery; and several corn, flour, and oil mills, and a manufaetory for steam boilers, with a foundry attacled. The mint has powerful and efficient steam and other machinery, for all the purposes of working the metals, and coining money. Ship-building was carried on formerly to a considerable extent, but is now nearly altogether extinet, owing, it is said, to the cheaper cost of construction in this country. The repairing of ships is, however, a considerable and lucrative business still; and the Government and private docks are extensive and commodious.

Commerce.-Calcutta is now the great emporium of the East, monopolizing the whole internal trade of Bengal, the nature and extent of which will be found at once fully and concisely exhibited in the following series of Tables:-

## Exports of Indigo.

Duty Levied in 1849-50, compared witil 1818-19.

The prineipal articles of export are opium, indigo, sugar, saltpetre, rice, raw cotton, raw silk, piece goods, hides, lac, \&e. The principal imports-metals, piece goods, twist, and yarn, salt, betel-nut, books, glasswares, wines, woods, woollens, \&c.

The banks of the Ilooghly, from the entrance of the river for many miles upwards, are low, flat, and covered with jungle. Ships cannot venture to make the river without taking on board a pilot from the pilot schooners of the Company stationed in the bay; and shifting sands, with a rapid stream, meeting a contending tidal rise, make the navigation of the river unecrtain and dangerous, and demand the pilot's constant watchfulness and care. Therefore, as early as 1669 , the Company (then laving a settlement at IIooghly only, 28 m . above Calcutta, and up to which large vessels could then sail), obtained permission from the Mogul Emperor to organize an establishment of pilots, and the present efficient body of Europeans forming the Bengal pilot service has been the result. Government and private steam tugs, now plying on the river, considerably lessen the risk of navigation, and lighten the labours of the pilots. The river, abreast of Calcutta, is about the breadth of the Thames at Gravesend. Ships of 1400 tons burden can sail up and anchor off the city in mid-chamnel, in 6 or 7 fathoms water, or may lie at moorings within a few feet of the bank.

Government has sanctioned the construction of a railway from Howrah, opposite Caleutta, to Pundoah, with a branch to the Ranigunge collieries, in the district of Burdwan, in all about 130 m . An electric telegraph has recently been formed between Calcutta and Diamond Harbour, about 50 m . down the Hooghly; and it is intended to carry it down to near the mouth of the river.

Currency.-The coins now coined and current in Calcutta and provinces are the Company's gold mohur, rupee, and pice. The first is equal in valne to 16 rupees, which are the silver currency, and one rupee is about the value of $2 s$.sterling. Each rupee is equal to 16 annas (a nominal coin) ; and each anna is equal to four pice, the copper currency. The bank of Bengal
issues notes, which pass current for their respective amounts, and are received at the Government treasury and provisional collectorates as cash, in payment of Government revenue and other dues.

Climate.-The range of the thermometer in November, December, January, and February, denominated the cold scason, is from $50^{\circ}$ to $75^{\circ}$ Fah.; the N.E. monsoon, then the prevailing wind, is bracing to the European constitution, relaxed by the preceding heats; and at this season the appetite and strength improve. Balls, and gaicty by night, and boarliunting with spears, jackal-hunting with hounds, and horseracing with Arab, English, New S. Wales, and country-bred lorses, are the amusements of the mornings during this season. Enropean vegetables for the table are then grown, and are fully equal to those produced in more temperate climates. March brings with it the S.W. monsoon, and hot weather, which increases in temperature during the succeeding month; and in May the thermometer reaclses $90^{\circ}-95^{\circ}$ in the shade, $100^{\circ}-110^{\circ}$ in the open air; and the hot atmosphere of that month striking the face, on going out of a house from which the external air has been from sumrise carefully excluded, has been aptly compared to the heat of a blast-furnace. This heat is, however, alleviated by occasional storms, called Northwesters, which are generally accompanicd by thunder and lightning. In June the rainy season commences, much to the relief both of animal and vegetable nature, and continues to the end of September; but there are very few days that have not some hours free from rain. The interval between the cessation of the rains, and the commencement of the cold weather, is unhealthy, from the moisture in the atmosphere, and a still powerful sun causing a rapid decay of vegetable matter. The climate has been, however, much ameliorated since the original establishment of the factory, by judicious draining, clearing away jungle in the suburbs, and by opening $u p$ roads and thoroughfares, and otherwise improving, from time to time, both the native and European quarters of the city. A permanent sanitary commission, with extensive powers, has been lately established by a local act. A stranger going to India, in order that be may be gradually acclimated, should so time his departure from England that he may arrive in the leginning of the cold weather. The sun of Bengal is singularly prejudicial to Europeans, and at no season is it safe in Calcutta to be in the open air, when the sun is up, without some protection from its rays. Carriages, gigs with leather hoods, or palanquins carricd by natives, by means of poles resting on their shoulders, are, therefore, absolutely necessary for Europeans. The proportion of deaths to the population is 3.13 per annum nearly; that of London is about 2.16 ; the difference being accounted for on the score of climate.

Population.-The population of Calcutta, according to the census of 1837, amounts to 229,714 ; but the apparent population scems much greater, from the crowds of people which pour into the city from the suburbs, during the day, to earn a livelihood, and which, according to the same census, amount to the additional number of 177,000 . The inhabitants of Calcutta may, for judicial purposes, be divided and classed into-1. British-born subjects and their legitimate descendants, about 3138 in number. 2. Hindoos or Gentoos, of Bengal and of the Upper Provinces of Hindoostan, in number about 137,651. 3. Mussulmans or Mahometans, of Bengal and of the Upper Provinces of Hindoostan, in number abont 58,744. 4. Other natives of Asia, neither Hindoos, Mahometans, nor Christians - such as Parsees, Chinese, Aracanese, Jews, Arabs, and Moguls. 5. Portuguese, Armenian, French, and other Christians of native or foreign extraction; together with half-castes, or illegitimate children of British subjects by native mothers, and their offspring, numbering about 4746 .

The Socicty - English-is excellent, being composed of members of council, judges, and heads of departments, and members of offices and boards, employed in the administration of the affairs of the Company, civil, and military, and of other officers and scrvants of the East India Company of both services, and the bishop and clergy; then the judges of the supreme court, the barristers, attorneys, and merchants, who are all independent of the Company.

Steam Communication with Great Britain.-Besides the continuous communication kept up by fine passenger and other sailing vessels round the Cape of Good Hope, passengers and mails are carried once a month, to and from Calcutta, by what VoL I.
is called ' the overland route,' namely, Alexandria, Cairo, and Suez. The Peninsular and Oriental Steam Navigation Company undertake the mail service, under contract with the Imperial Government; and, at the same time, carry passengers in the large steamers employed by them, and which leave Southampton on the 20 th, and Calcutta on the 8 th, of every month. Two other companies are in the field!- the one to be called the Eastern Stcam Navigation Company, to occupy the same line as the Peninsular and Oriental, but their steamer to leave Plymouth on the 1 st of the month for Alexandria, in correspondence with one from Calcutta; the other, the Screw Steam Navigation Company, now carrying a mail to the Cape of Good Hope, intend extending that line to Calcutta.

Early History.-Job Charnock, the agent of 'the London company, the first English East India Company incorporated by charter of Queen Elizabeth, in 1600 , was the founder of Calcutta. The first factory in Bengal of this powerful Company was established at Hooghly, 28 m . higher up the river, under a firman of the Mogul Emperor of IIindoostan, Shah Jehan, dated 1644. In the year 1686, the Company's then agent, Mr. Charnock, was with his council and factors driven out of it, by the Nawaub of Bengal, and on December 20, while sailing down the river, he was attracted by the shade afforded by a large tree in the village of Chuttannttee (the present site of a part of Calcutta), and, accordingly, he and his people landed, and began to entrench themselves there. Finding it inexpedient to remain, they left in February 1687, and did not return until some time after the treaty with the Nawaub, of August 1687, was signed. In October 1688, they again took their departure, and went to Madras. Overtures, however, having been made to them by the Nawaub, by the orders of the Emperor, Mr. Charnock, with his council and factors, returned to Chuttanuttee on August 24, 1690, when the Emperor gave them permission to form a commercial settlement, but prohibited the ercetion of any fortifications. Here, then, the settlement was permanently fixed as the head quarters of the Company's commercial establishments in Bengal. One officer and thirty men came from Madras with Mr. Charnoek, that being the military establishment originally allowed by the Emperor, 'to do honour to the principal agents.' This period, therefore, may be considered the era of the foundation of Calcutta! Its founder, Charnock, died in 1692, and lies buried in the old cemetry, where St. Joln's Church, the old cathedral, was afterwards built. The settlement rapidly increased, being situated on a navigable river, and therefore well adapted for being the emporium of the trade of Hindoostan. In 1695 , a grant was made by the Nawaub of Bengal, confirmed by the Emperor Aurengzebe, of the village of Chuttanuttee, together with two other villages called Kalleeghatta, and Govindpore adjoining, reserving an annual rent to be paid by the Company of 1195 rupees. Walls of masonry, with bastions at the angles, were first raised in the same ycar by the permission of the Nawaub, as a defence to the factory against a rebel Zemindar, or land-bolder of Burdwan. Thus originated the fortifications of Calcutta.

The old fort, called Fort-William in honour of King William IV., was not begun to be built until the year 1699 ; and that fort, and the European part of the town, were erected on the site of the village of Kalleeghatta, and hence the name Calcutta. The fort occupied the site of the present import warehouse, extending to about the centre of Tank Square, then called Lall Bagh or the Park. Part of the present native portion of the city on the N. occupies Chuttanuttee, while Govindpore has disappeared, and in its place we now see a magnificent maidan or plain, on the $S$. of the city, in which is placed the new citadel, also called Fort-William. As late as the year 1717, a forest stood immediately in front of the town to the $S$. on what is now the esplanade. In 1720, however, considerable improvements were made in the public buildings, and roads were opened, to contribute to the salubrity of the city. At this period, and for many years after, the maidan or plain, and the site of the present citadel, as well as the space now occupied by Chowringhee, were a complete jungle, interspersed with the huts of natives, patches of rice cnltivation, and grazing ground.

Calcutta, however, has had vicissitudes of fortunc. In the year 1757, the town extended about half a mile above and below the old fort, and about 600 yards inland, the houses of the English were in number about 70, and were detached in
separate enclosures, In the same year, Calcutta was captured and plundered by the Nawaub of Bengal, Sooraj-oodowlah, after a spirited defence; and many of our brave conntrymen, after the ignoble flight of the Governor, were taken prisoners, and died from suffocation in the Black Hole, where they had been placed for safe custody. Colonel Clive (afterwards Lord Clive), with about 3000 men, assisted by Admiral Watson, with a fleet of three King's ships, were sent from Madras. They re captured Calcutta in February of the same year; and Clive, a few days afterwards, attacked and routed the Nawaub in its vieinity. The latter then signed a treaty, dictated to him, by which, among other things, he agreed that the Company should fortify Calcutta in such manner as they should deem proper for its defence; and that money should be coined 'at Allenagur' (Caleutta), in the same manner as at Moorshedabad. In the year 1758, Meer Jaffier, Nawaub of Bengal, granted a sunnud to the Company for the free tenure of Calcutta. From this date, Calcutta became, virtually, the seat of an independent power.-(Davidson's Trade and Travels in the East; Von Orlich's Travcls in India; Orme's History of the W'ar in Bengal; I ve's Voyage; Bolst's Considerations on India Affiairs; Verelst's State of Bengal; Bengal and Agra Guide; Charters, Acts of Parliament, and Parl. Reports; and Wilkinson's Extcrnal Commerce of Bengal.)

CALDARO, or Kaltern, a tn . and com. Austria, Tyrol, prov. of, and 8 m . S.W. Botzen, near r. bank, Adige. It is tolerably well built, and has a square, a handsome parish chureh, townhall, hospital, and two convents; and a considerable trade in wine. Pop. 3219.

CALDAS [hot baths], several tns., vils., and medicinal baths, Spain, of which the most important are-1, Caldas de Montbuy, a tn, Catalonia, prov. of, and $15 \mathrm{~m} . \mathrm{N}$. Barcelona. It has narrow and crooked streets, two squares, a church, endowed school, hospital, several fountains, and a cemetery. Manufactures:-linen, woollen, and cotton fabrics, ribbons, serge, lace, and brandy. Pop. 2409.-2, Caldas de Reyes, a tn . Galicia, prov. of, and 12 m . N. Pontevedra; in a plain, at the confluence of the rivers Inmia and Bremaña. It has a chureh, two schools, a townhall, prison, ancient tower, and fendal palace of the Marquis of Bendana. The bathing establishments are two in number, and much frequented. The inhabitants are engaged in weaving, tanning, tillage, and eattle-rearing. Pop. 1177.

CALDAS, a tn. Brazil, in the S. of prov. Minas Geraes, near the sources of the Rio Pardo, an affluent of the Rio Grande, or Para. It bas a church and primary sehool; and its inhabitants are engaged in cattle rearing and in mining. Near it are warm sulphurous springs. Pop., tn. and dist., 2000.

CALDAS da Rainha, a tn. and par. Portugal, prov. Estremadura, dist. Alemquer, on the slope of a hill, $58 \mathrm{~m} . \mathrm{N}$. Lisbon. It contains a church and an hospital, and has a considerable annual fair, but deserves notice chiefly for its sulphur baths, which are mueh frequented. Pop. 1550.

CALDBECK, par. Eng. Cumberland; 24,280 ac. P. 1553.
CALDECOT, par. Eng. Norfolk; 930 ac. Pop. 48.
CALDECOTE, three pars. Eng.:-1, par. Cambridge; 833 ac . Pop. 117.-2, par. 11untingdon; 740 ac . Pop. 52 . -3 , par. Warwiek; 820 ac. Pop. 93.

CALDECOTT, two pars. Eng.:-1, par. Hertford ; 310 ac. Pop. 41.-2, par. Rutland ; 1440 ac. Pop. 260.

CALDER.-1, Two pars. Scot. Edinburgh: JVest and Mid Cakler; the former about 10 m . in length, and $5 \frac{1}{2} \mathrm{~m}$. in breadth; the latter about 7 m . in length, and 3 m . in breadth. Pop. (W. Calder), 1666; (Mid-Calder), 1456.-2, Calder (East), a vil. Scotland, co. of, and 11 m. S.W. Edinburgh, par. Kirknewton. Pop. 419.-3, Calder (North and Soulh), two small rivers, Seotland, co. Lanark, affluents of the Clyde, which they both join on the r. bank, the first 6 m ., and the second 10 m. S.E. Glasgow.

CALDER, two rivers, England.-1, a river eo. York, which rises on the E. borders of Lancashire, near Burnley; pursues an E. course to Wakefield, then, proceeding N., joins the Aire, near the village of Castleford. It is navigable for about 30 m ., is connected with a number of canals leading to Rochdale, Todmorden, Halifax, Goole, \&e.; and facilitates the transmission of goods across the kinglom, from Liverpool to Hull-thus forming a junction between the E. and W. seas. On its banks are the important towns of Wakefield and Dewsbury; and numerous iron and coal works, and stone quarries.
-2, A much less important river, which riscs near the same source, but flows in an opposite direction, and falls into the Ribble, in Laneashire.

CALDICOT, par. Eng. Monmouth; 1850 ac. Pop. 625.
CALDONAZZO, a vil. and com. Austria, Tyrol, prov. of, and 11 m. S.E. Trent; 2 m . S.W. Levico, near S.W. bank, Lake Caldonazzo. Silk is produced, and manutactured to some extent. Pop. 2588.

CALDY, a small isl. Wales, Caermarthen Bay, W. side, on the coast of Pembrokeshire; lat. (S. point) $51^{\circ} 37^{\prime} 54^{\prime \prime}$ N.; lon. $4^{\circ} 41^{\prime} 0^{\prime \prime} \mathrm{W}$. (R.) It is $1 \frac{1}{2} \mathrm{~m}$. long, and half a mile broad. Some part of it is cultivated, and a few families reside on it. The remains of an ancient priory are still visible.

CALEDON, a market tn. Ireland, co. Tyrone, on the Blackwater, 11 m. S. by W. Dungannon. It is generally well built, has a handsome church, with a spire; and chapels for Weslcyans and R. Catholics, a free school where 40 poor girls are clothed and educated, and several other sehools and charities; and extensive flour-mills in the vieinity. Pop. 1046.

CALEDONIA (NEW), a tract of country, British N. America, W. of the Rocky Mountains; included in the IIudson's Bay territory; between lat. $48^{\circ}$ and $57^{\circ} \mathrm{N}$.; extending about 500 m . N. to S., and nearly 400 m . E. to W. It is mountainous, and abounds in lakes and rivers-the largest of the latter called Frazer's River. The climate is unfavourable to agriculture ; but potatoes, turnips, wheat, and barley, are raiscd at some of the stations or posts, where also considerable numbers of cattle are reared; and there are many fertile spots along the rivers. The thermometer sometimes falls $32^{\circ}$ below zero; but the seasons are generally milder than in the same parallel E. of the Rocky Mountains. The summer is never very hot; although fires can be dispensed with from the end of May till the beginning of September. Snow lies on the ground from Novemher till April or May, and on an average six ft . deep. This part of the country is inhabited by the two great nations of the N.-the Takali or Carrier Indians, and the Atrials or Shouswaps. The Carriers are of extremely filthy habits, and brutal propensities. They live chiefly on salmon, and prefer their meat putrid, burying it for months under ground, till it become a mass of corruption, when it is considered a delicacy. They are quick tempercd, but neither sullen nor revengeful; and are singularly susceptible of ridieule. The Hudson's Bay Company have nine posts or stations in this territory.

CALEDONIA (New), an isl. Australasia, S. Pacific Ocean ; between lat. $20^{\circ}$ and $22^{\circ} 30^{\prime} \mathrm{S}$., and lon. $164^{\circ} 5^{\prime}$ and $167^{\circ}$ E.; length, N.W. to S.E., about 200 m ; breadth, 30 m . It is surrounded on all sides by coral reefs, connecting numerous islets, roeks, and banks of sand-rendering the navigation so intricate and dangerous, that the island can be approached by two openings only. Vessels may anchor securely at Port Balade, on the N.E., and at Port St. Vineent, on the S.W.; the latter having a natural harbour, with anchorage in 10 or 12 fathoms, perfectly seeure. Betwcen the small island of Botany and the S. end of New Caledonia, and within the coral reefs, a deep, wide ship channel was discovered by Capt. Woodin in 1849, and named by him Woodin's Channel. There are several bays in it, where ships may anchor close to the beach in 15 fathoms or less. Water also is abundant. In physical aspect, the island greatly resembles New S. Wales, consisting, in the interior, of barren rocky mountains, said to rise to the height of 8000 ft ., interspersed with fertile valleys ; many of the productions are also similar; but, on the whole, it is less fertile than most other islands of the Pacific. The principal roeks are granite, quartz, mica, steatite, with specular iron, and green amphibole. The sugarcane and banana, cocoa-nut palm, bread-fruit tree, taro, and mangoes, are cultivated; and sandal-wood is found to some extent ; the inhabitants live mostly on yams and fish. Trepang is fished on the coast. The natives are of a deep black, with curly hair, robust, active, and well-made. Some tribes of them are known to be courteous and fricndly to strangers, while others are treachcrous, mereiless, and cruel man-eaters. In 1849, the station at Balade was attacked, and some of the Europeans killed; and the same year, the Captain and cook of the ship Mary were murdered, cooked, and eaten. They speak a language distinet from that of the neighbouring islands. New Caledonia was discovered by Cook, in 1774, and is called Balade by the ratives.-(Rienzi, Oceanie; Naut. Mag., 1850.)

## Caledonian Canal. See Scotland.

CALELLA, a maritime tn. Spain, Catalonia, prov. of, and 30 m . N.E. Barcelona, at the foot of a small hill called Roser Its streets are clean and spacious; and it has two squares, a church, chapel, college, school, townhall, prison, hospital, dock for building vessels, and a cemetery. Manufactures :-linen and cotton fabrics, blonde lace, green paint, and ropes. Distilling brandy, fish-curing, slip and boatbuilding, and tillage, are carried on. Pop. 3035.

CALENZANA, a tn. France, isl. Corsica, 5 m. S.e. Calvi. It stands in a fine valley, open to the sea-breeze, and contains a large and handsome church. A good red wine is produced in the neighbourhood. Pop. 2437.

CALERA, a vil. Spain, New Castile, prov. Toledo, 8 m . S.W. Talavera, near l. bank, Tagus. It has two squares, a church, townhall, prison, two schools, a cemetery; and trade in cattle, grain, and wine. Pop. 2598.

CALESTANO, a tn. and com. Italy, duchy of, and 20 m . S.S.W. Parma, r. bank, Baganza, at the basc of Mount Fragno. It has a church, medical seminary, and primary school; and in the vicinity are quarries of fine marble. Four annual fairs are held. Pop. 2664.

CalF of Man, an islet. See Man (Isle of).
CALI, a tn. New Granada, 70 m . N. by E. Popayan; lat. $3^{\circ} 25^{\prime}$ N.; lon. $76^{\circ} 30^{\prime} \mathrm{W}$. It lies on a W. declivity of the Andes, near the Cauca; has straight streets, houses of brick, and of whitened earth, two elegant churches, several deserted convents, and one still in use. The inhabitants are wealthy, and chiefly engaged in the transit trade, from the interior to the Pacific. Pop. 4000.

CALIADEH, a vil. Hindoostan, prov. Malwa, on the Sipra, 5 m. N. Oojein; with a lofty, heavy, whimsical structure, entirely devoid of architectural attractions, called a water-palace, built on an insular eminence in the Sipra.

CALIANO, a vil. Austria, Tyrol, 10 m. S. Trent, l. bank Adige. In 1487 the Venetians were here defeated by the Archduke Siegmund, of Austria.

CALICE di Vara, a tn. and com. Tuscany, prov. Pisa, 11 m. S. Pontremoli, l. bank, Usurana, an affluent of the Vara, 4 m. S.W. from its confluence with the Magra. It is commanded by a castle, and has a large parish church, and some vil-mills. The neighbourhood is mourtainous, and clothed with forests of clestnut, vine, and olive plantations. The low grounds in the vicinity of the river are rich, and yield grain and pasturage for cattle. Pop. 2959.

CALICOULAN, a tn. Hindoostan, prov. Travancore, 116 m . N. Cape Comorin; lat. $9^{\circ} 11^{\prime} \mathrm{N} . ;$ lon. $76^{\circ} 33^{\prime} \mathrm{E}$.

CALICUT, a maritime tn. and dist. Hindoostan, prov Malabar. The town, formerly the cap. of the prov., is 43 m . S.E. Tellicherry, and 100 m . S.W. Seringapatam; lat. $11^{\circ}$ $15^{\prime} 12^{\prime \prime} \mathrm{N}$. ; lon. $75^{\circ} 45^{\prime} 30^{\prime \prime} \mathrm{E}$. (r.) It is of considerable extent, but a large portion of it consists of mere huts, the remainder of houses, constructed of teak-wood, or of sunbaked bricks-there being no buildings of stone. The manufacture of cotton goods was formerly carried on here to a great extent, and furnished a considerable supply to Europe; but this description of goods is now mostly imported. The exports consist principally of cocoa-nuts, betel-nuts, pepper, ginger, turmeric, teak-wood, sandal-wood, cardamoms, and wax. The anchorage for large ships in the harbour is in five or six fathoms. Calicut was the first Indian port visited by Vasco de Gama, in 1498. The inhabitants are mostly of Arab descent, and profess Mahometanism. The district extends along the sea-coast, and produces great quantities of pepper.

CALIFORNIA (Gulf of) [Mar Vermeja, Red Sea, Sea of Cortez], a gulf of the Pacific Ocean, W. coast, N. America, formed between the peninsula of Old California on the W., and the Mexican states of Sonora and Sinaloa on the E. It lies between lat. $23^{\circ}$ and $32^{\circ} 30^{\prime} \mathrm{N}$., and is upwards of 700 m . long, with a breadth varying from 150 m. near its entrance, to 45 m . near its centre; beyond which it again expands to 120 m . Its coast is irregular, forming on both sides numerous small bays or gulfs. Numerous islands are scattered over its surface-the largest being Angel de la Guardia, Tiburon, Carmen, Ceraloo or San Catalina, and San José. Its chief affluent is the Rio Colorado, falling in at the head of the gulf; and two small streams pour into it from the E. side. This gulf was formerly celcbrated for the pearl
fisheries of the Califoruian coast, which employed 800 divers. They are now much fallen off.

CALIFORNIA, Upper or New [Spanish, Alta-Culifornia, or Nueva-California], a large region, N. America, formerly a part of the Mexican Confederation, but now ineluded in the possessions of the United States. When under Mexican sway, it extended from lat. $32^{\circ}$ to $42^{\circ} \mathrm{N} . ;$ lon. $106^{\circ}$ to $124^{\circ} 10^{\circ}$ W.; and was bounded, N. by Oregon, E. the Rocky Mountains, S. the Mexican states of Sonora and Old California, and W. the Pacific Ocean ; area estimated at $500,000 \mathrm{sq}$. m. Since coming into the possession of the United States, the E. portion of this region, N. of lat. $37^{\circ} \mathrm{N}$., and E. of the Sierra Nevada, las been constituted the Mormon territory of Utah, sometimes also named Deseret; and the portion S. of lat. $37^{\circ}$ N., and E. of the river Colorado, has been added to the state of New Mexico, also acquired from the Mexican Confederation; and the sea-board portion, W. of the sierra Nevada, in the N., and of the river Colorado, in the S., now forms the state of California.
California or Upper California, as thus limited, includes the region between the Pacific Ocean on the W., Oregon on the N. (lat. $42^{\circ} \mathrm{N}$.), and a line running thence direct S., in lon. $120^{\circ}$ W. to lat. $39^{\circ}$ N., and thence S.E. to the lio Colorado, where it intersects lat. $35^{\circ} \mathrm{N}$., and thence along that river to the boundary between Mexico and the U. States; area, 188,981 $\mathrm{sq} . \mathrm{m}$. The coast is gencrally rugged and precipitous, and presents few good harbours, for its extent, above $9^{\circ}$ of lat.; the finest, commencing at the S. and going N., are San Diego, San Pedro, Monterey, and San Francisco (which see); the last, entered by an inlet 1 m . wide, is the most spacious and important in the state. On the S. part of the coast are a few islands-Santa Cruz, Santa Rosa, San Catalina, San Clementi or San Salvador, varying from 20 m . to 25 m . long, and San Nicolas, Santa Barbara, San Juan, San Miguel, merely islets.

California is divided into two districts of unequal size, and of markedly different character, by the sierra Nevada, a ridge of mountains which forms the E. limit of the N. portion of the country, but in the S. traverses it almost centrally. The district $\mathbf{E}$. of this range is little known, but, generally speaking, it may be described as sandy, sterile, destitute of forest trees, and even of vegetation, except along the banks of the streams, which are few and unimportant; it measures about 500 m . in extreme length, by about 250 m . in extreme breadth. In the N., however, a small portion of this district is well watered, and covered by offsets of the sierra Nevada. The W. district consists of one great, and several smaller valleys, all nearly parallel to the coast, and to each other; with inany minor transverse valleys, formed by spurs of the chief mountain ranges It is bounded on the E. throughout by the sierra Nevada, or snowy range, which, proceeding from Oregon, takes a direction generally S., though somewhat tortuous, parallel to, and about 150 m . from the coast ; unites, in lat. $34^{\circ} 30^{\circ} \mathrm{N}$., with a lower and nearly parallel range to the W., called the coast range; both afterwards constituting one chain, which lowers down, and forms the peninsula of Old California. In the sierra Nevada are volcanic peaks, some of which are said to be active, rising far above the limits of perpetual snow, to the height of $14,000 \mathrm{ft}$. and $17,000 \mathrm{ft}$; and its formation, to a considerable extent, is granitic; though trap and other igneous rocks occupy much of the upper and lower valley of the Sacramento, as well as a large extent of all the N . part of the country. The coast range-a comparatively low ridge of heightsoriginates near the Oregon frontier, takes a S. direction, parallel to, and at an average distance of 50 m . W. from the sierra Nevada, with which it unites, as above noted, in lat. $34^{\circ} 30^{\prime} \mathrm{N}$. ; it is formed chiefly of sandstone, with protrusions of trachyte, and other igneous rocks. Between these two ranges lies the great valley of the Sacramento and Joaquim or Tulares, 500 m . long, and shut in at the N . end by spurs of the Cascade mountains. W. of the coast range are other lower ranges of hills, also generally parallel to the crast, forming valleys, each named from the stream which waters it-Buenaventura, San José, San Sebastian, Pichomas, \&c. The N. part of the great valley between the two principal ranges is watered by the Sacramento, which flows S., receiving numerous affluents from the sierra Nevada, but none from the coast range; and near the centre, along with the San Joaquim, bursts through the coast range, and falls
into the bay of San Francisco, at that part of it ealled the bay of Suisoon. It varies in width from 200 to 300 yards, and is navigable inland for a considerable distance; steamers at all seasons reaching the mouth of the Butte, about 80 m . direct distance. Its principal tributaries are the Americanos, Feather or Plumas, Butte, Yuba, Bear, l'ine, Deer, Antelope, Quesnells, and Sycomore rivers. The S. part of the valley is watered by the San Joaquim, which rises in the sierra Nevada, flows N., and falls with the Sacramento, as already stated, into the bay of San Francisco; it is navigable, but how far inland is not known. From the head of the valley it receives the waters of the Lakes Tulé, Tulares or Chinlache, and, like the Sacramento, numerous tributarics from the sierra Nevada, and none from the coast range. Its principal affluents, some of which are also navigable to a certain extent, are the Merced, Toualumnes, Stanislaus, Calaveros, Mukelemnes, and Cosemnes. The only other note-worthy stream is the Buenaventura, flowing N . through a valley W . of the coast range, and falling into Monterey Bay. Lake Tulé, already named, is the only one of any considerable extent, being about 75 m . long, by about 20 m . broad. It lies near the S . extremity of the great valley, receives numerous streams from the sierra Nevada, and some also from the coast range; it is surrounded by lowlands, rankly overgrown with bulrushes. There are also a few small lakes near the course of the Sacramento.

Gold, and other Minerals.-From the formation of the country, granite, trap, and sandstone must be plentiful; excellent slate abounds in the valley of the San Joaquim; copper exists near San Luis Obispo, about 125 m. S. Monterey; lead of pure quality, and quicksilver, abound in the same locality; lead and iron, both of them of excellent quality, have been found on the slopes of the sierra Nevada, N. of San Francisco; near San Jose is a quicksilver mine, reputed to be one of the richest in the world; and silver has been found in various quarters. No coal has been discovered, nor is likely to be so; the geological formation of the country rendering sueh an event highly improbable. Gold, however, is so plentiful, that little attention has hitherto been paid to all baser minerals. Indeed, the mines of Peru, Mexico, and the Ural mountains, have all been thrown into the slade by the quantities of gold found in this favoured region, which, until the later discovery of gold in Australia, justly claimed to be the richest auriferous region in the world. The gold is fonnd in various slates, containing veins of quartz, and in hypogene or primary rocks, that have been protruded through them, in the sierra Nevada, both N. and S. of the junction of the coast range, and in the alluvial deposit of the rivers. On the coast, also, near the Oregon frontier, there las been discovered what is called a 'Gold Bluff;' on the beach, at its base, the gold is fomid mixed with black sand, supposed to have been washed down from the bold precipitous bluff by the tremendous swell of the ocean that constantly exists here. The gold-bearing sands are said to stretch along the shore for 6 m. ; but the heavy sea will prevent washing on the spot. Specimens of the blaek sand, brought to San Francisco, yielded $\$ 314$ cents ( 12 s .7 d .) to the 1 lb . The first source, however, above indicated-the living rock-must be the permanent source of supply; for it is in the nature of auriferous alluvial deposits to be ultimately exhausted-a fact of which plenty of evidence is afforded by the gold-washings of Brazil. The want of capital and machinery prevented, for a time, mining operations, properly so called, from being commenced. These wants having now, however, to a considerable extent been supplied, several mining companies have been established; and much gold is now obtained from quartz, which, after being excavated by blasting or otherwise, is crushed in a mill, and the gold separated cither by washing or by amalgamation with mereury. The efforts, however, of indivilual seekers, or small associations destitute of capital, have mainly been directed to the schistous rocks laid bare in ravines by water, and to the alluvial deposits. In the former, gold is often found in cousiderable masses, imbedded between the layers of the strata, whence it is scooped out by means of a strong knife, or displaced by a crow-bar, or other lever. The seeker in such localities may at times becone speedily rich, by finding a few large pieces; but, generally speaking, the supply from such a source is more precarious than from the alluvial deposits. These deposits are found in the great val-
ley along the rivers Sacramento, Joaquim, and their affluents from the sierra Nevada; on the river Klamath and its tributaries on the Oregon frontier, and probably on many others. They consist of silt, clay, and gravel or shingle; the last often containing numerous large stones, rendering the labour of removing them to get at the clay and small detritus very great. To what extent the great valley is pervaded by the precious metal, is not yet known; but at all events, gold is probably to be found in greater or smaller quantity in all the lower valley of the Sacramento, and as far S. as the head waters of the San Joaquim-a total stretch of nearly 300 m . The metal is found in the form of dust, or small grains, in smaller quantity in the surface deposits on the banks, or in the bells of the streans; and in greater abundance in the lower and firmer deposits, and in greatest abundance (at least on the San Joaquim) next the slate on which these deposits frequently rest; the goll, from its weight, apparently always seeking the lowest stratum. The metal is obtained by washing the alluvium, till all the carthy matter is floated off, when the gold is found left at the bottom of the vessel. The seekers stand in the water washing the deposit lifted from the bed of the stream, or they dig pits on the river edge, on a hill slope, or in some other locality deemed suitable, the soil and gravel thrown out requiring afterwards to be washed. These pits, also called dry diggings, are generally found to increase in value the deeper they are dug, until the slate or rock is reached, on the surface of which the metal is often found in surprising quantity. The digger's labour, however, is often expended in vain, and he frequently finds it difficult to earn as much as will suffice for his daily sustenance. The total amount of gold shipped at San Francisco, September 1, 1849, to December 13,1850 , was $\$ 31,060,175$, or $£ 6,212,035$; besides, probably, $£ 4,000,000$ bronght away by passengers. The total amount that has left California, from June 1848, when the gold was discovered, to the end of 1850 , may be roughly estimated at $£ 12,000,000$. It may not be out of place to add here some instances of extraordinary fortune, on the part of individuals, as reported in the current newspapers of the day. Between the middle and W. forks of Yuba river, a lump of quartz and gold was found, weighing 30 lbs ., containing, by estimate, 23 lbs . of pure gold; on one of the affuents of the Joaquim, a block weighing 93 lbs was discovered, onc-lalf of which was stated to be pure metal; and on another affluent, the Mercedes, a person found a lump of nearly pure metal, weighing 83 lbs.; but the largest piece as yet obtained was in the mines of the Mariposa, an affluent of the Joaquim-a lump of quartz weighing 700 lbs , and rich in goll.

Gold seeking can only be carried on with advantage during the dry season. The streams are so large, and the ground so saturated with water, during the wet and winter season, that it is next to impossible to do any work. Even after the wet season is past, a time must elapse before operations are seriously commenced in the bed of the larger streams; for the rivers being snow-fed, increase with the advance of spring, in place of diminishing; consequently, it is not till about $J$ une that the real labour of washing can be properly carried on in such places. The result of this state of matters is, that those who have not succeeded well during summer, are subject to great privations from poverty during winter; no doubt greatly aggravating disease, contracted from exposure and excessive labour. The size of the rivers, however, is no obstacle to the progress of the mining or dry diggings, both requiring a good supply of water to wash the crushed rock of the one, and the excavated heaps of the other. To those so engaged, therefore, the want of rain in winter, which sometimes occurs, causing many of the rivulets on which they depend for water to dry up, is as great a calamity as too much rain is to those occupied in the river washings; and the rise of the streams-from the melting of the snows-which relieves the former, still hinders the work of the latter. Gold searchers often unite in bands, to accomplish a definite object, and then separate. Thus they will form a company in the morning, to wash together all day, and separate again in the evening; or they will unite to excavate a pit in a given locality, and as soon as it is wrought out, divide the procceds, and separate. It being obviously inpossible to search the beds of the larger streams by ordinary methods, drelging has been tried; and steam vessels are now occupied on the Yuba, working dredging machines with considerable success.

Climate.-California, being intersected by the isothermal line of $60^{\circ}$, has the same mean annual temperature as the N . of Spain and the centre of Italy, and may, generally speaking, be esteemed genial and mild; and the year may be divided into a dry and a wet season-there being no frost, and rarely snow, excepting on the mountains. The wet season begins in November, and continues to the middle of February or the beginning of March, during which time a considerable quantity of rain usually falls, though in some years this season belies its name, and continues perfectly dry, to the great detriment both of agriculturists and gold seekers. No rain falls during the rest of the year. Though the climate is, generally speaking, mild, still, in many places the changes of temperature are sudden and great; and though in the great valley during the summer fogs are unknown, yet on the coast they are frequent. At San Francisco, the temperature in summer sometimes reaches $110^{\circ}$, and in the rainy season it seldom falls below $40^{\circ}$; the maximum and minimum differ as much as $30^{\circ}$ in 24 hours, and a scorching hot day is often followed by a night of bitter cold. The heat in the valleys is frequently oppressive, not being tempered by the sea-breezes; but, on the other hand, sudden changes, and great extremes of temperature, do not, in these localities, appear to be so frequent or violent as on the coast. On the lower slopes of the sierra Nevada the climate is said to be that of constant spring.

Vegetation.-N. of lat. $34^{\circ} 30^{\prime} \mathrm{N}$. the slopes and valleys of the coast range, the district W. of it to the sea, the valley of the Sacramento where not covered with sand or gravel, and the E. side of the valley of the San Joaquim, will yield heavy crops of wheat and oats; indeed, the greater part of these districts is annually covered with wild oats. The soil, in one place or another, is also suitable for maize and the other cereals, and for the tuberous plants and legumes usually cultivated in temperate climates. The vegetables grown in the U. States attain here an extraordinary size. The districts above referred to are covered with excellent herbage, on which numerous flocks of wild cattle, deer, \&c., depasture ; but the W. side of the valley of the San Joaquim having no permanent watercourses, and probably being chiefly composed of sand washed down from the coast range, is destitute of herbage, though covered with a profusion of beautiful flowers of the most varied hues, anong which, however, blue is the most prevalent. So destitute of herbage is this district, that the cattle of emigrants employed in transporting their effects to the gold districts of the valley, have frequently been on the point of starvation, while treading down a vigorous vegetation of which they refused to partake. That part of the valley near lake Tulé or Tulares is marshy, and covered with a thick growth of a kind of gigantic bulrush, frequently 15 ft . high, called tulé, whence the lake is named. The olives of California are equal to those of Andalusia, and the wine is similar to that of the Canary Islands; indeed, the fruits are most varied, including apples, pears, plums, figs, oranges, peaches, pomegranates, plantains, bananas, and cocoa-nuts; the indigo plant also, and the sugar-cane and tobacco, yield abundant returns. The lower parts of the country are interspersed with isolated trees of various kinds. Along the foot of the sierra Nevada are open groves, composed chicfly of white oak (Quercus longiglanda, Torr. and Frem.) 5 to 6 ft . in diameter, and 60 to 80 ft . high. Higher up are evergreen oaks, cypresses, cedars, and lofty pines, among which Pinus Lambertiana attains a height of upwards of 200 ft ., with a circumference of 57 ft ; its timber is soft, white, and light, and its turpentine of pure amber colour; its cones are 16 inches long, and the seeds are eaten roasted or pounded into cakes. The lofty plateaux, characteristic of this range, from which the bare volcanic peaks rise like pyramids, are generally densely covered with timber. From the uncertainty of the rains, and the great droughts of summer, agriculture must always, in California, depend much upon irrigation.

Zoology.-Bears, wolves, foxes, wild-cats, otters, beavers, antelopes, hares, and rabbits, abound. Large herds of wild cattle, horses, deers, and elks, depasture on the grassy slopes and valleys. The oxen are excellent, and the horses small, delicately formed, but capable of long-continued exertion without food or water. Mules, goats, sheep, and swine, are plentiful. The mutton is good, but the wool inferior. Poultry thrive well. Birds generally are scarce; the most common
are the turkey, buzzard, quail, and woodpecker; partridges, geese, ducks, and cranes, are said to be numerous. Snakes, among which the rattlesnake, and lizards of various kindsscorpions, tarentulas, \&c., are met with; and mosquitoes are innumerable.

Towns, Commerce, de.-The principal town and port, but not the capital, is San Francisco, situated on a spit of land at the entrance to the bay of its name. The seat of the legislature, and residence of the governor, is Vallejo, or Vallego, a new city on the N. shore of the bay of San Francisco, between the bays of San Pablo and Suisoon. San José, a small town about 45 m. S.W. San Francisco, was the old capital. Among the older towns, Montcrey, San Diego, Los Angelos, \&c., from being unimportant places, have become large cities. Of the more recently-founded places may be named, Napa, Sonoma, and Benicia, on the N. shore of the bay of San Pablo, and Martinez on its S. shore; New York of the Pacific, Butte, Boston, Sutter, Sacramento, Fremont, Vernon, Yuba, Nicolaus, \&c., on the Sacramento river, and its affluents; and Empire city, Stockton, Stanislas, \&c., on the Joaquim and its tributaries. All the recently-formed towns are built chiefly of wood, though erections of brick and stone are becoming more common; and houses are run up so rapidly, that whole new streets are formed in a few days. Many so-called towns, erected in the vicinity of ' the diggings,' are merely collections of tents. After the discovery of the gold, so many went in search of it, and the produce was so great, that labour and property in the towns arose to enormous prices. Servants were paid $\$ 100$ to $\$ 200$ ( $£ 20$ to $£ 40$ ) per month ; car-men $\$ 6000$ ( $£ 1200$ ) a-year ; a rifle cost $£ 20$; and clasp and bowio knives $£ 6$ to $£ 10$; a house, the size of a common English domicile, was rented to the Miners' Bank at $\$ 75,000(£ 15,000)$; a shed, 15 ft . by 20 , occupied by gamblers, gave $£ 8000$; but the influx of labour, and more correct ideas of the income from the gold districts, have now brought prices to a more natural level. Manufactured goods, having soon arrived in great plenty, were, at an early period, comparatively cheap; so much so, indeed, that at one time it was more economical to purchase new shirts than to pay for the old ones being washed.

Regarding the commerce of the country, little can yet be said. In former times hides and cattle were exported, and will likely be so again. At present gold is almost the only article of export (see p. 564), in return for manufactured goods, implements of various kinds, provisions, liquors, \&c.

Population.-The Spanish Californians, now comparatively a small section of the community, have large, strong frames, strong muscles, and a ruddy fresh complexion. The Indian population, now few and scattered, seems at one time to have been great, as evidenced by the remains of numerous villages in the great valley. The Indians are seldom more than 5 ft . high, of a dark copper colour, with low forehead, black eyes, thick lips, and rough straight hair. They are indolent, ignorant, and cowardly; though prone enough to murder when they can do so with safety. The main part of the population is Anglo-Saxon, and chiefly from the U. States, though numbers are also from Great Britain and Ireland. Almost every nation has its representative here; and the population forms a curious mixture of high born and low born, learned and ignorant, in which those accustomed to be highest are sometimes found to be lowest. Lawyers, ex-professors, physicians, \&c., dig cellars, drive ox teams, saw wood, and carry luggage; while those who have been private soldiers, sailors, cooks, and day-labourers, are at the head of profitable establishments, and often assist in the minor details of government. In 1802, lumboldt estimated the population of Upper California at 16,862 ; in 1846-47, Byrant estimated it at 25,000 ; and at present (1851), it is estimated at 300,000 ; of which, 60,000 are in the town of San Francisco.

History.-Upper California was discovered by the Spaniards; and its shores were examined by Cabrillo in 1542 ; and in 1578 , it was visited by Sir F. Drake, who gave it the name of New Albion. In 1602, Sebastian Visconio touched at Montcrey, and proclaimed the neighbouring country to be Spanish territory. The Jesuit mission of San Diego, the first settlement in Upper California, was established in 1769, and before 1803,18 others had been added, each with its tribe of Indians attached to it, and under its protection. In 1833, these missions were secularized and deelared public pro-
perty by the Mexican government; and in 1845 , those of Sau Juan, Carmel, San Francisco, Solano, and San Juan Capistiano, were disposed of by public sale; the remainder being subsequently transferred to the U. States. The country suffered several times from revolution, and the inluabitants more than once declared themselves independent, but as often rejoined the confederation. The authority of Mexico over it was very loose for the last 10 or 12 years of its connection with that country. In May 1848, Upper California was ceded by Mexico to the U. States, and about a month afterwards the discovery was made which has in such a remarkable manner altered its fortunes. Gold was previously known well enough to exist in the country, and had, indeed, been wrought to a certain extent by the Mexicans. Hakluyt, who accompanied Drake, and published in 1589, says, 'There is no part of the earth here to be taken up wherein there is not a reasonable quantitie of gold and silver.' Still, not until June, 1848, did the auriferous deposits of California attract general attention, when they were brought before the world, as one may almost say by accident, by some settlers, who discovered shining particles, and some heavier pieces of ycllow metal, in the mud in a mill-course near Coloma, on the Americanos or American Fork, an affluent of the Sacramento. Such a discovery could not be long concealed; the news spread, every other occupation was abandoned, and all hastened to the diggings, and wages, provisions, and property of various kinds, rose to an enormous price. In course of the following year, multitudes began to arrive from all quarters, Mexico, Peru, Chili, the Sandwich Islands, China, all parts of Europe and the U. States. In 18 months, 100,000 arrived from the U. States alone; there was almost a continuous line of emigrants across the Rocky Mountains, the Great Desert, and the sierra Nevada, by which route many thousands arrived, accompanied by immense waggons, drawn by bullocks. Great privations were endured in crossing these trackless regions, from want of food and water for man and beast. Many emigrauts and their cattle perished on the way, from hunger and fatigue. Immense numbers likewise arrived by the Isthmus of Panama, and numbers made a veyage of $17,000 \mathrm{~m}$. round Cape Horn. Such a great influx of people was too much for existing means of government; robbery and murder became frequent; lynch-law was in many places set up, and the culprit, after being tried and condemned by a jury selected on the spot, was hung on the nearest tree. In this dilemma the U. States emigrants decided on forming themselves into a state. Representatives, chosen from all parts of the country, met in June 1849, and adopted a constitution similar to that of New York, guaranteeing to citizens the right of trial by jury; free exercise of religions worship; the privilege of the writ of habeas corpus; protection from excessive fines or cruel punishments; exemption from arrest on crime, except on presentment or indictment; freedom of speech; right of petition; prohibition of a standing army in time of peace; representation according to population; abolition of imprisonment for debt; protection of rights of property, \&c. Since this event took place, and in consequence of the measures subsequently adopted, life and property have become much more secure than they were formerly; though the administration of the law, doubtless from defective organization, being somewhat tardy, it is still not uncommon for the populace to visit great culprits with condign punishment; in the execution of which they have generally exhibited a calmness and dignity of manner strangely at variance with the irregularity of the transaction, and forming certainly not the least remarkable feature in Californian listory, and of Californian society. California was admitted as a state of the Union in 1850. (Lieut.-Col. Fremont's Report; Lient. Emeroy's Narrative; Farnlan's Life, Travels, and Adventures in California; Commissioner King's Report, \&c.)

CALIFORNIA (Lower or OLD) [Spanish, Baja or Vieja California], a state or dep. of the Mexican Confederation, situated on the W, coast of N. America, and formed of a peninsula, Jying N.W. to S.E., about 750 m . long, by 30 to 120 m . broad ; and extending from Cape San Lucas, its most S. point; lat. $22^{\circ} 52^{\prime} \mathbf{N .}$; lon. $109^{\circ} 53^{\prime} \mathrm{W}$. (r.), to lat. $32^{\circ} 30^{\prime} \mathrm{N}$.; bounded, N. by Upper or New California, E. by the Gulf of California, and S. and W. by the Pacific Ocean. The peninsula is volcanic, and is traversed throughout its whole length by a continuation of the sierra Nevada, 1000 to nearly 5000 ft .
high, the culminating peak, Cerro de la Giganta, beiug 4900 ft ; it has two extinet volcanocs, hot springs of water and bitumen; much of it is heated by subterranean fires, and earthquakes are frequent. This mountain-range is almost bare of verdure, being only sprinkled herc and there with a cluster of briars small shrubs, or dwarf trees. Along the mountain-foot the ground is sandy or stony, and covered with cylindrical cactuses of extraordinary height. Among the ridges and protected hollows, are a few spots with soil, formed generally of decomposed lava. Springs of water, few in number, are ordinarily found on bare rock; for water and soil are seldom met with at the same place. Where, however, this happens to be the case, the fertility is immense. The want of water is the bane of Lower California. Only two streams fall from its mountains into the Gulf of California, both near the middle of the peninsula, and only three into the Pacific and none of them are large. In the interior are several copious springs, sending forth abundant streams, which unfortunately run along a rocky course, and are absorbed ultimately in the porous arid soil, or are lost in subterranean cliannels. For about 80 m . N. from Cape San Lucas, the air is mild, being tempered by the sea-breeze; from this section N. to Loretto, lat. $26^{\circ} 16^{\prime} \mathrm{N}$., the heat is excessive ; but thence N. the air is cooler. The temperature of summer, on the coast of the Pacific, ranges from $58^{\circ}$ to $71^{\circ}$; the sky is peculiarly clear, of a deep blue, and perfectly cloudless, excepting sometimes at sunset, when streaks of the most beautiful shades of violet, purple, and green appear. In winter, the rains are severe, but of short duration, and accompanicd by tremendous tornadoes of wind, sweeping the soil from every exposed position into the sea, and causing the tiller of the ground to seek a new place in which to ply his vocation. During the rains, the thermometer falls as low as $50^{\circ}$. The variety of climate, however, is great; for when near Cape San Lucas the thermometer stands between $60^{\circ}$ and $70^{\circ}$, at the head of the Gulf it is down to the freezing point. The few fertile spots of Lower California yield maize, manioc, wheat, beans, pease, and all manner of csculent roots; excellent grapes, from which a wine is made, similar to that of the Canaries; oranges, lemons, limes, citrons, prunes, dates, plantains, pine-apples, \&c. The mountains feed a few wild sheep and goats; and, to a small extent, horses, black cattle, mules, goats, and pigs, are reared. If the land be barren, the sea is stored with fish in incredible abundance and varicty among them may be named halibut, salmon, turbot, skate, pilchard, large oyster, thornback, mackerel, barbel, benitos, soles, lobsters, sardines, cod, tumnies, anchovies, and pearl oysters. The pearl oyster is obtained in the gulf, near the S . parts of California, and it was formerly much more extensively fished than at present; in fact, the fishing or diving for it has almost been abandoned. The pearls obtained are of a fine water and large, but rather irregular in shape, and not very pleasing to the eye. The quantity obtained in 1831 by 15 boats, amounted in value to about $£ 7000$. Gold is supposed to abound in Lower California, and a mine wrought near La Paz is said to be rich. The limited exports of the country consist of pearls, gold, dates, wines, grapes, soap, figs, spirits, salt, from an inland lake on the Island of Carmen; a few goats, and hides. The chief towns are Loretto, the capital ; lat. $26^{\circ} 16^{\prime} \mathrm{N}$. ; lon. $112^{\circ} 5^{\prime} \mathrm{W}$. ; with a population of 500 , though it formerly had 2000 ; and La Paz, about 150 m. S.E. the former, with a population of about 2000 . The present population of the country consists chiefly of mongrel breeds of Indians, whites, and negroes.

Lower California was discovered by Hernando de Grixalva in 1534 . In 1642, the Jesuits formed establishments in it; they taught the natives the art of cultivating the ground and raised them greatly in the scale of civilization. In the reign of Philip V., more especially subsequent to 1744 , the Spanish establishments in California increased, and became very considerable. In a very few years the Jesuits built 16 villages in the interior of the peninsula; but in 1767 they were expelled, and the administration of California was committed to monks of the Dominican convents of the city of Mexico, who have not maintained the same career of usefulness as their predecessors. Pop. 8000 ; of whom, probably 4000 are Indians.-(Humboldt, Essai Politique sur le Royaume de la Nouvelle-Espagne; Farnham's Life, T'ravels, and Adventures in California).

CALIG, a tn. Spain, Valencia, prov. Castellon de la Plana, 7 m . N. Peniscola. It is clean, and tolerably well built; has a square, a parish church, chapel, two schools, a spacious townhall and a prison beneath, a poorly endowed hospital, and a cemetery. Weaving, distilling brandy, expressing oil and wine, making bricks, and tillage, employ the inhabitants, who also trade in grain, wine, hemp, mauufactured goeds, \&c. Pop. 3020.

CALINGAPATAM, a small seaport tn . IIindoostan, E. coast, N. Circars, 18 m . N.E. Chicacole ; lat. $18^{\circ} 20^{\prime}$ N. ; lon. $84^{\circ} 11^{\prime} \mathrm{E}$.

CALII'UJANG, a harbour, isl. Java, S. coast, inside of isls. Nusa-Kombangan and Nusa Ré ; lat. $7^{\circ} 33^{\prime} \mathrm{S} . ;$ lon. $106^{\circ} 30^{\prime} \mathrm{E}$. Though the entrance by either side of the high round island, Nusa Ré, was laid down as safe in the chart, the vessel in which Mr. Earl entered struck on a sunken rock, in the E. channel. The Dutch establishment here, though the largest on the S. coast of Java, is small, and is employed in collecting the revenue on salt and edible birds'-nests.

CALITRI, a tn. Naples, prov. Principato Ultra, 15 m. E. St. Angelo-di-Lombardi, on the Ofanto. It stande on a high hill, and las a handsome parish church, with a Benedictine convent. Cattle and sheep are reared to a large extent in the environs. Pop. 5219.

Calitura, a th. Ceylon. See Caltura.
CALIZANO, a tn. Sardinian States, div. of, and 40 m . W.S.W. Genoa; to the W. of Mount Calvi, and not far from the source of the Bormida. Pop. 2432.

CALKE, or Caulk, par. Eng. Derby; 880 ac. Pop. 55.
CALLAC, a tn. France, dep. Côtes-da-Nord, 31 m. W.S.W. Brieuc. It has numerous fairs. Pop. 1038.

CALLAIN, a tn. Malay Peninsula, State Salangore, Strait of Malacca, lat. $3^{\circ}$ N. ; lou. $101^{\circ} 20^{\prime}$ E. ; 207 m . N.N.E. Singapare.

CALLAN, par. Irel. Kilkenny ; 5634 ac. Pop. 6128.
CALLAN, a tn. Ireland, co. of, and 10 m . S.W. Kilkenny, on the King's river. It consists chiefly of four streets, that meet in the centre; the other parts of the town are composed of mean, straggling thoroughfares. The parish chureh is an old monastic building. The R. Catholic chapel, situated in a commanding position, is a modern edifice. There are, also, a modern Augustinian friary and chapel, a large substantial stone structure ; a national school, a girls' daily school, a dispensary, and a loan fund. A small trade in grain is almost the only business done in Callan. A few persons are employed in making flannel, and a considerable number in making brogues or coarse shoes; but the great majority are cither small traders or agricultural labourers. Pop. 3111.

CALLANA, or Calanna, a tn. and mountainous dist. N.W. Africa, in Soudan. The mountains form part of the Bataka range; a system which branches off in a N.E. direction from the mountains of Kong, in about lon. $2^{\circ}$ W., and terminates in the desert of Sahara. The town of Callana is about 450 m. S.S.E. Timbuctoo; lat. $11^{\circ} 12^{\prime} \mathrm{N} . ;$ lon. $2^{\circ} \mathrm{W}$.

CALLANDER, a par. and vil. Scotland, co. Perth. The parist is 18 m . long, E. to W., and varying from 1 to 6 m . broad. Its fine mountains and lake scenery have been rendered classical by Sir Walter Scott's poem of the Lady of the Lake; the mountains Benledi, Stuic-a-chroin, and Uamhmhor, and lochs Katrine, Achray, and Vennacher, being within its bounds.-The village is beautifully situated on the N. side of a flat plain, intersected by the river Teith. It consists of a long double row of neat white-washed houses, on either side of the road, and contains a neat Established church, a Free church, and a school. Pop. of vil. 1107; of par. 1665.

CALLAO, a tn. Peru, dep. of, and 6 m . W. Lima, of which it is the seaport, near the mouth of the Rimac; lat. $12^{\circ} 4^{\prime} \mathrm{S} . ;$ lon. $77^{\circ} 13^{\prime} 45^{\prime \prime} \mathrm{W}$. (r.) The houses are mean, built of mud, with flat roofs, and are generally only one story. There being no rain, but frequent earthquakes, stone houses are both unnecessary and dangerous. Great improvements have, however, recently been made; the streets have been widened, a fine mole has been erected, and the whole town has assumed a more respectable appearance. The principal street, which runs parallel to the bay, is paved; has side walks, and contains some tolerably well-built houses, of two stories. The castle of Callao, which used to be regarded as the key of Lima, has been alnost entirely dismantled, and is now used as a custom-house. The market-place occupies a
square of $1 \frac{1}{2}$ acres. Omnibuses run several times a day to Lima. Heavy dews at night supply the want of rain. Callao is the emporium of a large and increasing trade; and its roadstead is large, safe, free from rocks, and always smooth.

Vessels Enteard and Cleared at the Port of Callao, in 1844 to 1847.
Entered.

|  | Entered. |  | Cleared. |  |
| :---: | :---: | :---: | :---: | :---: |
| Years. | Vessele. | Tons. | Vessels. | Ton |
|  |  | 127,110.. | . 509. | 20,908 |
| 1845. | . 577 | 127,549.. | . 563. | 124,678 |
| 1846. | 686 | 178,658.0. | 667. | 175,03 6 |
| 1817. | 709. | 205,69] | 687. | 199,472 |

In 1746, the town was entirely demolished by an earthquake, when only 200 persons, out of 4000 , escaped destruction. It has been since rebuilt nearly on its former site, but a little farther from the sea. At low water the ruins of the old town are still visible. November 5, 1820, Lord Cochrane and a party of Chilians cut out the Esmeralda, a large Spanish 40 gun frigate, from under the guns of the castle. Pop. 5000.

CALLAO ISLAND, an isl. Chinese Sea, E. coast, CochinChina, 9 m . from the mainland; lat. (S. part) $15^{\circ} 54^{\prime} \mathrm{N}$.; lon. $108^{\circ} 30^{\prime} \mathrm{E}$. It is high, one of its mountains exceeding 1400 ft ., of irregular form ; about 6 m . in length, and from 2 to 3 m . in breadth, having some islets adjoining its S . end, and others projecting W. from its N.W. part. It is inhabited, well cultivated, and the anchorage on the W. side, in 4 or $4 \frac{1}{2}$ fathoms, is safe in all winds. On this side there is a beautiful spot of about 200 ac ., covered with neat houses, temples, clusters of trees, and small hillocks, overgrown with shrubs. About 20 m. S.S.E. Callao is a small island, surrounded with rocky islets, called False Callao Island.

CALLAS, a tn. France, dep. Var, 5 m . N.E. Draguignan, on a low hill, at the foot of the Piol Mountain. It has narrow, crooked, and excessively dirty streets, polluted by the dungheaps in process of preparation for manuring the olive-yards of the environs. A good deal of oil is made here, and coal is worked in the vicinity. Pop. 1980.

CALLE ( $\mathrm{I}_{4}$ ), or Al Kalah, a seaport, Algeria, prov. Constantine, 31 m . W. Tabarka; lat. $36^{\circ} 50^{\prime} \mathrm{N} . ;$ lon. $8^{\circ} 30^{\prime}$ E. It is defended by a fort, and is a principal station of the French coral-fishery, lying midway between Tabarka and Bona. The environs are fertile, well wooded, and particularly rich in cork trees. Wheat, barley, leather, and tobacco are exported. Pop. 400.

CALLENBEliG, two vils. Saxony, both in circle Zwickau: -1 , dist. Waldenberg, containing chalk and tile works, and possessing a chalybeate spring. Pop. 1080.-2, dist. Lichtenstein, containing a handsome church, and possessing some linen manufactures, a mill, and distillery. Pop. 1900.

CALLIANEE.-1, a large tn. Hindoostan, in the Concan, 30 m . N.N.F. Bombay, cap. dist. of same name. A considerable traffic is carried on here in cocoa-nuts, oil, coarse cloths, brass, and earthenware.-2, a mountain-stream in the Concan Ghauts, on which occur numerous beantiful waterfalls, the principal of which is 1400 ft . high.

CALLIES, a tn. Prussia, gov. Köslin, 58 m. E.S.E. Stettin, on the Great and Little Baberon and Mühlensee. It has walls, with three gates; contains a castle, and a church; and, besides some linen and woollen manufactures, has aix yearly markets. Pop. 2641.

CALLIGRAY, or Killigray, a small isl. Scotland, Hebrides, Argyleshire, between Harris and N. Uist. It is about 2 m . long, by 1 m . broad.

CALLINGER, a tn. and fortress, Hindoostan, cap. dist. of same name, prov. of, and 90 m . S.W. Allahabad; lat. $24^{\circ} 58^{\prime} \mathrm{N}$.; lon. $80^{\circ} 25^{\prime} \mathrm{E}$. It stands on a lofty hill, the summit of which is at least 1200 ft . above the plaina below. The town, which is of considerable size, stands at the foot of the N. front of the hill; but the whole summit of the hill, compreliending a plain 5 m . in circuit, is encompassed by an immense mud rampart of Mahometan construction, and composed of rough unhewn stones. In the interior are several large tanks, always filled with water. In 1810, after an unsuccessful attack, it was taken by the British, the garrison having evacuated during the night.

CALLINGTON, a th. and par. England, co. Cornwall. The town, 12 m . N.W. Plymouth, lies low, and is destitute of all attraction; the houses are irregularly built, and form but one broad street, running N . and S . It was constituted a borough in the time of Elizabeth, and returned two members
to Parliament, but was disfranchised by the Reform Act. Pop. 1388. Area of par. 2600 ac. Pop. 1685.

CALLOO, a tn. and com. Belgium, prov. E. Flanders, 7 m. W.N.W. Antwerp, 1. bank, Scheldt. Here is the fort of Liefkenshoek, facing Fort-Lillo, constructed in 1583, to control the passage of the river. The position is strong, as the whole flat country around can easily be inundated. Calloo lias some trade in agricultural produce; it has also a tannery, brewery, rope-walk, and two flour-mills. Pop. 2147.

CALLOSA-de-Exsaraia, a in. Spain, Valencia, prov. of, and 31 m . N.E. Alicante, l. bank, Guadalest, which is sometimes called Callosa, 6 m . from the sea; strects generally steep, narrow, and crooked, but clean and well plaved. It has a parish church, four chapels, townhall, session-house, prison, hospital, cemetery, public fountain, and a magnificent bath of black niarble, obtained from a quarry about 1 m . E. of the town. Nempen shoes are manufactured, and some trade is done in grain, fruits, wine, \&c. Pop. 4328.

CALLOSA-de-Sequra, a tn. Spain, Valencia, prov. of, and $28 \mathrm{~m} . \mathrm{S}$. W. Alicante, near the Segura; with houses well built, chiefly of black marble, several clean, paved, and spaeious squares, a large and handsome parish church, two schools, a townhouse, prison, small hospital, and four convents, with churches attached. In the neighbourhood is an extensive aqueduct for conveying water from the Segura to the city of Orihuela. Pop. 2904.

CALLOW, par. Eng. Hereford; 640 ac. Pop. 171.
CALLUNDBORG, tn. Denmark. See Kallundborg.
Calmar, tin. Sweden. See Kalmar.
CALMINA, a tn. N. W. Africa, kingdom Dahomey, 10 m . S. Abomey, and about 80 m . from the coast at Whidalı; lat. $7^{\circ} 22^{\prime}$ N. ; lon. $2^{\circ} 22^{\prime}$ E.

CALMUCKS, Kalmucks, or Eleuthes, a remarkable people of Mongol extraction, found in various parts of central Asia, but occupying more especially the W. part of Mongolia, extending from Asiatic Russia to China proper. Both the people and the country are still very imperfectly known. 'They are divided into the four principal tribes of Koschots, Songars, Torgots, and Derbets, and are subject partly to IRussian, and partly to Chinese supremacy, though each is governed immediately by its own recognized chief. In customs and physical constitution, they bear a strong resemblance to the Mongolians, having oblique, narrow eyes, with angles far less salient than those of Europeans; their black eyebrows, small, flat noses, high cheek-bones, round heads, large cars, and remarkably acute senses of smell, sight, and hearing, so as to make objects perceptible to them at very extraordinary distances. They are in the highest degree filthy and sensual, lead a nomadic life, dwelling in movable huts of skin, and though not destitute of frankness and hospitality, are much more characterized by a deceitful and thievish disposition. Their habits unfitting them for agriculture, their chief employments are herding and the rearing of cattle. Like most savage nations, they are fond of intoxicating liquors, and have discovered the means of gratifying the propensity, by extracting from mares' milk a kind of spirit, which they call Ariki, or Kumiss. The individuals belonging to each separate horde are classed under the heads of people, nobility, and priests. The people are mere slaves: the priests, with a few cxceptions, are followers of Buddha: the nobility consist of several grades, some being hereditary chiefs, who take the title of noion, and govern the tribes of which they are the head, with little more than a nominal suljection to the khan, or heal of the whole nation; others goveruing a subdivision of the tribe, in subordination to the noion, and known by the name of dzaissang, or noble, in the proper sense of the term; and a third, and still lower grade, exercising authority over a still more minute subdivision, in subordination to both dzaissangs and noions. The authority of this last grade extends to the infliction of punishment, but is by 10 means of an arbitrary nature, as it must be exercised in conformity to a code of law which is not merely oral, but is said to exist in writing in the Mongol tongue. This tongue, or rather a corrupt dialect of it, is in general use among the Calmucks. Their armour consists commonly of a lance and a bow. Not a few, however, have learned the use of the musket, and none of the higher classes consider themselves completely armed without a coat of mail. The dress of the lower classes is skins, frequently almost in their natural state, but often also
after they lave been subjected to some process of manufacture; the wealthier classes dress in cloth or silk, and scem fully alive to the dignity snpposed to be conferred by a showy exterior. Their riches consist in the number of their live stock, more especially horses, of which individuals possess to the number of 1000 each. The milk of the mares, in addition to the spirit distilled from it, as already mentioned, furnishes the principal summer beverage, but in winter that of the cow is usually substituted for it. The milk of shecp, which, as a live stock, rank next in number to horses, is chiefly employed in making butter and cheese. For purposes of transport, the camel and dromedary are frequently employed. The only manufacture which exists in any degree of perfection among the Calmucks, is that of preparing sheep and lamb skins, which form a considerable article of trade, particularly with the Russians, and are often formed into pelisses, which bring a large price. This manufacture is almost entirely performed by the women, on whose sloulders, as usual in savage or half-savage nations, all labours which require careful attention and persevering industry are laid.

The Calmucks who acknowledge the authority of the Chinese emperor amount to about 50,000, and are governed by princes who trace their descent from a brother of the celebrated Genghis Khan. After coming from the N.W. and taking possession of the country around the Koko-noor, where they still have their principal locality, they gave in their adhesion to the Chinese government, and continued faithful to it till 1723, when they raised the standard of revolt, and made a hostile incursion into the Chinese territory. In the contest which ensued they sustained a signal defeat, and were subjected to an annual tribute of oxen, sheep, horses, and camels, the payment of which is still exacted. A detachment of this tribe, to the number of 25,000 , emigrated in 1759 to the bauks of the Volga, and became subject to Russia. The Songarian Calmucks about the beginning of the last century, after subduing some of their neighbours, engaged in a fierce struggle with the Mongolians and Chinese, and were themselves ultimately subdued. The Torgots, who, at a much earlier period than any of the other tribes, had emigrated to the Volga, having become discontented with their condition, returned in a body to their country in 1771 , leaving, however, a subordinate branch lieaded by a prince called Dundukov, who, with his followers, made their unreserved submission to the Czar. This prince at a later period became a convert to Christianity, and was succeeded by his son-in-law, who, by the command of the emperor, assumed the title of Dundukov Korsakov. Besides the Calmucks already mentioned, there are some who have joined the Greek church, and been assigned a residence in the town of Stavropol, gov. Simbirsk. In the same district are some Calmucks who have embraced Mahometanism. The whole number within the Russian dominions has been estimated at 56,000 .

CALNE, a market tin., parl. bor., and par. England, co. Wilts, 85 m . W. London. The town consists principally of one long street liglited with gas, and is, in gencral, well built, and clean. The parish church is handsome, and the tower, by Inigo Jones, coutains a set of fine chimes. There are here places of worship for various religious denominations, a free grammar-school, and some alms-houses. The manufacture of woollen eloth was formerly carried on extensively, but this trade has now greatly declined. Calne sent two members to Parliament from the time of Richard II. down to the passing of the Reform $\Lambda$ ct, which restricted its privilege to one. The Chippenham station on the Great Western Railway is 6 m . from the town. Pop. 2483 . Area of par. 9670 ac. ; pop. 5128.

Caloni. See Kaloni.
CALORE, two rivers, Naples:-1, rises on the S. frontiers of Priacipato Ultra, near Mount Calvello, and the town of Montella, flows in a tortuous course past Benevento, and joins the Volturno about 15 m . above Capua; whole course, about 60 m . It receives the Ufita and Miscono shortly after their junction, the Tanaro, and the Salvato; and contains excellent trouts, eels, and crabs.-2, Calore, Tangro, or Negro, which rises in Mount Cervaro, on the S.E. borders of Principato Citra, and runuing N.N.W. through the valley of Diano, falls into l. bank Bianco, after a course of nearly 50 m .

CALOSOO, a vil. Sardinian States, division of, and about $22 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Alexandria. A good wine is made in its neighbourhood. Pop. 1800.

## CALVISANO

CALPENTYN, a seaport tn., promontory, and gulf, Ceylon, W. coast. The town, $93 \mathrm{~m} . \mathrm{N}$. Colombo, consists of some large houses roofed with tiles, and contains a bazaar, and eight places of worship-one belonging to the Protestants, one to the R. Catholics, three to the Gentoos, and three to the Mahometans. There is also a charity school, supported by Government. As usual with the towns and villages of this island, it is thickly interspersed with cocoa-nut trecs, which, added to the rich foliage of the sooria, give it a singularly pleasant appearance. Gardens, besides, are attached to each house, in which various sorts of vegetables and fruits are produced, including vines, which here attain great perfection. There are here the ruins of a Dutel fort, built in 1646 , which contained some landsome houses. The harbour is not accessible, in consequence of shoals, to vessels exceeding 100 tons, even at the highest spring tides, so that they are obliged to unload in the Dutch bay at Mutwal, and to send their cargoes to Calpentyn in small vessels. The exports from Calpentyn to Madras, and other ports on the Coromandel coast, are copperas, the dried kernel of the cocoa-nut, cocoa-nut oil, shark's fin, coir rope, honey, bees'-wax, ghee, fish oil, wood oil, dammar, moss, chaya roots, and palmyra timber. The imports consist of eloths, rice, earthenware, hempen thread, spices, minerals, and drugs. There is, besides, a considerable trade with Colombo in copperas, salt-fish, fish roes, dried shirimps, ghce, and deer's horn, in return for Chinaware, English cloth, sugar, dates. jackwood planks, tiles, bricks, iron, lead, \&c. The fisheries here are considerable, and have greatly increased of late years. Calpentyn was acquired by the Portuguese in 1544, and was held by them till 1640, when it was captured by the Dutch, who remaincd there till 1795, when it was surrendered to the British, who still retain it. The inhabitants are composed of Malabars, Javanese, and Moors, and amount in number to about 4500.-The PROMONTORY of Calpentyn is a long narrow strip of land, of about 20 m . in length, separated from the mainland by the Gulf of Calpentyn, a straight inlet, about 7 m . broad at the widest part. The soil is excessively sandy, but productive.-The gulf affords safe anchorage for vessels of considerable size, as far as Calpentgn. It is plentifully stocked with fish, and a considerable mullet fishery is carried on along its N.W. coast. It abounds also in porpoises, dolphins, turtles, trepang, which is oceasionally collected and exported to the markets of Singapore and Penang, by Chinese merchants; and in chanks or conch shells. In the neighbourhood of Putlam, which is near the head of the gulf, sea snakes, of a venomous species, exist in great numbers.

CALPI, a tn. Hindoostan. See Kalpy.
CALRY, par. Irel. Sligo ; 11,511 ac. Pop. 6045.
CALSTOCK, a par. and tn. England, Cornwall. The inlabitants are chicfly employed in the copper, tin, and lead, mines of the vicinity; area, 5450 ac. Pop. 2553.

CALSTONE-W ELLING'TON, par. Eng. Wilts; 1130 ac . Pop. 31.

CALTANICETTA, a tn. Sicily, cap. prov. of same name, near the Kalso, 62 m . S.E. Palcrmo. It is fortified, and has a citadel; broad and straight streets; houses well built. In the vicinity are springs of petroleum, and of liydrogen gas, and important sulphur mines, producing annually about 5500 tons. Caltanicetta is supposed to occupy the site of the Nissa of the Romans. Pop. 16,563.

CALTHORPE, par. Eng. Norfolk; 850 ac. Pop. 214.
CALTONICA, a tn . Sicily, prov. of, and $15 \mathrm{~m} . \mathrm{N} . \mathrm{W}$ Girgenti. The sulphur works in the neighbourhood produce ammally upwards of 1000 tons of sulphur. Salt is also manufactured in the district. Pop. 7060.

CALTURA, a seaport t n . Ceylon, cap. dist. of same name, 28 m . S.E. Colombo; lat. $6^{\circ} 35^{\prime}$ N.; lon. $80^{\circ} 2^{\prime}$ E. It consists of about 200 tiled houses, and contains a handsome Wesleyan chapel and school. A great number of native vessels, belonging to the port, trade to Madras and other places on the coast of Coromandel. Being constantly cooled by the sea breezes, it is very liealthful, and is, on this account, much resorted to by invalids from Colombo.-(Ceylon Gaz.)

CALUIRF, a tn. France, dep. Rhone, 1 bank, Saone, 3 m . N.N.E. Lyons. It has three annual fairs. Pop. 5048. CALUSO, a th. Sardinian Sitates, prov. of, and $12 \mathrm{~m} . \mathrm{S}$. Ivrea, with a communal college. Pop. 3000.

Vol. 1.

CALVADOS, a dep. France, bounded, N. by the English Channel, along which its rocky slıore extends about $60 \mathrm{~m} ., \mathrm{E}$. by dep. Eure, S. by Orne and La Manche, W. by La Manche. Area, 2145 sq. m . It derives its name from a range of rocks extending about 14 m . along the coast, and which were called Calvados, after a Spanish vessel that was wrecked on them. It comprises the ancient Ange, Bessin, and part of Lieuvin. The department is undnlating, picturesque, and possesses rich pastures. Its S. portion is traversed by hills, none of which, however, in any part of the district, attain an elevation exceeding 250 ft ; the culminating point is Mount Pinçon. The principal rivers are the Touques, Dives, Orne, and Vire, which are navigable for small vessels. Coal is the ouly mineral worked to any extent Agriculture is in a more advanced state than in many other parts of France, and more than a half of the whole surface is under the plough. Wheat, barley, oats, ryc and buckwheat are cultivated, but the produce of grain is insufficient for the consumption. Dairics are numcrous, and well managed; and large herds of cattle are brought iu from the departments of Finistère, Côtes-du-Nord, \&c., to be fattencd on the pastures for the markets of Paris, Rouen, and Caen. Horses of the Norman breed are extensively reared, and held in high estimation. Butter and cheese are made in large quantities. Cider, grown in the department, is the common beverage of the country; and melons ripen in the open air. The principal manufactures are linen and lace, earthenware, porcelain, hats, cloth, cotton goods, and straw-hats. That of lace, near Caen and Bayeux, cmploys about 50,000 hands. There are also numerous oilmills, paper-mills, tanneries, distilleries, \&c. The mackerel and herring fisbery is carried on along the coast, where lobsters and shell-fish are also obtained. About $25,000,000$ of oysters, procured in the roads of Cancale, are annually laid down in beds at the mouth of the Seulles. The department is divided into six arrondissements, containing 37 cantons. It belongs to the 14th military division of the kingdom. Chief town, Caen. Pop. 498,385.

CALVELLO, a tn. Naples, prov. Basilicata, $13 \mathrm{~m} . \mathrm{S}$. Potenza, on a hill slope. It has a handsome church and two convents. Pop. 6550.

CALVENTURA ISLANDS, two groups of rocky islets in the Bay of Bengal, off the E. coast of Burmali, distant from each other about 5 or 6 m . The N.W. group consists of seven black rocks, in lat. $16^{\circ} 55^{\prime} \mathrm{N} . ;$ lon. $94^{\circ} 14^{\prime} \mathrm{E}$. (r.) The S.E. division consists of two high rocky islands, covered with trees and bushes, comnected by a reef of rocks with 5 to 7 fathoms water upon it.

CALVERLE1GH, par. Eng. Devon; 550 ac. Pop. 81.
CALVERLEY, par. Eng. W. Riding, York; 8390 ac . Pop. 21,039.

CALVERT, or Kaven, a group of small islands, $N$. Pacific Ocean; lat. (N.W. one), $8^{\circ} 54^{\prime}$ N.; lon. $170^{\circ} 49^{\prime}$ E.

CALVERTON, two pars. and a vil. England:-1, par. Bucks; 1980 ac. Pop. 493.-2, par. and vil. Notts. The village, picturesquely situated in a valley, consists of one street about $1 \frac{1}{2} \mathrm{~m}$. long; and, besides the parish ehurch, has chapels belonging to the Wesleyans, Baptists, and Ranters. It is gradually increasing. The inhabitants are chiefly employed in framework, in its various branches of hosiery, drawers, and gloves. Lee, the inventor of the stockingframe, was born in the parish. Arca, 3320 ac. I'op. (1851), 1427.- (Local Correspond nt.)

CALVI, a seaport tn. France, island Corsica, on a peninsula in the Giulf of Calvi, on the N.W. coast of the island; lat. $42^{\circ} 35^{\prime} 12^{\prime \prime} \mathrm{N}$.; lon. $8^{\circ} 43^{\prime} 30^{\prime \prime} \mathrm{E}$. (r.) It is a fortified place of the sccond class, being defended by a strong citadel, tlanked with five bastions. The port is good, and at its entrance, on Point Rivelata, is a light 289 ft . high. The trade of the place is considerable; its chief exports are timber, wine, oil, almonds, citrons, oranges, wax, goat skins, and wood fuel A good red wine is produced in the adjoining country. Calvi was taken by the English in 1794, after a siege of 51 days. Pop. 1746.

CALVIA, a tn. Spain, isl. Majorca, 6 m . W. Palna; with a church, school, townhall, and cemetery. Pop. 2007.

CALVISANO, a tn. and com. Austrian Italy, gov. Milan, prov. of, and about 17 m . S.E. Brescia, in a bcautiful and fertile plain. It is now of small extent, but is said to have been at one time a large and populous city.-TThe commune
is rich in grain and pasture, and contains numerous mulberry 1 lantations. Pop. 3502.

CALVISSON, a tn. France, dep. Gard, 11 m. S.W. Nismes; witlı a Protestant churel, a brandy distillery, exteısive manufactures of cream of tartar, and some trade in wine. 1'op. 2593.

CALW, or KALw, an anc. tı. Würtemberg, circle, Black Ferest, cap. bail. of same name, in a deep and well-wooded valley, on both banks of the Nagold, which is crossed by two bridges, and divides it into the upper and lower towns, 20 m . W.S.W. Stuttgart. It has seven churches, a grammar and a commercial school. The town church and townhouse are handsome, particularly the latter, which has a fine hall, with arched roof. It is one of the most industrious towns in the kingdom, and has considerable manufactures of linen, woollen cloths, hosiery, worsted, glue, and leather, also several dyeing establishments. In the vicinity are the ruins of the castle of the former Earls of Calw, the most powerful of the Swabian nobles in the Middle Ages. One of the Earls of Calw became Pope Victor II. Pop. of tn. 4190 ; of lail. 21,872.

CALY, a river, IIindoostan, which rises in prov. Gurhwal, flows in a S.S.E. direction tbrough Delhi, between the Jumna and the Ganges, parallel to, and, for a great part of its course, at equal distances from, these rivers. Latterly, it bends N.E., and falls into the Ganges on the W. confines of Oude, in lat. $27^{\circ} 10^{\prime} \mathrm{N}$; lon. $79^{\circ} 45^{\prime} \mathrm{E}$.

CALZADA, several tns. and vils. Spain, of which the chief are:-1, Calzada (Santo Domingo de la), a city, Old Castile, prov. of, and $25 \mathrm{~m} . \mathrm{W}$. by S. Logroño, in a fertile plain, r. bank, Oja or Glera; surrounded by ancient stone walls, and a fosse, and entered by seven gates. Its houses are generally well built, and it has well paved and clean streets, four squares, a Gothic cathedral, two churches, Latin and several other endowed schoels, a spacious townhouse, session-house, prison, rich hospital, house of mercy, orphan asylum, some convents, and a palace of the Marquis of Cirinuela. The weaving of woollen fabrics, clotl, baize, cashmerc, and counterpanes, dyeing wool, and agriculture, occupy the people. Trade in grain, fruits, cattle, manufactured goods, rice, wine, oil, and hardware. Pop. 3447.-2, Calzada de Calatrava, a tn . New Castile, prov, of, and 15 m . S. by E. Ciudad-real, in an irrigated plain. The houses are well built, and it has clean, well paved, and regular streets, a parish church, chapel, townhouse, prison, four schools, and a fine fountain. Linen and woollen fabrics, cloth, blonde lace, oil, and wine are made. Pop. 3840.-3, Culzada de Oropesa, a tn. New Castile, prov. Toledo, 28 m . W. Talavera, having a church, townhall, prison, and school. Pop. 1160.-4, Calzada and Casas de Calzada, a vil. Leon, prov. of, and $42 \mathrm{~m} . \mathrm{S}$. Salamanca. Pop. 368.-5, Calzada de don Diego, a vil. Leon, prov. of, and 16 m. S.S.W. Salamanca. Pop. 195. With many others.

CAM, or Grasta, a river, England, rising in the N. part of co. Hertford, and, after a N.E. course of 40 m . through Cambridgeshire, falling into the Ouse, $3 \frac{1}{2} \mathrm{~m}$. S. Ely. It has a remarkably sluggish stream, and is navigable to Cambridge, 15 m. from its confluence with the Ouse.

CAM, par. and vil. Eng. Gloucester; 3430 ac. Pop. 1851.
CAM, par. Irel. Roscommon; 12,403 ac. Pop. 3830.
CAMACHO, a large, and several small lakes, Brazil, prov. Santa Catharina, connected with each other by natural canals, which are navigable for laden canoes. They lie S. of the river Tubaråo, and are commonly named Jaguaruna, Gurupaba, and Santa Martlia.

CAMACUAN, or Icabaquam, a river, Brazil, prov. Sào-Pedro-do-Rio-Grande, rising in the W. frontier of the province, flowing E. between the serras de Tapes and the serra de Herval, and, after a course of about 150 m ., passing numerous falls, and receiving numerous tributaries, it enters the Lake of Pastos by several mouths. It is navigable for canoes for about 20 m . from its mouth, where the first falls occur.

CAMAJORE [anc. Campus major], a tn. and com. Italy, duchy of, and 16 m. N.W. by W. Lucca, 4 m . E.S.E. Pietra Santa, r. bank of a small tributary of the Lumbrichesc. It is well built, and clean; surrounded by walls, flanked by towers, and protected by a deep fosse. The streets are parallel, and regularly built, and the town possesses a square, a
handsome collegiate church, lospital, and numerous other neatly constructed edifices. Pop. 2220.

CAMAMU, a sinall, but flourishing tn., Brazil, prov. of, and 100 m. S.W. Bahia, l. bank, Acarahi, 10 m . above it3 embouchure in the Bay of Camamu. It has two churches, a townhall, and prison, a Latin and a primary school, and a port, defended by a fort. It trades with Bahia, exporting coffee, cacan, inanioc flour, spirits, rice, and building materials. Pop. 2000.-The bAY is about 10 m . square, receives scveral rivers besides the Acarahi, and has several islands, one of which, named also Camamu, is a rocky islet about 3 m . in diameter, on which several families live.

CAMANA, a tn. Peru, cap. prov. same name, dep. of, and 90 m. W. Arequipa, in a fertile plain near the sea. Pop. 1500 -_The province is about 75 m . N.W. to S.E., and about 40 m . broad; traversed by mountains and valleys, and watered by a number of torrents. The vine is extensively cultivated; from the fruit of which brandy and vinegar are made. Gold mines are numerous, but yield little profit. The province is peopled by 14 different tribes, named after the valleys which they respectively inhabit.

CAMAPUAN, a river, Brazil, prov. Mato-Grosso, one of the head streams of the Tacoary, or Taquari, an affluent of the Paraguay. It has a course of about 70 m .

Camaran, an isl. Red Sca. See Kamaran.
CAMARANCA, a river, N.W. Africa, Guinea, which has its sources in the Kong Mountains, near Laing's sources of the Niger ; lat. $9^{\circ} \mathrm{N}$. ; lon. $9^{\circ} 15^{\prime}$ W. ; it pursues a S.W. course of about 250 m ., and falls into Yawry Bay, on the coast of Sierra Leonc.

CAMARES, or Pont-de-Camares, a th. France, dep. Aveyron, 62 m. W.N.W. Montpellier, in the form of an amphitheatre, on a rock overhanging the Dourdon. It is poorly and irregularly built, and ill-paved; but the suburb, which stands on the opposite side of the river, and communicates with the town by a very ancient bridge, has a much more agreeable appearance. Manufactures :-woollen cloth and worsted. About 1 m . from Camarès are the saline chalybeate springs of Andabre, where there is a bathing establisiment. much frequented. Pop. 1710.

CAMARGO, a tolerably well-built vil. Spain, prov. of, and 6 m . S. Santander; with a church and school. Pop. 2138.

CAMARGO, a tn. Mexico, dep. Tamaulipas, r. bank, San Juan, near its junction with the Rio Sravo del Norte, 90 m . E. by N. Monterey; lat. $26^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $98^{\circ} 30^{\prime} \mathrm{W}$. Pop. 2600.

CAMARGOS, a vil. Brazil, prov. Minas Geraes, 6 m. N. Marianna; with a church and school, and an agricultural and mining pop. of 1000 .

CAMARGUE (LA), [Castra Mariana, Camaria insula], a river isl. France, dep. Bouches-du-Rhône, forming the delta of the Rhone. It is triangular, and is bounded E. by the branches called the Old Rhone and Great Rhone, W. by the Littla Rhone, and S. by the Mediterrancan. Area, 250 sq. m. ; length, N. to S., 25 m .; average breadth, 11 . It is quite flat, and in climate and soil-the latter composed of mud banks, arid sand, or bare gravel beds, alternating with salt marshes and lagoons, raised from 2 to 7 ft . above the sea-it assimilates rather to Africa and the borders of the Nile, than to France. Even some of the animals which resort to it-the ibis, pelican, and flamingo, belong to the African continent. The ground is so impregnated with salt that the water is brackish; the surface of the soil in summer is covered with a white saline efflorescence, and when the pools are dricd up, the salt forms a cake two inches thick. Herc, as in the African deserts, the mirage occurs during the heats. The sea is excluded by dykes, and the waters of the Rhone are successfully used in irrigation, to counteract the effects of the salt. The most elevated parts of the soil, principally on the banks of the Rhone, are extremely fertile, and produce large quantities of wheat and red wine, while the lower parts afford an extensive tract of excellent pasturage, on which flocks of sheep and cattle, with large droves of horses, are permitted to roam; 40,000 lambs are reared annually. The horses are small but nimble, much esteemed for the saddle, and said to be descended from the Arab stock imported by the Saracens. There are several lagoons, the largest of which is tlat of Valcarres. From these salt and soda are manufactured. The island contains nine communes.

CAMARINES (North and Soutii), two provs. Philippines, isl. Lizon, both occupying the S.E. limb of the island. The N. province is partly mountainous, but contains also extensive and fertile plains. The mineral products comprise gold, iron, and various kinds of marble. There are several rivers in the province, all of which abound in fish. Most of these streans are crossed by bridges, some of stone and others of bamboo, but they are little required excepting in the rainy season, the river generally being at all other times sufficiently low to be crossed on foot. The level tracts are nearly all under cultivation, and produce rice, but not sufficient to supply the wants of the inhabitants. The climate is oppressive and unhealthy, excepting in the months of January and February, when it is sufficiently agreeable. The inhabitants are remarkable for their honesty and good nature. The S. province is traversed by a chain of mountains that run throughout the whole length of the island, but is, nevertheless, more fertile than the N., producing such quantities of rice as enable its inhabitants to supply the neighbouring territories. In other particulars it resembles the N. province. Formerly the Camarines composed but one province, having been separated for administrative purposes.

CAMBAY, or Cambaja, a large seaport tn. IIindoostan, prov. Goojerat, in the Guicowar's dominions, at the head of the gulf of same name, 85 m . N.N.W. Surat, 240 m . N. Bomhay ; lat. $22^{\circ} 17^{\prime} \mathrm{N} . ; \operatorname{lon} .72^{\circ} 35^{\prime} 30^{\prime \prime} \mathrm{E}$. (R.) It was formerly a place of eonsiderable importance, but now much decayed, in consequence of the filling up of deposits brought down by the rivers. Near the town the tides rush in with great violence, and rise from 30 to 40 ft ., making it possible for large vessels to come close up at ligh water, though at ebb they aro loft dry. It has several mosques and Hindoo temples, and the remains of many more religious structures, erected by the Jains, a sect formerly predominant in this part of India. The surrounding country is fertile, producing abundance of wheat and other grains, oleaginous seeds, indigo, cotton, and excellent tobacco. Formerly, silk and chintz goods, jewellery and indigo, were exported, but the trade of the place is almost entirely limited to shipments of grain to Bombay. The silversmiths here excel in the art of embossing, which they perform by filling the article to be so ornamented with gum-lac, and puuching the figures with a small chisel. Beads and other ornaments of carnelian, bloodstone, agate, and other precious stones, are also manufactured with greatskill, though sometimes by very simple and primitive processes, such as rolling the stones together in bags for several weeks till they acquire a spherical form. Cambay and its territory prospered under the Moguls, and until the beginning of the present century were governed by a native prince, tributary to the Maharattas, since whose fall his rights have devolved on the British Government, to whom the present nabob pays tribute and owns allegianee.The oulf of Cambay is about 160 m . in length from N . to S., and at its entrance between Diu Head in Goojerat and Terrapoor Point in Concan, opposite coast, 130 m . wide, but subsequently diminishes to a breadth of about 18 or 20 m .

CAMBELLO, a vil. Indian Archipelago, isl. Ceram, peninsula Hoowamohel, on a slight bend of the shore. Though difficult of approach for ships, it is much frequented by foreigners, being the chief market for cloves.

CAMBERWELL, St. Giles, a vil. and par. England, co. Surrey, a suburb of London, S. side of the Thames. The village is about 3 m . from Blackfriar's Bridge, and is mostly occupied by shops. In the environs, which are very beautiful, are a number of elegant villas and mansions, the residences mostly of wealthy, and many of them retired, merchants. The new church, completed in 1844 , is considered one of the most elegant Gothic structures erected in England since the 16 th century. There are, besides, three other places of worship under the Establishment, and several chapels for Dissenters, a free grammar-school, a green-coat school, with several other endowed schools and minor charities. The S. Metropolitan Cemetery, a large and well laid-out enclosure, is in this parish, which also compreliends the important liamlets of Dulwich and Pecklam, and the district of St. George. Area of par. 4570 ac. Pop., 1841, 39,868.

CAMBIL, or Cambiel and Halabar, a tn. Spain, Andalusia, prov. of, and 14 m. S. by E. Jaen, leetween two hills, crowned, respectively, by the ruinous Arab castles after
which the town is named. The river Villantteva, crossed here by two bridges, divides the town into two equal parts. Its streets are tolcrably well kept, and it possesses a square, parish church, endowed school, townhall, prison, store-house, and cemetery. Wine and oil are expressed, and some trade is carried on in grain and cattle. An iron foundry has also been established in a suppressed convent. Pop. 2773.

CAMBING PULO, a small isl. Flores Sea, N.E. entrance of Ombay Passage, between the islands Timor and Oinbay, S. peak in lat. $8^{\circ} 18^{\prime} \mathrm{S}$. ; lon. $125^{\circ} 29^{\prime} \mathrm{E}$. (r.) It is from 10 to 12 m. in length, and of considerable height.

CAMBUDIA, or Camboja, a territory in S.E. Asia. See Anam and Siam.

CAMBODIA, Camboja, or Pontaipret, a th. Siam, the anc. cap. of territory of same name, on both sides of the Mekon; lat. $12^{\circ} 4^{\prime}$ N. ; lon. $105^{\circ} 4^{\prime} \mathrm{E}$. It is now greatly decayed, but the ruins of its royal palace and pagodas attest its ancient greatness. The Dutch had a factory here in the 17 th century.

CAMBODIA, or Camboja Point. The most S.E. point of Siam ; lat. $8^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $104^{\circ} 55^{\prime}$ E. ; at the entrance N. side of the Gulf of Sian. S.E. from the point a shoal flat stretches out a great way from the coast.

CAMBODIA, or Camboja, River. See Mekon.
CAMBORNE (St. Martin), a market tn. and par. England, co. Cornwall, 11 m. N.W. Falmouth. The town, which stands prettily on the slope of a gently rising hill, and is neatly built, contains a handsome granite church, and various dissenting chapels, with a number of daily and Sunday schools. Being situated in the midst of one of the richest mining districts in the county, and in the immediate vicinity of some of its most productive tin and copper mines, it has risen of late years from insignificance to be a place of wealth and import ance. The West Cornwall Railway has a station here ; area of par. 6900 ac ['op., par. and tn., $10,061$.

CAMBGORIE, or KAmburi, a tn. Siam, 120 m . N.N.W. Bangkok, at the conflucnce of the See-sa-wat and May-mannoi rivers, and for the most part along the bank of the former. It is a straggling place, comprising one long street, with several smaller diverging from it, and having in all about 500 houses, but no bazaar. It is surrounded by a wall, in which are eight gates. A brick fort constructed here is said to contain 20 guns.

CAMBRAI, or Cambray, a tn. France, dep. Nord, 33 m . S. by E. Lille, r. bank, Scheldt, a branch of which traverses the town. It is generally well built, is surrounded by walls flanked with ancient round towers, and defended by a strong citadel. The Place d'armes, at one end of which stands the Hôtel de Ville, is of great extent; and the esplanade is one of the finest in Frencl Flanders. The Revolution of 1793 stripped Cambrai of all its principal ornaments, leaving only two out of 12 churches. The beautiful cathedral, and the tomb of its archbishop, the celebrated Fenelon, were razed to the ground. A new monument to the memory of the latter, by the sculptor David, was inaugurated, in 1825 , in the present cathedral, a modern church of indifferent architecture. Cambrai is the seat of an archbishopric, tribunal of commerce, court of first resort, diocesan seminary, communal college, societé d'emulation, and school of design. It has a theatre, military hospital, mont-de-piété, and a public library, with about 30,000 volumes, and 1000 MSS.

The town has long been celebrated for its manufacture of the finc linens called, from the place, cambrics; its other manufactures are cotton goods, net, linen, and cotton yarn, starch, black soap, potato flower, and beet sugar. There are also some oil-mills, tanneries, salt refineries, bleaching grounds, and several breweries. It carries on a considerable trade in grain, oil seeds, wool, flax, caitle, agricultural produce, and coal. The St. Quentin canal begins here, and joins the Oise at Chauny.

Cambrai is the Camaracum of the Romans, by whom it was fortified. It is celebrated for the famous League against the republic of Venice, entered into here in 1508, and for a treaty of peace between Charles V. and Francis I., signed here in 1529. Louis XIV. took Cambrai from the Spaniards, in 1667, and it was finally confirmed to France loy the treaty of Nijmegen. On June 24, 1815, it was taken by a detachment of the British army, under Sir Charles Colville, and thereafter, to 1818 , was one of the principal stations of the army of oceupation. Pop. 18,308.

CAMBRESIS [I, Iatin, Cameracensium], an anc. dist. France, about 25 m . long by 10 broad, which was once a depentericy of ancient Flanders, and now forms the greater part of arrond. Cambrai, dep. Nord. It was ceded to Louis XIV., in 1678, by the treaty of Nijmegen.

CAMBR1DGE, an inland co. England, having co. Lincoln N., cos. Northampton, Iuntingdon, and Bedford N. W., cos. Ilertford and Essex S., Suffolk E., and Norfolk N.E. ; greatest length, about 50 m .; greatest breadth, about 25 m .; area, $548,480 \mathrm{ac}$. The surface is, in general, flat, although somewhat elevated towards the S., where grassy downs depasture numerous sheep and cattle. About a third part of the county is under tillage, the remainder being divided between pasture and waste. That part of the county-about one-lalf of the whole $-N$. of the Ouse belongs to the isle of Ely, and is wholly within the Bedford Level (which see). It is fine land, intersected by numerous canals, with windmills for lifting the water into channels high enough to carry it off, and grows heavy crops of oats, wheat, flax, hemp, and cole for sheep-feeding, and possesses excellent pastures. The soil of the S . part of the county is chalky, with some parts clayey, loamy, and gravelly. N.E. and E. of the town of Cambridge is the most level chalk tract in England. The more elevated tracts yield all kinds of corn, especially barley, and also turnips. In the fens a considerable number of cattle and long-wooled sheep are grazed; and in the S. part of the county, particularly on the rich meadows on the banks of the Cam, dairy husbandry is prosecuted extensively and successfully. The butter produced here is in great demand in Loudon, where it is sold under the name of Cambridge, and also of Epping, butter. Cambridgeshire is famous, also, for a peculiarly rich and fine-flavoured description of cream cheese, made at Cottenham. A vast number of calves are reared here, also, for the London market. Agriculture is, however, on the whole, in a backward state in this county; the farm-houses poor, and the cottages miserable. There are no manufactures, excepting a little coarse potteryware; but some of the towns do a good deal of business in corn and oil. The minerals are unimportant. The principal rivers are the Ouse, which crosses the county near its centre, W. to N.F., is navigable throughont the whole of that part of its course; the Cam, or Granta, flowing S.W. to N.E., and falling into the Ouse, and navigable as far up as Cambridge; and the Nene, or Nen, which crosses the N. part of the county S.W. to N.E., and is also navigable. Besides its rivers, the county has several navigable canals ; and internal communication is further facilitated by numerous good roads, and the main-line of the Eastern Counties Railway, and several branches. The principal towns are Cambridge, Ely, and Wisbeach. It is divided into 18 hundreds, which, together, contain 162 parishes. The whole county returns seven representatives to parliament; three county members, two for the town of Cambridge, and two for the universities. Pop. (1851), 185,405 (of which 92,699 were males, and 92,706 females).

CAMBRIDGE, a parl. bor. and market tn. England, co. Cambridge, 50 m . N.N.E. London, on a level tract of ground on both sides of the Cam, but the greater portion on the $r$. bank of that river, which is crossed by a neat cast-iron and several other public bridges, besides which, each college contiguous to the river has a private one. It is about 3 m . in length, E. to W., and about $1 \frac{1}{2}$ in breadth; is wanting in elegance, and, as a town, has, with exception of its celebrated university, few points of interest, and fewer of beauty. The streets, formerly narrow, winding, and irregular, are now mnch altered and improved, and are well paved and well lighted. The principal market place, recently much improved, is centrically situated, and consists of two spacions oblong squares, in one of which is a conduit, supplied by water from an aqueduct, at a distance of 3 m ., erected for the benefit of the town, in 1614, by Hobson, livery stabler, who gave rise to the well-known proverb of 'Hobson's choice,' by adhering to a rule of letting his horses by rotation ouly, thus leaving the hirer no alternative but to take the one whose turn it was to go out. At the S. end of the market-place stands the guildhall, which contains several large rooms for public purposes; and near the N.W. extremity of the town is the county court-
house, a spacious and handsome structure. There are, altogether, 14 parish churches in the town, and seven places of worship for different religious bodics; one for Indepentents, three for Methodists-Wesleyan and Irimitive, and three for Baptists. With exception of St. Sepulchre's, and probably St. Mary's the Greater, there are none of the churches in aly way remarkable as specimens of architecture. The former, called, from its shape, 'the round chureh,' was built in imittstion of the Holy Sepulchre at Jerusalem. In 1843, it was re-

RT. SKPULCHRE'S CHURCH, CAMBRIDGF.-Froma Print by Rudre.
stored, at considerable cost, under the auspices of the Camden Society. St. Mary's church is adorned with a massive and lofty tower, crowned with four turrets. But it is to its university that Cambridge owes the interest which it excites. The buildings of this illustrious institution extend along the greater portion of the W. part of the town, between it and the Cam, to both of which they rmn nearly parallel. They consist of the senate-house, the university library, and schools,

GATEWAY OF TRINITY COLLEGY, CAMHRIDGE.
From Le Keux's Memorials of Cambridge.
the former containing ahont 170,000 volumes; the university or Pitt press, the Fitzwilliam muscum, the anatomical museum, and the ohservatory, most of them remarkable for architectural elegance. The colleges are 17 in number, called,
respectively, St. Peter's, Clare Hall, Pembroke, Gonville and Caius, Trinity Hall, Corpus Christi, King's, Qucen's, St. Catherine's Hall, ' esus, Christ's, St. John's, Magdalene, Trinity, Emmanuel, Sidney Sussex, and Downing-the most recent, all of them magnificent structures. The greater number of the colleges are contiguons to cach other, chiefly along the Cam river, but there are several in different parts of the town. The origin of this learned foundation is involved in obscurity, but is supposed to date from the seventh century, and to have been founded by Sigebert, a king of the East Angles. It did not, however, assume the regular corporate form of a university till about the 13th century, when the first college was erected by Henry III. In 1333, King Edward III. granted the university some important privileges ; and, in 1430, Pope Martin V. invested it with exclusive ecclesiastical and spiritual jurisdiction over its own scholars. In the reign of Elizabeth, furtber privileges and rights were bestowed on it, all preceding grants were confirmed, and the university declared to be incorporated by the name of the chancellor, masters, and scholars. The present university comprises, as already mentioned, 17 colleges. Each college is a body corporate, and bound by its own statutes, but under the control of the general laws of the university. Each furnishes members for the executive and legislative government of the university. The place of assembly is the senate-louse. All persons who are masters of arts, or doctors in divinity, civil law, or physic, having their names upon the college boards, holding any university office, or being resident in the town of Cambridge, have votes in this assembly. The annual income of the university is about $£ 5500$, arising from various sources, including the produce of fees at matriculations, for degrees, \&c., and the profits of the university press, but chiefly from the proceeds of the rectory of Burwell. The public professors are paid, some from the university chest, some by the Government, and others from estates left for that purpose. The degrees conferred by the university are those of doctors in divinity, civil law, and medicine, and also in the science of music; that of master of arts, and the degree of bachelor, in each of the foregoing. The academical year consists of three terms, Michaelınas, Lent, and Easter. The languages, arts, sciences, \&c., taught, are Arabic, anatomy, astronomy, and geometry, botany, casuistry, chemistry, divinity, laws of England, geology, Greek, Hebrew, modern history, civil law, mathematies, medicine, mineralogy, music, natural philosophy, physic, besides various endowed lectureships. The botanical garden, on the S.E. side of the town, occupies between three and four acres. The anatomical school contains a large collection of valuable preparations. On an eminence, at the distance of 1 m . from the college walks, on the road to Madingley, stands the observatory, which cost $£ 19,000$. The Fitzwilliam musenm, bequeathed to the university by Lord Viscount Fitzwilliam, is a magnificent strncture, of the Corinthian order, and contains a noble collection of books, paintings, drawings, \&c. The nuiversity sends two members to the House of Commons, the privilege having been granted by James I. The right of election is vested in the members of the senate, in number (in 1845) 3204. The vice-chancellor is the returning officer. The principal charitable institution is Addenbrooke's hospital, situated at the S. entrance to the town. The annual cost of its maintenance is about $£ 2600$. There are, besides, several alms-houses, minor charities, and free schools. The markets in Cambridge are well supplied with every kind of provision, but from the very great consumption of the university, the articles are comparatively dear.

The weekly market-day is Saturday. There are two fairs annually, one in June, the other in September; the former continued for a week, the latter, which is called 'Sturbridge Fair,' for 14 days; but both are now much curtailed. The principal articles brought to sale on these occasions are horses, cattle, timber, pottery, leather, cheese, liops, wool, and hardware. There are no manufactures in the town, bnt a considerable trade is carried on with the port of Lynn in corn, coal, timber, oil, and iron. No dramatic performances are allowed in Cambridge, but there is a theatre in the adjoining village of Barnwell, which is occasionally opened; great musical festivals, however, are often celebrated in the town, where there is a permanent musical society on a great scale. Cambridge is a town of great antiquity; in Doomsday book,
where it is described as an important place, it is called Grentebrige, from one of the names of the river; the present name, derived from the modern name of the river Cam, being comparatively recent. In 871, it was burnt by the Danes, and again in 1010. Subsequently to this, it was the scene, at varions periods, of events which have become matter of history, including several royal visits, and some military experiences in the time of Cromwell. Of the ancient castle built by William the Conqueror on the site of a Roman station, and some years used as the county jail, only the gateway now remains. Pop., (1841) 24,453, (1851) 27,803; increase 18, per cent.

CAMBRIDGE, a tn. U. States, Massachusetts, on Charles's river, $3 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Boston. It is the seat of Harvard University, the oldest and best endowed literary institution in the U. States, possessing a library which contains upwards of 50,000 volumes ; an excellent philosophical and chemical apparatus, cabinet of minerals, anatomical museum, and botanic garden. A law school, theological seminary, and medical school, are attached to the institution. The average attendance of students is 246 . Besides the university buildings, which are extensive and commodious, though irregularly built, Cambridge contains an arsenal, 16 churches, two banks, rope tactories, and numerous lumber yards. Many of the private mansions are elegant and spacious. Pop. of township, 8409.-Several other towns of the U. States have the same name.

CAMBRIDGE GULF, N. W. Australia, between Capes Dussejour and Domett; lat. $14^{\circ} 45^{\prime} \mathrm{S}$. It is about 20 m . wide at its entrance, and runs about 75 m . inland.

CAMBRILS, a tn. and port, Spain, Catalonia, prov. of, and 12 m . W.S.W. Tarragona, on a hill-slope, and surrounded by decayed walls. It has a parish church, chapel, townhall; custom-house, two schools, an hospital, a cemetery, cavalry barracks, and prison. Wine, brandy, bricks, and tiles, are manufactured, and fishing is carried on. Only small vessels visit the port. Pop. 225t.

CAMBUSLANG, a vil. and par. Scotland, co. Lanark. The village lies on a rising ground, 4 m . S.E. Glasgow, ahd is a station on the IIamilton railway. It has an Established church and school, and is inhabited chiefly by weavers and miners; but is chiefly noted for the 'Cambuslang work, a remarkable revival in religion, which took place in 1742 , under the ministration of the Rev. Mr. M'Calloch.-Tho parish is about 3 m . square, and abounds in freestone, coal, and limestone. Pop. (1841), 3022 ; (1851), 3306.

CAMBUSNETHAN, par. Scot. Lanark; 12 m . by 3. Pop. (1841), 5803; (1851), 8611.

CAMBYNA, an isl. Flores Sea, S. coast of the 太.E. peninsula of Celebes. Centre peak in abont lat. $5^{\circ} 21^{\prime} \mathrm{S}$.; lon. $121^{\circ} 57^{\prime}$ E. It is about 24 m . long, S.W. to N.E., about 20 broad, and rises steep and rugged from its W. extremity. It is inhabited and cultivated.

CAMDEN:-1, A city and river port, U. States, New Jer" sey, l. bank, Delaware, opposite Philadelphia, and $29 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Trenton. It has six churches, an academy, three schools, three printing-offices, and several factories. A railway leads to New York, and another to Woodbury, and communication with Philadelphia is maintained by three ferries. Pop. 3371. -2, A vil. U. States, S. Carolina, 25 m . N.E. Colambia, 1. bank, Wateree, which is passed by a bridge $1 \frac{1}{2} \mathrm{~m}$. S.W. the village. It has four chnrehes, an academy, court-house, jail, and other public buildings. In the neighbourhood is an extensive cotton factory. A battle was fought here, in 1780 , between General Gates and Lord Cornwallis ; and another, in 1781, between General Greene and Lord Rawdon. Pop. 1000.

CAMDEN, a maritime co. New S. Wales, 65 m . in length, and 41 in breadth; area, $1,400,320 \mathrm{ac}$. The surface presents a continuous succession of hill and dale, with largo tracts unsurpassed in fertility; of these, the principal are the 'Cow Pastures,' so called from the large licrd of cattle found there, the produce of a few runaway animals that had escapel soon after the fonndation of the colony. The beautiful and picturesque region of Illawarra or the Five Islands, is in this county; it comprises $150,000 \mathrm{ac}$., and extends, N. and S., 18 m . along the coast. There are some fine lakes in the eounty, the scenery around which is very bcantiful. Camden returns one member to the Legislative Council. The county
town is Berrima. The stock has been estimated at 5598 horses, 33,433 head of horned cattle, 3510 pigs, and 35,117 sheep. Pop. 8323.

CAMDEN-TOWN, an extensive suburb of London, par. St. Pancras, co. Middlesex, $3 \frac{1}{2} \mathrm{~m}$. N.W. St. Paul's. The houses, which are in general of recent erection, are regular and substantial buildings; while in the upper part, the crescent, terrace, and other ranges, have a handsome appearance, and command a pleasing, though limited view of the Iampstead and Highgate hills. Camden-Town is intersected by the North-western Railway, which has a station here of immense extent. Besides the chapel, a handsome brick edifice, erected in 1828, there are two churches, and places of worship for Independents and Wesleyans. There are also a veterinary college, a museum, an infirmary, a range of alms-houses for decayed journeymen tailors, and an orphan workingschool.

CAMEL, two pars. Eng. Somerset:-1, Queen Camel; 2280 ac. Pop. 739.-2, West Camel; 2100 ac. Pop. 334. CAMELEY, par. Eng. Somerset; I 630 ac. Pop. 643.
CAMELFORD, a small market tn. and bor. England, co. Cornwall, on the Camel, 28 m . N.W. Plymouth. The streets are spacious and well paved; but the houses are, in general, very indifferent. It lias a townhall, erected by the Duke of Bedford; a free-school, and a Wesleyan Methodist chapel. The inhabitants are chiefly engaged in agriculture. It was disfranchised by the Reform Act. Previous to that period, it sent two members to the House of Commons, and had done so from the time of Edward VI. Pop. 705.

CAMELON, a vil. Scotland, co. Stirling, $1 \frac{1}{2} \mathrm{~m}$. N.W. Falkirk, on the line of the Forth and Clyde Canal. Nail making is the chief employment. Pop., 1841, 1340.

CAMEN, a tn. Prussia, Westphalia, gov. Arensberg, 25 m . S. Miinster, on the Scseké. It contains two churches, a Protestant and a R. Catholic. The inhabitants live by agriculture and the ordinary handicrafts. Pop. 2383.

CAMENZ, a tı. Saxony, circle, Bautzen, 1. bank, White Elster, 20 m. N.F. Dresden. It contains several churehes, one of them the Marienkirche, in the Gothic style, particularly handsome, and richly adorned; a library, a grammarschool. and scveral charitable endowments; and has considerable manufactures of earthenware, tobacco, and starch, several dyeworks and tanneries, numerous mills, a weekly and two yearly markets. It was almost wholly destroyed by fire in 1842. Lessing, the poet, was born here, June 22, 1729. An hospital was dedicated to his memory in 1826. Pop. 4000.

CAMERI, a tn. Sardinian States, prov. of, and 4 m . N.N.E. Novara, near the Tessin. It has several churches, and manufactures linen. Pop 3000.

CAMERINO [anc. Camerinum], a th. Papal States, 86 m. N.N.E. Rome ; seat of an archbishopric, and of a distriet court. The town stands on a hill, and contains some good public buildings, among which are the archiepiscopal palace, a handsome edifice, surrounded with pillars; the cathedral, a spacious structure; and the church of Omanzia, which contains some fine pictures by the great masters. In the principal square there is a bronze statue of Pope Sixtus V. There are also 12 monasteries, seven convents, and a university, founded in 1727. Silk is both produced and manufactured in the town, and forms an article of commerce. Pop. 5000.

CAMERON, par. Scot. Fife; 4 m. square. Pop. 1167.
Cameroons, Mountain and River. The mountain of Cameroons occupies the N.E. angle of the Bight of Biafra, W. Africa; lat. $4^{\circ} 15^{\prime} \mathrm{N}$. ; lon. $9^{\circ} 7^{\prime} \mathrm{E}$. Its base is 20 m . in diameter, and its loftiest peak is $13,000 \mathrm{ft}$. high; it is covered nearly to the summit with trees of luxuriant growth, and seems to form the commencement of a range of voleanic hills stretching N.E., and uniting with the Mountains of the Moon, at lat. $6^{\circ} \mathrm{N} . ;$ lon. $12^{\circ} 20^{\circ} \mathrm{E}$. At a short distance S.S.E. from the Cameroons Mountain is the estuary of the Cameroons river, which is the receptacle also of several other streams. It is a fine river, having an average breadth, before it reaches the estuary, of about 400 yards, with a depth in the dry season varying from 2 to 20 ft . The r. bark of the stream is low and swampy for several miles towards the base of the mountain, covered in most parts with mangroves, and intersected by numerous creeks, while the 1 . bank rises at once from the waterside to the height of about 50 ft . There are several
large and thriving towns on the river, through which an extensive trade is carried on in ivory and palm-oil. The latter is of a superior quality, and the former generally very large, and also of excellent kind. The supply of ivory is said to be inexhaustible, 60 tons having been procured in one season. It is here all taken from dead elephants, who, in search of water, have perished in a vast morass about 200 m . inland S.E. from Cameroons.

CAMERTON, a par. and vil. England, co. Somerset. The village lies in a valley 8 m. W. Bath, and is intersected by the Somersetshire coal canal. The inhabitants are mostly employed in the colleries. 2030 ac. Pop. 1647.

C $\Lambda$ META, a tn. Brazil, prov. Para, l. bank, Tocantins, near its mouth, 80 m. S.E. Belêm. It has two churches and an hospital; and is a depot for goods brought down the Tocantins and other streams, and a place of resort for vessels ascending these streams. It is a populous, flourishing town, whose inhabitants are devoted to agriculture, commerce, and navigation. Pop., including its district, which is extensive and fertile, 20,000 .

CAMIGUIN ISLANDS:-1, One of the Babnyanes islands off the N. coast of Luzon; lat. $18^{\circ} 54^{\prime} \mathrm{N} . ;$ lon. $121^{\circ} 53^{\prime}$ E. (r.) ; from 7 to 9 m . long, high and hilly. The S. part is formed of a high mountain, formerly a volcano, visible at 60 m . distance. The shore is lined with coral rocks, and on the E. and N. sides the land is low close to the sea. On the W. side of the island, S . of its centre, is the port of San Pio Quinto, formed by a concavity in the land, about 3 m . wide, and $1 \frac{1}{2}$ inland, sheltered from the sca by an island of the same name, which lies in the middle of the entrance. It is the only place amongst these islands where a large ship can be considered at all safe.-2, One of the smallest of the Philippines, on the N.W. coast of Mindanao; lat. $8^{\circ} 59^{\prime} \mathrm{N}$. ; lon. $124^{\circ} 20^{\prime}$ E. (r.) It is high, having a knob on its centre that may be seen 60 m . off.

CAMINHA, a tn. and par. Portugal, prov. Minho, dist. Moncão, on a tongue of land, 1. bank, and near the embouchure of the Minho, 30 m. N.W. Braga; lat. $41^{\circ} 52^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $8^{\circ} 45^{\prime} \mathrm{W}$. (R.) It is strongly fortified, but being commanded by a neighbouring hill could not be successfully defended. It contains two churches, three monasteries, two hospitals, and a poorhouse. The harbour is spacious, but is encumbered by a bar, which renders it inaccessible to any but small vessels. The inhabitants depend chicfly on fishing and salt making. Pop. 1272.

CAMISANO, two tns. Austrian Italy:-1, A tn., gov. Venice, prov. Vicenza, cap. dist. of same name, 11 m . N.W. Padua. It has a parish and a subsidiary church, and an hospital. Pop. 2800.-2, A th. and com., gov. Milan, prov. Lodi, dist. of, and 6 m. N.N.E. Crema. Pop. 881.

CAMLIN, par. Irel. Antrim; 6417 ac. Pop. 2157.
CAMMERINGHAM, par.Eng.Lincoln; 4450 ac. P. 139.
CAMMIN, or KAmmin, a tn. Prussia, prov. Iomerania, cap. circle of same name, on the Divenow, 5 nl . from its mouth on the shores of the Baltic, 38 m . N.N.E. Stettin. It is surrounded with walls, with three gates, and has three suburbs, a cathedral, built in 1124, two other churches, four poorhouses, and a spacious market-place. The inhabitants live chiefly by agriculture and fishing. Cammin is of Wendish origin, and was formerly the seat of a bishopric, which was suppressed in 1648. Pop. 3176 .-The cincle, area, 478 geo. sq. m., with exception of the dowus along the shores of the Baltic, is flat, and the soil a sandy loam. Pop. 34,636.

CAMMORTON, par. Eng. Cumberland; 2880 ac . P. 941.
CAMOLIN, a small tn. Ircland, co. of, and $21 \mathrm{~m} . \mathrm{N}$. Wexford, $\mathbf{r}$. bank, Bann; consisting of one long regular strect of stone houses on one side, and mud cabins on the other. Besides the parish church, it has a R. Catholic chapel, and a Methodist meeting-house. Pop. 561.

Camonica, or Valle Camonica, a valley, Austrian Italy prov. Bergamo, formed by two branches of a ramification of the Rhætian Alps, and stretching about 50 m . from N.N.E. to S.S.W. along both branches of the Ollio, and as far as the Lake of Iseo. It lies in one of the chief lines of communication between Italy and the Tyrol, is in general well cultivated, and abounds in iron, gives indication both of copper and lead, and has quarries of finely variegated marble, gypsum, and slate. The inhabitants, now about 50,000 , were anciently called Camuni.

CAMORTA, Car Morta, or Nicavari, one of the Nicobar islands, Gulf of Bengal; lat $8^{\circ} 2^{\prime} \mathrm{N} . ;$ lon. $93^{\circ} 40^{\prime}$ E.; length, N. to S .16 m .; breadth, 2 to 5 m . It is separated by a narrow channel from Noncowry, and along with that island forms Noncowry harbour, which is very capacious, and fit to shelter a large fleet from the winds. Camorta is lofty near the harbour, particularly on the W. side, where the principal village stands, at the foot of a precipice; but towards the $N$. and the centre it is flat, and contains a rich soil, which not only affords good pasturage but spontaneously grows yams, pine apples, plantains, guavas, and sugar-canes. Near the S.W. point is a lagoon, which extends far into the island. In the forests are several sorts of poon trees fit for masts. Camorta, notwithstanding its fertility, is thinly inhabited.

CAMPAGNA, atn. Naples, prov. Principato Citra, 18 m . E.N.E. Salerno, surrounded by high mountains. It is the seat of a bishopric, and contains a superb cathedral, three parish churches, several convents, a college, an hospital, and a mont-de-piété; and has some trade, and a large fair, held August 1. Pop. 8192.

CAMPAGNA-mi-Roma, an extensive dist. Papal States, nearly corresponding with the ancient Latium, and with the modern deleg. Frosinone, and S.E. part of the comarca of Rome. It stretches S.W. along the shores of the Mediterranean, from the banks of the Tiber to Terracina, on the frontiers of Naples, and backwards to offsets of the Apennines; greatest length, about 60 m .; average length, 40 m . It is a low undulating tract, almost nowhere 200 ft . above the level of the sea; of a gloomy and desolate appearance, abounding with swamps, which exhale pestilential malaria, and give the unhappy inhabitants exposed to them a frightful and disgusting appearance, exhibiting all the united symptoms of dropsy, jaundice, and ague. Great part of this district must, in all ages, have been unhealthy ; but there cannot be a doubt that the desolation now extends over parts of the country once well cultivated and densely peopled.

CAMPAGNATICO, a tn. and com. Tuscany, prov. of, and 15 m . N.E. Grosseto, on the summit and side of a hill 840 ft . above the sea, near r. bank, Ombrone; tolerably well built, defended by a castle; has an ancient parish church, municipal buildings, and several oil and wine presses. Pop. 994.

CAMPAGNOLA, a vil. Italy, duchy, Modena, prov. of, and 12 m. N.N.E. Reggio. Pop. 2000.

CAMPAN, a tn. France, dep. Hautes Pyrenées, 16 m. S.S.E. Tarbes, 1. bank, Adour, in the beautiful valley to which it gives its name. The houses, mostly built of the marble found in the vicinity, are remarkably neat and clean. One street stretches along the river, and another along the road to Bigorre. In the place or square is a handsome fountain, with marble basins. Woollen stuffs and paper are manufactured. In the vicinity is a remarkable stalactite grotto, and green marble of a fine quality is obtained. Pop. 3442.

CAMPANA, an isl. S. Pacific Ocean, off the W. coast of Patagonia; S. extremity, in lat. $49^{\circ} 10^{\prime} \mathrm{S} . ;$ lon. $76^{\circ} \mathrm{W}$. It is about 50 m . in length, N. to S., and 10 in breadth.

CAMPANA (La), a tn. Spain, Andalusia, prov. of, and 32 m. N.E. by E. Seville, 1. bank, Madre-Vieja, an affluent of the Guadalquiver. It has two squares, a parish church, two endowed schools, a townhall, insecure and unhealthy prison, public storehouse, cemetery, and several fountains. The inhabitants are engaged in weaving, brick-making, expressing oil, cultivating grain, and rearing cattle. Pop. 5380.

CAMPANARIO, a tn. Spain, Estremadura, prov. of, and 62 m . E. by S. Badajos, 8 m . N.N.W. Castuera; with narrow, ill-built, and neglected streets; a parish church, chapel of ease, two endowed schools, a town-house, and prison, and a deserted hospital. Manufactures:-linen fabrics, esparto ropes, wine, and oil. Trade:-grain, wool, and esparto. Pop. 5406.

CAMPANET, a tn. Spain, isl. Majorea, 22 m . N.E. Palma, on a rising ground; with well-built houses, a square, a parish church, townhouse, prison, two schools, and a cemetery. Pop. 2188.

CAMPANHA, a city, Brazil, prov. Minas Geraes, 230 m . N.W. Rio-de-Janeiro ; lat. $21^{\circ} 45^{\prime} \mathrm{S}$. ; lon. $46^{\circ} 50^{\prime} \mathrm{W}$. The principal streets run N. and S., and others cross them at right angles; houses chiefly of earth, and generally surrounded by gardens, contrasting curiously with the arid bare hills by
which the town is encircled, cut up by the excavations whence the gold has been taken. It has a townhouse and prison, five churches, an hospital, a Latin and a primary school, and a theatre. In the vicinity are several thermal springs. Pop., engaged in agriculture and mining, 3000 .

CAMPBELL ISLAND, a mountainous isl., S. Pacific, 30 m . in circuinference, 120 m. S. Auckland Islands; lat. (S. harbour) $52^{\circ} 34^{\prime} 24^{\prime \prime} \mathrm{S}$. ; lon. $169^{\circ} 12^{\prime} 42^{\prime \prime} \mathrm{E}$. (r.) ; discovered, in 1810, by Frederick IIazelburgh, in the brig Per. severance. It has several good harbours, of which two on the E. side are the best. Perseverance harbour, the more S. of these two, runs about 4 m . inland; the upper part landlocked, with good anchorage for 100 slips to lie in safety; and wood and water in abundance; rise and fall of tides, at neap, 43 inches. This island, like the Auckland group, is of volcanic formation; and subject to sudden and violent squalls, the prostrate condition of the trees sufficiently indicating the prevailing power of the westerly storms. 'Its iron-bound coast, and rocky mountains, whose summits appear to the eye bare of vegetation, give it the aspect of a very desolate and unproductive rock; and it is not until the quiet harbours are opened that any green hue, save a few grassy spots, is seen. In these narrow bays, a belt of brushwood, composed of trees in a very stunted state, form a verdant line close to the beach.'-(Hooker.) There are neither quadrupeds nor landbirds; but the albatross is plentiful, and seals are found on its coasts.-(Ross's Antarctic Experlition.)

CAMPBELTON.-1, A seaport tn., royal bor., and par. Scotland, co. Argyle. The town stands on a loch or bay of same name; lat. $55^{\circ} 23^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon $5^{\circ} 35^{\prime} 30^{\prime \prime} \mathrm{W}$. ; extend ing along the curved shore in the form of a crescent, the principal part, however, being on the S.W. side. It has two Established, one U. Presbyterian, and two Free churches, with Independent, Episcopal, and R. Catholic chapels, several week-day and Sabbath-schools, and a ragged school, established 1850. It has also an athenæum, and a handsome new jail. In the centre of the main street is an ancient stone cross or obelisk of the 12th century, supposed to have been brought from Iona. The town is well supplied with water, by gravitation, brought a distance of $1 \frac{1}{2} \mathrm{~m}$. ; and well lighted with gas. The mill-wright busincss is carried on to a considerable extent; and there is a brass and iron foundry. The herringfishery is prosecuted with activity, and so also is the whitefishing; but the distillation of malt-whisky is the staple business of the place, there being 24 distilleries in the town and its immediate vicinity. The spirit is of superior quality, and brings a high price in the market; about $1,000,000$ gallons are sent, annually, to Glasgow alone. There are good quays on either side of the harbour. The number of vessels registered at the port, in 1849 , was 20 ; tonn. 1154. Regular communication, by steam-vessels, is maintained with Glasgow and Ayr. The principal imports are barley, yeast, coals, timber, iron, and general merchandise ; the exports are whisky, malt, black cattle, sheep, and horses, turnips, beans, butter, cheese, and fish, and, formerly, potatoes. It unites with Oban, Inverary, Irvine, and Ayr, in sending a member to the House of Commons. Pop. (1841), including the village of Dalintober, which joins the town, 6790 ; (1851), 6829.-The BAY or LOCH, as it is called, is about 2 m . in length, and about 1 m . in breadth, with a depth of 3 to 15 fathoms water. It is, at once, one of the most beautiful and secure harbours in the W. of Scotland, being land-locked by Davar Island.-The PARISH, extending across all the peninsula, is about 11 m . by 9 . Pop. (1841), 9634 ; (1851), $9330 .-2$, A borough tn. New S. Wales, co. Cumberland, 25 m. S.W. Sydney. Pop. 541.

CAMPDEN-Chipping, a market tn. and par. England, co. Gloucester, 16 m. N.E. Cheltenham. The town lies in a fertile dell, surrounded by richly-wooded hills on all sides but the S.E. ; and consists chiefly of one street, about 1 m . long; houses in general ancient, many of them. in the Elizabethan style. There are a parish church, and meeting-houses for Wesleyans and Baptists; a free grammar-school, founded in 1487; a school for girls, and a national school for boys; and almshouses, endowed by the first Viscount Campden. Tho inhabitants are chiefly agriculturists. Area of par. 4660 ac. Pop. 2087.-(Local Correspondent.)

CAMPEACHY, or Camieche, a seaport tn. Central America, state of Yucatan, cap. dep. of same name; lat. $19^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $90^{\circ} 33^{\prime} \mathrm{W}$. (R.) ; W. coast, peninsula of

Yucatan, on a bay of its own name, and strongly fortified. It is wholly built of hewn calcareons stone; but the streets are harrow, irregular, ill-paved, and dirty. Most of the private honses are only of one story, but the public buildings on the square are of two stories, and are tastefnlly ormamented and painted. It contains six churches, and six convents, the walls of one of which bear the marks of the injury sustained by a siege in 1840. It has also a college, with six professors; and a theatre, one of the most beantiful edifices in the town. The principal suburbs, each of which las its own church, are San Roman to the S., and Guadaloupe and San Francisco to the N. The market is well furnished with fruit, vegetables, and fish; but provisions are much dearer here than in the other parts of the State. The town derives its chief importance from the exportation of logwood, termed Campeachy-wood, and wax. The wood (IIrmatoxylon Campechianura) is ent down in several places, but especially on the banks of the Rio Champoton, S. of the town; and the wax is procured from the wild stingless bees which are found in the country to the E. The other products are salt, rice, and sugar; marble of good quality is found. The only important manufacture is that of cigars. The harbour is capacious, bnt slallow, and vessels drawing more than 6 ft . mnst anchor 3 m . from the shore. Notwithstanding of this disadvantage, vessels measuring 100 feet of keel are bnilt here, and launched by ingenious contrivances. The climate is healthy; and though the heat at noon is extreme, yet the land-breeze in the morning, and the sca-breeze in the evening, render the atmosphere at those periods exceedingly agreeable. During the rainy season, agues prevail. Campeachy stands on a series of subterranean caverns, excavated by the ancient Mayas. In the neighbourhood are numerous interesting ruins. Pop. 18,006.

CAMPEGINL, a tn., duchy, Modena, dist. of, and about 8 m. W. Reggio, near the frontiers of Parma, r. bank, Enza. It is remarkable from the number of fountains which it contains. Pop. about 2000.

CAMI'ERDUIN, or CAMPERDown, sandy hills or downs, II Jlland, prov. N. Holland, between the N. sea and the small village of Camp, off which the British, under Admiral Duncan, gained a lhard-won victory over the Dutch, under De Winter, October 11, 1797.

CAMPI.-1, a dist., Italy. Tnseany, in the Val d'Arno, below Florence, containing several villages of the same name, the inhabitants of which are almost entirely employed in preparing the fine Tuscan straw ; and, in consequence of the demand for their staple, have, in recent times, rapidly increased. Pop. $9782 .-2$, a tn. Naples, prov. Terra di Otranto, 9 m . W.N.W. Lecce; with a handsome collegiate church. Yop. 4101.

CAMPIGLIA-di-MAremma, a tn. and com. Tuscany, prov. of, and 34 m . N.W. Grosseto, 18 m . S. by E. Cecina surrounded ly walls, entered by four gates, and defended by a fortress. It has two churches, a large hospital, and municipal buildings; two annual fairs are held in May and August. Pop. 3057.

CAMPILLO, numerous tns. and vils. Spain, of which the chief are:-1, Campillo de Altobuey, a tn. New Castile, prov. of, and 35 m. S.E. by S. Cuenca; with level, clean, and well-paved streets; a parish church, fonr conventual churches, two schools, a townhall, prison, and storehouse. Manufac-tures:-leather, oil, and wine, shoes, and sieves. An annual fair is held in September. Pop. 3149.-2, Campillo de Arenas, a tn. Andalusia, prov. of, and 16 m . S. by W. Jaen, having a church, townhouse, school, and prison. Pop. 1121. -3, Campillo de Llerena, a tn. Estremadura, prov. Badajos, 24 m. E.N.E. Llerena; possessing a church, townhall, and prison, two schools, a storehouse, and agricultural pop. of 1002.-4, Campillo de la Jara, a vil. New Castile, prov. of, and 58 m. S.W. by W. Toledo. Pop. $1012 .-5$, Campillo de Ranas, a vil. New Castile, prov. of, and 29 m . N. by W. Guadalajara. Pop. 515.-6, Campillo, a vil., prov. of, and 28 m . N. by E. Leon. Pop. 416.-(Madoz.)

CAMPILLOS, a tn. Spain, Andalusia, prov. of, and $35 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. by N. Malaga; in a plain, near the source of the brook Rincon. It has wide and paved streets, three squares, a large Doric parish chureh, a chapel, townhonse, prison, four schools, a poorhonse, extensive storehouse, fine fountain, anl spacions cemetery. Mannfactures :-woollen fabrics, leather, oil, \&c. Trade:-wool, grain, fruits, cattle, and gypsum, the
last extracted from a quarry in the neighbourlhood. Pop. 4410.

CAMPINA-GRANDE, a tn. Brazil, prov. of, and 75 m . W.N.W. Paraiba. The greater number of its houses are of earth, except the new ones, and the townhall. It has a church and two schools; and, along with its district, suffers from a defective supply of water, which has, on various occasions, caused considerable emigrations. Pop. tn. and dist. 5000 .

CAMPINAs, a city, Brazil, prov. of, and 70 m . N. São Paulo, in a fertile sugar district, in which are numerons sugarmills and distilleries-the products from which are exported on mules to Santos. Pop. tn. and dist. 6000.

CAMPINE [Flemish, Kempen or Kempenland], an extensive arid and sandy tract, forming part of the provinces of Antwerp and limburg, together with a narrow portion of Brabant, in Belgium, and continued into Holland. The greatest industry has been employed to reclaim it, but about $300,000 \mathrm{ac}$. still remain waste. Sce Belouvm.

CAMPIO FORMIO, or Camo Formido, a market tn. Anstrian Italy, gov. Venice, prov. Friuli, dist. Udina, 66 m . N.E. Tenice. It has a parish chureh, and numerous mills along the canal of Roja, and is famous for the peace of 1797 , between Austria and France, which bears its name. Pop. 1650.

CAMI'LI, a tn. Naples, prov. Abruzzo Ultra $1 ., 5 \mathrm{~m}$. N. Teramo. It has a cathedral, three churches, an abbey, several convents, an hospital, and a mont de-piété. Pop. 7125.

CAMPO.-1, A vil. Tuscany, S.W. coast, isl. Elba; on a gulf of same name, $7 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Porto Ferrajo. It contains a parish church. Pop. 1700.——The name Campo is given to a considerable district of the S.W. part of the island, commencing at Ancona.-2, A vil. and com. Naples, prov. Calabria Ultra I., dist. of, and 7 m. N.N.W. Reggio. The chief employment is the rearing of silk-worms. Pop. 1942.

CAMPO, numerous tns. and vils. Spain :-1, Campo de Criptana, a tn. New Castile, prov. of, and 22 m . N.E. CiudadReal, in an extensive plain, at the foot of a small ringe or sierra; with well-bnilt houses, clean, wide, and paved streets, a principal and six smaller squares, a spacious Gothic church, Latin and three endowed schools, an hospital, townhonse, police-court, prison, public storehonse, and cemetery. Weaving, dyeing, expressing oil and wine, and husbandry, employ the people. Pop. 5230.-2, Campo, a tn. Estremadura, prov. Caceres, $12 \mathrm{~m} . \mathrm{N}$. Coria; with a church, townhall, three schools, a prison, and cemetery. Manufactures :-linen fabries, cloth, soap, oil, and wine. Pop. 2629.-3, Campo (Sta Maria (del), a tn. New Castile, prov. of, and $38 \mathrm{~m} . \mathrm{S}$. by W. Cuenca ; possessing a clıurch, townhouse, two endowed schools, and a prison. Pop. 1519.-4, Cumpo (Sta Maria del), a tn. Old Castile, prov. of, and 21 m . S.W. Burgos; having a chureh, townhall, Latin and two other schools, hospital, orphan asylum, prison, and cemetcry. Pop. 991.-5, Campo, a vil. Valencia, prov. of, and 30 m . N. by W. Alicante. Pop. 1473.-6, Campo Frio, a vil. Andalusia, prov. of, and 40 m . N.N.E. Ilnelva. Pop. 828.-(Madoz.)

CAMPO-LARGO, a tn. Brazil, prov. Bahia, 1. bank, Rio Grande, abont 90 m . above its junction with the sãoFrancisco; lat. $12^{\circ} 50^{\prime} \mathrm{S}$. . lon. $45^{\circ} 10^{\prime} \mathrm{W} . ;$ with a chureh, townhouse, prison, and primary school. Pop. tn. and dist. chiefly labourers, 3000 .

CAMPO-MAIOR, a tı. Brazil, prov. Piauhi, 152 m . S.S.W. Parnaiba, on the Surubim, near a lake abounding in fish. It has two churches, a school, and resident magistrates. Its district is large, watered by the river Longa, and the streams Surulim and Martahoan. Pop., engaged in agriculture and cattle-rearing, 5000 .

CAMPO-Malor-de-Quixeramobim, a th. Brazil, interior of prov. Ceara, $180 \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{W}$. Forte or Ceara; lat. $6^{\circ} 10^{\prime} \mathrm{S} . ;$ lon. $39^{\circ} 20^{\prime} \mathrm{W} . ;$ r. bank, Quixeramobim-an affluent of the Jaguaribe. Like all others in the interior of this province, it is a poor town; but still, both its trate and population are increasing. It las a beautiful clureh, a townhonse, prison, a primary and a Latin school. Its territory is traversed by rivers and rivulets that dry up annually; the lower grounds are not arable, but the ligher ones are fertile. In the warm and the rainy season, the inhabitants descend to the level country, and feed numerous herds of cattle, which fini a ready market in Pernambuco. Pop. tn. and dist. 8000.

CAMPO-MAYOR, a fortified tn. Portugal, prov. Alemtejo, on the Spanish frontiers, dist. of, and 12 m . N.N.E. Elvas, and $15 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Badajos. The streets are narrow and dirty; it has a chureh, two convents, an hospital, and a workhouse. In 1723 the gunpowder magazine accidentally blew up, destroying a great part of the town and castle, and killing many of the inhabitants. It was taken by the Spaniards in 1801. Pop. 4618.- Several other small places in Portugal have the name of Campo.

CAMPO SAN PIETRO, or Campo Sampierro, a tn. Austrian Italy, gov. Venice, deleg. of, and 12 m . N.N.E. Padua, r. bank, Musone. It has manufactures of linen, and several tannerics. Pop. 2400.

CAMPO SANTO, a tn., duchy, Modena, gov. of, and 15 m . N.N.E. the town of Modena, l. bank, Panaro. It has an annual fair of three days. A fierce battle was fought here, between the Spaniards and Austrians, in 1743. Pop. 2000.

CAMPOS, a tn. Spain, isl. Majorca, 22 m . E.S.E. Palma, 6 m . from the sea. The houses are generally well built; and the town contains a square, parish church, handsome chapel, two schools, a townhouse, and cemetery. Manufactures:linen fabrics, brandy, wine, oil, and refined salt. Trade :fruit, brandy, and salt. There are thermal springs and baths in the environs. Pop. 2796.—Several other places in Spain have the same name.

CAMP'OS-dos-Gortacazes, or São Salvador-dosCampos, a city, Brazil, prov. Kio-de-Janeiro, en a plain, r. bank, Parahiba, 20 m . W. São-João-da-Praia; lat. $21^{\circ} 40^{\prime} \mathrm{S}$.; lon. $41^{\circ} 30^{\prime} \mathrm{W}$. It contains 1500 houses, chiefly of earth, only the principal streets are paved, but all are lighted with lamps. It has a townhall, prison, several churches, a primary and a Latin school; and a school of mathematics, philosophy, rhetoric, and French. The port only admits small vessels; and, during the rains, when the river is swollen, many small coasters arrive. An active trade with Rio-de-Janeiro is carried on in sugar, coffee, brandy, building materials, \&c. The district is extensive; sugar is the chief crop, though rice, millet, beans, and mandioc, are also raised; and a considerable number of cattle and horses reared. Pop. tn., 4000, dist. 40,000.

CAMPOS-NOYOS, a vil. Brazil, prov. Rio-de-Janeiro, dist. of, and 20 m . N. Cabo Frio. A small place, in a ruinous condition.

CAMPOBASSO, a tn. Naples, cap. prov. Sannio, on a hill-slope, 52 m . N.E. Naples. It is fortified, and is the seat of criminal and civil courts; has a collegiate chureh, four parish churches, several convents, two colleges, an hospital, and an almshouse. The cutlery manufactured here is said to be the best in Naples. The town is favourably placed for business, on the road from the capital to the Adriatic. Two fairs are held annually. Pop. 8330.

CAMPOBELLO, a fertile isl. New Brunswick, at the mouth of Passamaquodly Bay; lat. $44^{\circ} 57^{\prime}$ N.; lon. $66^{\circ} 55^{\prime}$ W. (r.); with a light on its N. point 60 ft . high, separated on the S.W. from Lubec by a strait, called the Narrows. This island is about 9 m . long, and from 1 to 3 broad; is for the most part in a state of cultivation, has several fine harbours, particularly that of Harbour de Lute; produces timber, and carries on a considerable trade in fish and gypsum.

CAMPOBELLO, a tn. Sicily, Val di Trapani, dist. Mazzara. Pop. 2985.

CAMPOLIETO, a vil. and com. Naples, prov. Molise or Sannio, dist. of, and 9 m . N.E. Campobasso. It occupies two small hills, and makes a very good wine. Pop. 2410.

CAMPOSANO, a vil. Naples, prov. Terra di Lavoro, dist. of, and 2 m . N. Nola. The chief employment is the rearing of silk-worms. In August there is an annual fair, which lasts three days. Pop. 1495.

CAMPSALL, par. and vil. Eng. York, W. Riding; houses of stone; 9390 ac. Pop. 2149.

CAMPSEY-ASII, par. Eng. Suffolk; 1900 ac. Pop. 374.
CAMPSIE, a vil. and par. Scotland, co. Stirling. The village is 10 m . N. Glasgow, pieturesquely situated at the base of the Campsie fells, hills of moderate elevation. Near the village are the Kirkton glen, and Fin glen, much visited from Glasgow and the surrounding country, for their picturesque beauty.-The parisir, 7 m. by 6 m ., is rich in coal and alum, and has extensive printfields, bleachfields, and ehemical works. Pop. 6402; (1851), 6918.
rol. I.

CAMPTON, par. Eng. Bedford; 1120 ac. Pop. 1390. CAMROSE, par. Wales, Pembroke. Pop. 1210.
CAMSINGMOON, a seaport, China, prov. Kwang-tong or Canton, about half-way between Macao and Bocea Tigris; on a small island, called Keeow, 35 m . N. Hong-kong; lat. $22^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $113^{\circ} 40^{\prime} \mathrm{E}$. It has a tolerable harbour, which used to be much resorted to by opium vessels, and now serves as a convenient depot. Since 1844, a considerable native trading town has sprung up about it. There is a European hotel in the place. Pop. about 5000.

CAMTOOS RIVER, a river, Cape of Good Hope, S.E. coast, dist. Uitenhage; one of the largest rivers in the colony. It is formed by the junction of the Salt and Karreeka rivers, which unite at lat. $33^{\circ} 5^{\prime} \mathrm{S}$; ; lon. $22^{\circ} 35^{\prime} \mathrm{E}$. From this point it flows in a S.S.E. direction, and falls into St. Francis Bay, in lat. $34^{\circ}$ S.; lon. $25^{\circ} 7^{\prime}$ E. ; entire course, about 105 m. ; its largest tributary is the Kouga, which joins it about 30 m . from its embouchure. It is about 220 yards wide a little above its mouth, its waters beautifully clear, and its l. bank is here skirted by a chain of wooded hills. The Camtoos was, at a former period, the E . limit of the colony.

CAMUS, par. Irel. Tyrone; 7506 ac. Pop. 6039.
CANADA, an extensive territory, N. America, belonging to the British, formerly divided into two provinces, called, respectively, Upper and Lower, or Western and Eastern, Canada, separated by the Ottawa; but now politically united, though still differing in laws, customs, and manners.
The entire territory presents an approximation to the form of an equilateral triargle, the base of which may be considered as being represented by the 50 th parallel of N . lat., and the apex by Point Pelee-the termination of a long peninsula which projects into Lake Erie; lat. $41^{\circ} 47^{\prime} \mathrm{N}$. The extreme E. point is generally deemed to be Cape Gaspe in the Gulf of St. Lawrence ; lon. $64^{\circ} 10^{\prime} \mathrm{W}$. (r.) The W. limit is undetermined, but is supposed to extend to about lou. $90^{\circ}$ or $90^{\circ} 30^{\prime} \mathrm{W}$.
The $\mathbf{E}$. side of the triangle to which the general outline of the territory has been assimilated, and which comprises Lower or E. Canada, and the peninsular portion of W. Canada, is formed by the N. shores of Lakes Erie and Ontario, and the river St. Lawrence, to about lon. $70^{\circ} \mathrm{W}$., after which the State of Maine and New Brunswick mark its S.E. limit. The W. side, again, comprising Upper or W. Canada, is formed by the N. shores of Lakes Superior and Huron. The length of the former, from S.W. to N.E., is about 600 m ., breadth about 300 m . ; length of the latter, from S.E. to N.W., about 750 m. ; breadth, between 200 and 300 m ., exclusive of the peninsular portion, which terminates in Lake Erie, and which is 280 m . in length, with an average breadth of between 40 and 50 m . The entire length of the territory, that is, of both Canadas, from E. to W. or from Cape Gaspe to lon. $90^{\circ} 30^{\prime}$ W., is from 1200 to 1300 m ., and its average breadth, from N. to S., between 200 and 300 m . It is but proper to add, that, as the boundaries of Canada are not precisely determined on any side but the S ., various limits will be found assigned to it by various authorities in all other direetions.

Upper Canada, though by no means so level as it has been represented, is characterized by a general evenness of surface -there being few great elevations, with exception of a table ridge of considerable height, which stretches S.E. and N.W., forming a water-shed between Lakes Superior and Huron, to which it runs parallel at a distance of about 70 m ., and the S. portion of Hudson's Bay, called St. James's Bay. A similar water-shed traverses Lower Canada also, as is indicated by the opposite courses of its rivers-a series of which flow S.S.E. towards the St. Lawrence, while another pours into St. James's Bay-both emanating from a common centre. The existence of this water-shed has, however, been doubted; and it has been alleged as not improbable, that the rivers here, as in other parts of N. America, have their origin in lakes which lie in a plain of a nearly level surface, and are situate at nearly the same elevation above the level of the sea.

Upper Canada, though much more fertile than Lower Canada, is inferior to it as regards romantic and picturesque scenery. The physical features of the latter, gencrally, are varied and grand, consisting of boundless forests, magnificent rivers and lakes, extensive prairies, bold, rocky heights, and foaming cataracts, diversified by cultivated fields, pretty villages and settlements, some of them stretching up along
monntains, fertile islands, with neat white cottages, rich pas tures, and well-fed flocks. This beautiful appearance, however, changes to a very different character in winter. After a heavy fall of snow, succeeded by rain and a partial thaw, a strong frost coats the trees and all their branches with transparent ice, often an inch thick, weighing on them so heavily, that in a tempest whole forests are laid prostrate, with tremendous noise and uproar. Nothing, however, can be imagined more brilliant and beautiful than the effect of sunshine in a calm day, on the frozen boughs, where every particle of the icy crystals sparkles, and nature seems decked in diamonds.

Mountains, Rivers, and Lakes.-The mountains of Canada are confined entirely to Lower or E. Canada, the clevations in the W. province not attaining that dignity. The principal ranges stretch from S.W. to N.E., and lie nearly parallel to each other. They consist of the Green Mountains, so called from the pine forests that cover their slopes, which, from the latitude of Quebec, follow nearly the course of the St. Lawrence, on the S. side of which they are situated, and terminate on the gulf of the same name, between the Bay of Chaleur and Gaspe Point. On the N. side of the river is a corresponding range, which forms undnlating ridges of about 1000 ft . in elevation, the Mealy Mountains, stretching from about lat. $75^{\circ} \mathrm{W} .$, to Sand wich Bay, computed to be about 1500 ft . high, and always covered with snow, and the Wotchish Mountains, a short range of crescent form, between the Gulf of St. Lawrence and Hudson's Bay. The rocky masses connected with the mountain chains that line the St. Lawrence river, advance in many places close to the stream, forming precipitous cliffs, frequently 200 and 300 ft . high. The rivers of C'anada, as clsewhere romarked, N. of the St. Lawrence, and the lakes, nearly all flow either N. or S., as they originate in the N. or §. slopes of the water-shed, by which both provinces are tiaversed, the one from N.W to S.E., the other from S.W. to N.E. As this elevated ground approaches nearer to the lakes, and to the St. Lawrence, than to Hudson's Bay, it follows that the rivers which flow towards the latter have a much longer course, and, generally, a much greater volume of water, than those that fall into the former.

The principal rivers in Lower Canada are the St. Lawrence, which issucs from the N.E. end of Lake Ontario, and which, after passing lat. $45^{\circ} \mathrm{N}$., is wholly within the province of Lower Canada, forming, previously to its reaching that point, the boundary line between Upper Canada and the State of New York; the Ottawa, which forms the boundary between Lower and Upper Canada, issues from Lake Temiscaming ; lat. $47^{\circ} 18^{\prime} \mathrm{N}$. ; lon. $79^{\circ} 35^{\prime} \mathrm{W}$. ; although its remotest sources are said to be 100 m . further N. It falls into the St. Law rence at Montreal, after a course probably of 350 to 400 m .; and is now navigable for about 90 m . from its embouchure; its scencry, particularly during the latter part of its course, is singularly pieturesque and beautiful, enhanced by magnificent cataracts, and numerous richly-wooded islands. The Seguenay, which issues from Lake St. John ; lat. $48^{\circ} 15^{\prime} \mathrm{N}$., also falls into the St. Lawrence, near Tadousac, after a course of about 100 m . The St. Maurice, or Three Rivers, originates in some small lakes, in lat. $47^{\circ} \mathrm{N}$., and joins the St. Lawrence about 70 m . above Quebce ; its whole course is about 180 m ., of which 110 or 115 m . are navigable by boats, from the mouth upwards; its banks are generally high, in some places from 200 to 1000 ft ., and covered with large groups of majestic trecs, and it has a great variety of falls and cascades, and is adorned with a number of beautiful islands. Other rivers of less note, though still of considerable size, but too numerous to be particularized here, debouch on the N. shores of the St. Lawrence, below the seguenay. The same, or nearly the same, may be said of the S. side of the estuary, where the principal rivers are the Richelieu, Claudiere, and the St. Francis; all tributaries, also, of the St. Lawrence, joining it from the S . The Richelieu flows from the N . extremity of Lake Champlain, in the State of New York, and joins the St. Lawrence at the head of Lake St. Peter. It is navigable for boats for 80 m . The banks of the Chaudiere, like those of most of the rivers in Lower Canada, are high and steep, and thickly clothed with wood, which, in many places, over lang its foaming rapids with the most picturesque effect. The St. Francis flows through a country of great beanty, diversified by hill and dale, forest and meadow, river and lake.

The 1 rincipal rivers of Upper Canada occur in the penin-
sular portion which projects into Lake Erie. These are the Thames and the Ouse; the former originates in the district of London, by the union of several streams, about lat. $43^{\circ} \mathrm{N}$. : lon. $81^{\circ} 15^{\prime} \mathrm{W}$., and falls into Lake St. Clair, after a S. and S.W. course of about 80 m . It is navigable for large vessels to Chatham, 18 m . up, and for boats nearly to its source. The Ouse rises in the Home district, about lat. $44^{\circ} \mathrm{N}$. ; lon. $80^{\circ} 10^{\circ}$ W., and, after a S. and S.E. course of about 100 m ., falls into the N.E. corner of Lake Erie. Numberless streams of smaller size, and of which the Trent is the principal, drain the Canadian sides of Lakes Ontario and Erie. The chief rivers that flow towards Hudson's Bay are the Albany, Moose, Harricanna, and Rupert.

The lakes of Canada are extremely numerous-the entire surface being thickly dotted with sheets of water, of various dimensions, interwoven with a net-work of connecting streams. The larger are Lakes Superior, IIuron, Erie, and Ontario, none of which, however. belong exclusively to Canada, being equally within the territory of the United States; their N. and S. shores forming, respectively, the N. and S. boundarics of these countries.-(For more full details regarding the lakes and rivers of Canada, see the several Articles under their respective names.)

Geoloyy, Mineraloyy, de.- The N: parts of Canada, so far as known, appear to be of crystalline formation ; while along the banks of the St. Lawrence, and the N. shores of the lakes, the primary stratifications prevail, including limestone in a great variety of states. The banks of the St. Lawrence are, in several places, composed of schist, in a decaying or mouldering condition ; and in every quarter granite is found, more or less inclined, but never parallel to the horizon. In the Gaspe district-the most E. part of Canada-numerous and beautiful specimens of quartz have been obtained, iucluding a great variety of carnelian, agate, opal, and jasper; indications of coal have also been traced. The limestone formation extends over $30,000 \mathrm{sq} . \mathrm{m}$. ; the dip is moderate, and the strata of limestone generally undisturbed. In the extensive region of the Ottawa, the limestone is invariably highly crystalline, and sometimes very coarse-grained in its structure; at other times its texture is so fine as to form statuary marble. Fossil organic remains are numerous. Along the shores of the estuary and Gulf of St. Lawrence, horizontal banks of recent shells appear at various heights, from 10 to 100 ft . above high water mark, and inland beeches of sand and shingle, with similar shells, as also elevated limestone rocks, scooped out by the waves, and showing lines of lithodomous perforations-all indicating the successive upheaving of the land, since the sea was inhabited by the existing species of testacea. Earthquakes have been frequent in Canada, and some of them of considerable violence. The most tremendous on record commenced on the evening of February 5, 1663, and is said to have continued at intervals for six months, extending from Quebec to the river Seguenay, a distance of about 120 m . Other accounts say that it extended more than 600 m . in length, and about 300 m . in breadth-agitating a surface of 180,000 sq. m. Earthquakes of a less violent character, but of force sufficient at times to split walls and throw down chimneys, are very frequent on the shore of the estuary of the St. Law rence. One of these occurred in December 1791, in St. Paul's Bay, about 55 m . N.E. Quebec, and the inhabitants say that about every 25 years, a violent earthquake returns, which lasts 40 days.

Iron of the best quality has been found in great abundance in Canada ; silver in small quaritities, and lead, tin, and copper, occur in several places. The latter seems to abound most on Lake Superior, where one mine alone (Cliffe mine), yielded, in 1848, 1000 tons. Marble, of many beautiful varieties, lithographic stone, and gypsum, are also found in the W. province.

Climate.-lf latitude alone determined the temperature of the atmosphere, the climate of the Canadas would resemble that of Central and S. Europe; but, through the operation of the numerous disturbing influences by which temperature is affected, it is nearly the same with the climates of Norway, Sweden, St. Petersburg, and the S. parts of Iceland-the isothermal line diverging far to the $\mathbf{N}$. of the parallels of latitude that connect it with the old Continent. Both the heat of summer and the cold of winter are much greater than in the corresponding latitudes of Europe-the thermometer ranging between $102^{\circ}$ above, and $36^{\circ}$ below, the zero of Fah.; but, in
the districts adjoining the great lakes on its S . border, the climate is much milder, and more equable, than that of places more remote-a natural consequence of the presence of great expanses of water. The prevailing winds in the Canadas are the N.E., N.W., and S.W.-the last being the most frequent. The azure of the Canadian skies is remarkable for its purity and transparency, while fogs are almost unknown. In Lower Canada the winter commences about the latter end of November, and lasts until the end of April, when agricultural operations are resumed; during this period the frost is generally intense, with N. winds, and a clear atmosphere. In Upper Canada the winter is considerably shorter, and the sledge, or sleighing season, which, in Lower Canada, generally continues for five months together, scarcely lasts two in the upper province. The average depth of snow that falls in the course of the winter is about 30 inches, but is frequently accumulated to far greater depths during snow storms and drifts. Generally speaking, the climate of Upper or W. Cauada is much milder than that of Lower or E. Canada-owing ehicfly to its being nearer the great lakes. 1Iere, spring is at least a month or six weeks earlier than in Quebec and Montreal ; and the extremes and sudden variations of temperature are much less intense. Indeed, winters in some localities in Upper Canada sometimes pass away with scarcely any snow at all, and with a very moderate degree of cold-circumstances whieh never occur in the lower province. The sudden and great fluctuations of temperature to which the climate of the Canadas is subject, form one of its most renarkable characteristics, a change of $30^{\circ}$ in 24 hours, or less, being frequent; while it is rare that the weather continues the same for more than three or four days at a time. Notwithstanding this, no climate in the world is more salubrious, or more conducive to longevity - contagious disorders or fatal epidemics being almost unknown; while, from the greater dryness of the climate, persons suffer far less from couglis and colds than they do in England. From the same cause, the surface of the country, in the latter part of the summer and autumn, has not that beautiful verdant appearance which is so attractive in a moist climate, like that of England; but this want is amply compensated by the magnifieence and splendour of the various tints of the forest, at the close of the summer season. The climate, up to $50^{\circ} \mathrm{N}$. lat., is singularly favourable to the growth of most of the cereals, particularly wheat, oats, maize, and barley; although, in the lower province, the field labours of the farmer are interrupted for five months in the year, but in the upper for a considerably shorter period.

Vegetable Productions, Agriculture, dic.-In Lower Canada, as in all cold countries, vegetation is necessarily rapid, the foliage of the forest being often unfolded in great luxuriance in the course of a fortnight. In Upper Canada, where the suddenness of the transition from winter to summer is not so great, the budding and blowing are rather more gradual than in the Lower province. The greater portion of both provinces is covered by forests-consisting chicfly of white and red pine, the former of which frequently attains the height of 100 ft . to the first branch, and occasionally 200 ft . Immerise quantities of this timber are annually sent to England. The other kinds of timber are ash, of varions species, black and white birch, beech, elm, hickory, sugar-maple, birds' eye or curled-maple, butternut tree, black walnut, wild cherry tree (Laurus cerasus), bass-wood or lime tree; on rich moist ground, the white sycamore and button-wood tree; in the marshes, alder, spotted alder, willow, and varieties of thorn; and in the swamps, red and white cedar, and tamaraek. There are, besides, spruce fir, Scotch fir, lareh, black oak, and several other varieties. Of shruhs, there are many kinds, amongst which is the shumach. Flowers of great beauty and variety abound-the woods in summer being crowded with them; they comprise many kinds now cultivated in English gardens, such as the scarlet lobelia, blue lupin, purple gentian, columbine, scarlet and other honeysuckles, and a host of others. Amongst the wild fruits are the wild cherry, wild grapes, blaek and red currants, gooseberries, raspberries, cranberries, large quantities of which are exported; plums, strawberries, nuts, \&c.; many of these, however, are inferior to the cultivated fruits of the same species. Nearly all the vegetables and fruits of England thrive in the Canadas, particularly in the W. province, under proper cultivation. In the S. parts, peaches and apples are produced in such abuud-
ance, that the former have been sold for a quarter of a dcllar per bushel, and the latter for three half-pence. Pumpkins and squashes grow in the open ficlds to an enormous size, often attaining the weight of 50 or 80 lbs .

The extent of occupied land in Western or Upper Canada, in 1848, was $8,613,591 \mathrm{ac}$., of which $1,780,152 \mathrm{ac}$. were under tillage, and 766,768 in pasture, the remainder uncultivable, or in a state of nature, with exception of a portion appropriated to gardens, town plots, \&c. Of the ground under the plough, there were 593,695 ac. in wheat, 38,542 rye, 29,324 barley, 285,571 oats, 82,516 pease, 51,997 maize, 26,653 buckwheat, and 56,796 potatoes; making altogether $1,165,094 \mathrm{ac}$. under crop. The live stock amounted, in the same year, to 565,845 horned cattle, 151,389 horscs, 833,807 sheep, 484,211 hogs. Dairy produce:-3,380,406 lbs. butter, and 668,357 lbs. cheese.

The returns for Eastern or Lower Canada are neither so recent nor so satisfactory as those for the Western Province. The returns for 1844 (there having been none for 1848), gives $2,802,317 \mathrm{ac}$. as under cultivation; but the whole produce in grain amour.ted only to $11,445,727$ bushels, and in potatoes to $9,918,869$ bushels. Of the grain; 942,835 bushels only were wheat, while in 1831 this crop amounted to $3,404,756$ bushels, showing a decrease of $2,461,921$ bushels. Live stoek in the same year:-horned cattle, 469,851 ; horses, 146,726 ; sheep, 602,821 ; swine, 197,935 . Wheat is the chief article cultivated by the Canadian farmer, but in the Lower Province there is not sufficient of even that crop raised as maintain the population, the defieieney being made up by importation from Upper Canada. Farming, until within a comparatively recent period, was in a very backward state in the Canadas. Bouchette, who wrote nearly 20 years since (1832), says-' The improvements that have been introduced in the European systems of agriculture are unknown in Canada, or, at least, have never been adopted; and the Canadian farmer is still seen guiding the old-fashioned plough used by his forefathers. The scientific rotation of crops is unknown to lim, and he steadily pursues the system handed down to him by his ancestors.' All this, however, is now muel changed, especially in Upper Canada. Within the last few years, agriculture has begun to keep pace with the improvements introduced into Eugland and Scotland. The emigration into the country of scientific agriculturists, with the establisliment of agricultural societies, have been mainly instrumental in effecting this great clange; stock of a different and better description has been imported, and mach land that was previously considered by the old proprietors worn out, las been improved and brought back, by means of judicious treatment, to its old capabilities. In order to give an impetus to the progress of improvement in agriculture in Upper Canada, Govermment holds out every encouragement, including pecuniary aid, to the formation of agricultural societies in that province. The most usual period for sowing in spring is April, reaping commencing about the middle of August; but the time of both operations is liable to fluctuations, being dependent on the mildness or rigour of the weather. Though in general sowing in Canada is later than in the N. parts of Britain; the harvest is earlier gathered, in consequence of the greater warmoth of the climate in summer. The other agricultural productions of Canada, besides those already mentioned, are hemp, flax, tobaeco, and maple sugar. Of the first three, very small quantities only are produced; but of the last, the quantity is very considerable, amounting on an average to upwards of $4,000,000 \mathrm{lbs}$ annually. The quantity of wool produced in 1848 amounted to $2,339,756$ lbs., the average fleece being $2 \frac{9}{8}$ lbs.

Animals.-Bears, wolves, beavers, foxes, racoons, otters, martens, minks, and musk-rats are to be met with in Canada, but the first three are exceedingly rare, and all the others are rapidly diminishing in numbers. The lynx and wild cat were also formerly tenants of the territory, but have now gone further N. Deer were at one period plentiful, but are also becoming scarce. Squirrels of different colours and species are extremely abundant, and are eagerly sought after, being considered excellent eating. Wild swans, wild turkeys, woodcocks, and snipes are occasionally met with; pigeons are plentiful in spring and autumn; ducks of many varieties, and wild geese also abound. Among the smaller feathered tribe are many beautiful birds-jays, woodpeckers, and blacktirds
of numerous and beautiful varietics; two species of humming birds, one of a golden green, the other having a crimson throat. Some of these, however, are summer birds only, migrating in autumn. Besides these, there are eagles, kites, hawks, horned owls, herons, bitterns, and crows. Snakes are numerous, but the venomous kinds are not so plentiful as in the U. States. Amongst the latter are the rattlesuake, adder, and the copper head. Wild bees are numerous. In the lakes and rivers the principal fish are the sturgeon, which is frequently taken of from 80 to 100 Ibs. weight; the lake or salmon trout, which attains a weight of from 10 to 50 lbs ; the white fish, the most delicious fish in the lakes, pike, pickerel, bass, markelonge or masquenonge, also a fine fish, sometimes
weighing 50 lbo ; cat-fish, suckers, perch, eels, speckled trout, and lake herrings, a flabby and indifferent fish.

Commerce, Trade, and Manufactures. - Timber forms the principal article of export, extending to many millions of fcet annually. Large quantities of barrelled beef and pork, flour, barley, oatmeal, wheat, butter, pease, pot and pearl ashes, furs, wool, staves, and lumber, are also exported. In this last trade, the 'lumber' trade, as it is called, a vast amount of capital is invested, in erecting saw-mills, log-ponds, \&c. The total exports from Canada in the year 1853 , amounted to $£ 5,950,325$, 168 .; the imports to $£ 7,995,359$. The principal imports by sea consist of wines, spirits, molasses, coffee, tea, tobacco, salt, refined and muscorado sugars.

Exporta of the Pboduce of Canada, in $18 j 3$, showing to wifrae Exported.

To the item of manufactures exported, we are warranted to add the ships, \&c., built during the year, on foreign (chiefly British) account. Their total tonnage was 49,615 , and if we assume their average price to have been $£ 12,10 s$. per ton, then an additional value accrues of $£ 620,187,10 s$. Further, to the value of exports from inland ports, add 20 per cent. $=£ 447,263,5 s .$, and we have the grand total, $£ 5,950,325$, 15 s. In 1852 it was $£ 3,826,091$; in 1851, $£ 3,452,651$. In 1853 the total number of vessels registered as belonging to Canada was - sailing vessels, 694; aggregate tonnage, 81,809 : steamers, 91 ; aggregate tonnage, 9,353 .

Cider and ale are brewed, and whisky distilled in great quantities in Upper Canada. Maple sugar, flannels, and linens, are also manufactured to a great extent by the peasantry. The first amounted, in 1847, to $6,463,845$ lbs., of which by far the greater portion was produced in Upper Canada. The inland trade of Canada will, doubtless, be much improved when the various lines of railway now in contemplation, and for some of which charters have been already obtained, shall have been completed. In the meantime it is conducted chiefly by its numerous canals, some of which are stupendous aelievements. The principal are the Rideau and Welland Canals. The first is 135 m . long, extending from Lake Ontario, at Kingston, to the Ottawa at Chaudière, and is large enough to receive vessels of 120 tons burthen. The Welland Canal, which has been recently enlarged, unites Lakes Erie and Ontario. It is 45 ft . wide at the bottom, and 10 ft . deep). The other more noticeable canals are the Cornwall Canal, 12 m . long, avoids some of the most violent rapids of the St . Lawrence; the Beauharnois Canal, about the same length, unites the Lakes St. Francis and St. Louis ; the Lachine Canal, extends from Lake St. Louis to Montreal ; the Chambly Canal, uniting Lake Champlain with the Richelieu River, and a number of others of lesser note, many of them short cuts to avoid the rapids of rivers. Both the internal and external trade of the Canadas are likely to be greatly benefited by the railway from Halifax, Nova Scotia, to Quebee, whiel has at last (1851) been sanctioned by Government, and a guarantee given of a fixed interest on the outlay required for its construction. This important line will give the Canadas the advantage, all winter, of an open seaport, of which they have hitherto been destitute, from the freezing of the St. Lawrence.

People, Manners, Customs, \&c. - The Upper lrovince, or

Canada W., is settled principally by emigrants, and the descendants of emigrants, from Great Dritain and Ireland. There are also large numbers of U. States loyalists, or persons who fought on the side of Great Britain during the American war, a mixture of all nations, and their descendants; and in particular locelitics there are large settlements of Pennsylvanian Dutch; and there are also many Americans scattered over the country. The Irish have rather a majority in the province, and next to them the English. In Lower or E. Canada, the majority of the inhabitants (habitans) are of French origin, mostly descendants of settlers from Normandy, established in the colony previously to 1759 , and to whom they still bear in many particulars a close resemblance. They are civil, polite, and hospitable, but illiterate, litigious, want ing in energy, and obstinately attached to old habits and usages, to the exclusion of all improvement. They are all in comfortable circumstances, being mostly proprietors of land, and living on the produce of their own properties. Their houses are sometimes built of stone, but generally of wood, and only one story high. The walls outside are white-washed, which imparts to them, particularly in summer, when almost everything else is green, a lively and cleanly appearance. Each contains a large kitchen, one good sitting-room, and as many sleeping apartments as may be thought necessary. Some of the houses have verandalis, and a small orchard and garden are often attached. The sitting-room or parlour, and bed-rooms, are lined with smoothly planed boards, and painted blue, red, green, yellow, \&c. Till recently the chief clothing of the population was wholly of their own manufacture, but the cheapness of Engiish goods has induced a partial use of the latter. Canadian cloth is, however, still almost universally used; and the gray capote of the habitant is the characteristic costume of the country. The capote is a large coat reaching to the knee, bound round the waist by a sash of the gayest colours. This, with a straw-hat in summer, a bonnet rougc or a fur cap in winter, and a pair of mocassins, complete the dress of the French Canadian. The women are clothed nearly after the fashion of French females in a similar condition of life. The habitans of the poorer classcs are gencrally tall and thin, with small, dark, lively eyes, aquiline noses, and thin lips. Those who are mucl exposed to the air are as dark as Indians. The women, when young, are handsome bruncttea. The enjoyments of the people, as in all R. Catholic countrics, are connected with their religious ceremonies. On Sundays, accordingly, after service, the day is devoted to festivity. The easy and comfortable condition of the population, generally, enables the halitans to spend more time in pleasure and recreation than perlapss any other people. It is owing to this that the greater jart of them cease from serious labour during the winter, and devote that season to visiting and merry-making. Unfortunately, decp-rooted feelings of estrangement, amounting to positive aversion, subsist between

CANADIAN RIVER
the French and English Canadians, arising, chiefly, from national prejudices, which have already led, and will, probably, again lead to the most unhappy consequences. The Indians, who were the aboriginal inhabitants of the Canadas, are now nearly exterminated. A few reduced tribes, however, still occupy portions of the country. In Upper Canada they are met with on Lakes Superior and Huron, and thence towards the N. boundaries. In Lower Canada some of them occupy a rescrved space on Lake St. Francis (an expansion of the St Lawrence, 10 m . above Montreal) and others reside in villages throughout the country; all leading a life of misery and starvation. They are described as contesting for the carcases of the most worthless animals, after the latter have been stripped of their skins by the Canadian honter. It has been further stated, that the number of the unfortunate Indians who die of hunger and want would be yet more considerable, if the humanity of the servants of the Company of the Posts did not frequently supply their wants. Amongst the tribes in this unlaappy condition are the Ifurons, the most intelligent, tlie bravest, the noblest, and once the most powerful of the North American Indians.

Government and Revenue.-The province of Canada, as mentioned in the beginning of this article, formerly consisted of two provinces, which were united under one legislature, in 1840, with the view, chiefly, of extinguishing the dominancy of the French party, whose greater political influence had hitherto been extremely detrimental to the general interests of the colony; an effect, however, which does not seem to have been accomplished by the measure. The form of the existing Government is popular, being in imitation of that of the United Kingdom. The executive power is wielded by the Governor-general, who is appointed by the Crown, and is assisted in his administration of affairs by an executive council, the members of which are appointed by the Governor, and the tenure of their offices depends upon their receiving the support of the Provincial Parliament of United Canada. The members, of the executive council, must hold seats in either branch of the Provincial Parliament. The Provincial House is called the legislative council, the members of which are summoned by the Queen, and hold their seats for life, unless forfeited by crime. The Legislative House consists of 84 members elected by the peoplc. In counties, a $40 s$ s sterling frcehold confers a vote, and in citics and towns the payment of a yearly rent of $£ 10$ sterling. The forms of procedure in the Provincial Parliament are identical with those of the Imperial Parliament. Bills passed by both houses of the Provincial Parliament, must receive the Queen's assent before they acquire the force of law, and this the Governor is authorized to grant in her Majesty's name, or to reserve the bills for the signification of the Queen's pleasure thereon. The gross revenue of United Canada, for 1849 , was $£ 513,431$. Gross expenditure for the same year, $£ 450,913$. The entire public debt of Canada amounts to $£ 5,208,640$, of which $£ 4,506,267$ has been expended on public works.

Religion, Education, dec.-The prevailing religion in Eastern or Lower Canada is that of the Romish Church. In Western or Upper Canada, the English Church predominates. In the following Table will be found a recent, and, it is believed, correct, classification and enumeration of the various religious bodics in the United provinces:-

It has been ascertained that about half of those who thus arrived in Canada, passed on to various parts of the U. States; most if not all of that moicty havirig merely taken the roundabout way to the latter for the sake of getting a cheap passage in overcrowded ships.

Price of Land.-All crown-lands, with few exceptions, are sold at $8 s$. currency, per acre. The price of cultivated land differs in the different districts, varying from about $£ 1,13 s$. to $£ 10,8 s$. per acre, iucluding buildings. Smith, in his Canadiun Gazetteer, an apparently meritorious work, published at Toronto, recommends that emigrants to Canada should not purchase land till they have been sufficiently long in the country to know its value, otherwise they are certain to pay at least one-third more for it than after they have been in the country for some time. No person, he adds, should purchase more land than he is able to pay for immediately, and, abovo all things, he should avoid purchasing land on long credits.

Ilistory.-Canada has its name from the Iroquois word lianata, signifying a collection of huts, and which the early European discoverers mistook for the name of the country. It is said to have been first discovered by Sebastian Cabot, in 1497 ; but the first settlement made by Europeans was in 1541, at St. Croix's harbour, by Jacques Cartier, a French navigator, who sailed up the St. Lawrence, to which he gave its present name. In 1608, a permanent settlement was made by the French upon the present site of Quebec, Canada being then called New France. From this period, till 1759, the French continued to occupy the country, though much harrassed by various tribes of Indians, particularly the Mohawks; but in the year just named, an English army, under General Wolfe, captured Quebec ; and by September 8, 1760, all other places within the government of Canada were surrendered to the British, and the French power in that quarter of the world entirely annihilated. In 1774, by an Act of the British Parliament, a legislative council of 23 members was appointed to assist the Governor. Seventeen years after, Canada was divided into two separate provinces, to be called the provinces of Upper and Lower Canada; and the first parliament of the former met at Niagara on September 17, 1792. In 1820, dissensions, chiefly of a political and financial character, began to arise between the Honse of Assembly and the Executive Government in Lower Canada, which went on from year to year increasing in intensity and malignity, deepened by the national prejudices of the French and English colonists, the former considering theinselves as having interests different from those of the latter, till a crisis arrived. The spirit of anarchy and discontent extended to Upper Canada, where it began to manifest itself in 1834, the causes being substantially the same with those of Lower Canada. At length matters were brought to an issue in the latter country by the arrest, in 1837, of two popular leaders, who were rescued. Wariants were issued for the arrest of others; the peasantry in the districts of Chambly and of Grand Brulé rose in arms, and were defeated by the military. Similar scenes were enacted at the same time in Upper Canada, where considerable exasperation prevailed against the Government. The insurrection here, however, was also suppressed, but not before martial law had been proclaimed. The result of these proceedings was the re-uniting of the provinces, which took place in 1840, under the name of the United Provinces of Canada, and the changing their respective designations from Upper and Lower Canada, to Canada East and Canada West. The present governor 1855), is the Earl of Elgin, who was appointed in 1846. Pop. of Upper Canada in 1852 , by census, 952,004 ; Lower Canada (1848), about 770,000.-(Bouchette, Lyell's Geology; Scobie's Canadian Almanac; Smith's Gazetteer of Canada West ; Parl. Papers.)

CANADA CREEK, a river, U. States, New York, the largest branch of the Molawk river, 60 m . long. It has several picturesque rapids and cascades.

CANADIAN RIVER, a river, U. States, the principal affluent of the Arkansas, and formed by the union of the N. and S. Canadian Forks. The N. Canadian Fork rises in

Texas, N. of Santa Fe, flows S.E., enters the Iudian territory, where, in lat. $35^{\circ} 22^{\prime} \mathrm{N}$. ; lon. $99^{\circ} 37^{\prime}$ W., it receives the S. Canadian Fork on its r. bank. It contiṇues to flow S.E. to lat. $34^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $97^{\circ} 13^{\prime} \mathrm{W}$., when it bends N.E., and ultimately falls into the Arkansas, in lat. $35^{\circ} 27^{\prime} \mathrm{N} . ;$ lon. $95^{\circ}$ W., after a course of about 1000 m . It is navigable for about 120 m ., and its waters are muddy. The S. Canadian Fork rises also in Texas. It is formed of numerous considerable streams, which, rising in sierra Obscura, unite their waters in lat. $34^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $102^{\circ} 5^{\prime} \mathrm{W}$.; whence the river flows N.E., and unites with the N. Fork, as already stated; whole course, to head of longest affluent, upwards of 300 m .

CANADIAN, or North Channel, one of the two passages (N. and S.), into which the estuary of the St. Lawrence is divided by the Isle of Anticosti; it is about 30 m . in breadth, and contains numerous islands on the N. or Canadian side, the principal of which are the Mingan Islands, laving passages between, and places of good anchorage.

CANALE, a tn . Sardinian States, prov. of, and 7 m . N.N.W. Alba. Some mineral springs are found in the neigh bourhood, which afford a neutral salt, much employed by the druggists of Piedmont. Pop. 3500.

CANALN, a tn . Spain, prov. of, and 36 m . S. by W. Valencia, on an elevated plain, at the confluence of the rivers Cañolas and Santos. It has wide, straight streets, well-built houses, several squares, a parish eliurch, townhouse, two schools, a prison, and cemetery. Manufactures:-glass and delft, from materials found in the neighbourhood, linen fabries, paper, and copper vessels, and ropes, bridle-reins, \&c., from the fibre of the Ainerican aloe. Trade:-manufactured goods, wine, oil, and corn. Pop. 2150.

CANAMINA, a tn. Dahomey, about $12 \mathrm{~m} . \mathrm{S}$. Abomey. It is scattered over a great ares, and contains a house set apart by the King for the accommodation of white men. The surrounding country is level, and cultivated. Pop. 10,000.

CANANDAIGUA, a vil. and lake, U. States, New York. The former is beautifully situate at the N. end of the lake, 230 m . N.N. W. New York; it is neatly built, is surrounded by a rich agricultural country, and contains a population of 2790.-The LAKE is about 15 m . long, and abounds with fish; its waters are remarkably clear, and its banks highly cultivated.

CANANEA, a maritime tn. Brazil, prov. São-Paulo, agreeably situate on an island, bay of same name; lat. $25^{\circ} \mathrm{S}$. ; lon. $48^{\circ} 5^{\prime} \mathrm{W}$. It has a church, custom-house, and several boat-building yards. Its port admits small vessels, of which numbers come for the excellent rice grown in the district-. much of which is exported to Santos. Coffee and vanilla are also grown. Pop. 2000.-The bay, formerly called Tarapande, is formed between a mountainous jeninsula S., and two islands N.; and measures about 12 m. N. to S., by 10 m . E. to W . Its entrance, about 2 m . wide, is obstructed by sandbanks, through which there is a channel for small vessels.

CANANORE (CANURA), a seaport tn. IIindoostan, prov. Malabar, presid. Madras, 44 m . N. W. Calicut; lat. $11^{\circ} 51^{\prime} 12^{\prime \prime}$ N.; lon. $75^{\circ} 20^{\prime} 45^{\prime \prime} \mathrm{E}$. (r.) It trades with Arabia, Bengal, Sumatra, and Surat, whence it imports horses, picee goods, almonds, sugar, silk, opium, camphor, and benzoin; and to which it exports pepper, eardamoms, sandal-wood, shark fins, and coir-cordage. It is the capital of the district of Cherical, an elevated and uneven tract, extending tor about 2 m . inland from the fort. The territory is now subordinate to the British. Cananore is the chief military station of the British in Malabar. Abreast of Cananore Point, on which a fort is built, vessels anchor in 5 fathoms water.

CANAKA, a maritime prov. Hindoostan, presid. Madras, comprehending the countries of Tulava, Ilaiga, and some parts of Malabar and the Hindoo Kankana; between Iat. $12^{\circ}$ and $15^{\circ}$ N., and lon. $74^{\circ}$ and $76^{\circ}$ E.; bounded, N. by Bejapoor and Goa, E. by Mysore and the Balaghaut ceded dis-
tricts, S. by prov. Malabar, and W. by the Indian Ocean ; length, along the coast, N. to S., 180 m. ; mean breadth, 40 m . ; area, $7380 \mathrm{sq} . \mathrm{m}$. It is divided into two districts, the one N ., the other S . of lat. $13^{\circ} 40^{\prime} \mathrm{N}$. The surface is generally rocky and uneven, the W. ghauts, or branches of them, traversing it throughout its whole extent. The soil on the high ground is red and gravelly, and near the sea sandy. The valleys are fertile, but the labour and expense of cultivating the land are great, owing to the irregularity of its surface, which renders it necessary to level the ficlds previously to ploughing them. Even after the land has been levelled and brought under cultivation, if it be neglected for a year or two, it is broken np by numerous deep gullies, formed by the torrents which fall during the monsoon. The chief production is rice, for the cultivation of which the climate, with its heavy rains, is peculiarly favourable, and the lands along the rivers, or arms of the sea, are well adapted. The finer sort of land yields two, and sometimes threc, annual crops of this grain; the inferior, one crop of rice, and another of some coarser grain. Manure is searce, and the incessant wet, and want of good pasture, has greatly detcriorated and stunted the breed of cattle. Cocoa-nuts, betel, and pepper are cultivated, but not extensively. The greater part of the lands are private property, and are leased by tenants who pay as rent from one-fourth to one-half of the gross produce. The proprietor seldom raises the rent, or removes the tenant. Some sugar is manufactured from the palms; and salt is made on the coast. The chief exports are rice, betel-nut, black pepper, ginger, sandal-wood, turmeric, cocoa-nuts, oil, and raw silk; imports, cloth, cotton, thread, blankets, tobacco, and black cattle. The ehicf towns are, in the N. division, Batticollah; and in the S. division, Mangalore.

Canara is inhabited by many different tribes; the Jains are more numerous here than in any of the adjacent districts, and some of their ancient temples are still pretty entire. The interior is inhabited by Nairs, Bunts, and Soodras, who are the chief proprictors of the land; the pcople on the sea-coast are principally Mahometans; and abont a sixth part of the entire population are Bralımins. There are upwards of 50,000 R. Catholies in the province, mostly descendants of the Portuguese, Dutch, Danish, and other colonists. This province, which had been previously ruled by Hindoos, was, in 1763, subdued by IIyder Ali, Rajah of Mysore. On the death of his son, Tippoo, in 1799, it passed into the hands of the British, where it has since remained in the enjoyment of uninterrupted peace. Pop., 1831, 707,571.

CANARIES (Islands of), [ane. Fortunate Insulce], a prov. Spain, comprising a group of seven large, and six smaller islands in the Atlantic, off the N.W. coast of Africa,

between lat. $27^{\circ} 49^{\prime}$ and $29^{\circ} 46^{\prime} \mathrm{N}$. ; lon. $13^{\circ} 20^{\prime}$ and $18^{\circ} 13^{\prime}$ W. The large islands are Gran Canaria or Grand Canary, Fuerteventura or Fuertaventura, Gomera, Lanzarote, Palma,

Tenerife, and Hierro, or Ferro, containing, collectively, an area of 3400 sq. m. The smaller are Roque del Este, Roque del Oeste, Alegranza, Graciosa, Montanaclara, and Lobos. These islands are volcanic, and from their position from E. to W., their contiguity to each other, and proximity to the African continent, form probably a continuation of the great mountain system of N. Africa. Alegranza is the most N., Lanzarote and Roque del Este the most E., and Hierro the most S.W. of the group. All are ragged and mountainous, frequently presenting precipitous cliffs to the sea, though in other parts having fertile valleys and verdant slopes, and all of them cut up by deep ravines, though the height of the interior of the islands, and the steepness of the declivity to the coasts, prevent the formation of rivers. The principal mountains are the Peak of Tenerife, 12,182 ft. above the sea level; El Cumbre, in Gran Canaria, 5842 ft.; Handia, in Fuerteventura, 2800 ft ; and Montana Blanca, in Lanzarote, 2000 ft . Besides the well-known volcano of Tenerife, there are several others, one of which broke out in Lanzarote in 1824, and still continues active. The climate is hot, but generally healthy, being attempered by N. and W. breezes, and by the clevation of the ground. The S. and S.E. winds produce various maladies, and often bring destructive visitations of locnsts. The vegetation of the Canaries is exceedingly varied, owing to their position near the tropics, and their great elevation. Near the sea, palms and other tropical plants flourish; higher up, cereals of various kinds, the vine, \&c., are cultivated; above these the laurel grows; and ligher still, pine trees, and white broom (Cytisus fragrans), occupy the still more lofty slopes. There is a great scarcity of water in some scasons of the year, from the absence of rivers, properly so called, the numerous water courses which cut up the islands in all directions being sometimes swelled to torrents, and at others dry. The agricultural produce of these islands, in 1842, consisted of grain, 150,000 qrs. ; wine, 50,000 pipes; brandy, 2992 pipes; barilla, 13,500 tons; potatoes, 500,000 barrels; besides these articles, exquisite fruits of all kinds, including oranges, lemons, dates, guavas, \&c., and various vegetables, are grown; honey, silk, cotton, archil, and cochineal are produced, and the sugar-cane flourishes wild, but is not cultivated. All kinds of domestic animals abound, though sheep and goats only are indigenous. The camel has also been introduced, but does not thrive in the climate. The canary bird is still plentiful, though differing in colour and appearance from those now bred in England. There is no scarcity of game, and these islands are liappily free from ravenous beasts and noxious reptilcs. The Canaries have few manufactures; silk, cotton, linen, and woollen fabrics are woven, though not extensively; and the inhabitants make felt and straw-hats, the latter in much request amongst the English sailors. The exports arewine, brandy, silk, barilla, cotton, honey, archil, cochineal, \&c.; and the imports-hardware, glass, earthenware, oil, soap, candles, haberdashery, perfumery, and other manufactured goods from England, France, America, and other states. The chief ports of the Canaries are Santa Cruz, in Tenerife; Talma, in Canaria; Lanzarote and Ortova; but though there is a great depth of water between the islands, yet the group lias no secure harbours, all being open roadsteads and unsafe, except in the fine season. Gran Canaria has safer ground for anchorage than any other, and Las Palmas Bay, at its N. side, affords a secure position from all winds save the E., which is seldom violent. In 1842, 111 vessels, tomn. 14,103, entered these ports. The fisheries on the African coast occupy so many of the inhabitarts, that it is reported Spain might, on einergency, obtain 2000 able seamen from them, without impoverishing the trade.

The Canaries were first discovered by a Spanish vessel, driven thither by stress of weather, about 1330 . The inhabitants now are chiefly of European origin, though some still claim to be of the stock of the aborigines named Guanches, who, from intcrmarriage, have disappeared. They are in general well formed, athletic, and brave. The Guanches believed in one God, and in a future state of rewards and punishments; embalmed their dead, and deposited them in an erect position in mountain caverns, somewhat resembling the catacombs of Egypt. Some of these mummies have been found in a state so desiccated as to weigh very few pounds. The inhabitants are now rigid R. Catholies, and generally as ignorant as bigotted. The three larger islands on the E.
form one bishopric, and the four W. a second, both suffiragan to the Archbishop of Seville. Pop., 1849, 257,719.-(Madoz; Tariff, \&c.)

CANARY (Great) [Spanish, Gran Canaria], a Spanish isl., N. Atlantic, W. coast, Africa, the second largest of the Canaries, near the centre of the group; lat. (N.W. point) $28^{\circ} 9^{\prime} 36^{\prime \prime} \mathrm{N}$. ; lon. $15^{\circ} 43^{\prime} 12^{\prime \prime} \mathrm{W}$. It is nearly round, about 40 m . in diameter; and is an enormons volcanic mass, whose highest peak, El Cumbre, near the centre, is 6630 ft . high, and covered with snow a great part of the year. Its coasts are fringed with breakers, and unapproachable, excepting at the N.E. side, near the peninsula of Isleta, which forms the Bay of Palmas, the finest anchorage in the group. Being well-watered by numerous rivulets, it is the most fertile of all the Canaries, and exports some winc, brandy, salt, silk, archil, and excellent cheese. The chief town is Palmas. Pol. 83,036.

CANASTRA, a mountain range, Brazil, prov. Minas Geraes, stretching S.E. from the S. termination of the scria Mata Gorda, which forms part of the boundary between provs. Goyaz and Minas Geraes. The Saio-Francisco, one of the largest rivers in Brazil, rises in the $\mathbf{N}$. slopes of this range.

CAÑAVARAl-de-Alconetar, a vil. Spain, Estremadura, prov. of, and $23 \mathrm{~m} . \mathrm{N}$. by E. Caceres, S. slope of a continuation of the sierra de Gnadalupe; possessing a chureh, townhall, prison, and school. Pop. 2355.-(Madoz.)

CANA-VERDE, a tn. Brazil, prov. Minas-Geraes, 12 nı. from Tamandua, with a church; inhabitants engaged in agriculture and cattle-rearing. Pop. 3000.

CANCALE, a tn. France, dep. Ille-et-Vilaine, 8 m. E.N.E. St. Malo, on the Bay of Cancale. It is divided into two parts-Cancale, pleasantly situate on an eminence, and La Houle, a suburb close to the shore, where the fishcrmen reside. The former is well built, and has a pretty church.

The BAY of Cancale affords good anchorage ground, in 5 to 6 fathoms water, with a mud bottom. A reef of rocks protects it on the outside. It is celebrated for its oysters, of which some hundred nillions are taken annually, without producing any apparent diminution of their numbers. Most of the oysters consumed in France are obtained here, an:l many are exported. Pop. 2682.

CANCAO, Kang-Kao, or Matian, a seaport tn. Siam, gulf of that name, at the mouth of the Cancao river; lat. $10^{\circ} 15^{\prime} \mathrm{N} . ; \operatorname{lon} .105^{\circ} \mathrm{E}$. It was formerly a Chinese colony, and had a considerable trade, a portion of which it still retains.

CANCELLARA, a tn. and com. Naples, prov. Basilicata, dist. of, and 8 m. N.E. Potenza. It is situate in a fine valley, and has an old handsome clıurch. Pop. 3110.

CANCUN, an isl., Mexican Confederation, state Yucatan, near the mouth of the Bullina. Its S. end, which forms a very narrow channel with the mainland, is in lat. $21^{\circ} \mathrm{N}$.; lon. $86^{\circ} 47^{\prime} \mathrm{W}$. It is a narrow strip of land, composed of sand-hills, is about 8 m . long, by $\frac{1}{4}$ broad; and has some sinall wells, which are used by fishermen.

CaNDAHAR. See Kandahar.
CANDEISH, or Khandeish, an anc. prov. and British collectorate, nearly co-extensive, Hindoostan, presid. Bombay, in the Deccan, between lat. $20^{\circ}$ and $22^{\circ} \mathrm{N}$.; lon. $73^{\circ}$ and $77^{\circ}$ E. It is separated N. from Malwa by the Nerbudda; and is bounded, E. by Gundwana and Berar, S. by Berar and Aurungabad, and W. by Goojerat ; length, E. to W., 210 m .; average breadth, about 80 m . The country, which is nearly surrounded by mountains, and watered by the Nerbudda, the Tuptee, or Tapty, and other considerable streams, is extremely fertile; and as its surface is studded in many places with detached hills, having rocky perpendicular sides and level summits, its military strength is naturally very great. The chief products are grain, indigo, and cotton, by which last a tenth of the whole land under cultivation was occupied, extending annually, on an average, the 12 years ending in 1846, to 104,549 beegas, or $53,580 \mathrm{ac}$. It is understood that the production of cotton might be greatly increased. One great obstacle to its extension is the want of good roads. Candeish is one of the original Mahratta provinces, and at one time contained a number of fortresses, strong both by nature and art Early in the 15 th century, it was governed by independent sovereigns claiming descent from the Khalif Omar, and resident at Asseerghur, their capital ; but towards the close of that century it was thoroughly subducd and annexed to the Mogul empire.

## CANFU

Its decline may be dated from 1802, when it was ravaged by Jeswunt Rao Holcar; next year it was depopulated by famine, and afterwards more slowly, but more effectually, ruined by the rapacity of the Peshwa's servants ; as also by the predatory incursions of the Bheels, Pindarries, and various insurgent bodies of Arabs, who had established themselves in the strongholds. In 1818, Candeish was ceded to the British; after which the Arabs were expelled, and the Bheels and other predatory hordes put down. Nearly a half of the villages were at this time abandoned to the tigers, with which the province swarmed; and impenetrable jungle occupied the land once covered with luxuriant harvests. Prosperity was, however, ultimately restored to Candcish, under the effective administration of General Briggs, who, besides other remedial measures, put a price on the head of the tigers, and that soon reduced their numbers. In four years prior to the General's arrival, they had carried off 350 men, and 24,000 head of cattle. The chief towns are Boorhanpoor, Asseerghur, Hindia, Nundoorbar, and Gaulna. Pop. 480,000.

CANDELA, a tn. Naples, prov. Capitanata, 12 m. S.E. Bovino. It has fonr churches, and an hospital. The environs produce good fruit, and wine of fair quality. Pop. 3850.

CANDELARIA.-1, A rocky islet and reefs, S. Paeific, Solomon group ; lat. $6^{\circ} 16^{\prime} \mathrm{S}$. ; lon. $159^{\circ} 20^{\prime}$ E., discovered by Montana, in 1567.-2, A bay, Central America, N.E. coast isthmus of Panama, W. Choco Bay, at the mouth of the Atrato ; lat. $8^{\circ} 10^{\prime} \mathrm{N} . ;$ lon. $77^{\circ} \mathrm{W}$.

CANDELARIO, a tn. Spain, Leon, prov. of, and 40 m . S. Salamanca, on a slope of the sierra de Bejar. The houses are, in general, well built, the streets steep and narrow, though well paved, the principal square is spacious, and contains the townhouse and municipal offices; there are, besides, two smaller squares, both mean and insignificant; a chapel, two schools, a prison, and cemetery; and, in the most elevated part of the town, the parish church, a large and elegant Ionic structure. Manufactures:-linen fabrics, paper, buttons for the army, wine, and cil; trade:-cattle and agricultural prodnce. Pop. 2089.

CANDELEDA, a tn. Spain, Old Castile, prov. of, and $42 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. by S. Avila, at the point of junction with New Castile and Estremadura, at the foot of the sierra de Gredos. It has badly-paved streets, three squares, in the principal of which is the townhall. It likewise has a parish church, prison, hospital, two schools, a storehouse, cemetery, and an old castle of the Counts de Miranda, which has been partly demolished, and the materials used in other buildings. The inhabitants are chiefly employed in weaving, making hats, and bricks, expressing oil, and in husbandry. Pop. 4730. -(Madoz.)

CANDIA, an isl. See Crete.
CANDIA, a city, cap. isl. Crete or Candia, N. shore of the island, about 90 m . from its $W$., and about 70 m . from its E. extremity ; lat. (Minaret), $35^{\circ} 21^{\prime} \mathrm{N}$. ; lon. $25^{\circ} 8^{\prime} 15^{\prime \prime}$ E. (r.) The streets are wide, regular, and clean, and ornamented with trees; the houses, in general, well built, mostly of one story in height. It is defended by high walls of Vene tian construction, with deep ditches and outworks, all kept in good order ; and contains a number of mosques, a Greek cathedral, and several churches; with a R. Catholic monastery and its chapel. It is the residence of a Pasha, and of a Greek archbishop. The harbonr is now so choked up with mud, that vessels drawing more than 8 ft . water cannot enter. The chief manufacture is soap, in the preparation of which much of the oil produced in the island is employed. There are also manufactures of silk and cotton, and several brandy distilleries. In 1846, the exports, consisting of honey, cheese, oil, silk, soap, wax, wool, frnits, \&c., amounted in value to $£ 46,261$; and the imports of the same year amounted to $£ 70,804$. Candia was founded by the Arabs, by whom it was called Khandah, signifying an entrenchment. Pop. 12,000 ; of which 9,000 are Mahometans.

CANDIA-di-Lomellina, a tn., Sardinian States, prov. Lomellina, 10 m . S.W. Mortara, near l. bank, Sesia. Pop. 1400.

CANDLESBY, par. Eng. Lincoln; 850 ac. Pop. 247.
CANDOVER, three pars. Eng. Hants:-1, Candover (Brown), 230 ac. Pop. 313.-2, Candover (Chilton), 2190 ac. Pop. 103.-3, Candover (Preston), 3430 ac. Pop. 481.

CANDY, a city, Ceylon. See Kanny.

CANDYAN provinces. See Kandyan.
CANE, or KEN, a river, Hindoostan, Bundeicund, formed by two head streams, which rise on the S . limit of that territory ; and, flowing N., unite lat. $24^{\circ} 38^{\prime}$ N., from which point it holds on its N. course, until it falls into the Jumna, lat. $25^{\circ} 45^{\prime}$ N., after a course of about 100 m . It is too rocky to be rendered navigable, but contains fine fish and beautiful peebles.

CANE ISLANDS, or KALib Rocks, two rocky isls. Mediterranean, off N. coast Tunis, N.W. Africa; lat. $37^{\circ} 37^{\prime}$ N. ; lon. $10^{\circ} 30^{\circ}$ E., $5 \frac{1}{2} \mathrm{~m}$. from Cape Zibib; they are dangerous, and have several rocks under water about them, but there is a good channel between them and the shore, having from 10 to 23 fathoms water.

CANEA, or Khania [anc. Cydonia], a scaport, and the principal commercial tn. isl. Crete or Candia, cap. prov. of same name, N. shore of isl., E. side Gulf of Khania; lat. (Castle), $35^{\circ} 28^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $24^{\circ} \mathrm{E}$. (r.) The town is surrounded by strong walls and deep ditches, but both are neglected; streets spacious and well paved; houses high, and old looking. It has several mosques and Greek churches, and a Capuchin monastery. The harbour, which had become so choked up as to be nearly useless, has been recently much improved, and now admits vessels of 300 tons. At the extremity of the mole by which the harbour is formed, there is a lighthouse, and opposite to it a small fort for the protection of the port. It is the principal mart for the commerce of the island, and carries on a considerable trade with France, Trieste, Venice, \&c. Its chief exports are wax, soap, oil, silks, fruits, wool, and provisions, which amounted, in 1846, to $£ 189,500$; the imports for the same year being $£ 181,950$. It is the residence of the provincial governor, the seat of the provincial council, and of a Greek bishopric ; it is also the residence of several European consuls. Canea is believed to stand on the site of the ancient Cydonia, of which, however, no vestige now remains. The conntry around is remarkable for its beauty-being covered with olives, cornfields, gardens, and vineyards, watered by rivulets overhung with roses and myrtles. Pop. 8000 ; of which about 5000 are Mahometans.

CANEGHEM, a vil. and com. Belgium, prov. W. Flanders, 15 m . N.E. Courtray. A considerable linen manufacture, and a trade in all kinds of grain, butter, poultry, and cattle, is carried on. Pop. 2013.

CANEL, a tn., W. Africa, Senegambia, kingdom Futa Toro, l. bank, Guilulu; lat. $15^{\circ} 30^{\prime}$ N. ; lon. $13^{\circ} 18^{\prime} \mathrm{W}$.

CANELAS, a tn. Mexican Confederation, state of, and 110 m . N.W. Durango, S.W. slope of the sicrra Madre. Although the climate is delightful, the inhabitants, who are employed in the mines, are very subject to goitre.

CANELLI, a tn., Sardinian States, prov, of, and 14 m . S.E. Asti, near 1. bank, Belbo. It contains two churches and a convent. Limestone quarries are worked in the neighbourhood. Pop. 3500 .

CANETE, three tns. Spain:-1, Cañete-la-real, a tn. Andalusia, prov. Malaga, 18 m . N. by E. Ronda, N. side of the sierra Sabora; with houses tolerably well built, two squares, a Doric parish ehnreh, town and courthouses, a prison, two well-attended schools, an hospital, storehouse, cemetcry, and several fine fountains. Inhabitants mostly employed in agriculture, and as muleteers. Pop. 3574.-2, Cañete-de-las torres, a tn. Andalusia, prov. of, and 25 m . E. Cordova; having a church, castle, townhall, prison, and two schools. Pop. 1960.-3, Cañete, a walled tn. New Castile, prov. of, and 30 m. E. Cuenca; with ill-built houses, church, chapel, townhall, prison, hospital, college, school, and storehouse. People engaged in weaving, shoemaking, and husbandry. Pop. 1216.-(Madoz.)

CANEWDON, par. Eng. Essex ; 2800 ac. Pop. 723.
CANFIELD, two pars. Eng. Essex:-1, Canfield (Great), 3070 ac. Pop. 496.-2, Canfield (Little), 1510 ac. Pop. 258.

CANFOO, a th. W. Africa, Soudan, territory Houssa, r. bank of a head stream of the Yeou, 40 m . 太. Kano, and 300 m. S.S.W. Kouka; lat. $11^{\circ} 15^{\prime} \mathrm{N}$. ; lon. $9^{\circ}$ E.

CANFORD-MAGNA, par. Eng. Dorset; 7880 ac . Pop. 968.

CANFU, or Canfoo, called Kaniru by the Chinese, an anc. tn. and seaport China, prov. Che-kiang, at the head of a considerable bay, $32 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Chapoo. It was originally
the port of Hangehat, and is deseribed, in the 9 th century, by two Arabian travellers, as the port of Clina, where all shipping centred. It is now deserted, in consequence of the stream which runs past it having become ehoked with sand. The trade which it formerly possessed is now engrossed by Canton and Chapoo.

CANGOZIMA, or KANGOZima, a tri. and seaport, Japan, S. extremity of the isl. of Kiusiu; lat. $31^{\circ} 37^{\prime}$ N.; lon. $130^{\circ} 29^{\prime}$ E., situate at the head of the Bay of Cangozima, which runs about 38 m . inland, with a breadth varying from 6 to 12 m . On a ligh rock, at the mouth of the harbour, there is a square built lighthouse. The harbour is protected by a bulwark and stone rampart, at the extremity of which is a guard-house. It is considered an important station.

CANGUCU, a tn. Brazil, prov. São-Pedro-do-Rio-Grande, 80 m. S. Pardo, on a river of same name; with a church, and, including its distriet, a pop. of about 5000 .

CANIAPUSCAW, or Koksoak, a river, British Ameriea, Labrador, issuing from a lake of same name, running N. by W., and, after receiving two considerable tributaries, falling into Ungava or S. bay, IIudson's Strait, in lat. $59^{\circ} \mathrm{N}$.-TThe LAKE of same name, of very irregular shape, is about 60 m . long, with a breadth varying from 8 m . to 35 m . Its N. end is in lat. $54^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $67^{\circ} \mathrm{W}$.

CANICATT1, a tn. Sicily, prov. Girgenti, 15 m . S.W. Caltanicetta; well built, and most of the inhabitants engaged in agriculture. Pop. 16,455.

CANILES, a tn. Spain, Andalusit, prov. Granada, 4 m. S. Baza. It has badly-paved streets, tolerably well-built houses, three squares, a parish church, chapel of case, townhall, courthonse, prison, sehool, and cemetery. Manufac-tures:- earthenware, bricks, tiles, and saltpetre, oil, and winc. Agriculture is the main employment. Pop. 3947.(Madoz.)

CANILLAS-de- certuno:- A tn. Spain, Andalusia, prov. of, and 22 m . E.N.E. Malaga, pieturesquely situate on the N.E. slope of the sierra Tejeda, 1900 ft . above the valley below. It is irregularly built, and possesses a parish church, townhall, and convent. Pop. 2250.-2, Canillas deAlbuida, a small th. contignous to the above, having a ehureh, two chapels, and a eemetery. Pop. 1108.-Several other small places in Spain have the same name.

C $\Lambda$ NINDE, a river, Brazil, prov. Piauli. It rises in the serra of Dous-Irmãos, in the S.E. of the province, about lat. $8^{\circ} 32^{\prime}$ S. ; lon. $41^{\circ} 33^{\prime}$ W., flows N.W. $120 \mathrm{~m} . ;$ and, at Oeiras, receives the united streams of the Riaehao and Itahim, on its r. bank; 50 m . N.W. Oeiras, it unites with the Piauhi, which joins its l. bank, from which point the joint stream flows $20 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. , and falls into the Parnaiba, after a total course, direct distance, of 200 m . Its banks are generally flat, and present excellent pasture; and near Ociras are some iron mines.

CANINO, atn. Papal States, deleg. of, and 19 m . W.N.W. Viterbo. It has some iron-works and mineral baths; and the beautiful palace of Lueien Bonaparte, prince of Canino.

CANISBAY, par. Seot. Caithness; 50 sq. m. Pop. 2437.
CANISTER ISLANDS, three isls., Bay of Beugal, Tenasserim coast, and called, respectively, the Great, Little, and W. Canister. The first and second are abont 10 m . apart, and the third, $35 \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{W}$. from Little Cannister, in lat. $12^{\circ} 41^{\prime} 15^{\prime \prime} \mathrm{N}$.; lon. $97^{\circ} 46^{\prime} \mathrm{E}$. It is a ligh, steep, small, round island, as is also Little Canister, which is further covered with trees. Great Canister is ligh, irregular, and of considerable size.-(Horsburgli.)

CANJAYAR, a tn. Spain, Andalusia, prov. of, and 24 m. N.W. Almeria, on the E. boundaries of the Alpujarras, hetween the sierras de Gador and Nevada; with lofty houses, narrow and steep streets, and an ancient church, whose lofty tower was destroyed by an earthquake in 1804. Pop. 2200.

CANN, or Shaston-St.-Rumbold, par. Eng. Dorset ; 910 ac. Pop. 523.

CANNA, an isl. Scotland, co. Inverness, one of the IHebrides, in the group forming the par. of Small Isles, 9 m . S. Skye. It is 5 m . long, by 1 m . broad, and is remarkably fertile, producing good crops of barley and potatoes. On its pasture black cattle are reared, of which a great many are annually sent to the S. markets. It has a sheltered, commodious, and much-frequented harbour.

CANNAWAY, par. Irel. Cork; 5225 ac. Pop. 1547.
Vol. I.

CANNE, a vil. Naples, prov. Terra di Bari, near the Ofanto, 8 m. S. W. Barletta; occupying the site of the ancient Canna, celebrated for the famous victory gained by IIannibal over the Romans, 216 r.c. The field of battle is still distinguished by the name il campo di sangue, 'the field of blood.' The ancient Cannæ was destroyed the year before the battle; but afterwards re-built, and made a bishop's see, in the early times of Christianity. It seems to have been abandoned in the Middle Ages for the places on the sea-coast.

CANNES, a seaport tn., France, dep. Var., 7 m. S.E. Grasse, on the Mediterrancan; lat. (S. tower), $43^{\circ} 32^{\prime} 45^{\prime \prime}$ N.; lon. $7^{\circ} 1^{\prime}$ E. (r.) It is picturesquely situate at the bottom of a beautiful bay, on the slope of a hill projecting into the sea; well built, has a Gothic castle and an old ehurch. There being no proper harbour, vessels anchor in a bight opposite the quay. Perfumes are manufactured here, and oil barrels made, and some trade is done in anchovies, sardines, wine, olive oil, oranges, citrons, fruit, grain, and the other productions of the distriet. Napoleon landed here, March 1, 1815, on his return from Elba. Pop. 3642.

CANNETELLO, a vil. and com. Naples, prov. Calabria Ultra I., 8 m . N. Reggio, on the strait of Messina. It was almost destroyed by an earthquake in 1783. Chief employment, fishing. Pop., including two small places, Pezzo and Piale, 2230.

CANNETO.-1, A tn. and com. Austrian Italy, prov. of, and 20 m . W. Mantua, l. bank, Oglio, near its confluence with the Chiesa; a very ancient place, and the scene of several engagements in the Middle Ages. Pop. 2922.-2. A tn . Naples, prov. Terra di Bari, 9 m . S. Bari. Almonds, anise, and cummin, are cultivated in the vieinity. I'op. 2192.

CANNINGS-BISIIOP's, a par. and vil. England, co. Wilts, 3 m . N.E. Devizes. The village consists of one prineipal street, tolerably straight, and kept in good order; though the houses, some of brick, and others of stone, are but indifferently built. The chureh, 600 years old, in the Norman Gothic style, is the only building of any interest, except a national school, founded in 1830 . The inhabitants are mostly employed in agriculture. Arca of par. 10,290 ae. Pop. 3843.

CANNINGTON, a vil. and par. England, Somerset, $3 \frac{1}{2} \mathrm{~m}$. N.W. by W. Bridgewater. The village consists of one principal street, well kept; the houses, partly of stone and partly of brick, are well built. An abundant supply of gool water, from a brook which, running past the end of the village, drives two mills. The inliabitants are chiefly employel in agrienlture. The Bridgewater station of the Great Western Railway is 4 m . from the village. Area of par. 3970 ac . Pop. 1349

CANNOCK, par. Eng. Stafford ; 11,970 ac. Iop. 2852.
CANNOUCHEE, a river, U. States, Georgia, after a S.E. course of 140 mm ., falling into the great Ogeeehee, of which it is the most W . and largest affluent. It is navigable 50 m . to Cedar creek.

CANNS'TAD'T, a tn. Würtemberg, circle, Neckar, cap. bail. of same name, in a beautiful and fertile eountry on the Neckar, 4 m. N.E. Stuttgart. It consists of the inner town, which has a double wall, with three gates, and of three suburbs. Its principal buildings are the theatre, an orthopædicinstitution, and a bridge over the river. It is the entrepot for the traffic on the Neckar-being accessible to barges of 30 tons; and has manufactures of woollens, cottons, tobacco, vinegar, \&c., with some considerable dyeing establishments. In the vicinity are a number of mineral springs, saline and sulphureous; with baths and pleasure grounds-forming a favourite resort of the inhabitants of Stuttgart. Roman remains, consisting of vases, coins, \&c., have been found in the neighbourhood. Close by are the royal seats of Bellevue and Rosenstein. Cannstadt is connected by a railway with Heilbronn and Carlsruhe. In 1796, a battle was fought near the town, between the archduke Charles, of Austria, and General Moreau. Pop. of tn. 4465, almost all Protestants ; of bail. 23,076.

CANOBBIO, a tn., Sardinian States, Piedmont, W. side Lake Maggiore, $17 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Bellinzona. It was onee fortified, and the ruins of its castle still remain. Its very handsome church was built by Bramante, and contains some good pictures and fine freseoes, chiefly by Gaudentio Ferrari. Canobbio has long been famous for its tanneries. Pop. 2000

CANOMA, a river, Brazil, prov. Para, an affluent of the Madeira, which it joins on the r. bank; lat. $3^{\circ} 58^{\prime}$ S., after a N. W. course of upards of 200 m . direct distance ; and, pass.
ing through Lake Canoma, about 35 m . long, by 12 m . broad. This lake has two outlets, the Canoma W., and the Furo or Abacaxis N.E.

CANON. two pars. Eng. Mereford:-1, (Frome), 1040 ac. Pop. 115.-2. (Pion or Pyon), 3730 ac. Pop. 681 .

CANONBIE, par. and vil. Scot. Dumfries. Pop. 3032.
CANONBY-CLOSS, par. Eng. Cumberland; 2400 ac. Pop. 5731.

CANOSA [anc. Canusum], a tn. Naples, prov. Terra-diI Bari, $13 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Barletta, on the site of the ancient citadel of the ancient town. It has two churches, of which the eathedral, built in the 6th century, is highly ornamented, and contains the tomb of Bohemond, prince of Antioch. The ancient city was one of the most considerable in this part of Italy. The ruins of an amphitheatre, aqueduct, columns, and tombs, attest its grandeur and extent. It was the refnge of the wreck of the Roman army, after the battle of Camnæ ; and was successively ravaged by Goths, Saraceus, and Northmen. Pop. 8080.

CaNOUGE, a tn. India. See Kanouge.
CANOURGUE (LA), a tn. and com. France, dep. Lozère, $9 \mathrm{~m} . \mathrm{S} . W$. Marvejols, on the Urıgue, near its confluence with the Lot; from time immemorial the centre of the manufacture of serges and other woollen goods, known by the name of Cadis-de-la-Canourgue. It also produces calicoes, and has some trade in grain and cattle. Pop. 1910.

CANSO CAI'E, a headland, British N. America, forming the N.E. point of Nova Scotia; lat. $45^{\circ} 18^{\prime} \mathrm{N} . ;$ lon. $61^{\circ} \mathrm{W}$.

CANSO (Gut or), a strait, British N. America, dividing Cape Breton from Nova Scotia, and forming a secure and much-frequented passage from the Atlantic into the Gulf of St. Lawrence; it is about 21 m . long, and varying from 1 m . to $1 \frac{1}{2} \mathrm{~m}$. broad ; lat. (N.W. entrance fixed light), $45^{\circ} 40^{\prime} \mathrm{N}$.; lon. $61^{\circ} 28^{\prime} \mathrm{W}$. (r.)

CANTA, a prov. Perı, bounded, N. by Caxatambo, E. by Pasco, S. by IIuarochiri, and W. by Chancay, about 105 m. E. to W., by 72 m . N. to S.; intersected by the Andes. The Carabaya, the Pasamayo, and other streams, take their rise in the province, which, although generally uneven, has some deep canals, on the sides of which, and in other small spots, potatoes, fruits, and vegetables, are raised. Cattle are numerous, and wild goats, and a peculiar species of sheep, likewise abound. Some silver mines, formerly very productive, are now filled with water. The capital town of the same name lies E. the Andes, 75 m . N.N.E. Lima. Its jurisdiction extends over 62 other towns. Pop. of prov. 12,150.

CANTABRIAN MOUNTAINS, Spain, forming a W. continuation of the system of the Pyrenees, with which they are connected by the sierra d'Aralar. Commencing with the sierra on the frontiers of Guipuzcoa and Navarre, they stretch $W$. for about 140 m ., scarcely deviating from the parallel of $43^{\circ}$ N., and terminate near the source of the Ebro, a little W. of Reynosa; lon. $4^{\circ} \mathrm{W}$. In their different parts they take the name of sierra de Salinas, sierra de San Salvador, and sicrra Angaña. They are imperfectly known, but the mountains of Reynosa are rugged and precipitous, and covered with majestic forests ; and from those of Santander, snow never entirely disappears. The culminating point of the sierra d'Aralar is 7032 ft .

CANTAGALLO, a tn. Brazil, prov. of, and 85 m. N.E. Rio de Janeiro, in an exhausted gold district. It has a circular market-place, in which stands the church, between two parallel etreets. The greater part of the inhabitants, however, live out of the town, to which they come on Sundays and feast days to assist in Divine service, and then retire. The town, likewise, has a primary school, a townhouse, with that usual appurtenance-a prison. The gold being nearly wrought out in the neighbourhood, the inhabitants have turned to agriculture. The products of the district are sent on mules to the ports on the Rio Macacu, whence they are exported to Kio de Janeiro. Pop. of tn., 4000; of dist. 12,000.

CANTAL, a dep. France ; bounded, N. by dep. Corrèze and Puy-de-Dôme, E. by deps. Lozère and llaute Loire, S. by Lozère and Aveyron, W. by Lot and Corrèze ; between lat. $44^{\circ} 38^{\prime}$ and $45^{\circ} 28^{\prime} \mathrm{N}$. ; lon. $2^{\circ} 5^{\prime}$ and $3^{\circ} 20^{\prime} \mathrm{E}$. Area, 2245 sq. m., cap. Aurillac. This department, formerly part of Upper Auvergne, is named from its highest mountain, Mons Celtorum of the ancients. It is one of the poorest and
least productive districts of France-the greater part of it being occupied by mountains, attaining an elevation of 5000 and 6000 ft ., and high lands, furnishing only timber, archil, and pasture. The mountains are of volcanic origin; and the quantity of lava emitted has been so great, as apparently to have filled up many of the original valleys, and converted them into table land. It is watered by numerous rivers, the principal of whieh are the Dordogne, Cere, and Lot. Climate rather severe near the mountains. Agriculture, though the chicf stay of the inhabitants, is in a backward statc. The principal crops are rye, buckwleat, potatoes, and chestnutsthe last to a large extent-and some hemp and flax. Of wheat and oats, the produce is insufficient for the consumption. Cattle, sheep, horses, and innles, are reared in large numbers; and on the refuse of the dairies, numerous pigs are fed. The horses are of good quality, and for the improvement of their breed, races have been established by the Government at Aurillac. The fat cattle from this department are much esteemed, and are sent to all parts of the country. Large quantities of cheese are made, and sold principally in the S. of France, under the name of Auvergne cheeses. Bees are numerous. There are quarries of granite, grindstones, slates, and limestone; but the minerals, as a whole, are unimportant. Hot mineral springs are abundant-those of Chaudes-Aigues being the most frequented. The manufactures are trifling; and consist, principally, of parchment, glue, leather, coarse woollens and linens, common lace, some hardware, paper, and glass. Large numbers of the inhabitants, apparently from want of winter employment, lave, from time immemorial, emigrated annually to Spain, or to other parts of France. Aurillac is the great market for young mules, Maurs for chestnuts, and Roquebrou for fat pigs, \&c. Horses, cattle, cheese, leather, honey, wax, wood, and archil, are exported, in exchange for grain, wine, oil, salt, iron, copper, cloth, \&e. (Gantal is divided into four arrondissements, containing 2I cantons, and 265 communes. Pop. (1846), 260,497.

CAN'TALICE, a vil. and com. Naples, prov. Abruzzo Viltra II., 5 m . N. Citta Jucale, on a stcep rock a little W. of Mount Terminello; with four churches and two convents. Pop. 2277.

CANTALUl'O, a th. and com. Naples, prov. Sannio or Molise, dist. Iscrnia, 13 m . W.S.W. Campobasso. Many of the inhabitants perished by an earthquake in 1805. It has two annual fairs, and produces a good deal of wine. The French here defeated the Ncapolitans in 1798. Pop. 2290.

CANTELEU, a tn. France, dep. Scine-Infericure, 4 m . W. Rouen, near r. bank, Seine, on a hill partly covered by the forest of Roumare, and crowned by the fine park of the old château of Canteleu. Indianas and cotton yarn are made here, and there are some dye-works. Excellent cider is produced in the district. Pop. 1113.

CANTERBURY, a city, co. Kent, metropolitan see of all England, and county in itself, having a separate jurisdiction, 55 m . E. by S. London ; beautifully situated in a fertile vale, surrounded by gentle eminences, which snpply numerous streams of excellent water. The principal thoroughfare is wide, the houses well built, and the streets, in general, well paved, and lighted with gas. It extends about $\frac{1}{2} \mathrm{~m}$. E. to W., and rather more N. to S., with four suburbs at the four cardinal points. From all points Canterbury presents a picturesque appearance, its antique features contrasting finely with the sylvan scenery around. The most remarkable oljject in the city is the cathedral, one of the finest ecclesiastical structures in England. The original building, of which no part now remains, was of great antiquity, the distinction having been claimed for it of being the first Christian church in the kingdom. The present edifice, 514 ft . in length, E. to W., and 71 in greatest breadth, bas been built in different ages (the oldest part dating 1184), and presents, in consequence, various styles of architecture, but retains, altogether, an imposing appearance; the great tower, 235 ft . in height, being one of the most beautiful specimens of the pointed style of arehitectnre; one of the towers at the W. end has been re cently built of Caen stone, of which material nearly the whole of the edifice is constructed. The cathedral derives additional interest from having been the scene of the murder of the celebrated Thomas-a-Becket, who was slain at the foot of one of its altars, in 1171; and whose shrine was the object of an annual pilgrimage, celebrated by Chaucer, and admirably
illustrated in modern times by Stothard. St. Augustine's monastery, in by-gone times a rival in grandenr to the cathedral, has been lately converted into a church missionary college. The N. gate is particularly handsome, and is a fine specimen

of the deeorated style of architecture. St. Margaret's church has been lately restored in excellent taste; and the church dedicated to St. Martin, which stands on a hill at some distance from the city, and is believed to be one of the oldest existing Christian churches, lias also been lately restored. There are, besides, numerous chapels and places of worship for various religious scets, including a Jews' synagogue. Other public buildings are-the guildhall, an imposing Ionic structure, the corn-exchange, fish-market, and a theatre. In addition to the royal grammar-school, founded by Henry VIII., there are numerous private schools, a mechanies' institution, museum and library, an hospital, dispensary, and numerous other charitable institutions. Canterbury was formerly noted for its silk manufactures, now supplanted by a superior kind of damask linen, for which it has become celebrated; its other manufactures are-worsted, vellum, and parchment; it is also famous for its brawn. There are several extensive breweries and malting establishments in the town; and the principal articles of trade are wool, corn, and hops, in the cultivation of the last of which the greater portion of the labouring class are employed. Canterbury has returned two members to the IIouse of Commons since the 23d of Edward I.; registered electors $(1850), 1940$. It is governed by a mayor, six aldermen, and 18 councillors. The South-eastern Railway has a station here. Lord Tenterden, the well known ChiefJustice of England, and several otherdistinguished individuals, were natives of Canterbury. Pop. (1841), 15,435; (1851), 18,747.-(Locul Correspondent.)

CANTERBURY.-1, A vil. New S. Wales, co. Cumberland, 5 m . from Sydney, on Cook's River. Here is the establishment of the Australasian Sugar Company. Pop.218.2, A settlement, New Zealand, middle isl. E. coast, Port Cooper district, Bank's Peninsula. This settlement was organized by a committec of Episcopalians, and is calculated to comprise an area of $2,400,000 \mathrm{ac}$., of which 635,000 acres are woodland, hill, and mountain, the remainder being fertile level ground, yielding abundant crops of grain, potatoes, fruits, and vegetables.

CANTIANO, a tn. Papal States, 19 m . S. Urbino, on a small strcam of its own name. It is fortificd and defended by a castle, and is said to be built on the ruins of an episcopal city called Juccolo. Pop. 2500.

CANTILLANA, a th. Spain, Andalusia, prov. of, and 17 m . N.F. by N. Seville, r. bank, Guadalquiver, on an eminence commanding the surrounding plain. It has tolerably
well-made streets, a large square, parish church, chapel of case, townhouse, small prison, seven schools, an hospital, and cemetcry. Earthenware, soap, brandy, oil, and wine, are made, and some trade done in fruit, grain, cattle, \&c. P. 4385.

CANTLEY, two pars. Eng. :-1, Norfolk; 2970 ac. Pop. 210.-2, W. Riding, York; 5160 ac. Pop. 651.

CANTON [Chinese, Kwangchau fou-broad city], a large city, China, the fourth as regards population in the empire, and the second, probably, as regards wealth, prov. Quangtong, of which Canton is a corruption, 1. bank, Chou-Kiang, or Pearl River; lat. $23^{\circ} 7^{\prime} \mathrm{N}$. ; lon. $113^{\circ} 14^{\prime} 30^{\prime \prime}$ E. ; about 45 m . above the month of the Bocca Tigris or the Bogue. It stretches, for about 4 m ., along the low banks of the ChouKiang, which is here about the breadth of the Thames at London Bridge, at the foot of, and partly ascending, a range of hills, called the White Cloud Hills, from which its general appearance is by no means inviting, presenting merely an expanse of reddish roofs, relieved only by a few large trees, some high red poles used as flag-staffs, and two or three pagodas. The approach to it, however, by the river, is striking and impressive. From Whampoa to Canton the banks are enlivened by villages and pagodas, the stream becomes more and more crowded with boats and vessels, and the noise and bustle attendant upon an intricate navigation gradually increases, until the visitor finds limself in the midst of innumerable war-junks and merehant proas, with thousands of fancifully painted and gay streamers floating in the brecze. Everything, in short, indicates an approach to a great trading city, and produces a degree of excitement and interest, from its novelty, of which few other scenes are capable.

The city proper, or that part of Canton which is surroundel by a wall, is built nearly in the form of a square, and is divided by a wall, running from E. to W., into two unequal parts. The northern part, which is much the larger, is called the Old City, the southern is called the New. The portion of Canton enclosed by walls is about 6 m . in circumference; the entire city, including the suburbs, or that part of it without the walls, is about 10 m . The walls themselves are composed partly of stone, and partly of bricks; the former is chicfly coarse sandstone, and forms the foundation, and the lower part of the walls, and the arches of the gates; the latter are small and of a soft texture. The walls are from 25 to 40 ft . high, and from 20 to 25 ft . thick, having an esplanade on the inside, and a line of battlements, with embrasures, at intervals of a few feet, on the top, all around the city. The gates are 16 in number, 12 outer and 4 inner; one of the former is 12 ft . high and 15 wide. They are all shut at night, and strictly guarded both night and day. The streets of Canton are very numerous, being estimated at upwards of 600 , although many of them are mere alleys or lanes. Some of the principal have such names as Golden Street, Golden Flower Street, Dragon Street, Martial Dragon Street, New Green Pea Street, \&c. They are generally short, slightly curved, and varying in width from 6 to 16 ft ., the average breadth, however, not exceeding 8 ft . Some, again, are so narrow, that a man may stand, and with his arms extended, touch the houses on either side, while elbows and angles of almost every name, formed by the blind corners of buildings, oppose the progress of the wanderer, and perplex him with their multiplicity. Nor aro there any public squares or open areas containing fountains and shrubbery as in Europe, to compensate the oppressive density and straitness which everywhere provails. The streets, however, are, upon the whole, very well kept, and are tolcrably clean. The liouses are generally small and low, seldom exceeding one story in height. The dwellings of the poorest class, who live in the extreme parts of the suburbs, along the lanks of the river and its creeks, are mere mul hovels, having but one single apartment, low, dark, and dirty; those along the water are all built upon piles driven into the ground. The houses of the better classes are rather more spacious, and more clearly, and are built of brick; they stand close upon the street, and have usually but a single entrance, which is closed by a bamboo screen suspended from the top of the opening; the windows are small, and rarely supplied with glass, in the place of whicb, paper, mica, and the interior laminæ of oyster-shells are used. In this description of dwellings there are generally three apartments, one of which is used as a common eating-room. The houses of persons of wealth and consequence, again, are large and
commodious, and are surrounded by a wall 12 or 14 ft . high, which fronts the strect, and completely screens the buildings within. The interior is decorated with earved work, varnished and gilded, and liung with scrolls covered with writing, or representations of landscapes, flowers, birds, \&c. In the densest parts of the city, the roofs of the houses are covered with a loose frame work, on which fire-wood is piled, clothes washed and dried, and meals cooked; it also affords a lounging and slecping place in summer, but in case of fire, which is of frequent oceurrence, these lumbered roofs tend to increase the calamity. Chinese wood and mason work is showy and unsubstantial, requiring constant repairs, and, therefore, both gardens and houses, when neglected, soon fall into a ruinous condition; but when new, they present a pretty appearanec. A house of six apartments, and capable of accommodating 10 or 12 persons, rents about $£ 20$ per annum. Houses are let on short leases, and the rent collected quarterly in advance. The shops in Canton are, in many instances, equal to those in some European cities, considering the difference of climate. They are commodious, well stocked with goods, and are associated together very much according to their respective trades. Neat and gaudily painted signs and names give a gay appearance to the narrow streets ; in most cases there are no windows in front, but the whole is thrown open by day and closed at night. At the end of the comnter, which is of granite, there is a niche, containing a tablet inseribed to Plutus or Mammon, where incense is burned every day, to invoke a profitable business. In the busy parts of Canton, every house is a shol'; but thers are two streets, China Street, and New China

nfw China street, canton - krom Vaillant, Voyage autour du Monde
numerous in the suburbs; they contain an immense number of made dishes, and are decorated with enormous fat pigs, varnished over, and pendent from different parts of the shop, together with varnished ducks and geese. The yearly rent of the best shops is from $£ 30$ to $£ 40$.

Prblic buildings, consisting of pavilions, halls, and religious edifices, are numerous, but, as specimens of architecture, unworthy of special notice, although some of them are not altogether destitute of elegance. There are, also, a vast number of temples-dens of infamy and vice, in which the priests and nuus are said to amount to 3000 . The pagodas elsewhere alluded to, and of which there are but two, are conspicuous objects; one, ealled the Kwang tah, or Plain Pagoda, is about 10 centuries old; it shoots up in an angular tajer ing tower, to the height of 160 ft . the other is an octagonal pagoda of nine stories, 170 ft . high, and 13 centuries old. There are several prisons in the city, one of which is capable of holding 1000 prisoners. There is also a foundling lospital, the children in which, when grown $n p$, are sold, and not un frequently for the worst conceivable purposes; but the charit able institutions are few in number, and nuiserably kept. The foreign factories, or hongs, as they are called by the Chinese, in the W. suburbs, are the most slowy in point of arehitectural display of any buildings in Canton. Their river frontage is between 700 and 800 ft . in length. They are built of brick stuccoed, with granite foundations; some of them are three stories high, but most of them only two. The rents paid for these factories vary from $£ 240$ to $£ 600$ per amum for each establishment. The space occupied by the factories is crossed by a narrow alley, called IIog Lane, ummatched in Europe for filth and the depravity of its inhabitants, who decoy sailors, drug them, and then rob and ill-use them. The atrocities of this pandemonium have been a causo of disagreement between the British and Chinese governments.

The trades and mannfactures at Canton are all, more or less, connected with the forcign commerce. Many of the silk fabries exported are woven at Fuhshan or Fatshan, a large town about 10 m . W. from the city ; fire-crackers, paper, matsails, cotton cloth, and other articles, are also made there for exportation. The number of persons engaged in weaving cloth in Canton is abont 50,000 , ineluding the embroiderers; about 7000 barbers, and 4200 shoemakers. The barbers are a favoured class, there being strict regulations for their protection. Those who work in stone, brass, and iron, are numerous, and each trade or calling is united into guilds for mutnal protection and sujport. The printing and book trade, also, is very considerable.

Canton is one of the five ports of China, at whieh, according to the treaty with the Chinese, of August 29, 1842, British sub-

Street, which are especially the resort of foreigners, and where the productions of almost every part of the globe are to be found. This part of the city being much frequented by seamen, every artifice is used by the Chinese retailers to attract their attention; each of them having an English name for himself-printed on the outside of his shop, besides a number of advertisements composed for them by the sailors in their own peculiar idiom. Amongst numerous attractive announcements of this kind, the following occurs in Chima Street. It is written in letters of gold on a lacquered board, which hangs in front of the shop- 'The Sailor's Coffee Shop, Chan Lung, No. 10, New China Street, where all kinds of silks and teas are sold, and goods of every description for seamen. Sailors ! you are invited to try this sloop, where you will find honest dealing, and where you can have ready-made coffee and tea, but no sanshoo.'* Lating shops are very

[^5]jects are permitted to trade. By far the largest article of export is tea. The other chief exports consist of silver, silks, and chinaware. The imports consist of woollen goods, eotton, cotton yarn, long eloths, and various other articles of British manufacture. A contraband trade in opium is still, it is believed, carried on in the Canton river.

[^6]Canton has, besides, a flourishing marine trade to Teëntsin and Shanghac. All its manufactures, its abundance of sugar, its accumulated stores of cotton, indigo, cassia, aniseed, and a variety of smaller articles, fill hundreds of junks bound for the N.; and its annual exports are not below $8,000,000$ dollars ( $£ 1,716,666$ ). In return for these articles, the junks bring back considerable sums of bullion, drugs from Shantung and Leouting ; felt, fruits, such as dates, pears, and grapes; and mutton. This is one of the most profitable branches of commerce which the city possesses. The anchorage ground for foreign shipping is at Whampoa, about 10 m . below the city, beyond which no large vessel can proceed : it is in lat. $23^{\circ} 6^{\prime} 30^{\prime \prime}$ N., and is formed on the S. side by two high islands, called by Europeans, Danes and French Islands. The harbour is safe, with a moderate tide, and from 5 to 6 fathoms water, with soft mud bottom; but there is scarecly room for two large ships to moor abreast, which occasions the lower part of the shipping to be moored opposite the entrance of Junk liver, when there are many arrivals.

Canton has also an extensive inland trade. It obtains from the province of which it is the capital, Quangtong, silks, rice, fish, salt, fruits, vegctables, and various kinds of fancy wood, silver, iron, pearls, cassia, and betel-nut. From Fookein, black teas, camphor, sugar, indigo, tobacco, paper, lacquered ware, grass cloth, minerals, woollen and cotton clotls of various kinds. From Chekeang, silks, paper, fans, wines, dates, golden-flowered hams, and a most expensive tea, called lung-tsing-cha. From Ganhwuy and Kangsoo, green teas, and silks, which obtain excellent prices. From Chihle, dates, ginseng, raisins, skins, wincs, venison, drugs and tobacco; returned in cloths, clocks, watches, and other articles of foreign import. From Shanse, skins, wines, ardent spirits, and musk. From Shense, brass, iron, precious stones, and drugs; returning cotton and woollen cloths, books, and wines; the trade with this province is very extensive. From Kansuh, gold, quicksilver, musk, and tobacco. From Szechnen, gold, iron, tin, musk, and a great quantity of drugs. Yunnan supplies the shops of Canton with iron, brass, peacock's feathers, and receives cotton and woollen cloths, books, and tobacco. Similar commoditics to those above enumerated, are sent from various other provinces in great quantitics, and similar returns to those named made from Canton. A considerable portion of this merchandise, as well as visitors, are conveyed into the city by canals, of which there are several.
The scenes which the strects of Canton present, are to a stranger exceedingly amusing and interesting. There are no wheel-carriages in use; but their absence is amply compensated by the nimble sedan-bearers, onc class of which are called by the Chinese, 'horses without tails.' These are the bearers of men of wealth, who generally appear abroad in sedan-chairs, taking up nearly the whole breadth of the narrow street, to the great annoyance of the foot-passengers, whom they constantly jostle. 'Recovered from such a shock, a coolee or porter, bearing a burden, knocks him against the wall, with a sort of grunt, while he is shuffled in an opposite direction by a second. Peculiarly curious to English eyes are the number and variety of live stock which are exposed for sale in these narrow streets-puppy dogs, yelping in bamboo cages, kittens mewing, rats squeaking, fowls chucking, ducks quacking, gecse cackling, and pigs grunting. Fish swimming, and earth-worms, slugs, \&c., variously disposed, are exhibited in tubs and earthen pans. A barber close by twangs his iron tweezers to call his customers near him; another operates upon a patient customer, seated on a tripod stand-plaiting his tail, cleaning his ears, shaving his liead and face, extracting all long and superfluous hair from his eyelashes, eyebrows, and nose, and finishing off by a good thumping of his back, and cracking lis joints. Hard by is an itinerant vender of cooked food, with an enormous reed umbrella, dispensing rice, fat pork, and stews, swimming in oil and soy, which he serves out in small bowls and basins to
 goat. Beside this merchant is seated a brother itinerant, tho vender of sweatmeats. A little further on stands a bookseller, exposing his library, the contents of two boxes, which he hawks about. In his vicinity is a fortune-teller, in the act of unfolding the future to an anxious dupe; and a doctor, decorated with a string of human teeth around his neek, extending below his waist, whils his box of drugs hangs before him. Then an aged woman may be seen, with feet three inches long, seated under an umbrella, mending old clothes, while a passer-by wanting a button sewed on, repairs to her, and remunerates her with a 'cash.' Not far distant a leprous beggar exhibits his disgusting sores, and rattles two pieces of bamboo to attract attention. Suppose the air filled with the noises, cries, and vociferations of these various venders, and of the constantly-changing throng of human beings, and some slight conception may be formed of Canton on approaching to Hog Lane.'

But the river presents scenes perhaps still more curions and intcresting to the stranger than the streets. The prodigious number of boats, anounting at one time to 84,000 , with which the surface is crowded, is the first thing that
strikes the eyc. A large number of thesc-as many, it is said, as 40,000 , containing a population of 200,000 -are fixed residences, and most of them moored stem and stern in rows.

FAMILY-BOAT. From a Drawing by Dr. Bland, RN.
The inhabitants are called tankia or boat people, and form a class in some respects beneath the other portions of the com munity, and have many customs peculiar to themselves.

Millions are born, and live and die in these floating dwellings, without ever having put foot on dry land; while their ancestors before them, for many generations, were all amphibious like theinselves. The dwelling or family-boats are of varions sizes, the better sort being from 60 to 80 ft . long, and about 15 ft . wide. A superstructure of considerable height, and covered with an arched roof, oceupies nearly the whole of the interior of the boat. This structure is divided within into several apartments, appropriated to different domestic purposes, all of which are kept much more clean than those in the honses of corresponding classes on shore. This kind of boat is furnished with stern-sculls, that move upon a pivot, and easily propel the boat among a erowd. The smaller boats of this description are not above 25 ft . long, and contain only one room, covered with movable mats. But by far the landsomest of the boats on the Canton river are the hwa ting or flower-boats. The form of these is very graceful, and their

raised cabins and awnings fancifully carved and painted. As they are let to parties of pleasure for excursions on the river, considerable expense is bestowed upon beautifying and furnishing them.

The people of Canton have some personal peculiarities; amongst the most striking of which is a great variety of complexion, the gencral flatness of face, and uniformity of features, and especially the strange formation of the eye, with the lid in many cases so small as to appear unadapted to its natural functions. With exception of the occiput, the heads of the men are shaved; while in that region, if its luxuriance will admit, it is permitted to grow until it reaches the heels. The girls wear the long plait, according to the fashion of the men, but do not shave the other parts of the head. After marriage, the hair is braided and decked with a profusion of flowers and jewels, answering to the rank or means of the possessor. The ordinary style of dress differs but little in both sexes. It consists of loose pantaloons, and an overgarment or robe, with long dangling sleeves, and which varies in length from the knee to the ground. Their girdles frequently answer the purpose of purses. The stocking has no reference to the shape or size of the limb, and the shoe has a thick chumsy sole turning up in front, and destitute of elasticity to aid the step. Beggars, most of whom in Cantun are blind, are a numerous and privileged class, and a source of great annoyance to passengers. The people of Canton have acquired an infamous celebrity for profligacy and corruption, and are usually considered abont the worst specimen of the nation that can be presented; and this the more intelligent amongst themselves readily allow, although claiming at the same time for the higher classes more enterprise, more enlarged views, and more general information, than is to be found amongst similar classes in most of the other large cities of China. A retiring Viceroy thus wound up a detail of his experiences in the government of Canton:-' Deceit and falsehood prevail everywhere in this city-in all ranks, and in all places. There is no truth in man, nor honesty in woman! I have endeavoured in vain to correct these evils-it has been labour lost. I am sick at heart, and wish to depart from such seenes of vice and habitual falschood.' A chief criminal judge of the city corroborates the testimony of the Viceroy. In an official proclamation by him, prohibiting the putting away of wives for slight canses, he says, 'For vile practices of this, and every kind, there is no place so bad as Canton.' Canton has long been the favourite retreat of all the most turbulent and worst portion of the Chinese; and it is
said that there is an organized band of 20,000 robbers in and around the city. The polica of Canton is well regulated, but is rendered worse than inefficient by the national failing -the venality and rapacity of its officers, who share with the thieves in the proceeds of their robberies, and liberate ottenders whom they have seized, for a bribe. They are said, also, to be in the habit of arresting rich individuals under false accusations, and confining them in private houses, where they subject them to every kind of ill-treatment, to induce them to pay for their liberation. Gambling is one of the prevailing vices, and its conscquence an extraordinary amount of suicide, a large portion of which is perpetrated by women. Edncation is in so low a state, that it is believed that not more than one-half of the male adult population of Canton can read. The education of girls is wholly and systematically negleeted, there being scarcely a sehool for females in the eity, public opinion and immemorial usage being against the edneating of girls.

The prices of the principal kinds of provisions in Canton depend very much on the seasons, but nearly as much on the amount of the extortions of the local officers; they are, however, in general high. As an article of food, puppies and kittens are highly esteemed; those intended for the table being fed on rice. Rats, mice, and snails are also among the delicacies, but are scarce in the market. As the articles exposed for sale in the streets are chiefly adapted to the necessities of the day, the extremes to which the principle of accommodation is carried are remarkable. Poultry and fish are dissected into very minute portions. A quarter of a fowl, the head and neek, and frequently the entrails alone, are all to which the means of the buyer extend. Vegetables are exposed to sale in the streets in the greatest profusion.

The coins in common use are taels, mace, candareens, and cash, equivalent in English money, respectively, to five shillings, sixpence, one penny, and the seventh of a farthing. The weights or measures are peculs and eatties; the peeul is equal to 133 lbs , and 1 lb . avoirdapois is equal to threefourths of a catty.

The climate of Canton is, upon the whole, salubrions. Foreigners residing there generally enjoy good health, if they abstain from ardent spirits, and avoid exposure to the sun. The heat, however, in summer is sometimes very great, the thermometer occasionally reaching from $90^{\circ}$ to $100^{\circ} \mathrm{Fah}$. in the shade; but the average of the whole year is $72^{\circ}$. In July and August the average is from $80^{\circ}$ to $88^{\circ}$, and in Jannary and February from $50^{\circ}$ to $60^{\circ}$. A fall of snow oecurred in Canton in February 1835, to the astonishment and no small alarm of the inhabitants, who hardly knew what name to give it. Iec, however, sometimes forms in shallow vessels, a line or two in thickness. Woollen elothes are worn, and fires are comfortable, during January and February, but the Chineso do not warm their liouses.

Canton is the oldest city in the S . of China, and since tho foundation has undergone many changes. The Chinese historians say they are able to trace their city for 2000 years, when it was called Nan-Wooching 'the martial city of thie South,' and was surrounded by a stockade made of bamboo and mud. One of its earliest names, and which is still used in its books, was Yang-Ching, 'the eity of rams.' In May 1840, Canton was taken by the British, and ransomed by the Chinese for $\$ 6,000,000$. It has been frequently devastated by fires, there being no other city where conflagrations have been more extensive, more destructive, and more frequent than in Canton, and it is said that they have not always been accidental. Amongst the latest of these disastrous fires was one which oceurred in October 1843, when 1000 Chinese buildings, and several foreign hongs or factories, were destroyed; and another in December 1844, when a large theatre was consumed, and 2300 persons, men, women, and children, perished. But the most destruetive fire of recent times in Canton, occurred in 1822, when between 13,000 and 14,000 houses, with nearly all the European factories, werc destroyed, and many lives lost. Another alarming conflagration took place in November 1835, which threatened the destrnetion of the entire eity, but was fortunately arrested by the walls, but not before an enormous loss of property had been sustained; the fire on this oceasion appeared to be about 1 m . in breadth, and was in the most populous part of the city. Pop. supposed to be considerably above $1,000,000$.- (Middle

Kingdom; Jour. Roy. Geog. Soc.; Martin's China; Parl. Papers, \& c.)

CANTORIA, a tn. Spain, Andalusia, prov. of, and 36 m . N. by E. Almeria, l. bank, Almanzora. In general it is well built; the streets clean, wide, and level, but unpaved; its two squares are spacious, and adorned with handsome houses and public buildings; a chapel, which supplies the place of a parish church, occupying the N . angle of the smaller square. The town has, besides, a townhall, prison, cemetery, and three primary schools. Manufactures:-linen and woollen fabries, saltpetre, oil, and wine. Trade in poultry, cattle, barilla, and manufactured goods. Pop. 4500.

CANTREFF, par. Wales, Brecon; 1867 ac. Pop. 223.
CANTU, or Canturio, a tn. Austrian Italy, gov. Milan, prov. of, and 5 m . S.E. Como. It is well built, surrounded by walls, entered by six gates, and possesses a parish church, with a remarkably fine tower, formerly used as a beacon, a townhall, school, hospital, theatre, \&c. In the vicinity are some ironworks, which have existed since the 10th century. P. 5518.

Cantyre, Cantire. See Kintyre.
CANUMA, a lake, Brazil, prov. Para, l. bank. Amazon; lat. (N. end), $2^{\circ} 30^{\prime}$ S.; lon. $58^{\circ} 45^{\prime} \mathrm{W}$. ; about 30 m . long by 10 m . broad. It pours its waters into the Urubu or Barururu-an affluent of the Amazon; its banks are inhabited by a few Indians; and at its N. end is the village of Conceição.

CANWICK, par. Eng. Lincoln; 17,560 ac. Pop. 13,896.
CANY, a tn. France, dep. Scine-Inferieure, 21 m . W.S. W. Dieppe, in a green and wooded valley, 1. bank, Durdent, 5 m . from its mouth. This thriving little town has several cotton and oil mills, driven by water; and a considerable trade in linen, oil seeds, oil, flax, yarn, and cattle. Pop. 1261.

CANZO, a vil. and com. Austrian Italy, gov. Milan, deleg. of, and 10 m . N.E. Como, on the side of a steep and bare hill, called, from its shape, the Horns of Canzo. It contains a parish church; and boasts of having given birth to two saints of the Roman calendar. Most of the inhabitants are employed in rearing silkworms and spinning silk. Pop. 1630.

CAORSO, a vil. and com. N. Italy, duchy Parma, 10 m . E. Piacenza, on the highroad at the confluence of the Chiavenna and Zeuo-affluents of the Po. It is well built, and has a churel, surgical and clementary schools; and an annual cattle fair, and one for grain and general merchandize. The inhabitants are engaged in raising grain, fruits, wine, and oil; and in rearing cattle, sheep, pigs, and poultry. Pop. 3078.

CAP and BUTTON ISLEN, two small isls. Indian Archipelago, strait of Sunda; the onc in lat. $5^{\circ} 58^{\prime} \mathrm{S}$. ; lon. $105^{\circ} 48^{\prime}$ E.; the other in lat. $5^{\circ} 49^{\prime}$ S. ; lon. $105^{\circ} 48^{\prime} \mathrm{E}$. They appear to be of volcanic formation, and one of them contains two caverns, in which are found edible birds' nests.

CAPACCIO, or Capaccio-Nuovo [anc. Caput Aqueum], a tn. Naples, prov. Principato Citra, 15 m . S. Campagna, 4 m . from the sea; the seat of a bishop, and having two handsome parish churches and a convent. The cathedral is 2 m . distant, at Capaccio Vecchio, formerly an episcopal town, but destroyed in the 13th century, by the Emperor Frederick II. The inlabitants then removed to San Pietro, and named it CapaccioNuovo. Pop. 2000.

CAPANNOLI, a vil. and com. Tuscany, prov. of, and 16 m . S.E. Pisa, 6 m . S. Pontedera, on a hill near the Era. It is tolerably well built, has a parish church and a castle, and manufactures of oil, wine, and silk. Pop. 1177.

CAPANNORI, a tn. and com. Italy, duchy of, and 5 m . E. Lucea, 5 m . W.S.W. Pescia, in a fertile plain. It has a parish church, and some oil and wine presses. Pop. 2100.

CAPE BRETON, a large island, British N. America, between lat. $45^{\circ} 30^{\prime}$ and $47^{\circ} 2^{\prime} \mathrm{N}$., and lon. $59^{\circ} 47^{\prime}$ and $61^{\circ} 35^{\prime} \mathrm{W}$. ; extreme length, N. to S., 100 m .; extreme breadth, 85 m. ; area, exclusive of the great inland gulfs, about $3100 \mathrm{sq} . \mathrm{m}$. It is separated on the $\mathbf{S}$. from Nova Scotia by the Gut of Canso, and, along with Newfoundland, from which it is about 60 m . distant, forms the E. entrance to the Gulf of St. Lawrence. It is of an irregular triangular shape, and, along the W. coast, is of dangerous access, possessing no harbour but that of Port Hood, near the Gut of Canso, and being lined throughout with precipitous iron-faced cliffs. Its other shores, though rugged, are indented with numerous harbours and bays. An inlet, called Bras d'Or, which is entered by two narrow passages, spreads into numerons bays and arms, and, almost intersceting the island from
N.E. to S.W., forms two great natural divisions; both rugged, but not properly mountainous, the highest point in the former not exceeding 1800 ft ., and that of the latter scarcely reaching 700 ft . The geology of the island is imperfectly known. Its slort distance from Nova Scotia has led some to imagine that it was at one time united to the continent, and has been dissevered by some violent convulsion; but this conjecture is not supported by any striking resemblance in the structure of the opposite coasts. Primitive rocks, particularly granite, prevail to the S.E. of Bras d'Or, and are also supposed to form the nucleus of the bighlands towards the N.W.; but tbroughout the whole island the carboniferous formation appears, and contains extensive fields of excellent coal. Iron-ore, also, aboun ls; and specimens have been obtained indicating the existence of copper, lead, and other valuable minerals. Higher in the series vast beds of gypsum are found. Salt springs exist on the coast. There is no navigable river, but the freshwater lakes are both numerous and of considerable extent. The largest, Lake Margucrite, in the N., is about 40 m . in circuit. The climate is clangeable, but not so rigorous as on the continent. Originally, the whole island was one great forest, but considerable tracts have been cleared. About $90,000 \mathrm{ac}$. are under culture, and produce the ordinary cereals, and pulse, maize, potatoes, and turnips. The quantity of corn raised is not equal to the home consumption. Capo Breton derives its chief importance from the working of its coal mines, and the fisheries carried on in the adjoining seas. Its exports, consisting principally of timber, fish, and coal, amounted in value, in 1844 , to $£ 70,872$; imports, $£ 24,323$. The ships in the same year were-entered, 535 ( 37,574 tons); and cleared, 631 ( 40,263 tons). The slipping belonging to the island was 19,662 tons. Cape Bretoa, which is administratively attached to the province of Nova Scotia, is divided into three counties, and sends two members to the Ilouse of Assembly. It is visited by the packets from England; and its internal communications have recently been improved by the establishment of a steamer, which plies regularly on the Bras d'Or. The island was first colonized by the French in 1712 , and taken by the Britisl in 1758. Pop. about 35,000 .

CAPE CLEAR, a high promontory, S. extremity of Clear Island, and forming the most S . point of Ireland, about $7 \frac{1}{2} \mathrm{~m}$. S.E. Baltimore, co. Cork. Its great height, 400 ft . above the sca, and prominent position, have rendered it a familiar landmark to marincrs. Adjoining the Cape is a lighthouse, which exhibits a bright revolving light, of 21 lamps, seven becoming visible every two minutes. The lantern is elevated 455 ft . above the sea, and may be seen, in clear weather, from a distance of upwards of 30 m . It is situated in lat. $51^{\circ} 26^{\prime}$ N.; lon. $9^{\circ} 29^{\prime}$ W. (r.) ——The islaxd of Clear is about $3 \frac{1}{4} \mathrm{~m}$. long, by about 1 m . broad. It is wild and romantic, steep and inaccessible cliffs rising up in all directions from the sea, while the greater part of the surface is merely rough, rocky pasture. The inhabitants are in a primitive state. The women manufacture a coarse kind of frieze, for clothing; the men, who have the reputation of being expert and resolute seamen, are wholly employed in fishing. Pop. of isl. (1841), 1052.

CAPE COAST CASTLE, a tn . and fort, Gold Coast, Africa, Gulf of Guinea, cap. of the British possessions on the Gold Coast ; lat. (light on fort) $5^{\circ} 5^{\prime} 24^{\prime \prime} \mathrm{N}$. ; lon. $1^{\circ} 13^{\prime} 38^{\prime \prime}$ W. (r.) The fortress, which is large, and well built, stands on a rock close to the sea, and projects, in bold relief, from the surrounding dark, green forests. With exception of a few houses for Europeans, the town consists of straggling lines of mud luts, with clusters of palm-trees, and an occasional tamarind attached. It is a principal mart for native barter; and zome individuals who have been educated at the Government school in the fort, now import, on their own credit, goods to the amount of $£ 20,000$ and $£ 30,000$ annually. A judicial assessor, appointed by Her Majesty, holds open court in the town three days a week, for native cascs. Great good has resulted from the establishment of this court by inspiring confidence in British protection, and the fear of justice. Climate unhealthy; mean temperature $78^{\circ}$. The principal exports are gold-dust, ivory, and palm-oil. Pop. estimated at 10,000 . See Gold Const.

CAPE HAYTIEN, a seaport tn . N. side isl. Mayti, called by the Spaniards Guarico, and afterwards by the French Cape François, named also Cape Henry, and Port

Picolet, nearly 90 m . N. Port-au-Prince or Port Republicain; lat. $19^{\circ} 46^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $72^{\circ} 11^{\prime} 45^{\prime \prime} \mathrm{W}$. (R.) It stands on the N. side of a hay half encircled by lofty hills, and, under French dominion, was considered one of the handsomest and most flourishing cities in the W. Jndies. Half of it is in ruins, the effect of the Revolutionary wars. This gives it a melancholy aspect, but it still may be described as a handsome town, regularly built. The strects are wide and well paved, and the honses principally of stone; several of the squares and markets are spacious and handsome, and adorned with fountains yielding an abundant supply of good water. The cathedral, which has been rebuilt by public subscription, is an elegant structure; the military hospital, a noble ellifice, with large well-ventilated apartments, has also been restored, and other improvements have been made. The under part of many of the houses is occupied as stores, warehouses, and stables, the upper part only being used for residence. The entrance to the harbour is difficult, but the anchorage is safe. Cape Haytien, as well as Port-au-Prince, was oceasionally the seat of government, and it continued so under Christophe and Toussaint. The trade, chicfly carried on with the U. States, is still very considerable. Pop., in 1789, 18,500; does not now exceed 9000 .

CAI'E IIORN, or IIOors, usually considered the S.extremity of S. America, does not really belong to that continent, but is the most S . point of Hermit's Island, one of the Tierra del Fuego group ; lat. $55^{\circ} 59^{\prime} \mathrm{S}$.; lon. $67^{\circ} 16^{\prime} \mathrm{W}$. (R.) This promontory is a lofty, dark, precipitous headland, from 500 to 600 ft . high, rumning far into the sea. When Sir J. C. Ross passed it, in September 1842, there was some snow on its summit, and its sides were clothed with a brownish eoloured vegetation. The strong gales from the W. render the doubling of the Cape from the E. a matter of some danger and difficulty. But the improvements in modern navigation have greatly diminished both. Gales from the W. blow during the summer nearly without interruption, but only near the Cape; a few degrees farther S. they are more variable. During the winter $\mathbf{E}$. winds are more frequent, but the navigation is then rendered dangerous by the icebergs which approach the Cape, and are found even farther N. The Cape was first doubled in 1616, by the navigator Schouten, a native of Hoorn, in Holland, who named it after the town in which he was born, the word having been since altered to Horn.

CaPE MOUNT, W. Africa. See Molnt (CApe).
CAPE OF GOOD HOPE [Portugueso, Cubo de Boa Esperança; Dutch, Kaap de Gocde Hoop], or Cape Peak, a celebrated promontory, S. Africa, at the S. extremity of the Table Mountain, having Table Bay on the E., and the Atlantic on the W., 31 m . S. Cape Town ; lat. $34^{\prime} 2^{\prime} \mathrm{S} . ; \operatorname{lon} .18^{\circ} 29^{\prime}$ E. (R.), and forming a bold promontory, rising nearly 1000 ft . above the sea. This cape, celebrated in the annals of navigation, was discovered, in the year 1486, hy the Portuguese navigator Bartholomew Diaz, whe, not being able to double it, and having encountered much bad weather in its neighbourhood, gave it the name of Cubo dos Tormentos or Cape of Tempests. John II., King of Portugal, considering this point as the goal of that gradual circumnavigation of the African continent, which had long engaged the attention of the Portuguesc, gave it, instead, the title of Cabo de Boa Esperança. Shortly after, Nov. 20, 1497, Vasco de Gama oncceeded in doubling the Cape, and was the first European who by this route reached the Indian Ocean.

CAPE OF GOOD HOPE, or CApe Colony, an extensive territory belonging to Great Britain, forming the S. extremity of Africa, between lat. $28^{\circ} 15^{\prime}$ and $34^{\circ} 50^{\prime} \mathrm{S}$., and lon. $16^{\circ} 20^{\prime}$ and $27^{\circ} 30^{\prime} \mathrm{E}$. On the W. it is bounded by the Atlantic, and S. and E. by the Indian Ocean. Its boundaries, landward, have varied much at different periods, and could scarcely be said to be defined till 1847, when, by a proclamation of the Governor, Sir H. Smith, they were declared to be on the N., the Gariep or Orange River; N.E., a branch of the same river, called the Nu Gariep; and E., the rivers Krai, Klaas Smits, Zwart Kei, and Plaats, the Katberg mountains, the rivers Chumie and Keiskamma; greatest length, W. to E., 520 m . ; greatest brearlth, N. to $\mathrm{S} ., 430 \mathrm{~m}$. ; area, about $170,000 \mathrm{sq} . \mathrm{m}$. Cape Colony consists of a W. and an E. province, and, for administrative purposes, has been formed into divisions. These have, of course, increased with
the accessions of territory which the colony has made at different times. Their number, previously 13 , has reeently been increased to 15 , by the two new divisions of Victoria and Albert, chiefly situated along the E. frontier, and formed out of a tract generally known by the name of the Ceded Territory. In addition to this, there is a large unappropriated tract lying between the former N. boundary of the colony and its new boundary of Orange River. It has never been properly explored, but is supposed to have an extent of nearly $50,000 \mathrm{sq} . \mathrm{m}$. According to the report of the SurveyorGeneral, 'it is, for the most part, as barren a desert as is to be found on the earth's erust.' From this sweeping assertion may probably be excepted the country in the immediate vicinity of the Gariep or Orange River, which is said to oceupy a climate more equable than some portions of the colony farther S., to be tolerably fertile, and to depasture large herds of cattle.

Physical Features.-The coast-line of the colony has an extent of about 1200 m . The N.W. portion, lying considerably out of the tract which is usually navigated, is imperfeetly known, but is understood to consist of sandy plains, generally covered with shrubby plants. To the S.W. and S. it loses this character, and though seldom forming what may be called a bold and rocky coast, presents an almost uninterrupted series of headlands and indentations. The former occasionally stretch out into lofty promontories, the principal of which are the celebrated Cape of Good Hope, forming the extremity of the isolated mountain mass, of which Table Mount is the culminating point, and Cape $\mathbf{A}$ gulhas, the most S. point of Africa. The latter are often scooped out into capacious bays, which have ample depth of water, but lying exposed in some direction or other, are very imperfect roadsteads. The chief of these hays are, on the W., St. IIelen's Bay, Saldanha Bay, and Table Bay; and on the S., False Bay, with its important arm called Simon's 13ay, St. Sebastian's Bay, Mossel Bay, the Camtoos, and Algoa Bay. Among these, complete slielter is afforded only by Saldanha Bay, which possesses all the essentials of an excellent harbour ; and Simon's Bay, which has been selected for the arsenal ant chicf naval station of the colony. The interior of the country may be deseribed as consisting generally of a succession of plateaux and mountain ranges, which rise above each other, and increase in elevation as they recede from the coast, eael range forming the boundary of a lower and the abutment of the next higher plateau; and again lowering down considerably towards the Gariep or Orange River. Beginning in the W., the first mountain range is the Bokkeveld, which lies about 40 m . inland, and stretelies from N. to S., in a direction nearly parallel with the W. coast, till it reaches the neighbourhood of the town of Worecster, lat. $33^{\circ} 40^{\prime} \mathrm{S}$. Almost parallel to this range, but about 100 m . farther inland, is the Roggeveld. Between these ranges lies an extensive elevated plateau, which, according to its proximity to either ranse, takes the name of the Bokkeveld, or of the Koggeveld Karroo. In like manner scveral mountain ranges run parallel with the S. coast. The first and lowest stretches from W. to E., without interruption, for about 200 m ., leaving a belt along the coast whieh seldom exceeds 20 m . This range of hills connects with the Bokkeveld, and properly forms one of its branches, takes, in the different localities through which it passes, the names of the Zwellendam, the Outeniqua, and the Zitzikamme mountains. Behind it, and at a distance varying from 15 to 30 m ., is a second range, connected likewise with the Bokkeveld, so as to form another of its branches, and known by the name of the Zwarte or Black Mountains. Between these two E. ranges lie the plateaux of Kannaland and Long Kloof. About 70 m . behind the Black Mountains is the last great E. range, which links with the Roggeveld, near lat. $32^{\circ} 10^{\prime} \mathrm{S}$., and takes, in succession, the names of the Klein Roggeveld, the Nieuwreld, and the Sneeuw or Snowy Mountains, the last forming the highest mountain chain in S . A frica, and attaining a height which has been variously estimated, but probably is not less than $10,000 \mathrm{ft}$. The large space between this range and the Black Mountains is occupied by a plateau, called the Great Karroo. On the W. it connects with the Bokkeveld and the Roggeveld Karroos, and on the E. with a similar tract called Candeboo, and thus the whole of these united Karoos may be regarded as one im. mense plateau, raised, on an averate, 3000 ft . above the levol
of the sea, surrounded on all sides by mountain ranges, and stretching continuously, though with varying width, for 500 m . The geological structure of the mountains appears to be very uniform. They lave a nucleus of granite, which sometimes comes to the surface, and forms the predominating rock, but much more frequently the granite is over-lain by cnormous masses of sandstone, easily distinguished by the numerous pebbles of quartz which are imbedded in it. The mountain summit, when composed of granite, is usually round and smooth, but when composed of the quartzoze sandstone is often perfectly flat, and assumes the form of which Table Mount is a well-known specimen. The thickness of this stratum, in some localities, is not less than 2000 ft ., and may then be seen forming steep mural faces resembling masonry, or exlibiting a scries of salient angles and indentations, as sharp, regular, and well defined, as if they had been chiseled. With the granite are often associated primitive schists, the decomposition of which seems to have furnished the chief ingredients of the thin barren clay which forms the characteristic covering of the Karroos. In some places, particularly towards the S . coast, more recent formations appear, and limestone is frequently seen piercing the surface.

Rivers.-Notwithstanding of its Jofty mountain ranges and clevated plateanx, Cape Colony has scarcely any navigable rivers. Dlephant, or Olifant's River, which falls into the Atlantic in the W. of Clanwilliam division, is affected by the tide, and is navigable for boats for 30 m ., but, like almost all the other rivers of the colony, is encumbered at its mouth by a bar, over which no ordinary sailing vessel can float. On the S. coast, the Breede, which empties itself into St. Sebastian's Bay, in Zwellendain division, admits vessels of 200 tons into the port of Beaufort which stands at its mouth, but, immediatcly thereafter, becomes navigable ouly by small craft. To judge by the map, one might be apt to suppose that the colony was remarkably well supplied with water. Streams are there seen traversing it in all directions, some of them apparently receiving numerous tributaries, and running a course of several hundred miles; and the fact is, that at the season when rains prevail, many of them are swollen into rivers of great width, and of a depth which would float the largest vessel in safety. But the fall of these rivers is as rapid as their rise had been, and the rains have no sooner ceased than they either disappear altogether, or sink down into deep chasms, and occupy a sliallow rocky led, overhung on both sides by lofty precipices of the prevailing sandstone. They thus not only become useless as a means of internal traffic, but cannot even be made available for purposes of irrigation.

Climate.-The temperature of the colony varies much in different localities, but its general average may be stated at $67^{\circ} 20^{\prime}$ at Cape Town, that of the coldest month being $57^{\circ}$, and that of the hottest $79^{\circ}$ Falh. The extremes, however, lave a much wider range; for Bunbury states, that, in 1838, during his visit to the Cape, the thermometer, on Jan. 25 , stood, in the shade, at $94^{\circ}$, and on the 28 th at $90^{\circ}$. In the mountainous districts, snow covers the highest summits during half the year, and the temperature, cooled down by the blasts which descend from them, often falls below freczing. The alternations of heat and cold are frequently great, as well as sudden. The S.E. wind sometimes begins to blow with all the characteristics of a simoom. At first it is almost stifllingly hot, and, gradually gathering strength, carrics along with it an impalpable sand, which penetrates everywhere. The whole atmosphere is dimmed, and the trees gather a coating which makes them look as if they had been painted with red ochre. Shortly, however, the breeze cools, its violence abates, and the air regains its wonted clearness. This wind, disagrceable though it be, is regarded as not prejudicial to health, and the statistics of the colony certainly go to prove that there are few climates in which, under ordinary circumstances, human life is more likely to run its fullest course. Less rain falls in the interior, and on the W. coast of Cape Colony, than in any other part of the world, excepting rainless districts. It approximates in this respect to Patagonia. and the E. coast of the S. American peninsula.

Vegetation.-The vegetation of the Cape is of a peculiar and distinctive character. To this, however, there are some curious exceptions in the case of particular plants, where a connection manifests itself between the botany of this part of Vol. I.
the world and that of very remote countries. Such occurs with the alder, and also with the bramble, one of the nine species of which that are enumerated by Ecklon and Zeyher as growing at the Cape appears to be the common English bramble or blackberry. There are also links of conncetion. as far as regards the similarity of some peculiar genera, with the botany of Australia, and that of S. America. Yct, nowhere else are genera and species confined within narrower limits than here, without any apparent cause for a dispersion so arbitrary. In many respects, the vegetation in the E. districts of the colony differs widely from that on the W., although several plants are common to both. Wheat is the grain most extensively cultivated at the Cape, but other cereals are also grown. With the exception of the silver-tree or Witteboom (Leucadendron argenteum), none of the indigenous trees in the vicinity of Cape Town, attain any considerable size. The one named, grows to the height of from 30 to 40 ft ., and is very conspicuous from the brilliant silky whiteness of its leaves. Its timber, however, like that of all the other trees of the colony, such as they are, is useless, being soft and brittle, lut its hark is said to be astringent, and to contain a considerable quantity of tannin. The native station of this tree, which now forms groves at the back of the Table Mountain, is at the foot of the E. side of the same mountain; even at present it is almost entirely confined to the peninsula of the Cape. But the characteristic vegetation of the colony consists in its Lricæ or heaths, Stapeliæ or carrion flowers, and Proteaceæ; of the first, there are about 400 species, and of the last 200, all exceedingly beautiful, but having a range so limited, that none are to be secn N. of the monntains which bound the Great Karroo, while by far the greatest number grow within 100 m . of Cape Town ; the Protea Cynaroides, bearing a flower the size of a man's hat, is found on Table Mountain; as for the singular and fleshy Stapelias, resembling a star-fish, about 100 species are mentioned, but they are almost entirely confined to the dry and sandy regions of the W. coast, where they cover a tract of many degrecs of latitude in extent. A grat portion of the E. fronticr of the colony and the adjacent districts are covered with extensive thickets of a strong succulent and thorny vegetation, called, by the natives, the bush. The most common plants of the bush are aloes, of many species, all exccedingly fleshy, and some beautiful; the great red-flowering arborescent aloe, and some others, make a conspicuous, though by no means graceful, figure in the E. part of the colony, where they grow irregularly scattered over the parched and naked faces of the hills Other characteristic plants of the E. districts are the spekboom (pork tree, Portulacaria afra), Schotia speciosa, Calitris or cedar, two or thrce species of Podocarpus or yellow-wood, and the great succulent Euphorbias, which grow into trees 40 ft . ligh, branching like a candelabrum, entirely leafless, prickly, and with a very acrid juice; the Euphorbia meloformis, 3 ft . in diameter, lics on the ground, to which it is attached by slender fibrous roots, and is confince to the mountains of Graaf Reynet, where also is found the extraordinary Testudinaria or Hottentot's bread. The Encephalartos, of which there are 15 species, all having the appearance of dwarf-palms, but without any similarity of structure, scarcely occur in the Cape Colony, properly so called, but extend over the mountains of Kaffraria, Tambooka, and Delagoa Bay, almost to the tropies. The brilliant Strelitzias are almost peculiar to the districts of George and Swellendam. Throughout are found various species of Acacia; many beautiful ones of Oxalis ; innumerable species of Ixia, Gladiolus, Tritonia, Watsonia, Hesperanthera, and other handsome Iridacer, known by the name of Cape bulbs; nor ought we to omit the endless varieties of Pelargonium or Cape geranium, Gnaphalium, Xeranthemum, Diosma, Mesembryanthemum or fig-marigold, shrubby Boraginaceæ, and curious, if not large or showy, blossomed Orchidacer. Such is an outline of the magnificent flora of S. A frica, from which the botanist has drawn more largely, and the gardens and green-houses of Europe have derived a greater variety of beautiful plants, than from any other quarter of the world. From their presence here, and almost nowhere else, Schouw has characterized this region as that of the Stapelias and Mesembryanthemums.

Zoology.-The animals indigenous to this colony are almost endlessly varied, from the most unwieldy bulks to the most delicate and graceful forms. Among quadrupeds may be
enumerated the giraffe, elephant, rhinoceros, the hippopotamus, now much less frequently seen than formerly ; the lion, panther, hyena, jackal, wolf, wild boar, quagga, buffalo, antelope, springbok, monkey, porcupine, ant-eater, \&c. Among birds are the ostrich, eagle, vulture, pelican, flamingo, crane, guinea fowl, turtle dove, and smaller species in great variety. The reptiles include, among their number, the largest and most venomous of their class, including the boa constrictor, and the cobra da capello. In the surrounding seas, and along the coasts, whales and seals exist in such numbers, as to make the capture of them an important occupation, while both there and in the rivers there is no deficiency of smaller fish.

Aborigines.-The original inhabitants of the peninsula of S. Africa consist of two distinct negro races-the Hottentot and the Kafir, which are again subdivided into 10 or 12 different tribes. The Hottentots occupy the N. portion of the peninsula, and the Kafirs the N.E. The first are a mild and timid people, with some talent, but no energy. They make excellent shepherds and herdsmen, and are faithful and honest. When young, they are clean limbed, and well proportioned; complexion, at clear olive ; cheek-bones high and prominent; tceth small and exquisitely enamelled. The Kafirs are a remarkably handsome race, tall, stout, beautifully formed and graceful in their movements, cheerful and contented expression of countenance, complexion verging towards black. The offishoots of these two great families are the Korannas or Koras, the Bojesmans or Bushmen, Namaquas, Damaras, Griquas, Bechuanas, Mantatas, and Zoolahs.

Agriculture.-The temperature is such as ought to favour the growth of all the ordinary cereals, and the first colonists who settled in the country expected to find the principal source of their wealth in the cultivation of them. The extent of territory allotted to them corresponded to this view, and they settled down in farms which never would have been im. agined of sufficient suze, had they not expected to make almost every acre of them arable. Some of the tracts were apparently fertile enough to countenance this idea, but three-fourths of the country were obviously of a very different description, and the consequence was, that the colony threatened, for a time, to becone a complete failure. Even where the soil was well adapted for the growth of wheat and the other cerealia, the climate often proved most unpropitious. Long-continued droughts destroyed the corn in the blade, and mildew destroyed it in the ear. At last a better system began to prevail. $\Lambda \mathrm{g}$ riculture, formerly deemed paramount, became only of secondary importance. Extensive tracts which never could have yielded a profitable return under the plough, were seen to be capable of supporting numerous flocks and herds, and the attention of the colonists was generally turned to pasture. The native breed of cattle has been supplanted by better breeds, or improved by crosses with them, so that the cattle of Cape Colony would not suffer by a comparison with those of many of the better improved districts of Europe, while the Cape sheep, remarkable only for the ponderousness of their tails, have been very generally supplanted by finer European breeds, and more especially by merinoes, which thrive admirably, and promise soon to make wool the great staple of the colony. Grain, particularly wheat, is still grown to a considerable extent in the lower districts, and in ordinary years, crops, both abundant and of good quality, are obtained. In the same districts, and also in Cape division, considerable attention is paid to the culture of the vine, which grows freely, but, in general, is more remarkable for the quantity than for the quality of its produce. It is well known in commerce by the name of Cape wine, but is not in much repute, and is understood to be extensively employed in adulterating some of the foreign white wines, especially Madeira. The only wine of the colony which has obtained a high reputation is the luscious red wine, which grows in a very limited district S . of Cape Town, and is called Constantia, after the celebrated vineyards near the town of that name, where alone it is produced.

Manufactures and Commerce.-The former are necessarily limited to a few articles of primary necessity, the colonists supplying themselves with the ordinary manufactures from the mother country, of a better quality, and at a cheaper rate than they could hope to produce them.

The exports of wool from the colony are inereasing rapidly, those of wine decreasing. In 1827 , only $44,441 \mathrm{lbs}$ of wool
were exported ; in 1851, 5,661,218 lbs. ; while the wine had decreased in the same period, from 740,000 to 460,540 gallons. The whale fishery, which was formerly pursued with success, has also declined. The total declared value of the exports from the whole colony, for the year ending January 5,1852 , was $£ 651,377$. The value of imports, as declared for the same time, was $£ 1,583,218$. The colonial produce exported, in $1851-2$, was of the declared value of $£ 483,941$; and it consisted principally of wool, skins, hides, wine, flour, meal, salted fish, ostrich-feathers, aloes, horses, beef, pork, butter, oil, \&c.

Government, Religion, Education, dec.-The government of the Capo is vested in a governor, nominated by the Crown, and assisted by an executive council, composed of the commander of the forces, the chief justice, auditor-general, treasurer, and accountant-general. Each province is administered by a lieutenant-governor, and each district by a civil commissioner, subordinate to whom are magistrates, superintending tracts of country 15 or 20 m . in circuit. Justice is administered by a supreme court of judicature, presided over by a chief justice and three puisne judges, a ligh sheriff and deputy sheriff for each district, a court of vice-admiralty, police, and matrimonial courts, \&c. The revenue of the colony has gencrally exceeded the expenditure, but the estimates for 1849 would show a different result, though not to any great extent. The revenue for that year has been calculated at $£ 213,424$, tho expenditure at $x^{2} 210,000$. The Dutch and English Reformed, Lutheran, R. Catholic, and Presbyterian chwehes in the Cape, are all entirely, or in part, supported by the (iovermment. From returns for 1846 , it appears that there were 115 congregations belonging to the two provinces, of which 32 belonged to the Dutch Reformed church, 13 to the English Episcopalians, 8 to different Presbyterian denominations, 4 to the R . Catholic church, 21 to the Wesleyan chureli, 23 to the Independents, 5 Moravian, and 9 Lutheran, Sunday and evening schools are attached to each. There are also numerous nissionary schools, and Bell's Lancasterian and other free sehools in each district. In numerous localities throughout the colony, missionary exertions are carried on, by various denominations of Christians, for the evangelization of the native population.

History.- The Cape of Good Hope was discovered, in 1486, by Bartholomew Diaz. In 1620, two commanders of the linglish East India Company took possession of the country in the name of King James; but no settlement was then formed. In 1650, it was colonized by the Dutell Government, and remained in their possession for 156 years. In 1795, it was taken possession of by a British armament, but restored to the Dutch in 1802. In 1806, it was again taken by the British, and confirmed to them at the general peace, in 1814. Alnost ever since this period, a succession of hostilities has occurred between the colonists and the Kafirs on the E. and N.E. frontiers of the colony, the latter revenging the encroachments of the former on their territories by plundering their cattle, and otherwise disturbing them in their possessions. When these aggressions become altogether intolerable, and threaten the ruin of the colony, a regular military force is sent against the Kafirs, which ultimately succeeds, though not without much trouble, and often considerable loss of life, in driving back the enemy, and for a time, but for a time only, putting an end to their maranding incursions. After a short interval of quietness, the Kafirs recommence their aggressions, and the same results, as in previous instances, follow, to be in turn succeeded by similar proceedings. The latest ' Kafir war,' broke out in December, 3850, and did not terminate till after fully 18 months' active hostilities. In 1851 , a representative constitution was granted to the colony, with a liberal free-tenancy suffrage; every owner of a tenement valued at $£ 25$, or more, having a vote for members both of the legislative council and house of assembly. Pop. in 1850, Western division, 114,886; Eastern, 170,393; total, 285,279.-(Bunbury, A Residence at the Cape of Good Hope; Cape of Good Hope Almanac; Past and Present State of her Majesty's Colonies; Naut. Magazine; Mrs. Nomerville's 1'hysical Geography, de.)

CAl'E RlVER, or Vaunks, a river, Central America, Nicaragua and Mosquito country, rising near the city of Segovia, flowing E. by N. for nearly 300 m ., and, after reeciving several tributaries, falling into the Cariblean sea at

Cape Gracias à Dios. It passes through a rich and fertile country, has some important towns on its bauks, and is navigable for a considerable distance from the sea. The upper part of its course is obstructed by falls.

CAPE TOWN, a tı. S. Africa, cap. of Cape Colony, on the lower or S. side of Table Bay, at the N. foot of Table Mountain, 31 m . N. the promontory of the Cape of Good Hope The view of the town and its vicinity from the bay anchorage is

very striking. Behind rise the perpendicular sides of Table Mountain, while, on either hand, are the barren crags of the Lion's Head and Devil's Peak; the former usually capped with a cloud. It is regularly built, lighted with gas, the strects, many of them wide, but most of them unpaved, cross at right angles, while the honses, with their little stoops, (porches) and gable fronts, exlibit many traces of their Dutch origin. Rows of oak, poplar, and pine trees, line the sides of the principal avenues; and the shops are well supplied with
large, well built, contain an infirmary, \&c., and have a large area in front as a parade-ground. Another important Government establishment is the observatory, well known by the labours of Sir J. Herschell. At noon, daily, a ball is dropped here as at Greenwich, to indicate true time to mariners. The botanical garden of the Baron von Ludwig contains a fine collection of plants. In the town are English, Dutch, Lutheran, Presbyterian, Independent, Methodist, and R. Catholic churches; the burgher senate-house, the chief court-houses, several frce and other schools; a theatre, a spacious market place, a commercial exchange, with a fine commercial hall, and a public library of about 30,000 volumes. Provisions, fruit, and vegetables, are abundant and cheap. Water is supplied from Government tanks in the dry season. The police lere is well organized, on a military footing. Crimes of a flagrant kind are rare. The town is divided into 12 districts, and each district into four wards, over each of which there is a commissioner and four wardmasters, chosen by the people; these, together, appraise town property and assess the local taxes. Within the town, also, is held the supreme court of justice of the colony.

Cape Town is defended, on the r. side, inland, by a regular citadel; on the l., towards the sea, by Amsterdam Battery, and some other works. To the port, at which is the customhouse, large vessels cannot come; but the anchorage in the bay is commodious, and usually safe. Two quays, extending from the beach into the bay, enable lighters to take in and discharge cargoes at all times of the tide. Great efforts are made both by the Government and the municipality to render Table Bay a safe harbour. It is now visited annually by a large number of vessels; still the casualties do not amount to a third per cent. From 1824 to 1848 , it was visited by 9615 vessels, of which only 28 were lost or seriously injured. The numbers, 1841-1848, were as follows:-

|  | Vessels. | Tonnage. |  | Vessels. | Tonnag ${ }^{\text {a }}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1811 | .. 433. | 133,963 | 1845. | ....680. | 191,922 |
| 1842 | \% | ..128,224 | 1846. | 550. | 158,413 |
| 1843 | 405. | .112,870 | 1847. |  | 162,706 |
| 1844 | 539 | 159,802 |  |  | 164,41 |

The increase of vessels, in 1845 , was caused by the great numbers that year employed in the guano trade.

The walks near the town are pretty, and neatly kept. One of them, which leads along to the top of the hill overlooking the town and bay, and giving a view of the sandy plain and distant mountains, with Green Point (where is a light-house), and Robbin's Island in the distance, is peculiarly picturesque. The drives aronnd are pleasant, especially that to Green Point, 2 m. W. The climate of the whole locality is considered salubrious; and the place is much frequented by Indian residents on Ieave of absence, whose pay (if holding official situations) is here usually continued to them. Cape Town was founded by the Dutch in 1650. Pop. 22,543.

CAPE VERD, the most W. promontory and point of Africa, in Senegambia, between the mouth of the Senegal on the N., and that of the Gambia on the S.; lat. $14^{\circ} 32^{\prime} 6^{\prime \prime}$ N. ; lon. $17^{\circ} 34^{\prime}$ W. (8.) It was discovered by the Portuguese, Denis Feruandez, in 1445.

CAPE VERD ISLANDS [Portuguese, Ilhas do Cabo Verde, Ilhas-Verdes], an isl. group, N. Atlantic, W. coast of Africa, consisting of 10 principal and several smaller isles, belonging to Portugal, between lat. $14^{\circ} 43^{\prime}$, and $17^{\circ} 13^{\prime}$ N. ; and lon. $22^{\circ} 28^{\prime}$, and $25^{\circ} 27^{\prime} \mathrm{W}$. They take their name from Cape Verd, which is about 320 m . E. of them, and is said to be so called from the verdure of a group of enormous baobab trees which crowns its summit. The largest and most important is Santiago; the others are Fogo, Brava, Mayo, St. Antonio, St. Vincent, St. Lucia, St. Nico-

European goods. Government house is a commodious cdifice. The gronnds are planted with fine old oaks, and partly formed into a public walk. The Government offices are here, and in the precincts is the S . African college. The barracks are
las, Sal, and Boavista. All the islands are evidently volcanic; most of them are rugged and lofty, but some have sheltered bays, with good anchorage. The most elevated is Fogo, on which there is a volcano, which, after 50 years'
quiescence, recently became active, and the peak of which has a height of 9157 ft . The island is fertile, and produees great quantities of maize, beans, and various kinds of fruits. The group, however, taken as a whole, docs not deserve this
 40,000.
all the erops. The Cape Verds were discovered by the Portuguese in 1449, and shortly after colonized. Pop, abont

CAPE WRATH, the N.W. extremity of Scotland, en. Sutherland. There is a light-louse on it, bearing a revolving light, 400 ft . above the level of the sea, showing a bright and red liglit alternately; lat. $58^{\circ} 38^{\prime} \mathrm{N} . ;$ lon. $4^{\circ} 58^{\prime} 30^{\prime \prime} \mathrm{W}$. (1.)

CAPE YORK, the terminating point of the N.E. eoast of Australia, having the Gulf of Carpentaria on the W., and the S. Pacific Ocean on the E.; lat. $10^{\circ} 38^{\prime}$ S. ; lon. $142^{\circ} 33^{\prime}$ E. ; separated by Torres Strait from l'apua, from which it is distant about 100 m . It is generally ligh and roeky, with ocea sional grassy flats between the ridges and the sea; in other places, the preeipices come down to the beach. A shallow recess at the extremity of the Cape, which has veen called Evan's Bay, lat. $10^{\circ} 45^{\prime}$ S. ; lon. $142^{\circ} 38^{\prime}$ E., was visited by the surveying expedition commanded by Captain Blaekwood, and a very full account given of it by Mr. Jukes, naturalist to the expedition, who considers it, as regards climate, one of the comparatively favoured spots of Australia, frequent showers falling there throughout the whole year, and thus permitting the existence of permanent fresh waterpools, and green grass during even the driest season. Garden ground and grass land, to a cousiderable extent, is also obtainable, with situations for houses easily defensible, and exposed to the full draught of a
character ; the surface is for the most part stoney, and often barren. Rain seldom falls; water is scaree, and generally, too, of indifferent quality, while the climate is decidedly unhealthy, intense heat prevailing from November to July, and storms and fogs during the remainder of the year. The largest of the islands is Santiago. It is 32 m . long and 15 broad, and though possessing a few fertile spots, is generally mountainous and sterile. Its town, Porto Praya, has an excellent harbour, though inferior to that of Porto Grande in St. Vincent, which is the best in the whole group. The chief products are maize, rice, and haricots, bananas, guavas, lemons, oranges, pine apples, cocoa nuts, figs, and melons. The vine yields two crops a year, and good wine might be made, but the Government prohibits it. Coffee has been successfully introduced; the cotton and indigo plants are indigenous, and both they and the sugar cane are partially cultivated. Orchil, onee monopolized and then set free, has again been monopolized by the Government, on the ground that the deterioration produced by the free traders had diminished the quantity exported, and seriously affected the reveme, which, from orchil alone, has in some years reached $£ 24,000$. The principal trees are the palm, tamarind, and baobab; the chief domestic animals are goats, asses, and poultry. Monkeys, wild cats, and pigeons abound, but there are no serpents or venomons reptiles. Numerous turtles frequent the coasts, and whales are captured in the neighbouring seas. On the shores of all the islands amber is found. The chief manufaeture is salt; the others are linen, leather, soap, and carthenware. In 1842, the number of vessels entered was 78 (7446 tons), and cleared 76ه(7446 tons). Of these, 32 Portuguese entered, and 32 cleared; 28 British entered, and 26 cleared. The natives are indolent but inoffensive, and speak a Portuguese jargon, called Lingua Creoula. These islands, with some possessions on the coast, form the Portuguese province of Cape Verd, of which the capital, formerly Porto Praya, is now Mindello, in St. Vineent. In 1850, the island of San Nicolas was visited by measles and hooping cough, which, in four months, carried off 700, in a population of 4500 , and scarcely an individual eseaped the malady; and in September, of the same year, a hurricane, in three or four hours, destroyed about 400 houses, and swept away
refreshing sca-breeze. anchorage is safe. But and of a most important kind, according to Mr. Jukes. In eases of accident to vessels in Torres Strait, where accidents are frequent, from the intricate and dangerous nature of the navigation, Cape York, were it made the site of a station, would afford a ready place of refuge to those who might escape in boats. Its rocky elevations, besides, render it a conspicuous object from the sea. In a military point of view, also, it would be important, in respect of affording protection, in case of war, to our commerce between the S. Pacific and Indian Oceans; and in the event of steam commnnication being established between India and New S. Wales, by way of Torres Strait, Cape York would necessarily become one of the coaling stations. Mr. Jukes deseribes the natives he met with here as quiet and friendly, but of very low intelligence. They had the thin-legged, spare, lanky form, of all the Australian people. Their hair, however, was like that of Europeans, and worn either straight, or waving in broad open curls. Houseless and lomeless, without any kind of cultivation, and destitute of fruits and vegetables, they pass their lives either in the search for food, or in listless indolence. 'These Australians,' says Mr. Jukes, 'sat listlessly looking at us, standing where we told them, fetching anything or doing anything we ordered them, with great docility indeed, but with complete want of interest and curiosity. On our shooting a kite or two, they instantly seized them, plucked off some of the feathers, and then warming the body a little at the fire, tore it open and eat it, entrails and all.'-(Jukes's Narrative of the Surveying Voyage of II.M.S. Fly, in 1842-1846.)

CAPEI, four pars. Eng. :-1, Surrey; 4990 ac. Poן. 983.-2, (le Ferne) Kent; 1490 ac. Pop.247.-3, (St.Andreu) Suffolk; 2400 ac. Pop. 222.-4, (St. Mary) Suffolk; 1210 ac. Pop. 608.

CAPELLADAS, a tn. Spain, Catalonia, prov. of, and 34 m. W.N.W. Barcelona, in a fertile plain. It contains a parish chureh, chapel, seven sehools, a townhall, prison, hospital, cemetery, and some public baths. The inhabitants are chicfly employed in weaving coarse eloth, cotton and woollen fabrics, paper making, distilling brandy, and in agriculture. Pop. 2798.

Capelle properly, Grevelduin Cairelle, a vil. Holland, prov. N. Brabant, 12 m . W.S.W. Hertogenboseh; with a handsome chureh, school, and two annual markets. I'op. 1160.

CAPELLE-op-dex-Yssel, a vil. Holland, prov. S. Hulland, 4 m. E. by N. Rotterdan. It has a church with a fine tower, a school, a branch of the Public Utility Society, and a literary association. Pop., including surrounding hamlets, 1050.

CAPES'TANG [auc. Caput Stagni], a tn. France, dep. Herault, $9 \mathrm{~m} . \mathrm{W}$. Beziers, on the Canal du Midi, and near the N. bank of an extensive lagoon, to which it gives its name. It is surrounded by walls flanked with towers, both in a ruinous condition. The church contains some Gothic sculptures, and within the town are the remains of a Roman bridge. Pop. 1831.

CAPESTERRE (LA).-1, Le Marigot, a tn. W. Indies, isl. Guadeloupe, 9 m. E.N.E. La Basse-Terre, at the S.E. angle of the island and at the mouth of the Riviere-aux-Pères. It is the capital of the most fertile and salubrious district of the colony. Coffce, cacao, and sugar, are cultivated around it.2, A th. W. Indies, S.E. coast isl. Maric-Galante, cap. of a district.

CAIPSTRAN(), a tn. and com. Naples, prov. Abruzzo, Ultra 11., $23 \mathrm{~m} . \mathrm{S} . \mathrm{E}$. Aquila. It is situated on a hill, on which there is a castle, contains two handsome churches and a convent, and has two anual fairs. Pop. 2408.

CAPIBARI, a tn. and several streams, Brazil.- 1, A tn., prov. of, and 120 m . W. São-Panlo, on a stream of its own name, an affluent of the Tieté. It has a church and school; and the building of canoes, and the distilling of brandy, are carried on. Pop. 2000.-2, A river, prov. São-Paulo, falling into the Tieté on its l. bank, 22 m . Lelow Porto-Feliz. It traverses the town of its own name, and its banks are covered with timber suited for building canoes of the largest size.3 , A river, prov. Santa-Catharina, falling into the Tubarão, about 10 m . from the sea. It is havigable for about 30 m . -4, A river, prov. São-Paulo, a tributary of the Ivahy, an affluent of the Parana.

CAPlBARIBE, a river, Brazil, prov. Pernambnco, rising in lat. $7^{\circ} 50^{\prime}$ S.; lon. $37^{\circ} 45^{\prime}$ W.; flowing E. and S., and falling by two mouths into the Bay of Recife. It is navigable for canoes and flat-bottomed boats a considerable way inland. Total course about 200 m ., exclusive of windings.

CAPISTRELLO, a vil. and com. Naples, prov. Abruzzo Ultra II., $5 \mathrm{~m} . \mathrm{S} . \mathrm{S}$. W. Avezzano, 3 m . W. Lake Fucino. It contains two churches and an hospital. Pop. 1300.

CAPITANA'TA, a prov. Naples, on the Adriatic, comprising the small group of Tremiti and the islet of Pianosa, bounded N. and E. by the Adriatic, S. by provs. Bari and Basilicata, and W. by Principato Ultra and Sannio: area, 3173 sq. m. W. and N. it is intersected by spurs of the Appenines, one of which terminates in the wooded promontory of Gargano. S. and E. extends a vast sandy plain, called the Tavoliere di Puglia, on the excellent pastures of which more than a million and a half of sheep are annually wintered. The coast is gencrally low, and has no good port. The province is well watered by the Candelaro and its affluents, the Cervera, and the Carapella, all flowing to the Adriatic Wheat, though cultivated only in the valleys, is superabundant ; legumes, fruit, and liquorice, are plentiful; the wines produced are in general good, especially those of San Giovanni, Viesti, and Manfredonia; and likewise the olive oil of Gargano; tobacco and manna are also cultivated. The principal riches of the province, however, consist in fine large cattle, esteemed horses, and sheep, the last yielding excellent wool. Goats and pigs are reared in large numbers. Marine salt is gathered in the lagoons, and good potter's clay, limestone, and alabaster are obtained. There is little fishing, and no manufactures. Trade in grain, fruits, liquorice, honey, and wood; horses, cattle, wool, cheese, and hides. Its capital is Foggia ; ports, Viesti, Manfredonia, and Rodi. The province is divided into three districts, Foggia, Bovino, and San Severo, comprising 28 circondario, and 62 comune. Pop. 294,055.

CAPIVARI, a tn. Brazil, prov. Rio-de-Janciro, near Cabo Frio, with two churches, and inhabitants engaged in agriculture, and in felling and preparing timber for the marbet at Rio-de•Janeiro. Pop., tn. and dist., 3000.

CAPIZ.-1, $\Lambda$ prov. Philippines isl. Panay, N. coast, and including several small adjacent islands, is about 80 m . E. to W., by 57 N . to S. It is undulating, and its lower grounds are flooded in the wet season, rendering it fertile in rice. It has several rivers, some of which are filled with crocodiles. None of them appear to be navigable, but all are well wooded. The coasts are dangerous at certain scasons, but they have two excellent safe harbours, that of Bataan and that of Capiz, both capable of admitting vessels of medium size. Gold and silver are found in the province. -2, A tn., cap. of above prov., on a plain near the sea, and surrounded by the rivers Panay, l'anitan, and lvisan, with some houses of stone, and the remainder of nipa palm. It is defended by a fortlet and a small garrison. In the rainy seasons it is sometimes inundated. The iuhabitants are laborious, and fond of commerce and fishing. Pop. 11,145.

CAPIZZI [anc. Capitum], a tn. Sicily, prov. Messina, 10 m . S.E. Mistretta. Marble, petroleum, asphaltum, and iron pyrites are fomnd in the neighbourhood. Pop. 3488.

CAPLE, par. Eng. Kent; 1630 ac. Pop. 516.
CAPO-di-Sepra, and Capo di-Sotta [called also Capo-di-Sassari, and Capo-di-Cagliari], the two govs. into which isl. Sardinia is divided; the former the N., and the latter the S.

CAPO D'ISTRIA [anc. Agida], a seaport tn. Austria, Illyria, gov. of, and 9 m . S.S.W. Trieste, on a small rocky island, Gulf of Trieste ; lat. (church) $45^{\circ} 32^{\prime} 42^{\prime \prime}$ N. ; lon. $13^{\circ} 44^{\prime} 15^{\prime \prime} \mathrm{E}$. (R.) It is connected with the mainland by a causeway of about $\frac{1}{2} \mathrm{~m}$. long. It is defended by an old fort, now going to decay. Ruined walls, falling houses, and dark narrow streets, give it a very gloomy appearance. It contains a cathedral, a lofty edifice, faced in the Venetian style with marble, and containing some fine paintings, sculptures, and arabesques; several other churches, a handsome Gothic townhouse, a corn exchange, and theatre. It is the seat of a bishopric, and has six monasteries and two nunnerics, a gymnasium, two superior schools, several hospitals, and a penitentiary. The town is very inadequately supplied with water by an aqueduct, and from rain cisterns. There are manufactures of soap, candles, leather, and sea salt, about 18,000 bushels of the latter being manufactured yearly; and a considerable trade, besides, in wine, oil, and fish, the fisheries being pretty extensive. The harbour is capacious, but is resorted to by fishing boats only. After the 10th century, Capo d' Istria belonged alternately to the Venetians and Genoese, and was made by the former, in 1478, the capital of Istria. Pop. 6300.

CAPODRISI, a vil. and com. Naples, prov. Terra di Lavoro, $3 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Caserta. It contains a handsome church, adorned with pictures and statues, and a charitable endow ment. Pop. 2415.

CAPOONACAUGANY, a river, Upper Canada, rising in some lakes N . side the ridge of hills running parallel to Lake Superior. It flows N., joins the Necaugany, and subsequently falls into the Albany, lat. $51^{\circ} 5^{\prime} \mathrm{N} . ;$ lon. $85^{\circ} 30^{\prime}$ W., about 200 m. W. by S., the entrance of the latter into St. James's Bay.

CAPOSELE, a tn. Naples, prov. Principato Citra, 12 m . N.N.E. Campagna, near the source of the Sele. Pop. 4480.

CAPPADOC1A, an anc. prov. Asia Minor, now included in Asiatic Turkey; bounded, N. by Pontus, E. by the Enphrates and Armenia Minor, S. by Mount Taurus, and W. by Phrygia and Galatia, between lat. $37^{\circ} 16^{\prime}$ and $39^{\circ} 28^{\prime}$ N. lon. $32^{\circ} 50^{\prime} 18^{\prime \prime}$ and $39^{\circ} \mathrm{E}$. It is mountainous and well watered, and was celebrated for the production of excelleut wheat, as well as for its fine pasture, and its superior breed of horses, asses, and sheep. It was subdued by the Persians under Cyrus; and after the time of Alexander the Great, it was governed by kings of its own, till A.D. 17, when Tiberius reduced it to the form of a Roman province. Christianity was early propagated in Cappadocia, as we learn by the address of the first general epistle of the apostle Peter.

CAPPADOCIA, a vil. and com. Naples, prov. Abruzzo Ultra II., 8 m . W.S.W. Avezzano, a little N.W. of the hill in which the Liri rises. Pop. 1771.

CAPl'AGH, 2 pars. Ireland.-1, Limerick; 1268 ac. Pop. 755.-2, Tyrone; 37,671 ac. Pop. 13,330.

CAPPAGHWHITE, a vil. Ireland, co. of, and $7 \mathrm{~m} . \mathrm{N}$. Tipperary. It is a constabulary police station, and has five annual fairs. Pop. 1046.

CAPDANACUSHY, a group of islets and an old castle, Ireland, co. Kerry. The islets are situated 3 m . W. Kenmare, at the head of the estuary of the river of same name; and the remains of the castle are on the mainland opposite.

CAPPEL, a vil. Switzerland, can. of, and 10 m . S.S.W. Ziirich. It contains an old Cistercian convent, founded in 1185 ; a poorhouse, once the prefecture ; a presbytery, sclioollouse, \&c., and a simple monument, erected, in 1838, in memory of Zwingle, the eminent reformer, killed Oct. 12, 1530 , in a contest between the troops of the R. Catholic and Protestant cantons, which took place near Cappel. P. 578.

CAPPELN. See Kappeln.
CAPPOGE, par. Irel., Louth; 1284 ac. Pop. 568.
CAPRAIA, or Capraja [anc. Egilium], an isl. Sardinian States, Mediterranean, 22 m. N.W. Elba; lat. (castle, E. side) $4 t^{\circ} 2^{\prime} 36^{\prime \prime} \mathrm{N}$. ; lon. $9^{\circ} 50^{\prime} 45^{\prime \prime} \mathrm{E}$. (n.) It is of volcanic origin, about 12 m . in circumference, mountainous, and of difficult approach, except on the E. side, where the town of Capraja is situate. The port liere is safe, and defended by a fort. Wine is the only produce of the island. Most of the inhabitants are fishermen. Wild goats now, as formerly, abound in it. Pop. 2500.

CAPRARA. See Tremiti Islands.
CAPRAROLA, a tn. Papal States, deleg. of, and 9 m . S.E. Viterbo, containing a celcbrated castle, built on the slopes of Mount Cimino, said to be the inasterpiece of the architect Vignola, and to be unrivalled, at least in Italy, as a specimen of the fortified domestic architecture of the 16 th century. It was built for Cardinal Alessandro Farnese, nephew of Pope Paul III., and is richly dccorated with frescoes and arabasques, each room being devoted to some incident in the history of the Farnese family, or to some allegorical subject.

CAPRERA, a small isl. N.E. the island of Sardinia, and separated from it by a narrow strait. It is 6 m . long N. to s., and nearly 2 m . broad. It is fertile, and produces both corn and good pasture.

CAPRI [anc. Capreax], an isl. belonging to Naples, Mediterranean, $3 \frac{1}{2} \mathrm{~m}$. E. Cape Campanella, which separates the Gulf of Naples from the Gulf of Salerno; lat. (S. point) $40^{\circ} 32^{\prime}$ N. ; lon. $14^{\circ} 11^{\prime} 45^{\prime \prime} \mathrm{E}$. (R.) It is about 9 m . in circumfer ence, and is surrounded by perpendicular cliffs, which afford only one landing-place. The island consists of two mourtains of limestone, remarkable for their picturesque shape; and between them lies a well-cultivated valley, which yields grain, the choicest grapes, olives, and other fruit. The inhabitants are occupied in the production of oil and wine, in fishing, and in catching quails, which come in immense numbers from Africa to the sloores of Italy. Rows of nets are placed across the breaks in the woods and chasms in the rocks, to intercept these birds in their annual flights, and the quantity taken is almost incredible. The climate is remarkably fine, and a residence in Capri is recommended in cascs of chronic-bronchitis. The island is supposed to have been originally peopled by a tribe from the Epirus. The Emperor Augustus resided here during his illness; and Tiberius made this place the scene of his debaucheries during the last ten years of his life. IIe is said to have built 12 villas in different parts of the, island, but, after his death, they were destroyed by order of the senate. Numerous ruins and fragments of ancient monuments still remain, among which is a temple cut in the side of a hill, said to have been dedicated by Angustus to his mother; besides portions of aqueducts, baths, and palaces. The island contains two towns, Capri and Anacapri. Capri is the seat of a bishop. It is built on the acclivity of a hill, and contains a cathedral, and some other churches. Pop. about 1800.-(Sce Anacarri.) Pop. of isl., 3301.

CAPRIATA, a vil. Sardinian States, Piedmont, div. Genoa, prov. of, and 7 m. S. W. Novi, r. bank, Orba. P. 2365.

CAPRICORN (Cape), Australia, N.E. coast, about 30 m . N. Port Curtis; lat. $23^{\circ} 18^{\prime} \mathrm{S}$. ; lon. $151^{\circ} 43^{\prime}$ E. (r.)

CAPRICORN (Gnour), an assemblage of islets and reefs, N.E. coast Australia, laving $152^{\circ}$ meridian and the tropic of Capricorn passing through them, whence their name. They are all much alike in their geological characteristics, and general features. One of them, called First Bunker's Island, about a quarter of a mile in diameter, is composed of coarse fragments of worn corals and shells, bleached by the weather. At the back of it a ridge of the same materials, 4 or 5 ft . high, and as many yards across, completely encircle the island.

Inside this ridge, on which is a belt of small trees, is a sandy plain covered with a short scrubby vegetation, a foot or two in height. Between the trees on the ridge, and in some other spots, there is a thin layer of vegetable soil. The island abounds with sea fowl and other aquatic birds, especially black noddies, with whose nests the trees are laden. Most of the islands are encompassed by coral reefs, with lagoons inside, in which sharks and turtle swim about in great numbers, the former of immense size and strength. Turtle is so abundant, that 'one night,' says Mr. Jukes, 'Lieut., now Commander, Slaadwell, being on one of the islands observing star altitudes, was actually obliged to place sentries round him, to prevent the turtle from running over his artificial horizon as it lay on the ground.' They were chiefly green turtle, and the kind called loggerheads.-(Foy. II.M.S. Fly, 1842 to 1846.)

CAI'RIN'(), two tns. Austrian Italy. $-1, \Lambda$ tn., gov. Venice, prov. of, and 16 m. N.E. Verona, cap, dist. of same name, on the small river Ri, a tributary of the Adige, and surrounded by liills. It contains a parish and a subsidiary chureh, three chapels, and a record office for the district. Pop. $3500 .-$ 2, A tn., gov. Milan, prov. of, and 10 m . W.N.W. Bergamo, near 1. bank, Adda. It is well built and clean, and comprises a spacious chureh, townhall, public library, and convent. Hardware, and weaving silken and woollen fabrics, is carried on. Pop. 1419.

CAPRYCKE, a tn. and com. Belgium, prov. E. Flanders, 12 m . N.N.W. Ghent, with a tannery, three breweries, two roperies, and manufactures of wooden pumps and clogs. There is also some trade in agricultural produce, wood, cattle, and linen. Pop. 3859.

CAPSALI, a scaport tn . Ionian Islands, cap. of Cerigo, near S. side of the island, upon the slope of a mountain. It has a commodions liarbour, defended by a fort. Pop. 5000.

CAPUA [anc. Capoa and Capua], a city, Naples, prov. Terra di Lavoro, in a plain 18 m . N. Naples, 1. bank, Volturno, which is crossed by a handsome bridge. It is the seat of an archbishopric, is well fortified, has a strong citadel, and is reckoned one of the keys of the kingdom, being the principal fortress that covers the approach to Naples. It has two magnificent gates, three principal streets, two handsome squares, and three public fountains. The town is dirty, but the houses are well built. The principal public buildings are the cathedral, with a cupola, supported by 18 columns; the church of the Annunciation; the governor's palace, and the townhall. There are also 18 parish churches, several convents for both sexes, a scminary, a college, military school, extensive barracks, four hospitals, and a handsome theatre. A noted fair is held here amnually on Dec. 26.

The ancient city was situated $2 \frac{1}{2} \mathrm{~m}$. S.E. from the modern town, which was built from its ruins by the Lombards in the 9 th century. The site is now occupied by a considerable town, called Santa-Maria-di-C'apoa. The ancient Capua, ono of the finest and most agrecable cities of Italy, was of such extent, as to be compared to Rome and Carthage. Ilannibal wintered at ancient Capua after the battle of Cannæ. It was a favourite place of resort of the Romans, on account of its agreeable situation and its healthy climate ; and many cxisting ruins attest its ancient splendour. Pop. 8100.

CAPUL, isl. Indian Archipelago, one of the Philippines off the N.W. coast Samar ; lat. $12^{\circ} 31^{\prime} \mathrm{N} . ; \operatorname{lon} .124^{\circ} 9^{\prime} \mathrm{E}$.

CAPURSO, a tn. and com. Naples, prov. of and 7 m . S.S.E. Bari ; in a plain, and celebrated for its almonds. Pop. 3160.

CAPUTII, par. Scot., Perth; 16,000 ac. Pop. 2317.
CARA, a small isl. Scotland, co. Argyle, at the S. side of Gigha, with which it forms a parish. See Gigha.

CARABANCHEL Alto y Bajo, two vils. Spain, New Castile, prov. of, and 3 m. S. Madrid, each possessing a church, schools, town and session houses, and being adorned with villas, gardens, fountains, \&c., belonging to the nobility of Madrid. United pop. 1804.

CARABOBO, a pruv. Venezuela, bounded by Coro and the Caribbean Sea N., Caracas E., Varinas S., and Truxillo W.; area, $8148 \mathrm{sq} . \mathrm{m}$. Its principal productions comprise coffee, wheat, tobacco, indigo, and cotton. Valencia is the capital, 30 m . S.W. from which is the village of Carabobo, whence the province is named, and where a decisive battle was fought in 1821, which sccurcd the independence of Columbia. Pop. 96,967.

CARACA, a mountain range, Brazil, prov. Minas-Geraes, N. of the city of Marianna. It is a portion of the cordillera of Mantiqueira, being one of its highest ranges; and liquorice, ialap, sarsaparilla, and other medicinal plants, grow naturally on it.

CARACAS, a group of six small uninhabited isls. Caribbean Sea, coast of Venezuela, a little W. Cumana.

Caracas, Santiago-de-Leon-de-Caracas, a tn. S. America, cap. of Republic and of the dep. Venezuela, and of prov. Caracas, 3000 ft . above the level of the sea, 11 m . S.S.E. La Guayra, from which it is separated by a chain of mountains, whose highest point on the road is 5160 ft ; lat. $10^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $66^{\circ} 54^{\prime}$ W. (r.) The river Guayra bounds it on the S., and is everywhere fordable near the town, excepting after heavy rains, when it runs with great rapidity, but subsides almost as suddenly as it rises. Three other streams pass close to the town, namely, the Arauco, across which is a handsome bridge ; the Caroata, which separates one part of the city from the rest, and across which is another bridge; and the Catncho. The town is well and regularly built, the streets being in general about 100 yards apart, and intersecting each other at right angles. They are almost all furnished with fountains. The houses are solidly built of brick or earth, faced with stuceo, often richly decorated. Many of them have terraced roofs. There are several squares, the chief of which is the Plaza Mayor or Great Square, where the market for fruits, vegetables, fish, \&c., is held; the E. side is principally occupied by the cathedral, a clumsy structure, which was much damaged by an earthquake in 1826 ; the S . by the college; and the W. by the public prison. The chief public buildings are the elnurelies, of which there are seven, all solidly built, and in the interior richly ornamented; and the convents, of which there are five-three for monks and two for unus. The most splendid church is that of Alta Gracia. From the Catucho the town is well supplied with water, which is dispensed to the inhabitants in public fountains, as well as in pipes and reservoirs. Caracas is the seat of an archbishop, and has a university, founded in 1778, and three hospitals. Its trade is considerable, and consists of the products of the adjacent fertile valleys. For its exports, see La Guayra. The climate is liealthful, but earthquakes are common, that of 1812 destroyed nearly all the houses, and upwards of 10,000 of the inhabitants; and though the town has been rebuilt, the houses are inferior to what they were before that dreadful visitation. The city, founded in 1567, by Diego Losada, was formerly the capital of the Captain-generalship of the Caracas, and is the birthplace of Bolivar. Pop. about 50,000 .-The province lies between lat. $7^{\circ} 38^{\prime}$ and $10^{\circ} 26^{\prime}$ N., and lon. $65^{\circ} 30^{\prime}$ and $68^{\circ} \mathrm{W}$.; bounded, N. by the $\mathrm{Ca}-$ ribbean Sca, W. Carabobo and Varinas, S. Achaguas, and Venezuela and Guiana, and L. Barcelona; area, 45,264 geo. sq. m. The surface is partly mountainous and partly flat; the former towards the sca coast, where several deep indentations occur, and form good harbours and roadsteads; the latter towards the interior, and particularly towards the S., where the country stretches out into vast plains. The most important vegetable production of the province is cacao, the quality being the best of all that is brought to the European market; but all the usual tropieal erops are grown in perfection, among which may be specified coffee and indigo. The province is divided into 16 cantons, of which that of $\mathrm{Ca}-$ raccas, containing the capital, though not the largest, is the most fertile and best peopled. Pop. 242,888.

CARACOL, Banathogo, or ()xiba, a river, New Granada, prov. Guayaquil, rising on the N. side of the mountain Carguairazo, about $85 \mathrm{~m} . \mathrm{S}$. by W. Quito, and after a S.S.W. course of 90 m ., for the greater part of which it is navigable, falling into Lake Sambovamban, 25 m . N. Guayaquil.

CARAGLIO, a tn. Sardinian States, prov. of, and 7 m . W. Coni, on the Grana. Spunsilk and silk fabrics are manufactured here. Pop. 6000.

Caliman, and Caramania. See Karaman and Karamania.

CARAMAN, a tn. France, dep. Ilaute Garonne, 16 m . E.S.E. Toulouse. It has numerous fairs. Pop. 1381.

CARAMNASSA, a river, Hindoostan, which separates the prov. of Bahar from that of Allahabad. It rises in a hilly disirict, about 55 m . S.S.E. Benares ; lat. $24^{\circ} 40^{\prime} \mathrm{N}$.; lon. $83^{\circ} 40^{\prime}$ E. ; bends round to a N.N.E. direction, and falls
into the Ganges 10 m . above Buxar. Its whole course is about 75 m .

CARANG ASSEM, a tn. Indian Archipelago, isl. Bali, on the strait of Lombok; lat. $8^{\circ} 42^{\prime}$ S.; lon. $116^{\circ} 34^{\prime}$ E. (r.) Ships may here obtain water, bullocks, logs, and poultry. The country around is fertile and well cultivated.

CARANGAMI'TE, a large, shallow, salt-water lake, S. Australia, dist. Portland Bay, about 50 m . W. the town of Geelong. It is upwards of 90 m . in cireumference, but to the S. it is so shallow, as to be crossed by the natives for a distance of 15 m . ; it is deeper to the N .

CARANJA, an isl. W. coast, Hindoostan, between Bombay and the mainland; lat. $18^{\circ} 53^{\prime} \mathrm{N}$. ; lon. $73^{\circ} \mathrm{E}$. It is 4 m. long and 2 broad, and is low and woody, excepting two remarkable hills, called Great and Little Caranja Hills, the former near the S. part of the island, the latter on the N . Great Caranja is very conspicuous, being of a tabular form, with a steep declivity at each end.

CARANO, a small vil. Austria, Tyrol, prov. of, and 21 m . N.E. Trent, r. bank, Aviso, in the vicinity of which are calcareous and saline springs; temperature $38^{\circ}$ to $40^{\circ}$, clear, and of an earthy flavour, and said to be efficacious in cutaneous affections. Pop. 804.

CARATE, a tn. Austrian Italy, prov. of, and 15 m . N. Milan, L. slope of a hill, r. bank, Ailda, here crossed by a wooden bridge. It was formerly fortified, and in its vicinity several engagements have taken place. Silken, woollen, and linen fabrics are woven. Pop. 2282.

CARAVACA, a tn. Spain, prov, of, and $43 \mathrm{~m} . \mathrm{W}$. by N. Murcia, on the side of a hill crowned by an ancient castle, 1 . bank, C'aravaca, here crossell by a stone bridge. The houses are generally commodious, well constructed, and in many cases adorned with iron balconies. Most of the larger streets are wide, paved, and clean; there are five squares, the prineipal of which contains the Government-house, head inn, prison, and townlall, the last a spacious and handsome structure, with an elegant balcony and a central arch, forming an entrance from the square into the principal street, and into the edifice itself. The parish church, a fine specimen of the Ionic style, completed in 1600, has a lofty tower of hewn stone; its interior is tastefully decorated, and contains numerous monumental and pictorial works of considerable merit. There are, besides, several conventual churches and a variety of chapels. The remaining public buildings are two hospitals, a theatre, cemetery, and numerous schools. Manufactures:-linen, woollen, and hempen fabrics, paper, soap, earthenware, copper vessels, leather, brandy, oil, and winc. There are also extensive chemical and dye works, and flour-mills. Trade:in cattle, grain, and manufactured goods. A yearly fair is held for general merchandize. Pop. 26,572.-(Madoz.)

CARAVAGGIO, a tn. and com. Austrian Italy, gov. Milan, prov. Bergamo, 24 m . E. Milan, on the Gera d'Adda, between the Adda and Serio. It was surrounded by walls, and defended by a strong castlc. These have been recently demolished, but the deep fosse, filled with water, still remains, and six bridges over it give aucess to the town, which has several churches, an hospital, and a mont-de-piété. In the principal church are some good paintings by Campi; and near the town is the sanctuary of the Madonna, built, in 1575 , from the designs of Pellegrino Tibaldi, picturesquely situated and adorned with some fine paintings. This town is famous for being the birth-place of the two great painters, both called 'da Caravaggio,' Polidoro Caldara, the scholar of Raphael, and Michael Angelo Merigi. The commune is fertile. It produces all kinds of grain in abundance, and is scattered over with mulberry trees. Its melons are large and of excellent quality, and yield a considerable revenue to the peasantry, who cultivate them on their own account, renting ground for the purpose. Pop. 6203.

CARAVELLAS, a maritime tn. Brazil, prov. Bahia, on a bay of same name, into which flows the river Caravellas; lat. $17^{\circ} 42^{\prime} \mathrm{S} . ;$ lon. $39^{\circ} 15^{\prime} \mathrm{WV}$. It is agreeably situate on a rising ground, and three of its streets run parallel to the shore. It has two churches, a Latin and a primary school; and it exports manioc flour, coffee, and fish; the former two cultivated extensively in the district. Pop., th. and dist. 5000 .

CARBONARA, a tn. Naples, prov. Principato Ultra, 17 m. E.N.E. St. Angelo de Lombardi. Pop. 2886.

CARBONNE, a tn. France, dep. IIante Garonne, 24 m . S.S.W. Toulouse, agreeably situate l. bank, Garoune, not far from where it receives the Arize. It has some woollen manufactures, a fulling-mill, dye-works, brick and tile works. Its trade is in oil and wool. Pop. 1328.

CARBROOKE, par. Eng. Norfolk; 3020 ac. Pop. 807.
CARBURY, par. Irel. Kildare; 4797 ae. Pop. 754.
CARCABUEY, a tn. Spain, Andalusia, prov. of, and 34 m . S.E. by S. Cordova. It has narrow and irregular streets, a square, which contains the townhouse and prison, a church, store-house, and endowed sehool. The inlabitants are oecupied in weaving and lusbandry. Some little trade is also done in grain, wine, oil, and eattle. Pop. 3396.-(Madoz.)

CARCAGENTE, or Carcaxente, a tn . Spain, prov. of and 28 m. S. by W. Valencin, in a fertile and beautiful plain r. bank, Jnear. The houses are well built and spacious forming wide and elean streets. The principal square is large, lined with bandsome dwellings and shops, and contains a spacious and elegant modern townhouse and prison. There are likewise a parish church, several chapels, two convents, an hospital, almshouse, cemetery, some primary sehools, and an extensive palace of the Marquis of Calzada. In the environs are delightful promenades and gardens. Trade:-in grain, fruits, and silk. Pop. 7280.

CARCASSONNE, a city, France, cap. dep. Aude, intersected by the Aude, and on a branch of the Canal du Midi, $53 \mathrm{~m} . \mathrm{S}$. Toulouse; lat. $43^{\circ} 12^{\prime} 55^{\prime \prime} \mathrm{N}$. ; lon. $2^{\circ} 21^{\prime} 9^{\prime \prime} \mathrm{E}$. (t.) It consists of two parts, on the opposite sides of the river, which is here crossed by a bridge of 10 arches, the New Town in a plain, l. bank, and the Old Town on a hill, r. bank. The former is surrounded by double walls, and has a castle. A portion of the inner line of ramparts and towers is attributed to the Visigoths, and the rest, including the castle, seems to be of the 11 th or 12 th century. The streets are narrow, dirty, and desolate, the houses falling to ruin, and those that are inhabited, tenanted only by the poorest class. It contains the church of St. Lazarus, formerly the cathedral, within whieh, near the high altar, may be seen the tomb of Simon de Montfort, who led the infamous crusades against the Albigenses, 400 of whom were here burnt alive. The modern town forms a striking contrast to the old eity. It is cheerful, flourishing, and industrious, consisting chiefly of modern houses in streets at right angles with each other, surrounded

THE NARHONNT. GATE AND TREASUREFOWER, CARCASSONNF Fram Vosakee dans 1 Anctenine France

The cloth manufacture lias long been an inaportant branch of industry; the wool being spme, dyed, and woven here. The large fine-woollen eloth manufactories, of which there are seve ral, give employment to 7000 persons. The eloth is exported chiefly to the Levant, Barbary, and S. America, where it is esteemed for its brilliant dyes. There are also distilleries, tameries, manufactories of paper, soap, woollen coverlets, stockings, linens, and nails. A good trade is also done in wine, grain, flour, frnits, brandy, leather, and hardware. In the time of Cæsar, Carcassonne was a place of considerable note, and held a high rank among the Narbonnese towns. The Visigoths fortified it, and built some of the existing walls and towers. In 1209, it sustained a memorable siege by the army of fanaties who had been sent to extirpate the Albigenses. Want of water eompelled the latter to eapitulate, when scenes of miserable atrocity followed. Pop. 15,380 .

CARCELEN, a tn. Spain, Murcia, prov. of, and 24 m . E.N.E. Albacete, at the foot of a hill. The streets are narrow and steep, and the only square contains the townhouse, prison, and a ruined tower. The town also possesses a church, poorhouse, cemetery, and two schools. Manufactures :woollen and linen fabries, oil, and a little wine. There are marble quarries in the vicinity. An annual fair is held in August. Pop. 2019.

CAR-COLSTON, par. Eng. Notts; 1200 ac. Pop. 276.
CARCES, a tn. France, dep. Var, agreeably sitnate at the confluence of the Issole and Argens, 16 m . W.S. W. Dragnignan It has silk mannfactures, tanneries, and distillcries. Pop. 2101.

CARDIFF [Welsh, Caerdydd], a parl. bor. and seaport, S. Wales, cap. Glamorganshire, 1. bank, Taff, over which there is a haudsome briclge of three arches, leading to swansea, 3 m . S.E. Llandaff ; lat. (custom house) $51^{\circ} 28^{\prime} 36^{\prime \prime}$ N.; lon. $3^{\circ} 10^{\circ} \mathrm{W}$. (r.) The principal streets are well built, paved, and lighted with gas, and eontain some good houses and shops: but those parts of the town inhabited by the poorer class have a mean appearance. On the N . side is an ancient castle, in a tower of which Robert, Duke of Normandy, was confined for 28 years, and had his eyes put out by his brother Henry I. This eastle has been modernized by its proprietor, the Marquis of Bute, who converted a part of it into a dwell-ing-house. The chureh of St. John has a lofty and elegant spire, forming a fine feature in the gencral aspect of the town. Besides two established churehes, there are places of worship belonging to Wesleyans, Baptists, Independents, Calvinistic Methodists, and IR. Catholies, with an infirmary, free sehool, and a number of other sehools and charities. The other public buildings are a county jail, guildhall, and theatre. The town is governed by a mayor, six aldermen, and 18 councillors; and, conjointly with Cowbridge and Llantrissent, the borough returns a member to the House of Commons. There are no manufactures in Cardiff, the inhabitants depending almost exclusively on the shipping, and on the coal and iron-works in the neighbourhood. The accommodation for slipping being formerly deficient, the Marquis of Bute greatly extended it by construeting a canal and two spacions docks. The commerce is steadily on the increase, and is already very considerable. In 1848, there were shipped for exportation:-iron, 225,819 tons ; coals, 659,800 tons; and 121,224 tons of iron ore were imported. Besides iron and coals, considerable quantities of till are exported from Cardiff, also oats, barley, butter, and poultry. The Taff Vale and $A$ ber dare Railway has a station here. Pop. (1840) 10,077.(Local Correspondent.)

CARDIGAN, or Cardigansmire, a maritime en. S. Wales, having N. cos. Merioneth and Montgomery, E. cos. Radnor and Brecknock; S. Cacrmarthen aud Pembroke; and W., Cardigan Bay. Extreme length, N.E. to S.W., about 43 m. ; extreme breadth, E. to W., about 20 m . ; area, $432,000 \mathrm{ac}$. The surface of this county, like that of nearly all the other Welsh counties, is mountainous and harren, with the frequent occurrence of beautiful and fertile valleys. The mountains are, in general, destitute of wool, and present a bleak appearance; some of them attain a considerable height; the loftiest, Plinlimmon, reaching an elevation of 2463 ft . The soil of the elevated parts is chiefly a light loam, intermixed with sand. The valleys of the luwer districts have a brown mould,
which is extremely favourable to the growth of grass crops. In other parts, the soil is a stiff argillaceous earth, and very sterile. Its geological formation is chiefly a bard slate of the transition series. Near the sea coast are some productive tracts, yielding good crops of wheat, barley, turnips, and potatoes, and in the hilly districts rye is cultivated, but barley and oats are the principal crop. The science of agriculture has made little progress here, and does not seem to be improving. Dairy husbandry, however, is well attended to. The breed of cattle, horses, and sheep, is small, but the latter is of superior quality, and all are hardy. Pigs and poultry are reared in considerable quantity, and eggs abundant. The mineral productions are silver, lead, and copper; great quantities of these metals were obtained here during the 17 th century, but the mines have since much declined in value, and many of them, particularly those of copper, have been altogether abandoned. Slates are still quarried, but they are of an inferior quality. There being no coal in the county, turf is the universal fucl. There are no manufactures, unless it be the weaving of small quantities of flannel and coarse woollen stuffs. Gloves also are made in the neighbourhood of Aberystwith and Tregaron, which, with Lampeter and Cardigan, are its chief towns, the last being the county town. The county sends one member to the House of Commons; registered electors (1850) 2294. Exports:-oats, butter, and slates; im-ports:-culm, limestone, and deals. Pop. (1851), 70,796.

CARDIGAN, a seaport tn. and parl. bor., Wales, cap. of Cardiganshire, on an eminence on the r. bank of the Teify, here crossed by an ancient stone bridge of seven arches, between 4 and 5 m . from its embouchure in St. George's Channel, 200 m . W.N.W. London. The town consists of two principal streets, with a number of narrow irregular lanes and alleys, formed by mean-looking houses. The church, upwards of 200 years old, is a venerable structure, with windows in the florid pointed style. The townhall and county jail are also handsome buildings. Its ancient castle, the ruins of which occupy a low cliff at the foot of the bridge, is famous in Welsh story; two circular bastions are now all that remains of it. There are places of worship here for various dissenters, a free grammar school, two or three charity schools, and several schools of other descriptions. The harbour is obstructed by a bar, which renders the entrance dangerous in rough weather, and, consequently, seriously affects the trade of the port, which, however, in coasting, is still considerable, though in foreign very trifling. In spring-tides, vessels of 300 to 400 tons can come up to the town, but the general trade is confined to vessels of from 15 to 100 tons. Upwards of 10,000 tons of shipping, employing above 1000 seamen, belong to the port. Cardigan, conjointly with Aberystwith, Lampeter, and Adpar, returns one member to the House of Commons. Pop. (1841) 2925; (1851), 3012.

CARDINGTON, two pars. Eng.-1, Bedford; 5050 ac. Pop. 1466.-2, Salop. ; 6500 ac. Pop. 691.

CARDINHAM, par. Eng. Cornwall; 8550 ac. P. 802.
CARDIOTISSA, a small isl. Grecian Archipelago, belonging to kingdom of Greece, about half way between Sikyno and Polycandro; lat. $36^{\circ} 38^{\prime} \mathrm{N} . ;$ lon. $25^{\circ}$ E. It has a few inhabitants, and a chapel dedicated to the Virgin.

CARDISTON, par. Eng. Salop; 1980 ac. Pop. 372.
CARDITO, a vil. Naples, $6 \mathrm{~m} . \mathrm{N}$. the city of Naples. Silk-worms are extensively reared in the vicinity. Pop. 2730.

CARDIVA, or Karetivoe.-1, An isl. Indian Ocean, Gulf of Manaar, N. W. coast Ceylon, S. end, in about lat. $8^{\circ} 26^{\prime}$ N. It is about 10 m . long and 1 broad, and is mostly low, with sandy patches in some parts, and bushes or trees in others. -2, An isl. Indian Ocean, one of the Maldives; lat. $4^{\circ} 58^{\prime}$ N.; lon. $73^{\circ} 26^{\prime}$ E. (R.) It is nearly 2 m . long, a little more than $\frac{1}{2} \mathrm{~m}$. broad, and is covered with high cocoa-nut trees. This island gives its name to the channel in which it lies.

CARDONA, a tn. Spain, Catalonia, prov. of, and 45 m . N.W. Barcelona, r. bank, Cardener, here crossed by a bridge. It stands on a declivity, is surrounded by walls entered by six gates, and is commanded by a strong castle crowning the summit of an adjacent hill. Its strcets, with the exception of two, are stee $\rho$, but, in general, well paved and clean. There are two squares, both planted with trees, and one of them containing the large, handsome, and ancient parish church; there are also several chapels, a town-house, prison, hospital, small Vol. I.
theatre, cemetery, two convents, and a variety of schools. Manufactures:-linen, woollen, and hempen fabrics, and paper, wine, and oil. Trade:-grain, fruits, cattle, and salt. About 1 m . from the town is the remarkable mass of salt noticed in the article Barcelona. Pop. 2366.

CARDROSS, a par. Scotland, co. Dumbarton, r. bank, Clyde, remarkable only as having been the closing scene of the illustrious career of the victor of Bannockburn and the restorer of the Scottish monarchy, Robert Bruce. About 1 m . from Dumbarton, on the road to the village or hamlet of Cardross, that monarch built a castle, forming the surrounding lands into a park. Here lie sought relaxation in the chase, and here he died, June 7, 1329, his remains being carried to Dunfermline, where they were interred. No vestige of the castle now remains, but the eminence on which it stood retains the name of the Castle-hill. Pop. 4416.

CAREBY, par. Eng. Lincoln; 1590 ac. Pop. 73.
CARENAGE (The), or Port Castries, a tn. and port, W. Indies, isl. St. Lucia. It is the capital of the island, stands at the head of a deep irregularly formed harbour, surrounded by hills, on the N.W. coast; lat. $14^{\circ} \mathrm{N}$. ; lon. $61^{\circ} 1^{\prime}$ W. (R.) The port has deep water, with good anchorage, and shelter from all winds. Red mullet, and various other sorts of fish, may be caught here in abundance by hook and line.

CARENTAN [anc. Carentonum Unellorum], a maritime tn. France, dep. Manche, 14 m. N.N.W. St. Lô, in the midst of unhealthy marshes, l. bank, Taute; lat. $49^{\circ} 18^{\prime} 24^{\prime \prime} \mathrm{N}$.; lon. $1^{\circ} 14^{\prime} 30^{\prime \prime}$ W. (R.) It is built with tolerable regularity, but the houses, in general, are indifferent. It has a castle and fortifications; contains a handsome church, surmounted by a spire; manufactures some lace and cotton goods; and has a trade in cattle, horses, hemp, flax, cider, butter, and honey. Small coasting vessels come up to the town. Pop. 2559.

CARESTON, par. Scot. Forfar ; 3 m . by 1 m . Pop. 218.
CARGILL, par. Scot. Perth ; 6 m . by 4 m . Pop. 1642.
CARGIN, par. Irel., Galway; 3609 ac. Pop. 1369.
CARIIAIX [anc. Caretum], a tn. France, dep. Finistère, on the Illiers, 44 m. E. by S. Brest. It stands on a high hill, and forms the central point of Finistere. Six main roads, leading to Brest, Quimper, Chateaulin, Vannes, St. Brieuc, and Morlaix, meet here. The parish church is said to date from the 6th century ; and the town abounds in old houses, with projecting cornices and carved timber work. There are some tanneries and paper works. Hats, linen, and drapery, are also manufactured. Pop. 1827.

CARHAM, par.Eng. Northumberland; 11,470ac. P. 1282.
CARHAMPTON, par. Eng. Somerset; 6460 ac. P. 682.
CARHUAMAYO, a tn. Peru, 16 m. S. Pasco; lat. $11^{\circ} 5^{\prime} \mathrm{S}$. ; lon. $75^{\circ} 45^{\prime} \mathrm{W} . ;$ a little E. of Lake Chinchaycocha, and $13,087 \mathrm{ft}$. above the level of the sea.

Cariaco, or San Felipe de Austria, a seaport tn. Venezuela, prov. of, and 40 m . E. by N. Cumana, at the head of the gulf, and near the mouth of river of same name, on an extensive fertile plain, covered with plantations; lat. $10^{\circ} 30^{\circ}$ N.; lon. $63^{\circ} 40^{\prime}$ W. The climate is hot and unlealthy. Cotton, cacao, coffee, and sugar, are raised, the first of which is of excellent quality. Intermittent fevers prevail. A good deal of English rum used to be smuggled in here. Pop. 7000. -The oulf, near the mouth of which lies Cumana, is about 38 m . long by 5 to 10 m . broad, lying nearly E. to W. There is good anchorage in all parts of it, the deepest water being 40 fathoms. On either side the land presents an amphitheatre adorned with the most beantiful and varied vegetation. Near the entrance are some mud banks, frequented by innumerable sea fowl.

CARIACO, or Carriaco, one of the Windward Islands, Grenadine group, between St. Vincent and Grenada, 40 m . S. the former, and 20 N . the latter; lat. $12^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $62^{\circ} 30^{\prime}$ W. It is the largest of the Grenadines, being about 21 m . in circumference, but of irregular form. It has two bays on its N. side, and contains a town named Hillsborough.

CARIATI [anc. Paternum], a seaport tn . Naples, prov. Calabria Citra, 16 m . S.E. Rossano, on a high promontory washed by the Ionian Sea. It is surrounded by ruinous walls, and has a dilapidated castle. It is the seat of a bishopric, and contains a cathedral, four other churches, a diocesan seminary, and a house of refuge. Silk worms are extensively reared, and the best manna of Calabria is produced in the vicinity. The coasts ahound with fish. Pop. 2144.

CARIbbeAN, or Carribbeay Sea, that portion of the N. Atlantic Ocean, lying between the Caribbee, or Leeward nnd Windward Islands on the E., Guatimala on the W., the islands of IIayti or St. Domingo and Cuba on the N., and New Granada and Venezuela on the S . It communicates with the Gulf of Mexico by a passage of about 120 m . in width, between Cape Catoche in Yucatan, and Cape St. Antonia, the most W. point of Cuba. Its S . shores are generally high and rocky, and contain some gulfs of considerable extent. leing but little encumbered with rocks or islands, its navigation is, for the most part, clear and open.

CARIBEES, or Lesser Axtilles, usually divided into the Windward and Leeward Islands; a section of the West India Islands (which see).

CARIFE, a vil. and com. Naples, prov. Principato Ultra, 10 m. S.S.E. Ariano. It contains a collegiate church, high school, convent, hospital, and almis-house. Pop. 2558.

CARIGNANO [ane. Cariniacnm], atn. Sardinian States, prov. of, and 11 m . S. Turim, 1. bank, Po, here crossed by a wooden bridge. It is surrounded by old walls, and has a landsome square ornamented with areades, a fine chureh, four convents, a college, two hospitals, some silk spiming-mills, and a sugar refinery. Preserved lemon peal, of excellent quality, is prepared here. From this town is named a branch of the house of Savoy. In 1544, the French dismantled the fortifications, but spared the castle. Silk is produced to a large extent in the vicinity. Pop. 8000.

CARIMATA, or Kramata.-1, An uninhabited isl. Indian Archipelago, off S.W. coast Borneo; lat. $137^{\prime}$ S.; lon. $108^{\circ} 51^{\prime} \mathrm{E} .(\mathrm{k}$.$) ; about 12 \mathrm{~m}$. long. It is lofty, one of its peaks being 2986 ft . high, well wooded, and was formerly a great resort of pirates.-2, Carimata, or Billiton Passage, the passage bounded E. by Carimata and the islands adjacent to the S. W. part of Borneo, and W. by Billiton. It is also called the Outer Channel, and is taken by ships from the Malacea Strait, bound by the E. passage to China or the Moluceas after October, when the N.W. monsoon prevails S. of the equator.-3, Carimala Sea, a name at times given to that part of the China Sea lying between Borneo, Cambodia, and the Malacca peninsula.

CARIMON JAVA, a small isl. Indian Archipelago, 20 m . in circumference ; lat. $5^{\circ} 50^{\prime} \mathrm{S} . ; \operatorname{lon} .110^{\circ} 34^{\prime} \mathrm{E}$. It is high and woody, with an elevated hill in the eentre. Adjoining it are several small islands, some of which abound with deer, and among which ships may anchor in 20 to 24 fathoms, and obtain wood and water. The Dutch formerly had an establishment on the island, to prevent piracy.

CARLMONS, two isls. Strait of Malacea, ealled Little Carimon and Great Carimon; lat. $1^{\circ} 8^{\prime} \mathrm{N} . ; \operatorname{lon} .103^{\circ} 30^{\prime} \mathrm{E}$. Little Carimon is about $2 \frac{1}{2} \mathrm{~m}$. long by 1 broad. It is high and rocky, peaked in the centre, and covered with trees. Great Carimon, separated from the S.W. side of Little Carimon by a narrow passage, is about 9 m . long. Near its N. end are two lofty peaks, but, with exception of these, it consists of low level land. Off its N.E. point vessels can anchor in 6 to 8 fathoms. It is oceasionally frequented by Malay and Buggis proas.

CARINENA, a tn. Spain, Arazon, prov. of, and 30 m . S.S.W. Saragossa, on the high road from that city to Daroca. It has several squares, a townhouse, church, ehapel, prison, hospital, cennctery, and three primary schools. Some little trade is done in cattle, grain, fruits, and oil. Pop. 1995.

CARINHENIIA, a tn. Brazil, prov. Bahia, on the frontier of prov. Minas Geraes, at the junction of the river of same name with the Rio San Franciseo. It has a church and an extensive district. Pop. 2000.-The nven Carinhenha rises in prov. Gozaz, in the serra Tabatinga, flows E., forming the boundary line between provs. Bahia and Minas Geracs, and falls into the Rio San Franeisco; lat. $14^{\circ} 30^{\prime}$ S.; low. $44^{\circ} 42^{\prime}$ W. Total course about 160 m ., exclusive of windings.

CARINI, a th. Sicily, prov. of, and 11 m . W.N.W. Palermo, beautifully situated on river of same name, near its embouchure. It has a Gothic eastle, with several churches and convents. Near it are the ruins of the ancient Hyccara. Fishing is the chief employment. Pop. 7000.

CARINOLA, a tn. Naples, prov. Terra di Lavoro, 19 m . W.N.W. Caserto, at the foot of Mount Callicola, in an unhealthy district. It was formerly an Episcopal town, and has a handsome eathedral, a parish church, an extensive seminary, and a Franciscan convent. The surrounding district pro-
duces wine of good quality. The town is said to occupy the site of the Foro Clandio, built by the Lombards in 1058. 1'op. 5420.

CAILNTH1A [German, Kärnthen], a duchy, Austria, kingdom lllyria, between lat. $46^{\circ} 24^{\prime}$ and $47^{\circ} 7^{\prime} \mathrm{N}$., and lon. $12^{\circ}$ $35^{\prime}$ and $15^{\circ} 10^{\prime}$ E., bounded, N. by Salzburg and Styria, E. by Styria, S. by Carniola, and W. by Italy and Tyrol. A rea, 3015 geo. sq. m. It is extremely mountainous, generally sterile, and one of the most thinly populated provinces of Austria. The arable land does not exceed 290,000 acres, but there are some fertile valleys, and a considerable extent of rieh pasture land. It has several rivers and lakes. Of the former, the principal is the Drave, and of the latter the Klagenfurter or Worth See, the Ossiacher See, and the Millstätter See. All of them abound with fish. The country does not yield corn cnough for the consumption of the inhabitants, who import the deficiency from Hungary. The grains most extensively cultivated are rye and oats. Some wine is produced in Lower Carinthia, but it is of inferior quality. Ilorned cattle, sheep, and horses, are raised in considerable numbers, but the mines of Carinthia are the main sources of its wealth. The chief of these are iron, lead, and calamine. Various kinds of precious stones are met with. Its operative industry is chiefly confined to the working its metallic ores, though there are several manufactories of woollens, cottons, silk stuffs, \&e., most of which are in Klagenfurt.

Carinthia formed part of the empire of Charlemagne, and afterwards belonged to the Dukes of Friuli. It subsequently passed through various hands, and finally beeame an appendage of the Austrian crown in 1321. In 1809, it was annexed to the empire of Napoleon, but was restored to Austria in 1814. In the year after, it was formed into the cireles of Klagenfurt and Villach. It has its own diet, composed of four estates-the dignitaries of the chureh, the aristoeracy, the equestrian order, and the representatives of towns and places with markets-but its internal administration is subordinate to the Government authorities of Laibach. The principal towns are Klagenfurt, the eapital, and seat of the criminal and other judicial courts, and Villach. The inhabitants are represented as indolent and superstitious, and mostly R. Catholies. Pop. $454,785$.

CARIl'E, or Cambe, a th. Venczuela, prov. of, and 40 m . S.E. Cumana, in a fertile valley of same name. In the valley is a cavern, the opening into which is 85 ft . broad, and 77 ft . high, which dimensions it preserves to the distance of 1548 ft . inwards. Pop., tn. and valley, about 5000 .

CARISBROOKE, a vil. and par. England, eo. Ilants.The vallage is pleasantly situated at the foot of a hill near the centre of the Isle of Wight, $1 \frac{1}{4} \mathrm{~m} . \mathrm{s} . \mathrm{W}$. Newport. It was formerly a place of considerable importance, having been a narket town and the capital of the island till superseded by Newport. The parish church is a fine ancient structure, with a tower containing a peal of eight musical bolls; and there are, besides, places of worship belonging to Independents, Methodists, and other dissenting bodies. The inhabitants are principally employed in agriculture. Carisbrooke owed its former importance to its proximity to the castle of the same uame, on the top of a considcrable eminence overlooking the village, and now a heap of ruins. It is of high antiquity, and is supposed to have been a fortress anterior to the Roman invasion. The latest additions are said to have been made to it in the time of Elizabeth. Here Charles 1. was confined for 13 months previously to his trial and execution. The castle and grounds occupy a space of about 20 ac . The exterior forms a pleasant promenade of more than 1 m . in $\mathrm{cx}-$ tent. Besides objects of historical interest and curiosity, the castle contains the official residence of the governor of the island, a respeetable mansion, with two spacious ball-rooms. A short distance N.E. of Carisbrooke is a neat row of houses, called the New Village. Area of par. 8850 ac . Pop. 5613.

CARLBY, par. Eng. Lincoln; 1020 ac. Pop. 216.
CARLEE, or CAkli, a sinall vil. Hindoostan, prov. Auruugabad, 50 m. S.E. Bombay, near which are some remarkable cave temples. The interior of the principal cave is 126 ft . long and 46 broad, and is supported by 21 columms, the eapitals of which are of singular and beautiful workmanship, each consisting of a large cap resembling a bell, finely carved, and surmounted by two clephants, with their trunks entertwined, and each carrying two male and one female figure.

On several of the columns are inscriptions, from one of which it would scem that this temple was built A.D. 176 . It is semicircular at its termination, and is supposed to have been the work of Buddhists.

CARlENTINI, a tn. Sicily, Val-di-Noto, 20 m . N.W. Syracuse ; built by Charles V. for the head quarters of the Sicilian army, and destroyed by the earthquake of 1693 . It is now a place of little importance. Pop. 2502.

CARLET, a tn. spain, prov. of, and 18 m. S.W. by S. Valencia, r. bank, Magio. The streets are clean, wide, and lined with regularly and well-built houses. The town has six squares, a parish church, two chapels, a convent, spacions townhouse, prison, cemetery, and two schools. Manufactures : -soap, brandy, oil, and wine, which with grain, salt fish, fruits, and cattle, constitute the sole traffic of the place. Pop. 3884.

CARLETON, several places, England:-1, Carleton, \$ $\%$. Peter, par. Norfolk; 930 ac. Pop. 96.-2, Carleton ForeHoc, par. Norfolk; 700 ac. Pop. 151.-3, A township and vil. W. Riding, York. The village is situate on a gentle eminence 2 m . S.W. Nkipton, consists of four streets, straight, and kept in good condition; greater part of the houses well built of stone, and slated. Its chureh is a small Norman structure, and it has several free schools and other charities. The inhabitants are principally employed in the cotton manufacturc. Pop. of the townslip, 1242.

CARLINGFORD, a seaport tn. and par. Ireland,co. Louth. The town is beautifully situateS. W. side of Carlingford Lough or Bay, at the base of an extensive range of mountains, which terminates at this point, 9 m . E.N.F. Dundalk. It has rather a poor and desolate appearance. The lough is about 10 m . long inland, and abont 2 broad. Near the mouth is a bar with only 9 ft . water at low tides, but on which the tide rises 18 ft . Once inside the bar, the lough may be navigated for 6 m . by vessels of the largest size at all times; at high tide, vessels of 18 ft . draught may proceed 2 m . farther to Warren Point, and by those drawing 14 ft . to 4 m . farther, to Fatliam, where is the entrance of the canal, which has a depth of 11 ft . to the town of Newry. On Block-House Island, at the entrance to the bay, is a fixed light, 101 ft . high; lat. $54^{\circ} 1^{\prime} 12^{\prime \prime} \mathrm{N}$. ; lon. $6^{\circ} 4^{\prime} 45^{\prime \prime} \mathrm{W}$. The bay being well stocked with oysters, dredging for them constitutes the chief occupation of the inhabitants. The only trade of Carlingford consists in exporting a little corn and provisions to Dublin. Pop. 1110 . Area of par., $20,050 \mathrm{ac}$. Pop. 12,588.

CARLISLE, an anc. city and inland port, England, co. Cumberland, 262 m. N.N.W. London, about 8 m . from the Scottish border, pleasantly situate on a gentle eminence, at the confluence of the Eden, Caldew, and l'etcril, the first
of the modern houses are handsome, and, being built on a plan, are gradually imparting an appearance of uniformity to the city. The cathedral, which is situate on elevated ground, near the centre of the town, is one of the principal oljects of interest. It is of Saxon origin, but has received many additions and embellishments throughout successive generations; some parts of the building are beautiful, and the whole has a venerable and imposing appearance; the E. window, which is 48 ft . high, by 30 broad, and partially filled with painted glass, is one of the finest specimens of the kind in England. In the N. aisle are interred the remains of the celebrated Dr. Paley. The castle, another object of interest from its historical associations, is situate on a slight eminence overlooking the Eden, at the N.W. angle of the city; it commands a fine view, and is still maintained as a garrison-fortress, being the only remnant of the ancient military character of the city, the old walls and bulwarks having now almost entircly disappeared. Amongst the literary and educational institutions of Carlisle are-an academy for the encouragement of the fino arts, a literary and philosophical institution, with a museum and theatre for lectures, a grammar school, several national and Sunday schools, two subseription libraries, and two newsrooms; likewise three reading rooms, with librarics attached, for the use of the working classes. Its chureh accommodation, besides the cathedral, consists of the parish churches of St. Mary and St. Cnthbert, with their chapels of ease, Trinity church and Clarist church, and 12 places of worship for various religious denominations. It is the seat of a bishopric, founded by Henry I., and exercises ecclesiastical jurisdiction over 93 parishes. The dignitaries, besides the bishop, are a dean, four prebendaries, and eight minor canons. The charitable institutions are numerous, and well supported, and include a commodious infirmary, fever hospital, and dispensary. The buildings appropriated to corporate purposes are the townhall, guildhall, and council-chamber. The courts of justice, where the assizes are held, and the county jail, are situate at the S . cntrance of the city, and were erected after a design by R. Smirke, R. A., at a cost exceeding $£ 100,000$. In the area, in front of the courts, a fine marble statue of the late Earl of Lonsdale, by M. L. Watson, is erected Many of the public edifices are exceedingly handsome. Carlislo is the seat of various, and of some extensive, manufactures, of which cotton is the principal, embracing the weaving of checks and ginghams, calico-printing, and the manufacture of cotton twist. The making of hats is also carried on to a large extent. Carlisle lias long been famed for its manufacture of whips and fish-hooks; there are, besides, a woollen manufactory, several dyeworks, tannerics, iron-foundries, breweries, marble-works, and an extensive biscuit manufactory, which employs upwards of 200 hands. It has a considerable coasting trade, by means of its canal, which extends from the town to Bowness, on the Solway Firth, a distance of about 11 m ., and is navigable for vessels of from 80 to 100 tons burthen. The gress amount of customs' dnty reccived at the port for 1845 was $£ 33,235$, being an increase of nearly $£ 4000$ on the preceding year; in 1848, the receipts had increased to $£ 48,962$; and in 1849, they were $£ 41,071$. The station of the Lancaster and Carlisle Railway Company (in connection with the London and North Western) is situate near the courts, and is a handsome, ornamental building, with a portico supported by a range of pillars, and is likewise jointly occupied by the 'Caledonian,' 'Glasgow, Dumfries, and South Western,' 'Maryport, Carlisle, and Whitelaven Junction' Railway Companies. The Newcastle Railway Station is in London Road.

Carlisle was originally a Roman station, and then called Luguvallum, al breviated by tho Saxons to Luel, to which was put the prefix Caer, or 'city,' thus making ('aerhel, whenco
here crossed by a handsome stonc bridge of five large, and the same number of smaller arches; the Caldew is crossed by two bridges, and the Peteril by one. The town is somewhat irregularly built, but its principal streets are spacions, well-paved, well-lighted; and it is amply supplied with water. A number

Carlisle. It was destroyed by the Danes in the 9 th century, and subsequently restored by William Rufus, who built its castle. From this period it was a frequent object of attack in the long-protracted wars between England and Scotland, and suffered scvercly on many of these occasions.

Having declared for Charies I., it was subjected to severe privations during the civil wars of that period also. In 1745, it surrendered to Prince Charles, but was retaken by the Duke of Cumberland, when a number of the officers who formed the garrison were execnted as traitors, and their heads exposed on the gates and walls of the city. It gives the title of 'Earl' to a branch of the Heward family. Returns two members to Parliament: constituency (1851), 1050. Pop. (1770), when taken by the late Dr. Heysham, 7677 ; (1841), 23,012; (1851), 26,583.

CARLLLLE, a tn. U. States, Pennsylvania, cap. co. Cumberland, 15 m . W. by S. Harrisburg, neatly and regularly built, chiefly with brick or stone, and has a college, with a library containing 11,000 vols., nine churches, a courthouse, and county offices, a market-house, a bank, young ladies' seminary, an academy, and 16 schools. The Cumberland Valley railroad, from Harrisburg to Chambersburg, passes through it. Half a mile from the town are the U. States barracks, built in 1777, capable of holding 2000 men, and provided with a cavalry school. It has six tanneries, three distilleries, three printing offices, two breweries, and carries on a considerable trade. Pop. 4351.

CARLISLE (New), a maritime vil., Lower Canada, Gaspé district, N. side Bay of Chalcur. It is regularly laid out, and carries on the fishing.

CARLÖ, a small isl., Russia, Gulf of Bethina, 18 m . W. Uleåborg, in Finland; lat. (W. point beacon) $65^{\circ} 2^{\prime} \mathrm{N}$. ; lon. $24^{\circ} 33^{\prime}$ E. (r.)

CARLOBAGO, or Carlopago, a tn. Austria, Croatia, circle, Thither Save, on the E. of the strait which separates the island of Page from the mainland. It is fortified, and contains a R. Catholic parish church, and a cloister. Pop. 960.

CARLOFORTE, a tn. Sardinian States, isl. San Pietre, near the S.W. coast of isl. Sardinia. It is defended by walls, and the port is commanded by a castle, on a neighbouring height. There are extensive saltworks in the vicinity, and the coral and anchovy fishery are carried on by the inhabitants. Pop. 2500.

CARLOS (Sax):-1, A tn. Venezucla, prov. Carobobe, 130 m . S.W. Caracas, on the Aguine. It is large, handsome, and well laid out, and, before the wars of independence, was one of the most opulent cities of the Captain-generalship of the Caracas. The surrounding savannahs have large plantations of indigo, coffee and cotton; and rear vast numbers of oxen, horses, and mules. Pop. $5000 .-2, \Lambda \mathrm{tn}$. Chili, cap. prov. and on the N.E. coast of isl. Chiloe. It is fortified, has an excellent harbour, and is the principal entrepôt of the island, exporting planks, hams, and woollen stuffs.-3, A port, N.W. coast, E. Falkland Island, rear the N. entrance to Falkland Sound, with anchorage for large vessels, and where fuel and water may be obtained; lat. (Fanning Head, S.W. summit) $51^{\circ} 27^{\prime} 12^{\prime \prime} \mathrm{S}$.; lon. $59^{\circ} 7^{\prime} 15^{\prime \prime} \mathrm{W}$. A river of same name flows in at the head of the sea-arm forming the port.

Carlos (San), a th. Spain. See Carraca.
CARLOTA, a tul. Spain, Andalusia, prov. of, and 17 m . S.W. from CorJova. The principal strects are lined with trees, and the houses, many of which are detached, are, in general, tolerably well built. The town has two squares, an old palace, now serving the double purpose of townhouse and theatre; a parish church, three chapels, three schools, a prison, barracks, and cemetery, five distilleries, four soap-works, seven oil-mills, and a number of wine-presses. A small trade is done in cattle and grain. Pop. 3252.

CARLOW, an inland co. Ireland, prov. Leinster, having W. and S.W. co. Kilkenny, N. Queen's co., Kildare, and Wicklow, and E., and S.E. cos. Wicklow and Wexford ; extreme length, N . to $\mathrm{S} ., 29 \mathrm{~m}$.; extreme breadth, at the N. end, about 16 m. ; at the S. extremity it terminates in a point, gradually diminishing from 5 m . to less than a quarter of a mile. Area, $221,342 \mathrm{ac}$.; of which 84,059 are arable, 31,249 uncultivated, and 4927 plantations, 505 under water. The surface gencrally consists of gentle undulations, excepting in the $S$., where it rises into a mountainous ridge, whose highest summit is 2604 ft . above the sea. Although this part of the county presents a sufficiently cheerless and barren aspect, there are others in which are numerous broad and fertile valleys, and where the hills are cultivated to their summits. Dairy husbandry is carried to a greater extent in this county than perlaps in any other in Ireland. The principal produce is
butter, of a superior quality; very little cheese being made, and that only for demestic consumption. Wheat, barlcy, oats, turnips, and potatoes are successfully cultivated, and are the principal crops, but flax, hemp, rape, vetches, \&c., are also grown, though to a limited extent. Agriculture is in a comparatively advanced state here, being much more so than in any of the adjoining counties, while the implements employed are of the most alpproved kind; and the staple trade is in agricultural and dairy produce, of which large quantities arc exported. Carlow is divided into seven baronies-Carlow, Forth, Idrone, E. and W. Rathvilly, and St. Mullin's, Lower and Upper ; contains 47 parishes, and sends three members to the House of Commons-two for the county, and one for the borough of Carlow. Pop. (1841), 68.075.

CARLOW, a parl. bor. and cap. of above co., pleasantly situate on l. bank, Barrow, 34 m . S.W. Dublin, with which it is commected by a railway. It has a neat and cleanly appearance, and has upwards of 14 respectable streets, of which the two principal intersect eachother at right angles, and it is increasing in size. A bridge of four arches leads over the Barrow to the suburban village of Graigue, in Queen's County. The principal public buildings are the parish church, an old edifice, with a handsome modern spire; the R. Catholic cathedral church, an elegant structure; and the R. Catholic college, a plain, but spacious building. There are also barracks, a lunatic asylum, a handsome courthouse, a jail, and an infirmary, with numerous charity schools and charitable institutions. Carlow is the principal mart for the agricultural produce of the surrounding country, and carries on an extensive trade in corn, flour, and butter, having communication by the Barrow with the ports of Ross and Waterford, and with Dublin, beth by a canal and by railway. There are in the town some extensive flour-mills, a large malting establishment, two breweries, and a distillery. It sends one member to the House of Conmons. On a rising ground on the S. sicle of the town, where a small stream, called the Burren, falls into the Barrow, stand the ruins of the ancient castle of Carlow, formerly a place of great strength, and still presenting a very imposing appearance. Pop. of tn . (1841), 8734 ; of bor. 10,409 .

CARLOWITZ, or Karlowitz, a tn. Austria, Sclavonia, circle of, and 7 m . S.E. Peterwardein, r. bank, Danube, well built, but much scattered, stretching along the banks of the river like a large village, rather than a town. The best part is that which joins the archiepiscopal palace. It contains one Greek cathedral, two other Greek churches, a R. Catholic church, a gymnasium, a Greek theological seminary, and lyceum, a German upper school, a national school, and an hospital. It is the seat of the Greek Metropolitan Archbishop, the head of the church of the dissenting Greeks in the Austrian dominions. The palace of the archbishop contains a valuable library. Carlowitz is a free community, and is governed by civil magistrates, consisting of an equal number of R. Catholic and Greek members. Though within the military frontier, yet its inhabitants are exempted from duty, that they may devote themsclves to trade and manufactures. An excellent wine is produced on the hilly district between Camenitz and Carlowitz. Sturgeon is caught in great quantities in the Danube, close by the town. Peace was concluded here betwcen Austria and the Turks in 1699; and here, too, Prince Eugene defeated the latter in 1716. Carlowitz is a station for the stcam-boats navigating the Danube. Pop. 5600.

CARLSBAD, or Kablsbad, a tn. Bohemia, circle, Ellbogen, 70 m . W.N.W. Prague, in a romantic narrow valley, on the small river Tepl, near its junction with the Eger. Some of the houses are built, tier above tier, in recesses cut out of the rocky and precipitous sides of the valley. The Tepl is crossed by six bridges, some of them mere pathways; and along its banks are the two most spacious streets. A monument of Charles IV., which stands in the market-place, tlee high church, an hospital, and a granite bridge of one arch across the Tepl, are the only objects in the town worth noticing. Carlsbad is the most celebrated watering-place in Germany, and its springs the hottest in Europe. They were known in the seventh century; but were lost sight of till 1347, when, according to a tradition of the country, they were rediscovered by Charles IV., whose attention was drawn to the spot, while hunting, by the cries of one of his hounds that had fallen into a hot spring when pursuing a stag. He subsequently established regular baths here, to which he gave his name, and bestowed
on the borough certain rights and privileges, which it still retains. Carlsbad is believed to stand over an immense subterranean reservoir of boiling water, the depth and extent of which is unknown, although several attempts have been made to ascertain these points. Holes are bored in the ground in different parts of the town to allow the ascending vapours to escape, as, without such precaution, serious explosions would occur. These holes must be cleared out every three months, as they are continually filling up with encrustations of lime deposited by the waters. Substances immersed in the Sprudel Spring get coated with this lime, which is so hard that it admits of being polished. This spring is covered with a solid mass of masomry, to prevent accidents from the expansive force of the steam below, which forces up the water in jets of 2 and 3 ft . high. Its temperature is from $165^{\circ}$ to $168^{\circ}$ Fah. The Hygeia Spring has the same degree of heat. The other springs are the Bernherds, $145^{\circ}$ to $157^{\circ}$; the Neubrunnen $144^{\circ}$; the Michlbrunnen, $133^{\circ}$; the Marketbrunnen, $135^{\circ}$; the Theresienbrunnen, $131^{\circ}$; the Schlossbrunnen, which disappeared in 1809, and reappeared in $1823,121^{\circ}$; the Spitalwell, $135^{\circ}$; and the Felsenbrunnen, used for shower-baths, $97^{\circ} \mathrm{Fah}$. It has been calculated that the whole of the springs yield $1,925,180$ gallons of water per day, of which the Sprudel and Hygeia alone supply $1,669,300$ gallons. The principal chemical ingredients of the two latter springs are carbonate of soda, sulphate of soda (Glauber salts), chlorine, and sodium. They are chiefly efficacious in the removal of complaints of the liver, kidneys, \&c. A salt, known by the name of Sal Caroliniense, is produced from the waters of these springs by evaporation. There are here some thriving manufactories of articles in steel and brass, of needles, and lacquered ware; and around the town a number of pleasant walks, and some elevated points, from which extensive views are obtained. Carlsbad was the favourite residence of Goethe, Hoffman, and Werner. The permanent population is about 3000 , to which about 4000 strangers are added in the summer season.

CARLSBURG, or Karlsburg, a fortified tn., Austria, Transylvania, co. Weissenberg, r. bank, Maros, 33 m . N.W. Hermanstadt ; lat. $40^{\circ} 0^{\prime} 50^{\prime \prime} \mathrm{N}$.; lon. $23^{\circ} 34^{\prime} 29^{\prime \prime} \mathrm{E}$. (L.) It consists of an upper and lower town, the former built on a hill, and the latter in a valley. A bridge, 210 paces in length, crosses the Maros from the lower town. The citadel, built by Charles IV., is surrounded by a wall with seven bastions. The principal gate is finely sculptured. The town contains two R. Catholic churches, one of them the cathedral church of the bishop of Transylvania, possessing a number of ancient monuments; a Lutheran church, two synagogues, two monasteries, the residence of the bishop of Transylvania, a canon's college, containing the archives of the province; the royal mint, where the gold and silver obtained from the mines of Transylvania is purified and coined; the observatory, in which is a good collection of instruments; and an excellent library, an arsenal, barracks, \&c. There are also a theological college, a R. Catholic gymnasium, a normal school, and an hospital. The manufactures of the place are insignificant, with exception of saltpetre, which is considerable. The Jews here enjoy, under the special protection of the bishop, a perfect equality of civil rights with the other citizens, a privilege denied them in every other part of Transylvania. Half a mile from Carlsburg, on the Maros, is the Maros Porto, the chief shipping place for the Transylvanian rock-salt. Carlsburg occupies the site of the ancient Apulum. Several Roman antiquities have been found in it. Pop. 12,300.

CARLSCRONA, or Karlsciona [Charles's crown], a seaport tn., Sweden, cap. län or co. of same name, on the rugged isl. Trottsö, and some smaller isolated rocks, but connected with the contiguous mainland by several long bridges; lat. $56^{\circ} 9^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $15^{\circ} 35^{\prime} 30^{\prime \prime} \mathrm{E}$. (R.). It is well built, and has uncommonly broad, though sometimes billy, streets, three churches, a townhall, freemasons' house, and schoolhouse; but it suffers from want of good water for domestic use, which has to be brought from Syckeby, distant about 3 m . The trade has much fallen off, though sugar refining, and the manufacture of tobacco, are still carried on. The harbour, in which the Swedish navy is stationed, is one of the best in Europe; it has three entrances, of which only one is suitable for the larger war vessels; and there are two docks, the old and the new; a royal shipbuilding yard, artillery park, arsenal, anchor forge, and a model room, con
taining models of various kinds of vessels, several of which were prepared by the hand of the well-known Chapman, of whom there is here a marble bust. The entrance to the harbour is defended by the two forts Drottniugskär and Kongsholm. The town was made the Swedish marine station and arsenal by Charles XI., in 1680 ; it thenceforth took his name. The admiralty offices, however, are still located at Stockholin. Pop. 12,456.-The LथiN, or COUNTY, also called Blekinge, is the smallest in Sweden; area, $1193 \mathrm{sq} . \mathrm{m}$. It is bounded, N. by Wexio and Kalmar, W. by Christianstad, and E. and S. by the Baltic. It is hilly, but not mountainous, gneiss and granite are the prevailing formations; between the hills are fertile valleys, and a strip of low land runs along the coast. In some parts the soil is sandy, in others clayey; but, generally, it is fertile, yielding potatoes and rye plentifully. Oats, pease, and wheat are also cultivated; and, in some localities, buckwheat. Cattle are reard to some extent; and garden culture is attended to by the peasants. Wood is still plentiful, consisting chiefly of oak, beech, fir, and birch; and the fisheries afford a considerable amount of employment. Several islands belong to the län, and some of them are thickly wooded. Pop. 77,659.

CARLSHAMN [Charles's haven], a seaport tn., Sweden, län of, and 27 m . W. Carlscrona, at the mouth of the Mie- $\AA$; lat. $56^{\circ} 10^{\prime} 18^{\prime \prime}$ N.; lon. $14^{\circ} 52^{\prime}$ E. (n.) It lies at the end of a beautiful valley, is prettily and regularly built, and its square market-place, planted on all sides with trees, has a fine appearance. It has two churches, an elegant townhouse, a good harbour, and an active trade. Wood, of various kinds, with oak and beech staves, constitute the chief exports. The manufactures are:-sail-cloth, sacking, hats, tobacco, leather; and there are dyeworks, soap-boileries, and a shipbuilding yard. Pop. 4408.

CARLSHOFF, an isl. N. Pacific; lat. $15^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $145^{\circ} 38^{\prime} \mathrm{W}$. (n.) It is about 8 m . in circumference, has a lake in the centre, and was discovered by Roggewein, the Dutch navigator, in 1728.

CARLSRUHE, or Karlsruhe [Charles's rest], a city, cap. grand duchy of Baden, on a fine plain, 4 m . E. l. bank, Rhine; lat. (Schloss) $49^{\circ} 0^{\prime} 50^{\prime \prime}$ N.; lon. $8^{\circ} 24^{\prime} 44^{\prime \prime}$ E. (L.) It is in the form of a wheel, of which the ducal palace is the

centre or nave, from which 32 openings radiate. These were originally, and many still are, mere avenues leading to the ducal residence, but more than a third of them are now lined with buildings, and converted into streets, which gives the town the wheel or fan-like form by which it is characterized. The streets are wide, well paved, well lighted, and furnished with foot-paths. The houses are built in a variety of styles, and many of them exceedingly handsome. Carlsruhe is, in part, walled, and has seven gates, one of which, the Ettlinger, is a beautiful specimen of architecture. There are five principal squares, in one of which, the market-place, is a monument of red sandstone, erected in memory of the founder of
the city, who lies buried beneath. The grand dueal palace, or Schloss, is built in the old French style, and consists of a main-building or centre, and two wings. Extending from these are, on one side, the orangery and hot-houses; on the other, the stables and riding-school. From the turret of the palaee, called the Bleithurm, a fine view of the town and surrounding country is obtained. Among the more remarkable public buildings are the Protestant and R. Catholic churches, built by Weinbrenner; the synagogue, the palace of the Dowager Margravine of Baden, and the polytechnic school, in the style of the Middle Ages. The Protestant chureh, founded in 1807, is built in the pure Roman style. The R. Catholic church is adorned with a handsome portico, supported by eight Ionic columns, and lighted by a cupola 100 ft . high, and of the same width. The synagogue is in the Oriental style. Besides the two palaces mentioned, there are several others, belonging to the nobility, deserving of notice. There are also the townhall, the lyeeum, the mint, and the house of the Legislative Assembly, post-office, infantry and cavalry barracks, arsenal, cannon and bell-foundry, and several hospitals, one of which was founded by Stultz, the celebrated London tailor, who endowed it with 100,000 florins ( $£ 8500$ ). The theatre, another handsome structure, was destroyed by fire in 1847 , when many lives were lost. Connected with the ducal palace are a library, consisting of 80,000 volumes, and containing, also, many valuable MSS., a cabinet of coins, and a museum of natural listory, ineluding a great variety of fossil remains. There is also a public library, containing 90,000 volumes, and a botanic garden. There are numerous elementary schools, Protestant, R. Catholic, and Jewish. The more apecial schools are the polytechnie, veterinary, military, evangelical, normal, and musie. The manufactures are:-chemical stuffs, machinery, including locomotives, tobacco, playing cards, jewellery, carpets, cloth, mustard, and carriages; and a considerable transit trade is carried on by means of the Rhine, and of the railways which connect the city with Frankfort-on-the-Main, with France, Switzerland, \&c. Carlsruhe is a modern city, its fomdation having been laid in 1715 , by Charles William, Margrave of Baden, in a locality that scrved as a hunting rendezvous. Pop. 22,619; of whom 14,538 are Protestants, and 8081 R . Catholies.

CARLSTAD, a tn. Sweden, liin of same name, N. shores of Lake Wenern, on an isl. formed by the two mouths of the Klar, and connected with the mainland by a bridge aeross either stream, one of which is the largest and most beautiful stone bridge in the kingdom. It is beautifully situate, regularly built, is the seat of a bishop, and has a cathedral, gymnasium, townhonse, frcemasons' hall, theatre, and small harbour. Pop. 3108.-The LÄN, bounded, N. and W. by Norway, N.E. by Falu liin., E. by Örebro, S. by Marienstad, and W. by Wenersborg; area, $6868 \mathrm{sq} . \mathrm{m}$. , consists of several valleys, generally lying N.W. to S.E., and has numerous streams and lakes. Though hilly, it is not mountainons, its highest points being barely 1000 ft . high. Oats and rye, and, to a less extent, other kinds of grain, are cultivated, and cattle reared, and iron is exported from the numerous mines of the country. Pop. 189,611.

CARLSTADT' [ane. Carolostadium], a tn. Austria, Croatia, circle, Hither Save, co. and 34 m. S.W. Agram, agreeably situate in a perfectly level and richly-cultivated plain, near the junetion of the Kulpa, Korana, and Dobra. It is surrounded with walls, flanked with bastions, and consists of the town proper and the eitadel, together with the suburb of Dubovacz, which is entirely built of wooden houses, the proprietors having been allowed to ereet them on the understanding that, in the event of an encmy appearing, they are to be burnt or torn down at a moment's notice. Carlstalt, thongh not a place of great strength, used to be eonsidered as the bulwark of Croatia against that angle of the Ottoman empire which is called the Trockene Grenze, or Dry Frontier. It is tolerably well built, and contains five R. Catholic churehes, and a Greek non-united chureh, a Francisean cloister, barracks, and armoury for 30,000 stand of arms, a gymnasium, a head and a girls' school, and a civil and military hospital. It has almost no manufaetures, but its transit trade is considerable. Pop. 6000.

CARMAUX, or Carmeaux, a vil. France, dep. Tarn, 1. bank, Cerou, $9 \mathrm{~m} . \mathrm{N}$. Alby. In its vicinity coal is wrought. Pop. 1951.

CARMAVY-GliANGE, par. Irel. Antrim; 789 ac P. 307.
CARMEL, or Kurmul:-1, An anc. ruined tn. Asiatic Turkey, Palestine, about 7 m . from Hebron, and believed to be the place mentioned in Seripture, 1 Sam. $x v .12 ; ~ x x v .2$. The ruins, scattered about the head, and along the sides of a valley among the monntains of Judah, indicate a town ones of considerable extent ; the most renarkable ruin is that of a quadrangular castle, occupying a knoll ith the midst of tho town.-2, Carmel (Mount), a range of hills, Asiatie Turkey, Palestine, extending N.W. from the plain of Esdraelon, ending in the only great promontory upon the coast of Palestine, and forming the Bay of Acre. These hills form a curve of about 6 m ., and vary in height, from 1500 to 1800 ft . At their S . foot runs the brook Kishon; and, a little farther N., the river Belus. The whole range is of compaet limestone; and contains hundreds of eaves. Upon the summit of Carmel is a convent, which gave name to the monks of that name in Europe. It was destroyed, in 1821, by Abdallah Pasha; but, by the aid of contributions from Europe, has been re-built.-3, Cape Carmel, a promontory, Palestine, S. side of the Bay of Acre, and the termination of Mount Carmel ; lat. $32^{\circ} 51^{\prime} 12^{\prime \prime}$ N.; lon. $34^{\circ} 57^{\prime} 45^{\prime \prime}$ E. (R.)

CARMEN, a tn. and two islands, Ameriea:- 1, A tn. La Pdata, prov. Buenos Ayres, near the confines of Patagonia, on the side of a steep sandstone bank, 1. bank, Rio Negro, 16 m . from its embonchure in the S . Atlantic; lat. $41^{\circ} 4^{\prime} \mathrm{S} . ;$ lon. $62^{\circ} \check{5} 0^{\prime} \mathrm{W}$. The streets are very irregular, and the houses are, for the most, mere huts of one story, built of mud and bricks. The most conspienous edifice in the place is a ruinous mud fort, defended by seven old, and almost useless pieces of artillery. This fort was erceted by Francisco Viedma, at the formation of the settlement, in 1779, and was intended as a military station for the protection of the Spanish settlements on the W. coast of S. America. The soil in the neighbourhood of the town is fertile, and produces wheat, barley, Indian corn, and various kinds of fruits and vegetables. Sheep, borses, cattle, and goats are also abundant. Pop. about 1230. 2, An isl. Gulf of Califormia; lat. (E. point) $26^{\circ} 10^{\prime}$ N. ; lon. $111^{\circ} 2^{\prime}$ W. (12.) It contains an inland lake, from which a considerable quantity of salt is annually obtained.-3, An isl. Gulf of Mexico, Yneatan, at the entrance of the lagoon of Terminos; lat. (W. end) $18^{\circ} 38^{\prime} 24^{\prime \prime} \mathrm{N}$. ; lon. $91^{\circ} 50^{\prime} 42^{\prime \prime}$ W. (R.)

CARMICHAEL, par. Scot. Lanark; 18 sq. m. Pop., (1851), 805.

CARMIGNANO, a tn. and com. Tuscany, prov. of, and 13 m . W. Florence, E. side of Mount Albano. It contains a parish chnreh, and several other public edifices. Pop. 1544.

CARMÖE, or KARMöE, an isl., S.W. coast, Norway, bail. Stavanger, at the mouth of the Jukke-fiord; lat. (S. end) $59^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $5^{\circ} 10^{\prime} \mathrm{F}$. ; separated from the mainland by
a strait about 2 m . wide. It is 20 m . long, by about 6 broad, and is well cultivated; cattle-rearing and fishing are also carried on. Harald Hårfarger died here A.d. 936. Рор. 6000.

CARMONA [ane. Carmo], a tı. Spain, prov. of, and 20 m . E.N.E. Seville, eap. dist. of same name, E. extremity of an elevated ridge, overlooking a rich and extensive plain, covered with olive trees. It is surrounded with walls, and is, in general, elean and well-built, containing a number of good houses, and several handsome mansions, belonging to some of the nobility, who, though usually resident in Seville, spend part of the year here ; it has, besides, two prineipal squares, one of which is well planted, and is partly formed by a handsome churels of Gothic arehitecture, with a lofty tower; while the other is used as the market-place, and partly formed by

THE MARKET PLACE, CARAIONA -From Roberis's $\mathrm{S}_{\text {panish }}$ Sketchem

CARNAGH, par. Irel. Wexford; 2106 ac. Pop. 352. CARNALWAY, par. Irel. Kildare; 3841 ae. Pop. 1181. Carnaryon, co. and tn. Wales. See Caernarvon. CARNARVON, a co. W. Australia, the most N.E. in the colony; lat. $31^{\circ} \mathrm{S}$. ; about 65 m . in extreme length, E. to W., and about 45 in breadth. In its centre are several granite hills, ealled Highelere liills; on the S. are some low wooded hills, and extensive traets of grassy country. There is also a pretty large lake of fresh water in the county, called Lake Brown, which is dry in October.

CARNARVON, or Caernaryon Bay, a large inlet of St. George's Channel, W. coast, Wales, counties Cacrnarvon and Anglesey, extending 34 in . from near Holyhead on the N., to Braichy Pwll on the S.

CARNATIC, an extensive maritime prov. S. Hindoostan, extending along the Coromandel coast, from Cape Comorin to the river Gondegam, or between lat. $8^{\circ}$ and $16^{\circ} \mathrm{N} . ;$ and lon. $77^{\circ}$ and $81^{\circ}$ E. ; length, S. to N., about 550 m . ; average breadth, about 90 m .; intersected, S.W. to N.E., by a ridge of mountains called the Gliauts, the culminating peak of whieh, as far as yet ascertained, is Mount Permaul, 7364 ft . ligh, the loftiest known summit S. of the Himalayas. It is divided into S ., Central, and N. Carnatic. The first extends from Cape Comorin to the river Colleroon, about 260 m ; the seeond, from the Colleroon to the river Pennar, about 220 m. ; the third, from the Pennar to the river Gundegam, about 70 m . Madras is situate near the centre of Central Carnatic. The general division of the country is into ligh and low lands, or Upper and Lower Carnatic ; in the first, all kiuds of grain are cultivated; in the last, rice. The soil is fertile in the wellwatered valleys, but poor on the high
several of the most important public edifices. One of the most conspicuous objeets in the town is an old Moorish castle, still in tolerable preservation, flanked with massy towers, faced wich tin, and blackened by age. The other principal edifices, in addition to those already mentioned, are six parish churehes, all in Gothic, or semi-Gothic style, and more or less handsome; the consistorial buildings, occupying the old Jesuit college of San Teodomiro; several well-endowed hospitals, and educational establishments, two ancient Roman gates, particularly the one called the Gate of Cordova; and a handsome theatre, of recent construction. The manufactures consist of ordinary woollen cloth, coarse frieze, hats, leather, earthenware, tiles for roofing and pavement, soap, \&c. There are also several flour, and numerous oil-mills, and an important fair, ehiefly for eattle, which lasts three days. Pop. 15,121.

CARMUNNOCK, par. and vil. Seot. Lanark; 6 m . by 4 m . Pop. (1851), 710.

CARM YLIE, par. Scot. Forfar; 12 sq. m. P. (1851), 1240. CARN, two pars. Irel.:-1, Wexford; 1963 ac. Pop. 914. -2, Kildare; 1457 ac. Pop. 499.

CARNA13Y, par. Eng. York, E. Riding, 1950 ac. P. 185.
CARNAC, a vil. France, dep. Morbihan, 15 m. S.E. Lorient, on a beight near the coast. It contains a handsome church, enriched by the votive offerings of pilgrims who anuually visit it in great numbers. The great druidical monument of Carnac, the most extensive in Frarce, is situate about tiree-quarters of a mile from this village, and is traversed by the road from Auruy. In the midst of a wide heath stand about 10,000 rude blocks of gray granite, set on end, angular, showing no marks of polish, and covered over with long moss, indicating the great length of time they must have stood in their present position. They are in the form of obelisks, with the vertex reversed, none of them exceeding 18 ft . high, and s.e arranged in 11 lines, forming 10 avenues, with a curved row of 18 stones at one end. There are many gaps in the stony lines, as every house and wall in the vieinity seems to have been built from this ready quarry. The origin of this remarkable monunent is unknown. Pop. 2600.
grounds. Sugar and indigo are cultivated in small quantities. The cotton chiefly raised is the common dwarf kind. Few trees grow here spontancously, and none will thrive, under any treatment, near Madras, around which the soil is very poor, consisting of a heavy, sterile, salt loam, and there are other tracts equally barren. The elimate of the Lower Carnatic, or eountry between the ghauts and the sea, is the hottest in India. On the coast, this excessive heat is tempered by the sea-breeze; but 10 or 12 m . inland, its intensity is rather increased than lessened by it, in consequence of its passing over the heated intervening traet. When the sea breeze fails, which it sometimes does for several days together, the heat on the coast becomes intolerable, the thermometer rising to $130^{\circ}$ in the shade. In May, June, and July, showers are frequent, which have the effeet of cooling the air, and promoting vegetation. The principal rivers are the Pemar, the Palaur, the Colleroon, and the Vaygaroo, all of which have their sources in the table land above the ghants, and discharge themselves into the Bay of Bengal. The majority of the imhabitants of the Carnatic are Hindoos, the Mahometans being thinly seattered over the country. A large portion of the land is rented by Brahmins, but these seldom labour with their own hand, employing slaves of the inferior Sudra castes to cultivate their farms. There are a few Mahometan farmers who possess slaves; but the most numerous elass of agriculturists are Sudras, who are looked down upon by the Brahmins as an inferior race, and, in towns, are not permitted to dwell in the same street with the latter. Few provinces of India can exlibit so many large temples, and other evidences of former wealth and civilization, as the Carnatic. lts forts and fortresses were also execedingly numerous, but these are now falling rapidly into decay. The Carnatic was conquered by the l3ritish in 1783, but was not finally ceded to us till 1801 . Pop, about $7,000,000$.

CARNBEE, par. Scot. Fife; 5 m . by 4 m . Pop. 1043.
CARNCAS'TLE, par. Irel. Antrim; 9726 ac. Pop. 2079.
CARNDONAGH, a small tn. Ireland, co. Donegal, 19 m . N. Londonderry. It has several places of worship, a few schools, and a number of large and well-built houses. P. 653

CARNEW, par. Irel. Wexford; 8115 ac. Pop. 7205. CARNGIWEH, par. Wales, Carnarvon. Pop. 119.
CARNICOBAR, an isl. Bay of Bengal, the most N. of the Nicobar group, about 80 m S. by E. the Little Andaman; lat. (centre) $9^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $92^{\circ} 54^{\prime} \mathrm{E}$. ; about 6 m . N. to S ., and 5 broad, very little elevated above the sea, except at the W. side. The middle of the island is covered with long, rieh grass, where multitudes of hogs are bred; near the coast are fruit trees of various kinds, partieularly orange, citron, lemon, and lime trees ; plantains, yams, and sweet potatoes may be also proeured, but cocoa-riuts are in the greatest abundance, and on these all the animals are fed, there being no sort of grain grown on the island. The inhabitants are hespitable and inoffensive.

CARNIERES, a vil. and com. Belgimm, prov. Hainaut, 11 m. W. Charleroy, r. bank, IIaine. Here are several coal mines and iron-works; ineluding 60 nailers' forges, employing 300 people. Pop. 2557.

CARNIOLA [German, Rrain], a duchy of Austria, forming three cireles in gov. Laibaelh, kingdom Illyria, namely, circles Laibach, Neustädt, and Adelsberg, between lat. $45^{\circ} 10^{\prime}$ and $46^{\circ} 20^{\prime} \mathrm{N}$. ; and lon. $13^{\circ} 50^{\prime}$ and $16^{\circ} 25^{\prime}$ E.; having Carinthia and Styria N. and E., Croatia and Lombardy S. and W.; area, 2903 geo. sq. m. It is covered with lofty mountains, some of which are about $10,000 \mathrm{ft}$. high, and, generally speaking, is one of the most unfertile regions of the empire. Some districts, however, produce considerable quantities of wheat, barley, wine, and, in the S., fruits of various kinds, and exeellent flax. Bees are numerous in S. Carniola, and silkworms are reared. It has many small lakes, but few rivers of any importance. The largest is the Kulpa. There are some iron, lead, and quicksilver mines, the latter exceedingly rich. It abounds in clays and valuable stones, and in coal and marble. There are considerable manufactures of iron, fine linen, lace, woollen cloth, flannel, worsted stoekings, leather, wooden articles, \&c. Its chief exports are steelwares, quicksilver, hats, linens, glasswares, wax, wine, flour, \&c.; prineipal imports-salt, eil, fruit, coffee, sugar, tobaceo, cloths, cattle, \&e. Carniola was made a duchy in the 12 th century, under the dominion of the counts of Tyrol, whe became extinct in 1335, and were sueceeded by the Earls of Goerz. After the treaty of Vienna, in 1809, it was ceded to France, and incorporated in the kingdom of Illyria. In 1814, it came again into the possession of Austria. Capital Laibach. The inhabitants are industrious and temperate, and all R. Cathulies. Pop. 427,000.

CARNMONEY, par. Irel. Antrim; 8937 ac. Pop. 6128.
CARNO, par. Wales, Montgomery; 5000 ac. P'op. 995.
CARNOCK, par. Scot. Fife; 2260 ac. Pop. 1270.
CARNOUl, Curnoul, or Kurnool, a fortified tn. Hindoostan, presid. Madras, prov. Balaghaut, cap. ancient principality of same name, r. bank, Toombuddra, 250 m . N.W. Madras; lat. $15^{\circ} 49^{\prime} 58^{\prime \prime} \mathrm{N}$. ; lon. $78^{\circ} 6^{\prime} 19^{\prime \prime}$ E. (L.) The fort is well defended on three sides by the rivers Henday and Toombuddra, the latter here 765 to 875 yds. broad, while the W. side is strongly fortified. The interior is almost entirely covered with stone and mud houses. Towards the S. of the fort is the pettah, or suburbs, which are of considerable extent. 1'op. 4000 .

CARNSORE POINT, a headland, Ireland, eo. Wexford, forming the S.E. extremity of the island ; lat. $52^{\circ} 10^{\prime} 18^{\prime \prime} \mathrm{N}$. ; lon. $6^{\circ} 21^{\prime} 42^{\prime \prime}$ W. (R.)

CARNTEEL, par. and tu. Irel.Tyrone; 13,432 ac. P. 7903.
CARNWATH, a vil. and par. Scotland, co. Lanark, 27 m . S.E. Glasgow. The village, 7 m . N.E. Lanark, contains several handsome houses, and has of late years greatly improved; and has a parish, a Free, and a U. Presbyterian chureh.-The PARISII, 12 m . by 8 m ., abounds in valuable minerals; lime, coal, and iron, being wrought to a great extent. There are also extensive iron-works. See Lanakkshire. P'op. (1851), 3553.

CAROLINA, a th. New Granada, prov. Antioquia; lat. $6^{\circ} 45^{\prime} \mathrm{N}$. Pop. 1572.

CAROLINA (La), atn. Spain, Andalusia, prov. of, and 36 m . N.N.E. Jaen, on a slope of the sierra Morena. The streets generally lie at right angles, and are noted for cleanliness and uniformity. There are two squares, and a bull-ring; a parish church, townhouse, prison, two schools, a cemetery, and some handsome fountains. Manufactures:-linen and woollen
fabries, oil, and a little wine. This town is the capital of the German colonies, formed in the reign of Charles III. The settlers received a grant of land, and various other advantages; even yet, the distriet is distinguished by the superior industry and activity of its inhabitants. Pop. 1739.-(Madoz.)

CAROLINA (North), one of the southern U. States, between lat. $33^{\circ} 50^{\prime}$ and $36^{\circ} 30^{\prime} \mathrm{N}$.; and lon. $75^{\circ} 45^{\prime}$ and $84^{\circ}$ W. ; bounded, N. by Virginia, W. Tennesee, S. South Carolina, and E. the Atlantic ; length, E. to W., 430 nr .; breadth, 180 ; area, 48,000 sq. m . A ridge of sand runs along the whole coast of this state, and is partially separated from it by arms of the sea of greater or less extent. The passages into them are shallow and dangerous, and the only one through whieh vessels can pass is Oceacock inlet, formed by Capes Hatteras and Lookout, off which, particularly the former, disastrons shipwreeks are of frequent oceurrence. The surface, for 60 or 80 m . from the coast, is a dead flat, covered with swamps and marshes, through which muddy streams pursue a sluggish course. The chief natural product is the pitch pine, whieh attains a great size. The soil is generally poor and sandy; but in many of the swamps along the margins of the rivers, rice of fine quality is raised. The climate of this part of the district is very umhealthy. Farther inland for about 40 m ., though the soil continues sandy, the surface loses its monotonous appearance, and beeomes undulating, after which it gradually ascends, becomes more fertile, and assumes the form of a table land, being 1800 ft . above the sca, and forms the base of a portion of the Alleghany Mountains. The prineipal summits are Grandfather Mountain, 5556 ft . liigh ; Roan Mountain, 6038 ft ; and Black Mountain, 6476 ft ., the greatest height in the $\mathbf{U}$ States E . of the Rocky Mountains. The soil of this elevated district, particularly its W. slopes, is generally fertile; and, when not brought under cultivation, is occupied by magnificent trees of oak, walnut, lime, and cherry. The elimate here is pure and salubrious. Winter is occasionally severe. The principal minerals of N. Carolina are gold and iron. The former, whieh is found both in grains and in masses, and lumps, along both sides of the Blue Ridge, was at one time obtained in sueh quantities, as to have procured for that district the name of the gold region of the U. States. The produce has progressively declined; and, being now eelipsed by that of California, will probably cease to be sought after. Iron, of exeellent quality, abounds, and traces of both lead and coal have been discovered. The principal rivers are the Clowan, Cape Fear, Pamlico, Roanoke, Neuse, Yadkin, and Catawba. They are admirably fitted for internal communication, but, owing to the sluggishness of the latter part of their course, are encumbered at their mouths with bars, which unfit them for the navigation of large vessels. They are well supplied with fish; but near the coast are infested with enormous alligators. The chief wild quadrupeds are the wild cat and the wolf; among wild birds, the first place belongs to the turkey; the worst reptile is the rattlesnake. The chief agricultural products are Indian corn, rice, wheat, oats, tobacco, and cotton. The cane grows luxuriantly, but comparatively little sugar is made, the greater part being eonsumed green by eattle, particularly hogs, which in N. Carolina far out-number every other class of domestic animals. Neither the trade nor manufactures of this state are of mueh importance. The latter are chiefly cotton yarn, ironware, earthenware, soap, leather, and flour. The former, in consequence of the want of harbours, is chiefly conducted through the neighbouring states. The chief exports are rice, cotton, and the products yielded by the piteh pine, namely, pitch, tar, turpentine, and timber. The exports, in 1847, amounted to $£ 56,983$; imports, $£ 28,476$. N. Carolina is one of the slave-holding states, and exhibits in its condition not a few of the baneful effects of that nefarious practice. Its internal improvements eontrast unfavourably with those of some of the N. states, and neither religion nor education can be said to be flourishing. The most numerous religious denominations are the Methodists, Isaptists, and Presbyterians; but the whole number of their communicants falls short of that of the white persons, above 20 years of age, who ean neither read nor write. The Legislature consists of a Senate of 50 , and a House of Commons of 120 members, both elected biennially, the former only by freemen pessessing a freehold qualification of 50 acres of land, who vote in districts regulated by the amount of state taxes paid; the latter by all free white men of 21 years of
age, who have been inhabitants of the state for the previous 12 months, and who vote in counties regulated by population. The governor is also elected by the latter class of voters, but the judges of the supreme court are chosen by a joint ballot of both houses, and hold their office ad ritam aut culpam. The seat of Legislature is Raleigh. Pop. 753,419; of whom 245,817 are slaves.

CAROLINA (Souti), one of the southern U. States, between lat. $32^{\circ} 2^{\prime}$ and $35^{\circ} 10^{\prime} \mathrm{N}$.; and lon. $78^{\circ} 24^{\prime}$ and $83^{\circ} 30^{\prime}$ W.; bounded, N. and N.E. by N. Carolina, N.W., W., S. W., and S. by Gcorgia, S.E. by the Atlantic; length, S.E. to N.W., 200 m ; breadth, 125 ; area, $25,000 \mathrm{sq}$. m. In slape it is an irregular triangle, of which the vertex is in the N.W., while the base is washed by the sea, and lined by a chain of fine islands which furnish the famous sea island cotton. The natural division of this state is into the lower, middle, and upper country. The first stretches from the sea for 80 to 100 m . inland, and is covered with extensive forests of pitch pine, interspersed with swamps and marshes. Along its rivers and creeks are rich alluvial tracts, on which fine erops of cotton and Indian corn are grown. The swamps form fine rice plantations. The lower country terminates with a range of low sand hills, of a curious undulating appearance, which continue for 60 or 70 m ., and forms the middle country. Between these hills some tolerable land occurs, but the greater part of it is mere waste, unfit for cultivation. The upper country, legiming with what is called the Ridge, which rises suddenly, and with some degree of abruptness, attains a considerable clevation, and forms a fine tract of hill and dale, abundantly watered with streams of pure water. It terminates in tlie Alleghany ranges, which pass through the state, and throw out several branches with lofty peaks. The highest is Table Mountain, which is 4000 ft . above the sea level. The upper country is salubrious, beautiful, and generally fertile. The minerals of this state include gold, iron, and some lead, also marble, various ochres, potter'sclay, and fuller's earth. The principal rivers are the l'edee, the santec, formed by the junction of the Waterce and Congarec, the Edisto, and the Savannah, a noble stream, which, during its whole course, proceeding from N.W. to S.E., forms the boundary between this state and (icorgia. The staple productions are cotton and rice. Indigo was at one time extensively enltivated, but cotton, being found more profitable, las superseded it. Great quantities of Indian corn are raised. The other ordinary agricultural crops are wheat, oats, and potatocs. The chief manufactures are cotton-twist and leather, but neither is of nuch inportance. Almost the only exports are the staples of rice and cotton, already mentioned. The total exports, in 1847, amounted to $£ 2,086,303$; imports, $£ 226,303$. The largest and most commercial town of the state is Clarleston; but its harbour is encumbered by a dangerous sand bar. The capital is Colombia. The Legislature consists of a Scnate of 45 members, clected by districts for four years, one-half renewed every sccond year; and a House of liepresentatives of 124 members, apportioned among the districts according to the number of whites and taxation, and elected for two years. The governor is elccted for two years ly both houses jointly; the supreme judges are chosen by the same bodies, and hold office ad vitan aut culpam. 1'op. 594,398; of whom 327,038 are slaves.

CAROLINE ISLANDS, or New Phunpines [Sparish, Carolinas, Felipinas-A'ueras], a large archipelago, N. T'acific Occan, between lat. $3^{\circ}$ and $12^{\circ} \mathrm{N}$., and lon. $132^{\circ}$ and $172^{\circ} \mathrm{E}$. 1t contains at least 50 groups, while the individual islets which stud its surface are almost incalculable. Many of them are mere coral reefs little elevated above the ocean, but the principal groups beginning at the W. and procceding E., are the I'elew Islands, Yap or Gouap. Dangerons Matelotes, Ulie, Ilaweis, Enderby, Hogoleu or Roug, Duperrey, Onalan, Radick, Piscadores or Wallis, Radack Chain, Chatham, and Marshalls. The most important vegetable productions are palms, bread-fruit trees, and bananas. The inhabitants belong to different races, and have made very different degrees of progress in civilization. In the central groups they are of a handsome physical type, active, and industrious, and have some commerce. On the E. generally, and on the W., with the exception of the Pelew Islands, the inhabitants, though apparently of the same stock, are far less advanced. The archipelago was first discovered by the Spaniards in 1543.

The expedition of Duperrey and d'Urville, ard the visit of Captain IIall, particularly to the Pelew, have furnished much interesting information with regard to them; but the most recent, and also perhaps most important, accounts have been furnished by the Ruessian navigator Lïitke. Many of the groups, however, have not yet ben visited, and many more are very imperfectly known.

CAROMB, a tn. France, dep. Vaucluse, 5 m . N.E. Carpentras, in a fertile district. It contains an old castle, and is surrounded by walls and ditehes, which give it the appearance of a fortress, though it is said not to be strong. In the neighbourhood a narrow ravine has been danmed up, so as to retain the waters of a rivulet, and form an extensive lake, which is employed for the purpose of irrigation. Pop. 2100.

CARONIA, a vil. and com. Sicily, prov. Messina, dist. of, and 8 m . N. Mistretta, and ncarly 2 m . S. from the coast. The inlalitants are chicfly employed in the Bosco di Caronia, a forest a few miles S. of the village, and the most extensive in Sicily. Pop. 1810.

CARONY, a river, Venczuela, dep. Orinoco, rising in the sierra Pacaraina, on the contines of Brazil, flowing generally N., receiving the Acaman and Paragua, and, after a course of between 300 and 400 m ., falling into thic Orinoco 80 m . E. Angostura. It is rendered wholly unnavigable by numerous cataracts, one of which, 15 ft . high, is near its mututh; and such is the rapidity of its current, that, for a considerable distance after entering the Orineco, its waters can easily be distinguished from those of that river.

CARON-İ-CLAWDD, a par. Wales, co. Cardigan. Pop. 2572.

CALOOR, a tn . Ifindoostan, Carratic, $\mathrm{I}_{7} \mathrm{~m} . \mathrm{W} . \mathrm{N} . \mathrm{W}$. Tanjore, 1. Jank, Amaravati, 6 m . W. its confluence with the Caviri ; lat. $11^{\circ} \mathrm{N}$. ; Ion. $78^{\circ} 8^{\prime} \mathrm{E}$. ; in a fertile district, and defended by a fort, now in a ruinous condition. It contains a famous Ilindoo temple, and abont 1000 houses, and was formerly a place of great commercial importance.

CARORA, or Caroho, a tr. and dist. Venezuela, prov. of, and $100 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Coro, about 50 m . E. of Lake Maracaybo, on the Tocuyo ; lat. $10^{\circ} 13^{\prime} \mathrm{N}$. ; lon. $70^{\circ} 26^{\prime} \mathrm{W}$. It is tolerably well built, and contains a laandsome parish churel, a Franciscan convent, and a hermitage. The climate, though lot, is salubrious; but the soil is dry and sterile. The district is famous for its aromatic lialsams, resins, and gums, and a kind of wild cochincal, the gathering of which once formed the chief occupation of the inhabitants. The breeding and rearing of useful domestic animals is much attended to. Manufactures:-leather and shoes, cloth, ropes, and very handsome hammocks, from the fibre of the Agare fotitla. Trade:-in these articles and other products of industry, with Coro, Maracaybo, and Cartagena. Before the wars of independence, the pop. was 9000 .

CAROTTO, a vil. Naples, prov. Naples, 5 m . S.W. Cas-tel-a-Mare. It has two churches, and a marine school founded ly Ferdinand IV. The silk worm is extensively reared in the district. J'op. 3500 .

CAROCGE, a tu. and par. Switzcrland, can. of, and about $1 \mathrm{~m} . \mathrm{S}$. Geneva, surrounded by fine villas, orchards, and meadows. It contains a landsome R. Catholic, and, immediately adjoining, a Protestant church, manufactures, a fine pottery, and has several tam.eries and an catensive cotton factory. 1'op. 4367.

CAROVIGNO, a tn. and com. Naples, prov. Terra detranto, 17 m . W.N.W. Brindisi. It stands on a hill, and contains a church, two convents, and an hospital. Pop. 3576.

CARPANETO, a tn. and com. Italy, ducly Parma, 13 m . S.E. Piacenza, between the Vezzino and Chero. It contains a medical and two elenientary schools. Good grain and wine of very fine quality are produced here. Pop. 5134.

CARPATlllan, or Karpathin Monetans [German, Karpathen; anc. Carpatus, Tatra T'atri], a range of mountains, Europe, chiefly in Austria, which, commencing at New Orsova, on the Turkish fronticr of the Banat of Austria, where the bed of the Danule is all that separates it from Mount Ilacmus, proccels first N.E. and then E. to the frontiers of Mollavia, where it trends, first N.W., then W., and, finally, S.W., as far as Presburg, enclosing thec plains of IIungary, and forming a semicircular belt, nearly 800 m . long ly 250 broad. The Carpathian chain may be divided into two great scetions, the E. and the W. Carpathians, the fortwo great sections, the E. and the W. Carpathians,
mer curving from the mouth of the Nera, which falls into the Danube 41 m . E. Belgrade, to the source of the Theiss, and forming the boundary between Austria and the principalities of Wallachia and Moldavia; the latter, proceeding from the sources of the Theiss and the Pruth, and terminating on the banks of the Danube W. of Presburg, and forming the boundary between IIungary and Galicia. The principal mountains of the E. group are the Dumoskenye and Szemenik, near the sources of the Nera and Temes in the Banat; the Kozstara, Pojana, and Pietru, near the sources of the Schyl in Transylvania; the Szurul E. of the pass of the Rothenthurm; the chain of Fagaras, S. of the town of that name; the VurvuszIlly, E. of the pass of Tertzburg, the Vurvn-Kapri and Kotzmardi, the Lakotz and Niagul, the leeze-Vapa, the Lokavas, mounts Stroumoura, Pietra, Gallatz, Pietrozza, and Rusky. The W. Carpathians, at first lower than the mountains of: Transylvania, rise to the W . of the Poprad, and form the remarkable group of Tatra, separated by the little river Arva, from another group called Baszkid, whose principal summits are Zsylecz, Jalovec, and Czerkow. This group unites with a chain which form the W. limits of the Carpathians, and presents a series of heights, the chief of which are the Javorina and the Weterling or Weiss-Gebirg. The greatest heights of the E. Carpathians are-Ruska-Poyana, 9909 ft ; Garluvipi, 9587 ft.; Buthest, in Transylvania, near Kronstadt, 8695 ft ; Buthest, in Wallachia, $6812 \mathrm{ft} . ;$ Retirzath, 8502 ft . ; and Lentschitz, 8456 ft . The greatest heights of the W . Carpathians are in the Tatra range, namely, the Kriwan, 8029 $\mathrm{ft} . ;$ the Viszoka, 8312 ft ; the Csabi, same height ; and in the mountains of Lomnitz, the Eisthalerspitze, 8521 ft. ; the Grüneseespitze, 8203 ft . ; the Hundsdorferspitze, 8318 ft ; and the peak of Lomnitz, 8462 ft . The principal intersections of the mountains, forming the most remarkable and most frequented passes, are those of Teregova, leading from Orsova to Temes war; of Vulkar, forming the valley in which the Schyl flows; and of the Rothenthurm, in a gorge formed by the Aluta, at the foot of Mount Szurul. The outer bend of the Carpathians is much steeper than that which descends towards the valleys of Transylvania and Ilungary. The mountain branch which, stretching N.W. towards Lutowisko and Ustrzyki, separates the basin of the Dniester from that of the Saan, also forms the line of separation between the basin of the Baltic and that of the Black Sea. From this line, as far as Jublunkau in Moravia, all the streams, from the N. slope, fall into the Vistula; thereafter, all the streams from both sides of the Carpathians belong to the Danube. The only important rivers which actually rise in the chain are the Vistula, the Dniester, and the Theiss. The E. part of the Carpathian chain, from Orsova to the source of the Bureza, near Kronstadt, is entirely composed of primitive rocks. These are succeeded by greywacke, which extends to the sources of the Theiss, and is only interrupted by a primitive group between the pass of Borgo and the source of the Viso. A great chain of trachyte appears on the frontiers of the Bukowina, and stretches to the point where the Aluta begins to flow S.W. To the W. of this chain, on approaching the plains, an extensive tract of sandstone, belonging to the coal formation begins to appear, and covers the greater part of Transylvania. Tertiary formations surround the vast plains of Hungary, which consist of a rich alluvium, and must once have been the bed of a lake. Basalt frequently occurs, bnt no distinct traces of extinet volcanoes have been found. The Carpathian range is rich in minerals, including gold, silver, quieksilver, copper, and iron. Salt occurs in beds, which have sometimes a thickness of 600 or 700 ft ., and are apparently inexlaustible. Vegetation also is vigorous. On the plateaux, corn and fruit are grown, to the height of 1500 ft . IIigher up, the mountain stceps are covered with, forests of pine, some of thent as high as 5500 ft . About 6000 ft . seems to be the vegetable limit. A bove it a few lichens may be found, but, in general, nothing is seen but bare steep rocks, many of them in the form of conical peaks.-(Orographie de l'Europe; \&e.)

CARPENEDOLO, a tn, and com. Austrian Italy, gov. Milan, prov. of, and 21 m. S.E. Brescia, near l. bank, Chiese. It contains four churches, and two hospitals, and has manufactures of silk. Besides a monthly market, it has a fair, which lasts two days. Pop. 4977.

CARPENETTO, a vil. Sardinian States, Picdmont div. Alessandria, 6 m . E. Acqui. Pop. 1500.

CARPENTARIA (GULF of), an immense gulf in N. Australia, between Cape York, and Cape Wessel the N. point of the Wessel islands, and Cape Arnhem on the mainland. It is about 400 m . in width, and about 460 in length, taking the coast line of York peninsula, which forms the E. side of the gulf. The land on the E. and S. is so low for a space of 600 m., that no part of the coast is higher then a ship's nuast head. The W. shore of the gulf is rather higher.

CARPENTRAS (anc. Carpentoracte), a city, France, dep. Vaucluse, 14 m. N.E. Avignon, 1. bank, Auzon, in a rich and fertile district at the foot of Mont Ventoux. It is surroundel by walls in good repair, flanked with towers, and has four gates exactly opposite each other. The strects are rather narrow, but most of the houses are well built, and almost all are supplied with water from the fountains in the public squares. Ontside of the walls is a broad esplanade, planted with trees. The prineipal publie buildings are-the cathedral, a Gothic edifice with a spire of the age of Charlemagne; the Porte d'orange, a very perfect gate surmounted by a high tower; the palace of justice, formerly the episcopal palace, close by which is a Roman triumphal arch; the hospital, erceted in 1751 ; public wash-houses, theatre, markets, new prisons, and public library, containing 22,000 volumes, 2000 MSS., 6000 medals, and various antiquities. The aqueduct, a massivo structure, which crosses the valley of the Auzon by 48 arehes, and supplies the fountains of the town, was finished in 173.t. Carpentras is the seat of the assize court for the department, of a court of first resort, communal college, and society of rural economy. There are here brandy, spirit of wine, and essence distilleries, manufactories of nitric acid, glne, verdigris, cotton, and silk yarn. There are also madder mills, tanneries, and dye works. Carpentras is the entrepot for the productions of the distriet; and the weekly markets for the disposal of them are among the most considerable in the S. of France. A considerable trade is likewise carried on in olive oil, fruit, almonds, madder, clover, lucerne seed, wax, honey, \&c. The Romans embellished Carpentras with many edifices, of which the successive ravages of the Goths, Vandals, Lombards, and Saracens, have left few traces. In 1313, Pope Clement V. fixed his residence here, and made it the seat of the Pontifical See, an honour that cost the town dear, as at his decease the cardinals were so long in appointing his sucecssor, that the people, worn out with their endless disputes and consultations, set fire to the college where they had assembled, and the flames spreading, consumed a large portion of tho town. The present walls were built by Pope Innocent VI. 50 years after that event. The bishopric, founded in the third century, was suppressed by the concordat of 1801. 1'op. 7691.

CARPI, a tn. Italy, duchy Modena, canal of same name, 8 m . N. Modena; seat of a bishopric, suffragan to Bologna. It is surrounded by walls, defended by a citadel, and has a cathedral, a seminary, and manufactures straw liats and spun silk. Two fairs are leld anuually; but the trade is trifling. The neichbourlood produces rice, wheat, hemp, and flax. Pop. 6500.

CAliliNO, a tn. Naples, prov. Capitanata, 22 m . N.E. St. Severo, near Lake Varano. It has three churches. P. 6061.

CARPI(), three tns. Spain. - 1, A th. Andalusia, prov. of, and 17 m . E.N.E. Cordova, 1. bank, Guadalquiver, on a declivity, on the summit of which stands a castle. It is tolerably well built, and possesses a parish church, townhonse, ladies' seminary, two primary sehools, a prison, and several convents, brick and lime kilus, and oil-mills. Some trade is carried on in cattle, grain, fruits, \&c. Pop. 2696.-2, Cur-pio-el-Tajo, a tn. New Castile, prov. of, and $24 \mathrm{~m} . \mathrm{W}$. by s . Toledo, in a hilly locality; houses indifferently built, and streets irregular. It has a chureh, townhall, prison, cemetery, and three schools. Serge, glass, and oil, are manufactured. Pop. 2497.-3, Carpio (EI), a tn. Leon, prov. of, and 35 m. S.W. by S. Valladolid, r. bank, Trabancos; honses poorly built. The town contains a chureh, a palace of the counts of Carpio, and a primary sehool. 1'op. 659.-Several other places in Spain have the same name.

CARRA LUUGH, a small lake, Ireland, co. Kerry, $3 \frac{1}{2} \mathrm{~m} . \mathrm{S}$. Castlemaine harbour, about 3 m . long, by 1 at its greatest breadth; abounds in tront and salmon, and exhibits scenery little inferior to that of the far-famed lakes of Killarney.

CARRACA ( $\mathrm{I}_{\mathrm{A}}$ ), a tn. Spain, Andalusia, dep. of, and 4 m . E.S.E. Cadiz. It is the chief naval arsenal of the government, and nne of the most complete in Europe. It stands in the channel E. of the Isle of Leon; and has been completely isolated from the mainland by artificial meaus. Its situation is so low and swampy that the buildings have been erected upon piles. It is defended by four batteries; and, in addition to the extensive buildings connected with the establishment, contains a handsome parish church. A little S. of Carraca, and between it and San Fernaudo, on the N.E. of the Isle of Leon, a new town, to be called San Carlos, was commenced in 1776, on a very magnificent scale; but few buildings of any consequence bave been completed.

CARRAGH, par. Irel. Kildare; 3734 ac. Pop 921.
CARRAN, par. Irel. Clare; 14,461 ac. Pop. 1144.
CARRAN-TUAL, a mountain, Ireland, co. Kerry, rising 3410 ft . above the level of the sea-being the highest summit of that remarkable range called Macgillicuddy's Reeks.

CARRANCA, a tn. Brazil, prov. Minas Geraes, between Bacpendi and Saro-João-del-Rei, with a church and an agricultural pop., dist. included, of 4000.

CARRARA, a tn. Italy, duchy Modena, 3 m . N.W. Massa, 1. bank, Avenza, $3 \frac{1}{2} \mathrm{~m}$. above its entrance into the Mediterrancan. It has a cathedral, begun in imitation of that at Pisa, but unfinished; several churches, a convent, an academy of sculpture, and numerous workshops for sawing, cutting, and polishing marble, for which water power is employed. There are also flour, oil, powder, and paper mills. Carrara is the seat of a district court, and forms part of the episcopal see of Massa and Carrara. The marble quarries from which this town derives its whole importance, occupy three or four descending ridges which unite in a lofty mountain called Monte Sagro. For upwards of 2000 years, the marbles lave continued to be exported, and still there remain stores apparently inexhaustible. They are of various shades; but the kind most prized is the transparent white kind, used for statuary, of which, however, the quantity obtained is small, in comparison with that of the inferior kinds. Pop. 5063.

CARREIRA ISLES, a small island group, Spain, off E. coast Galicia, prov. Coruña, 22 m . N.W. Vigo. They form part of the parish of San Paya de Carreira, which lies on the mainland along the bay of Arosa, and lias a large and wellbuilt parish church. Pop. 1241

CARRETĨO, a tn. Brazil, prov. of, and 120 m . E.N.E. Goyaz, with a church, and an extensive and fertile district. The inlabitants, however, are chicfly devoted to mining; though those who follow cattle-rearing are the richest.

CARRICAL, or Karical, a tn. Hindoostan, in the Carnatic, coast of Coromandcl, 152 m . S. Madras; lat. $10^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $79^{\circ} 53^{\prime} \mathrm{E}$. It was formerly a place of importance and strongly fortified, but is now wholly dismantled.

CARRICK, a dist. Scot. co. Ayr (which see).
CARRICK, four pars. Irel.:-1, Kildare; 5157 ac . Pop. 552.-2, Westmeath; 2957 ac. Pop. 532.-3, Tipperary; 2426 ac. Pop. $9165 .-4$, Wexford; 3009 ac . Pop. 1251.

CARRICK-A-REDE, an insulated basaltic rock, Ireland, co. Antrim, about $4 \frac{1}{2} \mathrm{~m}$. N.W. Ballycastle, scparated from the mainland by a chasm 60 ft . wide, and more than 80 ft . deep. Here is a valuable salmon fishing station, as the fish can easily be intercepted at this place in their retreat to the rivers. A communication is maintained with the mainland by means of a rude bridge of ropes thrown across the chasm, and allowed to remain during the fishing season.

CARRICK-on-Shannox, a tn. Ireland, co. Leitrim, 85 m . N.W. Dublin, 1. bank, Shannon, over which is a bridge to a straggling suburb in the comuty of Roscommon. The town consists, principally, of two streets, intersecting each other at right angles; is badly paved, and has a handsome church with a spire, a R. Catholic chapel, two Methodist meeting-houses, and parochial schools; a county courthouse, bridewell, jail, and the county infirmary, with dispensary attached. Being the capital of the county, the assizes are held here, as are the general and petty sessions. It is the chicf market for grain and provisions in Leitrim, and carries on an extensive trade in butter and provisions with Dublin and Newry. It has also some trade in coarse linen, druggets, frieze, coarse flannel, and yarn. The prosperity of the place has been greatly increased by recent improvements on the Shannon, which have
rendered that river navigable to Lough Allen, about 8 in . N. of the town. Pop. (1841), 1984.

CARRICK-on-SUIR, a tn. Ireland, co. Tipperary, 85 m . S.W. Dublin, on a plain, l. bank, Suir, which is navigable, up to the town, for ships of 200 tons burthen. Carrick-beg, a suburb, stands on the r. bank of the river. The town consists of four streets, three of which are of a good width, and a number of lanes; houses mostly of stone, and well built, though of unequal heights; water abundant. The public buildings, exclusive of the churches, are a courthouse, bridewell and barrack, an old castle or monastery, built by the Earl of Ormond, in 1260, for Franciscan friars; and an ancient abbey in Carrick-beg, founded in the year 1336. This last autique structure presents a curious achitcctural peculiarity. The tower is considerably broader than the body of the wall, on which it is supported by an inverted pyraunid, commencing

CARRICK-BEG AbBEY as existing in 1897.-From a Sketch by Rev. W. hill.
on two stones, one projecting from either side. Resting on these projections, the tower rises to a height of 34 ft .3 inches; and thus balanced, for there is no central base, it has stood, unharmed, the tempests of ages. The churches are the parish church and a R. Catholic chapel, both large, but neither of them particularly handsome. There are a parish school, under the Church Educational Society; a school kept by the monks, and one or two private schools. The town was formerly celebrated for the manufacture of coarse broad-cloth, for the use of the army. It still manufactures ratteen, a coarse woollen fabric, but the trade is now very much reduced. A considerable export trade, in corn, butter, bacon, and live stock, is carried on. Pop. (1841), 8369.

CARRICKBAGGOT, par. Irel. Louth; 826 ac. P. 302.
CARRICKFERGUS, a parl. bor. and seaport, and par. Ireland, co. Antrim. The Town lies N. side of Belfast Lough, 11 m . N.E. Belfast, with which it is connected by railway. It extends nearly 1 m . along the shore, and consists of the town within the walls, and two suburbs, called the Scotch and Irish quarters. On the N. and W. sides of the town, some portions of the old wall are still entire. The honses are mostly built of stone, roofed with slate, and have, many of them, a substantial and respectable appearance, especially those built within the last 40 years. The parish church, an old, patclıed, ungainly building, is surmounted by a fine modern spire. There are, also, a R. Catholic chapel, and places of worship for various dissenting congregations; with numerons charities, and a dispensary. The ancient castle of Carrickfergus, an object of considerable interest, is perched on a rocky peninsula projecting into the sca, and is still maintained as a fortress, having a number of guns on the walls, and being garrisoned by one or two companies of foot. The trade of the town was at one time considerable, but has been nearly extinguished by the rivalry of Belfast, to which it has now become subordinate; the registry of vessels, and the custom's duties, being meluded in the returns of the latter port. The small importations still taking place here consist of coals, iron, timber, bark, salt, slates, \&c.; the exports of
black eattle and grain. The spiming of cotton and linen yarn is carried on to some extent, and there are a large distillery, and some extensive tanneries. A good many persons are employed, also, in weaving cotton goods for the Belfast and Glasgow manufacturers. But the chief dependence of the town is on the influx of visitors during the summer season, when it is much frequented by bathers, and on the fishery in the bay, which affords employment to a large portion of the inhabitants, and is very productive. King William landed at Carrickfergus castle 16 days previously to the battle of the Boyne; and in 1760 it surrendered to a French squadron under Thurot, who was soon after killed, having been attacked by some English ships under Commodore Elliot. In 1778, the celebrated Paul Jones captured the Drake sloop: of-war in the bay, but made no attempt on tle town. Pop. (1841), 3885. Area of par., 16,700 ac. Рор. 93.9 .

CARRICKMACROSN, a tn. and par. Ireland, co. Mon gglan. The town, $46 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Dublin, consists of one long street, with several smaller ones branching from it. It has a clean, respectable appearance, and contains several good shops. The parish chureh is a landsome building, with an clegant steeple. There are here a grammar-school, two national, and various other schools; a dispensary, a mendicity society, a savings'-bank, and a bridewell. A considerable retail trade is carried on with the surrounding country; and soap, candles, brogues, and coarse hats are manufactured in the town. There is also a lanyard, a brewery, and a distillery. P. (1841), 1997. Area of par., 16,072 ac. I'. 13,44.-(Local Correspondent.)

CALiRIDEN, par. Scot. Linlithgow; $424 \mathrm{sq} . \mathrm{m} . ~ I ' .1208$.
CARRIGAHOLT, a maritime vil. Ircland, co. Clare, on bay of same name, estuary of the Shannon, 10 m. W. Kilrush. It has a pier, at which agricultural produce is slipped, and is frequented by fishing craft. IIere are the ruins of as: ancient castle, on the verge of a cliff overhanging the sea. lop. 426.

CARRIGALINE, par. Irel. Cork; 14,590 ac. P. 7489.
CARRIGALLEN, or Clincorick, a vil. and par. Ireland, co. Leitrim. The village, 19 m . E.N.E. Carrick-on-Shannon, is a constabulary police station; has petty sessions every altelnate Saturday; a weekly market, and several fairs. Pop. 473. Area of par. 18,104 ac. Pop. 4400.

CARRIGDOWNANE, par. Irel. Cork; 797 ac . P. 245.
CARRIGLEAMLEARY. par. Irel. Cork; 3320 ac. Pop. 1256.

CARRIGPARSON, par. Irel. Limerick; 1449 ac. P. 568.
CARRIGROHANE, par. Irel. Cork; 2658 ac. P. 2279.
CARRIGROHANEBEG, par. Irel. Cork;2061 ac. P. 641.
CARRIG'TOHILI, a vil. and par. Ireland, co. Cork. The former, 18 m. W. by S. Youghal, is chiefly one long irregular street, and is a constabulary police station, and hasseveral fairs. Pop. 692. Area of par. 10,319 ac. Pop. (1841), 3976.

CaRRIGUE, or Carrigufoyle, a small isl. Ireland, co. Kerry, in the Shannon, $1 \frac{1}{2} \mathrm{~m}$. N.W. Ballylongford. It is about $1 \frac{1}{2} \mathrm{~m}$. in circumference; las a battery, and bombproof barrack for 20 men, and is a coast-guard station. The castle of Carrigufoyle, belonging to the O'Connors, offered a deternined resistance to Cromwell, and was one of the last taken by him.

CARRIL, a tr. Spain, Galicia, prov. of, and 10 m . N.N.W. Pontevedra, near the mouth of the Ulla; houses, in gencral, badly built. The town has a parish church, customhouse, primary school, and several marine storehouses. The average value of exports is about $£ 56,000$; imports, $£ 35,000$. Pop. 1100.

CARRINGTON, par. Scot. Edinburgh; $3 \frac{1}{2} \mathrm{~m}$. ly 2 m . Pop. 616.

CARRION, a river, Spain, Leon, prov. Palencia. It rises in the mountains of the Asturias, flows S., and, passing Saldana, Carrion-de los-Condes, and Palencia, falls into the Pisuerga, 22 m . N.F. Valladolid, after a course of 75 m . exclusive of windings.

CARRION-de-calatrava, a tn. Spain, New Castile, prov. of, and 7 m . N.E. Ciudad-real, near l. bank, Guadiana. It is indifferently built, and possesses a large and highlydecorated parish clurch, a chapel, convent, storehonse, prison, cemetery, and four primary schools. Wine and oil are expressed here, and some trade is prosecuted in grain, cattle, wool, and oil. Pop. 3130.

CARRION-de-Los-cosdes, a tn. Spain, Leon, prov. of, and 22 m . N. Palencia, l. bank, Carrion. Nost of its strects are narrow, ill paved, and dirty; and it has three squares, the principal containing the townhouse, public storehonse, and other offices. Its remaining public buildings are-nine churches, several chapels, convents, and schools, a prison, lospital, and cemetcry. In the environs, along the banks of the river, are many pleasant public walks, ornamented with trees and fountains. The inhabitants are engaged in tamning, dyeing, expressing wine and oil, and in husbandry. Trade:cattle, grain, fruits, wool, \&c. A large and well-attended cattle fair is held in September. Pop. 3132.

CARRON, a vil. Scotland, co. Stirling, eclebrated for its extensive iron foundrics, about 2 m . N E. Falkirk.-'Ihe RIVER of same name is a small stream, rising in an extensive meadow called the Carron bog, near the centre of the county, and after an E. course of about 17 m ., falling into the Forth at Grangemouth. This stream is snpposed by some antiquaries to have been the boundary of the Roman conquests in Britain; and several memorable battles have been fouglit on its banks. In its course it supplies water to several printfields and the great reservoir of the Carron works, and drives some paper-mills.

CARRONSHORE, a vil. Scotland, co. Stirling, 2 m . below Carron works, partly in the parish of Larbert, and partly in that of Botlikennar. Pop. 838.

CARROWMORE, a lake, Ireland, co. Mayo, $3 \frac{1}{2} \mathrm{~m}$. N. W. Tulloghaan Bay, and $1 \frac{1}{2}$ m. N.E. Broadhaven Bay. It costains several islets; its waters flow by the rivulet Munhin into the A vonmore, and through it into Tulloghaan Bay.

CARRU, a tn. Sardinian States, prov. of, and 9 m . N.N. N . Mondoni. Pop. 3800.

CAREHALTON, or Casehorton, par. Eng. Surrey; 2680 ac. Pop. 2228.

CARSING'TON, par. Eng. Derby; 1080 ac. Pop. 235.
CARSI'IIAIRN, par. Scot. Kirkeudbright; 88 sq. m. Pop. 790.

CARSTAIPS, par.Scot.Lanark;11,840ac. P.(1851),1066. CAR'T, two streams, Scotland, co. Renfrew.- 1 , The White Cart rises in Carrot Moss, S.W. Eaglesham, flows N.W. and passing Catheart and Pollockshaws reccives the Levern, passes through Paisley, and falls into the Clyde $6 \frac{1}{2} \mathrm{~m}$. below Glasgow, after a course of $20 \mathrm{~m} .-2$, The Black Cart, a small unimportant stream, issues from Castle Semple Loch, $5 \frac{1}{2} \mathrm{~m}$. S. W. Paisley, flows N.E. and falls into the White Cart, about a mile above its confluence with the Clyde.

CAR'TAGENA, or Carthagena [anc. Carthago Nova], a tn. and seaport, Spain, prov. of, and 31 m. S.S.E. Murcia, cap. dist. of same name; lat. (mole light) $37^{\circ} 36^{\prime} \mathrm{N}$. ; lon. $0^{\circ} 56^{\prime} \mathrm{W}$. (r.), about 17 m . W. Cape de Palos. Its barbour, one of the largest and safest in the Mediterranean, has depth of water for the largest vessels, is sheltered from all winds by lofty hills, and guarded from the sea by the island of Escombrera, which forms a complete natural breakwater. It stretches N. and is narrowest at its mouth, where it is defended by the castle of Galeras, occupying one of the heights on the W., and the castle of St. Julian, occupying one of those on the E. The town, situate at the N. end of the harbour, is surrounded by a lofty wall, flanked with bastions. The space enclosed is much larger than the actual population requires, and everything about the place bears strong cvidence of extensive, rapid, and comparatively recent decay. The principal streets are spacious and regular, and many of the houses, though of simple arehitecture, well built, and provided with balconics. The most important squares are the Merced or Market-place, the largest of all, lined throughout with elegant buildings, and adorned with a fine fountain, furnishing tl:e purest water so copiously as to supply the greater part of the inhabitants; and the Monjas, of less dimensions than the former, but occupying both a more centrical and airy situation. The Alameda, in the N.W., near the Madrid gate, is well planterl, and affords both a healthy and picturesque promenade. The principal edifices are the cathedral, possessing little architcctural merit, and now, since the bishop's see bas been removed to Murcia, converted into a simple parish chureh, the old castle (Castello Antiguo) supposed io date from the foundation of the city by the Carthaginians, the barracks, arsenal, presidio or convict establishment, the military hospital, and hospital du Caridad, the artillery park, the observatory, the couvents of

St. Augustine and Monjas, and several other convents and churches. When Spain possessed her colonies, and was in a flourishing condition, Cartagena was one of her most important naval stations, and carricd on a very extensive commerce, but

> 6. Iglesia Mayor. 7. Artillery 1larracks, 8. Observatory. 9. Tbe Artillery Paik. 10. Timber P'ondc.

Ancient Castle (Casptllo Antaguo)
2. Iglesia Mnyor Atigua
cverything has since gone to decay, and the town can hardly be said to have either trade or manufactures. The latter consists chiefly of red lead, carthenware, cordage, esparto, mats, and glass. The mines, chiefly argentiferons lead, extensively wrought in the neighbourhood, give employment to scveral smelting furnaces and foundries. The chief articles of export are barilla, grain, and esparto. In addition to other causes of decay, Cartagena has suffered greatly by its unhealthiness. Repeated epidemics have raged within it, and carried off the inhabitants by thousands. Pop. including suburbs, 33,593.

Cartagena or Carthagena, a seaport tn. New Granada, cap. prov. of same name, on a small sandy peninsula, connected with the continent by an artificial neck of land; lat. (dome) $10^{\circ} 25^{\prime} 36^{\prime \prime} \mathrm{N}$. ; lon. $75^{\circ} 34^{\prime} \mathrm{W}$. (r.) On an island, communicating with the city by means of a wooden bridge, is a large suburb, called Xiximani. Buth the former and latter
tery of Nuestra Senhora de la Popa. 'The height of La Popa is not fortified,' says Capt. Cochrane, 'which is unaccountable, as it has several times caused the fall of Cartagena without a single shot almost being firel.'
The port is magnificent, and is the only one on the coast fit for the repair of vessels. It also possesses excellent building docks. The bay, which is land-locked, and has smooth water, extends N. to S. 7 m ., and affords excellent anchorage. There were two entrances to the port - the Boca Grande, close to the town; and the Boca Chica (narrow mouth), many miles farther S.; but the better to defend the approach, the former has been blocked up by sinking old vessels in it, i:1 consequence of which, ships are compelled to go round by Boca Chica, a circuit of 30 m ., to gain the usual roadstead for frigates, which is 3 or 4 m . from the town. The Boca Chica is defended by two strong castles. The entrance to the port is rendered somewhat difficult by shallows. The town and suburbs are well laid out and well built. The houses are generally of stone, two stories high, with balconics and lattices of wood, which, in this climate, has the durability of iron; and the streets, though not very spacious, are straight, and well paved. Among the public buildings are numerous churches and convents, some of them of great magnificence; a general and a nilitary hospital, a townhall, a theatre, a circus, and a college, with an average attendance of 200 students. Tha spring water is bad, and the inhabitants are in consequence obliged to obtain supplies from immerise cisterns, constructed for the purpose of collecting rain water. The weather, especially during the rainy season, is excessively hot, and thus both heat and damp combine to render the climate, particularly from May to November, most insalubrious. Leprosy is common, and yellow fever often makes fearful ravages. In recent years, owing partly to greater attention to cleanliness, mortality is said to lave decreased. The chief manufactures aro ropes and sail-clotls. The trade of Cartagena, at one time considerable, has declined very much, in consequence of the rivalship of the ports of Santa Martlia and Savanilla. Tho export trate is now almost confined to specie and bullion, conveyed by the steamers of the Royal Mail Steam-packet Company to England. In 1845, the arrivals and departures of vessels were 39, tonn. 5541 ; value of cargoes imported, $£ 56,786$; exported, $£ 13,488$. In 1846 , the vessels numbere 42 , tomı. 6502; cargoes imported, $£ 62,708$; exported, $£ 48,712$. A canal of $80 \mathrm{~m} .$, to connect the bay of Cartagena with the river Magdalena, is now in progress, and it is anticipated that on its completion the trade of Cartagena will revive. Poi. about 10,000 .

CARTAGO.-1, A tn. Central America, cap. of CostaRica, r. bauk, of a river of its own name. It was formerly a place of considerable commercial importance, and had a population of about 37,000 . It then contained 3000 houses and eight churches, but it was so utterly ruined by an earthquake on September 2, 1841, that only one church and 100 houses were left standing. Near the town is Mount Cartago, rising $11,480 \mathrm{ft}$. above the sea level, and presenting indications of having at one time been an active voleano. $-2, \Lambda \mathrm{tm}$. New Granada, prov. Popayan, in the valley of the Cauca, on the Yiega. The streets are broad and straight, and it has a spacious and handsome square, a cathedral, and two parish churches, and a well-conducted Lancasterian school. Its trado is principally in dried beef, live pigs, fruits, coffee, superior cacao, and tobacco. The sugarcane thrives well here. Minerals of various kinds abound, and the hills contain nitre. Cartago is the entrepôt for the The climate is hot, but dry and healthy. Pop. 5500

CARTAMA, a tn . Spain, Andalusia, prov. of, and 14 m . W. Malaga, at the base of a hill, called 'la Virgen,' crowned with the ruined walls of an ancient fortress. It has wide and paved streets, a square, which contains the chureh; a chapel,
school, and scveral fountains. The inhabitants are chiefly employed in agriculture, cattle-rearing, and expressing oil. 1'op. 2863.-(Madoz.)

CARTAYA, a tu. and port, Spain, Andalusia, prov. of, and 9 m . W.N.W. Huelva, l. bank, Piedra. Its houses are irregularly built, and it has a large square, in which is situate the towuhall, now ruinous. It also has two churches, a prison, school, hospital, public granary, now used as a sessionhouse ; custom-house, and an old Moorish castle, now converted into a cemetery; docks for ship and boat building, and a marine storehonse. In 1843, 57 vessels entered and sailed from the port, tonn. 2907. The bulk of the people are fishermen. Pop. 4097.

CARTERET, an isl. S. Paeific, Solomon Archipelago; lat. $8^{\circ} 50^{\prime}$ S.; lon. $160^{\circ} 48^{\prime} \mathrm{E}$. It bears the name of the English navigator who discovered it in 1767 .

CARTHAGE, the anc. cap. of a famous country of same name, N. Africa, the site of which is believed to be a few miles N. the city of Tunis, on the N. part of a small peninsula; lat. $36^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $10^{\circ} \mathrm{E}$. About 30 years atter the destruction of Carthage city (b.c. 161), the Romans attempted to establish a colony on its site, whieh did not prosper; but a second, under the name of Colonia Carthago, rose into importance, and became the first city of Roman Africa. $\ln 439$, the Vandals, under Genseric, seized it. It was retaken by Belisarius in 553 , but was finally destroyed by the Saracens in 693. The few ruins that now exist belong to the Roman city. Not a trace remains of the Carthaginian metropolis. In 1841, a monument was set up in the locality by the French, in memory of their King Louis IX. (better known as St. Louis), who died of the plague, May 25, 1270, while besieging the neighbouring eity of Tunis.

CARTHAGE (CAPE), N. Africa, gulf of Tunis; lat. $36^{\circ} 52^{\prime} 24^{\prime \prime} \mathrm{N}$. ; lon. $10^{\circ} 20^{\prime} 15^{\prime \prime} \mathrm{E}$. (r.) The cape is on the W. side of the gulf, about 10 m . E. from the city. A lighthouse has been erected on this promontory with a revolving light, performing a revolution every three minutes.

Carthagena. See Cartagena.
CARTMEL, a vil. and par. England, co. Lancaster. The village is 11 m . S.W. Kendal, in a valley surrounded by lofty and picturesque hills, consists of two prineipal streets, well kept, and is abundantly supplied with water. The ehurch is a fine old cruciform structure, formerly a priory, founded in 1188. There is an ancient endowed grammar-sehool, with some small parochial charitable institutions. People chiefly employed in agrieulture. Area of par. 22,960 ac. Pop. 4927. - (Local Correspondent.)

CARUPANO, a seaport tn . and dist. Venezucla, prov. of, and 57 m . N.E. Cumana, within a few miles of Cariaeo; lat. $10^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $63^{\circ} 22^{\prime} \mathrm{W}$. ; agreeably situate at the opening of two fine valleys. The place is said to be healthy, and the inhabitants are of a gay and lively temper, fond of daneing. A battery, seated on an eminenee, defends the port. It has some traffic in horses and mules; and in 1847, the arrivals at the port were 22 vessels, tonn. 789 ; departures, 67 , tonn. 1186. Pop. 5000 .

CARVIN, a tn. France, dep. Pas-de-Calais, 14 m. E. Bethune, 16 m. N.E. Arras; with manufaetures of stareh, leather, earthenware, beet sugar, and potato flour. Pop. 4038.

CARWAR, a seaport tn. IIindoostan, prov. Canara, 50 m . S.S.E. Goa; lat. $14^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $74^{\circ} 11^{\prime} \mathrm{E}$. This was formerly a noted seat of European commeree, the English East India Company having bad a factory here so early as 1663, but during Tippoo's reign it fell into utter decay.

CARYSFORT, a small vil. Ireland, co. Wicklow, and 5 m . S.W. Rathdrum, formerly a parl. bor., returning two members to the Irish House of Commons. It has a free sehool, founded by Charles I., which is numerously attended.

CARYTENA, a vil. Greece, nome Areadia, 17 m . W. Tripolitza, near the Carbonaro. It has an old castle, repaired by, and for years the residence of, the celcbrated ehief Colocotroni. Pop. 1000.

CASACALENDA, a m . Naples, prov. Sannio, 18 m . N.E. Campobasso, at the foot of a hill. It has three churches, one of which is in the good Tuscan style; and a convent. Silk-worms are reared in the neighbourhood, and the district produces wine and fruit of good quality. Pop. 5190.

CASALANGU1DA, a vil. and com. Naples, prov. Abruzzo Citra, dist. of, and 11 m. S.W. Vasto. Pop. 2306.

CASACBORGONE, a vil. Sardinian States, prov. of, and 14 m . N.E. Turin. Pop. 2000.

CASALBUTTANO, a tn. and com. Austrian Italy, gov. Milan, prov. of, and 8 m . N.N.W. Cremona, on a navigable canal, between the mountains of Breseia and the Ollio. It contains a parish chureh, and four oratories; has manufactures of linen and cotton, and numerous silk-mills, one of the largest silk houses of Italy having its establishment here. Pop. 3903.

CASALDUNI, a vil. and com. Naples, prov. Sannio, dist. of, and 19 m . S. Campobasso. It has an annual fair. P. 3300 .

CASALE [anc. Bodincogamus], a tn. Sardinian States, cap. prov. Casale, division of, and 18 m . N.N.W. Alessandria, r. bank, Po. The citadel, founded in 1590 , by Duke Vicenzo, was one of the strongest in Italy. The eastle, or palace, is still standing; but the ramparts lave been converted into promenades, and the defences are now insignificant. The cathedral is said to lave been founded in 742. There are several other ehurches, a scminary, several convents, two hospitals, an orphan hospital, college, public library, theatre; corn magazine, several silk spinning-mills, a parade, and public garden. The trade of the town is inconsiderable. Casale is the seat of a bishopric, and distriet court of justice. It was the capital of the ancient marquisate or duehy of Montferrat. In 1640, the Duc dHarcourt defeated the Spaniards here. Casale was taken and retaken several times by the French and Anstrians, and it formed, for a time, part of the department of Marengo in the French Republie. Pop. 21,000.-The province, area, 2224 sq. m., is hilly to the S. and W. Its produets are:-grain, frnit, liemp, silk, and wine. It is divided into 15 mandamento, and 73 comune. Pop. 112,000.

CASAL-MAGGIORE, a tn. Austrian Italy, prov. of, and 22 m . E.S.E. Cremona, l. bank, Po, from the inundations of which it is with diffieulty protected by strong embankments, It is the seat of several courts and public offiees, and has several churehes, an abbey, barracks, and a custom-house, various schools and charitable institutions, a mont-de-piété, and a theatre. Its manufactures consist of earthenware, glass, and cream of tartar, some tanneries, and brandy distillerics; and it has markets twice a week, and an annual fair, which lasts seven days. Inhabitants chiefly engaged in agriculture, partieularly in cultivating the vine. Pop. 4106.

CASALNOVO, two tns. Naples:-1, A tn. prov. Calabria Ultra, $9 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Nieastro, near 1. bank, Savuto. Pop. 1610. -2, A tn. prov. Principato Citra, 14 m . N.E. Policastro, r. bank, Sele. Pop. 2500.

CASALNUOVO, three tns. Naples:-1, A tn. prov. Calabria Citra, 8 m . N.E. Cassano. Pop. 6600- $-2, \AA \mathrm{tn}$. prov. Calabria Ultra, 31 m . N.E. Reggio, almost entirely destroyed by the earthquake of 1783 . The neighbourbood prodnces silk. Pop. 8241.-3, A tn., prov. of, and 6 m . N.E. Naples. Pop. 3120.

CASAL-PUSTERLENGO, a tn. and com. Austrian Italy, gov. Milan, prov. of, and 13 m . S.E. Lodi, I. bank, Brembiolo. It is the seat of several public offices; coutains a parish chureh and sanetuary; has manufactures of linen and silk goods, and earthenware; and earrics on a considerable trade, particularly in Parmesan cheese, which is here made in great quantities, ard of the best quality. There are limekilns in the neighbourhood. Pop. 5601.

CASALTRINITA, a vil. and com. Naples, prov. Capitanata, dist. of, and 30 m . E.S.E. Foggia, and about 1 m. S. Lake Salpi. There are salt-works in the neighbourhood belonging to the crown. Pop. 3785.

CASALVECCH1O.-1, A vil. and com. Naples, prov. Capitanata, dist. of, and 15 m. S.W. Sansevero. Great quantities of olives are raised in the neighbourhood. Pop., greater part Albanese or Arnaouts, 1020.—2, A tn. and com. Sicily, prov. of, and 30 m . S.S.W. Messina, dist. of Castroreale. Pop. 3633.

CASAMANZA, a river, Sencgambia, betwcen Cacheo and Gambia. Falls into the Atlantic; lat. $12^{\circ} 34^{\prime} \mathrm{N}$. ; lon. $16^{\circ} 50^{\prime} \mathrm{W}$. Source unknown. Off the entranec of the river there are only 4 or 5 fathoms water at the distance of 8 or 9 m . from the land. There is a French factory at its cmbouchure; another, called Berrin, 30 m . higher up; and a third, Zinginehor, belonging to the Portuguese, 9 m . above the latter. The river is navigated by large schooners to a considerable distance beyond the farthest settlement.

CASAMASSIMA, a tn. Naples, prov. of, and 14 m. S.S.E. Bari. It has several churches, a convent, and two abbeys. The district produces wine and almonds of good quality. Pop. 4230.

CASAMICCIOLA, a tn. Naples, prov. Naples, isl. Ischia, at the foot of Mount Epomeo, near the sea coast. It produces earthenware, and has some hot baths, which are mach frequented; and a custom-house. Good wine is produced in the neighbourhood. Pop. 3133.

CASANARE.-1, A prov. New Grenada, dep. Boyaca; extending from the E. slope of the Andes to the Orinoco. It is very mountainous on the W.; but the remainder is an immense plain, covered with forests and marshes, traversed by numerous rivers, rich in fine meadows, but little cultivated. The banks of the Orinoco is the only part inhabited. Pop. $12,000 .-2, \mathrm{~A}$ river in the above prov., rising in the mountains of Chita, and, after an E. course of about 180 m . through immense plains, nearly under the parallel of $6^{\circ} \mathrm{N}$., falling into the Meta, a little E. the confluence of the Chire; lat. $5^{\circ} 58^{\prime} \mathrm{N}$. It is navigable for small craft throughout the year. $-3, \mathrm{Atn}$. on the above river; lat. $5^{\circ} 56^{\prime} \mathrm{N}$. ; lon. $71^{\circ} 50^{\prime} \mathrm{W}$. It has a good harbour, and 900 inhabitants, chiefly Indians.

CASANDRINO, a vil. and com. Naples, prov. of and $5 \mathrm{~m} . \mathrm{N}$. city Naples. The chief employment is rearing silkworms. Pop. 2195.

CASARANO, a vil. and com. Naples, prov. Otranto, 11 m . N.N.E. Gallipoli. It contains an hospital, orphan asylum, and two convents; and has an annual fair. Pop. 2748.

CASAR-de-Caceres, a vil. Spain, Estremadura, prov. of, and 8 m . N. by W. Caceres; with a Gothic church, townball, prison, hospital, several schools, a public storehouse, and three fountains. Manufactures:-liven and woollen fabrics, shoes and boots, oil and wine. Pop. 6025.

CASARICHE, a tn. Spain, Andalusia, prov. of, and 52 m . E. Seville, r. bank, Yeguas. The houses are well built; the streets spacious. It has a small square, a church, chapel, chapter-house, prison, and two schools. Inhabitants occupied in burning charcoal, distilling brandy, expressing oil, and in husbandry; and in trading in grain, fruits, and cattle. Pop. 2125.

CASAS, several tns. Spain. Those noteworthy are:1, Casas-de-Ves, a tn. New Castile, prov. of, and 32 m . N.E. Albacete, on the borders of Valencia, r. bank, Gabriel. It has wide and regular streets lined with substantial houses, and an extensive square containing a handsome townhall; it also has a parish church, two schools, a prison, storehonse, and cemetery. Inhabitants engaged in weaving, currying, and husbandry; and in trading in grain, fruits, cotton, wool, and silk. Pop. 3385.-2, Casas-Ibañez, a tn. New Castile, 4 m. N. the former, possessing a church, townhall, prison, storehouse, cemetery, and two schools. Inhabitants employed in domestic weaving and tillage. Pop. 2891.-3, Casas-de-Millan, a vil. Estremalura, prov. of, and 20 m . N. by E. Caceres, r. bank, Tagus. It possesses a square, church, townhonse, school, prison, and cemetery. Woollen and silken fabrics are manufactured here, and some trade is done in grain, fruit, and pigs. Pop. 1817.-(Madoz.)

CASAS-GRANDES, a tn. Mexican Confederation, state Chihuahua, 35 m . S. Llanos, apparently, at one period, a place of considerable extent and importance, as the country, for some distance around it, is covered with the ruins of buildings capable of accommodating about 30,000 inhabitants. The ruins are of various kinds, comprising aqueducts, and other works. In the immediate neighbourhood of the town the soil is extremely fertile, and the verdure perpetual. Its present inhabitants, of very indifferent character, amount to about 300 .

CASATE-NUOYO, a vil. and com. Austrian Italy, prov. of, and 18 m . N. by E. Milan; with a church and small couvent. Pop. 2400.

CASBiN, or Kazvin, a city, Persia, prov. Irak, 90 m . N.N.W. Teheran; lat. $36^{\circ} 6^{\prime}$ N.; lon. $49^{\circ}$ E.; on a plain, and described by Southgate as the best-looking town he had scen in Persia. Many of its buildings are of kiln-burnt bricks, which gives them a livelier and more agreeable aspect than when built of those that are sun-dried. There are several spacious and well-constructed bazaars, 48 caravansaries, and 24 mosques, some of which are very elegant structures. Descrted and ruined houses are singularly numerous in the
town, and its prosperity, generally, is much impeded by the scarcity of water. There are no manufactures of any consequence ; but it has a great transit trade with Hamadan, Resht, Teheran, and Tabriz. Pop., nearly all Mahometans, about 40,000.

CASCADE, or President Mountanss, a mountain-range, U. States, Oregort, rumning parallel to, and about 80 to 100 m . E. from the coast. It may be said to commence with Mount Baker, near the fronticr of British N. America, lat. $49^{\circ} \mathrm{N}$., and to terminate S. with Mount Shasti, which closes up the head of the valley of the Sacramento in California; total length, about 550 m . N. it is separated by Fraser's river from the mountains of New Georgia, and S. by the Sacramento from the sierra Nevada. Besides Mount Baker, its highest peaks are Mounts Jefferson, Hood, St. Helena, and Rainer, some of which are 12,000 to $14,000 \mathrm{ft}$. high.

CASCAES, a small seaport t . Portugal, prov. Estremadura, about 6 m . N.W. the mouth of the Tagns, and 18 m . S.W. Lisbon, defended by two forts. It contains two churches, carries on some trade with the W. Indies, and has some manufactures of woollen stuffs. There are thermal springs in the vicinity. Cascaes is the birthplace of a pilot named Alphonso Sanches, who is alleged, by the Portuguese, to have been driven out to sea by a violent tempest, to have reached $N$. America, returned with three or four companions, sole survivors of the voyage, by way of Madeira, and to have left a journal, which fell into the hands of Columbus, then residing there, and furnished him with hints which ultimately led to his celebrated discovery. Pop. 2080.

CASCANTE, a city, Spain, Navarre, 52 m. S. Pamplona, 7 m . S.S.W. Tudela, 1. bank, Queiles. Its houses are tolerably well built, and it has a spacious square, two churches, several chapels, two endowed schools, a townhouse, prison, and cemetery. In the environs is a public walk, adorned with trees. Manufactures:-linen fabrics, saltpetre, brandy, oil, and wine. Trade:-grain, fruits, cattle, and colonial produce. Pop. 2244.

CASCIA, a tn. Papal States, deleg. of, and 12 m . F. Spoleto. Pop. 3200.

CASCIANA-der-Bagni, a vil. Tuscany, prov. of, and 16 m . S.E. Pisa, on a hill in the Val d'Era. It has a parish church, and baths, which take their rise in a hill of marine tufa in the vicinity. Pop. 1152.

CASCIANO, numerous small places, Tuscany, none of them deserving notice, except a vil., prov. of, and 9 m. S.S.W. Florence, on the Ema, in the vale of Arno. It contains a parish church, and manufactures coarse woollens, artificial flowers, and straw-bonnets. A good wine is raised in the neighbourbood. Pop. 1800.

CASCINA, a tn. and com. Tuscany, prov. of, and 9 m . E.S.E. Pisa, l. bank, Arno. It is of a quadrangular form, surrounded by walls, and has a parish church, and a castle, some silk manufactories, oil-mills, and wine presses. I'op. 2588.

CASCOB, par. Eng. Hereford. Pop. 171.
CASCO BAY, U. States, Maine, extending 20 m . at its entrance between Cape Elizabeth and Cape Small Point; containing 300 small, but generally very productive, islauds. It includes several smaller bays, and receives various rivers.

CASELLE, a tn. Sardinian States, prov. of, and 8 m . N.N.W. Turin, on a branch of the Stura. It has two churches, a convent, an hospital, and manufactories of Indiannas, silk, and paper, besides several fulling-mills. Pop. 3500.

CASERTA, or Caserta Nuova, a tn. Naples, cap. prov. Terra di Lavoro, in an agreeable plain, 7 m . E.S.E. Capua. It contains a royal palace, commenced, in 1752, by Charles III. of Spain, a large, elegant, and profusely ornamented structure, to which is attached gardens adorned with numerous statues, ancient and modern. The park, of great extent, is regularly planted and supplied with water from Mount Taburno, by an aqueduct 22 m . in length. The town has several churclies, a convent of noble ladies, an hospital, military school, handsome public square, and spacious barracks for the troops. In some buildings attached to the palace a silk manufactory has been established, and the products, some of which are embroidered, are reckoned equal to the best stuffs made in Europe. The district produces excellent fruit, and wine of superior quality. Pop. 5000 .

Cashan. See Kashan.

## CASHMERE

CASHEEN:-1, A bay, Ireland, co. Galway, W. side isl. Garomna, $8 \frac{1}{2} \mathrm{~m} . N$. the Arran isls. It is easy of access, and well sheltered.-2, A river, Ireland, co. Kerry, formed by the confluence of the Feale, the Geale, and the Brick, $5 \frac{1}{2} \mathrm{~m}$. W. Listowel, and, after a sli rrt N. course, falling into the Shannon.

CASIIE1, a city and parl. bor. Ireland, co. Tipperary, 8.8 m. S. W. Dublin. It consists of one prineipal street, from which several others diverge irregularly, and has, on the whole, a mean and poverty-stricken appearance, although in some parts the houses are good, and one or two of the streets look clean and respectable. The supply of water is scanty, and in the summer season altogether inadequate. The cathedral and R. Catholic chapel are both modern buildings, and both spacious. The arehbishop's palace is a large and handsome mansion, with extensive gardens attached, and a library containing 9000 volumes. There are also here a convent of nuns, and a Methodist meeting-house, an infirmary, market, and court-houses, a bridewell, and handsome infantry barracks, and some interesting ruins of Hore Abbey or Grey Friars, the Dominican Abbey, and those on the celebrated rock of Cashel. This remarkable rock rises abruptly from a jlain, close by the city which it overlooks; on its summit are a series of splendid ruins, consisting of Cormac M'Cullinan's chapel, built in the ninth century, a round tower 56 ft . in circumference, and 90 ft . in height, of unknown date, but supposed to be the most ancient building on the rock; a cathedral, castle, and monastery, all built about the 12 th century,

CASHMERE, or KAShmir, a country in N.W. Hindoostan, Purjab dominions. It consists of an extensive valley of an irregular oval form, lying N. W. and S.F.. 5500 ft . to 6000 ft . above the sea, and surrounded on all sites by lofty mountains, sccondary ranges of the Mimalayas. As laid down on Arrowsmith's Map of the I'unjab, Kashmir, \&c., it is comprised between lat. $33^{\circ} 27^{\prime}$ and $34^{\circ} 37^{\prime} \mathrm{N}$., and lon. $74^{\circ} 30^{\prime}$ and $76^{\circ} 14^{\prime}$ E.; area estimated at $4500 \mathrm{sq} . \mathrm{m}$. The alluvial plain in the bottom of the valley is estimated at 75 m . long, by 40 m . broad. The mountain range which encloses the valley is, on the N., called the Durawur and Kuhiama Mountains; N.E., the LIaramuk and Sonamurg Mountains; E., the snowy Panjal ; S., the Futi l'anjal and Panjal of Panihal; and W., the Pir Panjal. Excepting for a fifth part of the circumference S.W. of the capital Serinagur, their summits appear to be covered with perpetual snow. The highest peak seems to be the Pir Panjal, $15,000 \mathrm{ft}$. high, on the $\mathrm{S} . \mathrm{W}$. boundary of the valley; and on the N.E. the llaranuk is $13,000 \mathrm{ft}$. The mountains generally appear to be of basaltic formation, presenting at times beautiful amygdaloidal trap; in the N.W. schistous rocks, penetrated by quartz veins, rise to the height of 500 or 1000 ft . ; and N.W. of these gypsum appears. Primary rocks are rare, and though granite blocks are sometimes met with, that rock has not been found in situ. lebbly conglomerate, sandstone, and clay, overspread large spaces on the lower slopes of the mountains. Earthquakes occur. In 1828 , about 200 shocks were felt, and in June of that year, 1200 houses were destroyed, and 1000 persons killed in Serinagur. Some have supposed the valley to have formed the crater of a volcano; at all events, it has evidently once been the bed of a sea, as is shown by the great beds of limestone, containing marine fossils. Iron has been found abundantly, embedded in the limestone; lead is worked, and copper is known to exist in the valley. Plumbago abounds in the Pir l'anjal; excellent limestone exists in inexhanstible quartities, some of it in the form of fine black marble. The valley is entered by numerous passes, 11 of which are said to be practicable for horses, but none of them for wheeled carriages. The most important are the Baramula and Punch, on the W. frontier, the latter 8500 ft . high; Banihal on the S., 9690 ft ; and Nabog on the E.., all practicable at all seasons of the year. The Pir Panjal Pass is $12,500 \mathrm{ft}$. high ; and the Bundipur, leading to Iskardo, is $11,271 \mathrm{ft}$. Cashmere is watered by the Jailum or Behut, which, rising in the inountains of the S.E. frontier, flows N.W. through the centre of the valley, receiving numerous streams from both sides, and expands into lake Wuller, which is also the recipient of several other streams. From the S.W. end of this lake the river emerges, pursucs a W. by S. course, and leaves the valley, of which it is the sole drain, by the Baramula Pass. The channel of the Jailum is very winding, and the river is navigable for boats of considerable burden, from near Islamabad to its exit from the valley. The principal lakes are the Dal or City Lake, close by the capital, 6 m . long by 4 broad; the Manasa Bul, small, but said to be deep; and the Great Wuller Lake, which is merely a shallow expansion of the Jailum, 20 m . long by 9 broad. Hesides these, which are on the r. bank, the smaller lakes, Opun and Wusikara, are on the 1. bank, and there are numerous small pieces of water in the mountains. The whole of the valley is thus most perfectly watered, and admirably supplied with the means of irrigation.

The elimate, though subject to extremes of temperature, is, on the whole, salubrious. In consequence of the great elevation of Cashmere, the cold of winter is rather severe. Night frosts set in about the middle of November, and early in December snow begins to fall, covering the ground to a depth of 2 ft ., ard clothing the surrounding monntains in a dazz ling whiteness, but the Jailum is seldom frozen over. The hottest season is from the middle of July to the middle of August, when a peculiar stillness, for which the air of Cashmere is remarkable, renders the heat greater to the sense than it really is, the thermometer ranging, at noon, from $80^{\circ}$ to $85^{\circ}$ in the shade. Rain falls plentifully in spring and the be gimning of summer. The soil is, in general, exceediugly fertile.

Rice is the priscipal erop, the returns being from 30 to 40 fold, and in favourable seasons, as high as 50 or 60 . Wheat, barley, millet, and maize, are also eultivated, but are a preearious crop, in consequence of the seanty rains in summer. Buckwheat is extensively cultivated. Cucumbers and melons are raised in small artifieial floating gardens on the City Lake. Tobaceo is also cultivated, but to a very limited extent; cotton more largely. Great quantities of saffron, of excellent quality, is grown, and most of it exported. Grapes are cultivated, but with indifferent success. Esculent vegetables are produced in great variety and abundance, including kidneybean, turnip, cabbage, beet-root, radish, capiscum, \&e. Amongst the natural productions, the most valuable is the Singhara or water-nut, the seed of Trapa bispinosa, on which a large portion of the poorer inhabitants almost wholly subsist. It grows in the Wulur Lake, from which about 60,000 tons are annually taken. The nuts are eaten raw, boiled, roasted, or ground into flour, and made into gruel, and, though insipid, are extremely nutritious. The prineipal fruits are apples, pears, plums, eherries, apricrots, \&c. Amongst the finest trees of Caslimere are the deodar or ILimalayan cedar (Cedrus deodara), the chunar (Platanus orientulis), the poplar, and the lime, all of which abound, and attain a great size and luxuriance, and the wild ehestnut-tree, growing to a size far exceeding that of the European variety, some measuring 100 ft . from the ground to the parting of the branches. Maple, willow, and white thorn, are common, and on the steep deelivities of the mountains, bireh, alder, and various kinds of pine. Flowers of various kinds, and of surpassing beauty, grow everywhere in vast profusion, especially roses, which are carefully cultivated for the sake of the attar extraeted from them.

The wild animals are bears, brown and black; a sort of leopard, of a white colour with small black spots; jackals, foxes, otters, stags, gazelles, the ibex, wild goats, musk, and other species of deer, squirrels and marmots, but no hares. Birds of prey are numerous, including various species of vultures, one of them said to be the largest in the world, and so unwieldy, that it is often killed before it can rise from the ground; the other kinds are eagles, lawks, and falcons. There are also various kinds, and vast numbers of geese, ducks, divers, baldeoots, snipes, woodeocks, and small pelicans; peaeocks, pheasants, and partridges. The smaller kinds of birds are numerous, ineluding the bulbul or nightingale, which, however, is a distinet species from the European one, to whieh it is also greatly inferior in song; venomous reptiles, rare. The waters abound in fish, ineluding a species ealled shiruh. which often attains the weight of $24 \mathrm{lbs} .$, is firm in the flesh, and of fine flavour. The horses are small, and altogether of an inferior description, though said by IIägel to be lively, hardy, and tractable. Black eattle, sheep, and goats, are numerous; the breed of the black eattle is small, but they give abundance of milk; the mutton is said to be well flavoured.

Cashmere has been long celebrated for its shawls. The wool used in their manufacture is of two kinds, one obtained from the tame, the other from the wild goat, wild sheep, and other wild animals. It is the fine down growing next to the skin alone that is taken, the long hairs being all picked out by the hand. Three weavers are employed on an embroidered shawl, of an ordinary pattern, for three months; but a very rich pair will oceupy a shop for 18 months. They are dyed in the yarn, and carefully washed with rice flour instead of soap, after the weaving has been finished. The embroidered border of the finest shaw] is generally made separately, and joined skilfully by sewing to the field or middle part, whieh sometimes consists of as many as 15 different pieees, neatly joined. The first eost of a pair of fine shawls has been estimated at $£ 200$, that is, for labour, materials, dyeing, duty, and other charges. The demand for the shawls of Cashmere has, from various eauses, greatly fallen off of late years, and is still on the wane. Cashmere has long been nearly as famous for its gun and pistol barrels as for its shawls. The artizans employ extraordinary pains in fabricating them, and produce work of singular beauty and excellence. Paper, and leather for saddlery, are also manufactured, both of superior quality; the paper is said to be the finest made in India. Lacquered ware, of the most beauriful deseription and nicest workmanship, is likewise amongst the products of Cashmere; and the lapidaries excel in taste and skill those of Europe;

Vos.. I.
the attar of roses made in the valley is considered superior to any other.

The total amount of the exports of Cashmere has been estimated at $£ 400,000$, and the imports at $£ 50,000$. Of the former, the principal articles are woollens and rice; of the latter, shawl wool.

The greater part of the population are Mahometans. In physical qualities, the natives of Cashinere exeel all other branches of the great Indian nation, being tall, robust, and handsomely formed. In disposition they are lively, witty, and good humoured, bnt addicted to all the vices common to the other tribes of India. They are selfish, intriguing, dishonest, and false. The language is a dialect of Sanserit, containing a large almixture of Persian, in whieh the records and correspondence of Government are written. The pronunciation of the natives is broad, coarse, and uneouth. The dress of both sexes eonsists of a long loose wrapper and trowsers, the former of woollen eloth. In cold weather both sexes earry a little wicker basket, containing a small iron or earthenware vessel holding lighted charcoal, and called a kangri, whieh they apply to sueh parts of the body as require to be warmed. Cashmere eontains 10 towns, and 2200 villages; the chief towns are Cashmere or Serinagur, the capital ; Chapinian, Islamabal, and Pampur. In 1586, Cashmere was subjugated by the Emperor Akbar, and was ineorporated in his empire. The Afghans vanquished it in 1752, and it remained under their sway till 1819 , when it was conquered by the Sikhs, and since that time it has eontinued under the dominion of the Maharajah of the Punjab. Pop. abont 200,000 , to which number it has been reduced in 20 years from 800,000 , by earthquakes, pestilence, and famine(Hügel, Vigne, Mooreroft, \&e.)

CASHMERE, tn. See Serinagur.
CASIINA, a tn. Nigritia. See Kasins.s.
CASKE'TS, a dangerous gronp of rocks, English Channel, about 7 m . W. Alderney, on the highest of which is a lighthouse ; lat. $49^{\circ} 43^{\prime} 24^{\prime \prime} \mathrm{N}$. ; lon. $2^{\circ} 22^{\prime} 30^{\prime \prime}$ W. (R.) The Victory, a ship of 110 guns, foundered off these rocks in 1744.

CASOLE, a tn. and com. Tuseany, prov. of, and 18 m . W. by N. Siena, on an elevated plain. It is surrounded by walls, commanded by a fortress, and contains a fine collegiate church, and a handsome palace. Pop. 1293.

CASOLI, a tn. Naples, prov, Abruzzo Citra, 10 m. S.W. Lanciano, with several churches, and two normal seliools. Pop. 5858.

CASORATE, a tn. and eom. Austrian Italy, gov. Milan, prov. of, and 11 m . N. W. Pavia. It is tolerably well built, and contains a chureh, in which some fine pictures and frescoes are preserved. In 1239, the Milanese, commanded by Lodrizio Viseonti, gained a decisive vietory here over the Germans, under the Margrave d'Augsburg. Pop. 4300.

CASORIA, a tn. Naples, 6 m . N.N.E. Naples. It has four fine churelies, and is the residence of a district judge. Silk is prorlnced in the neighbourhood. Pietro Martino, the painter, was born here. Pop. 7924.

CASPE, a tn. Spain, Aragon, prov. Saragossa, 12 m . N.N.E. Alcaũiz, l. bank, Guadalupe, near its confluence with the Ebro, on several small hills and in the intervening valleys. It has paved streets, one principal and nine smaller squares, a handsome Gothie coilegiate and two other churches, several chapels, three schools, a townhall and prison in a suppressed convent; an hospital, and several public fountains. Manufactures:-wine, oil, and soap, and some trade is also carried on in grain and cattle. Two annual fairs are held, Pop. 7500.

CASPIAN SEA [ane. Mare Caspium, or Iyrcanium], a large inland sea, lying for the most part between Europe and Asia, more precisely between lat. $36^{\circ} 55^{\prime}$ and $47^{\circ} 30^{\prime} \mathrm{N}$.; and lon. $46^{\circ} 48^{\prime}$ and $55^{\circ} 25^{\prime}$ E. Greatest length from N. to S., 730 m. ; greatest breadtl. S. part about lat. $45^{\circ} \mathrm{N} ., 270$ m.; narrowest part between Cape Apsheron in Europe, and Cape Tarta in Asia, 150 m . Bounded N. and W. by Rnssia and Persia, E. by the Kirghez steppe and Khiva, and S. by Persia. Area $140,000 \mathrm{sq} . \mathrm{m}$., draining, in Europe alone, an extent of $850,000 \mathrm{sq} . \mathrm{m}$. Altliough, at some points, the Caspian attains a considerable depth, Hanway having in one place found no bottom at 480 fithoms, it is remarkable for its slallowness generally, especially alongst its shores, where it seldom exceeds 3 ft . for a distance of 100 yards from the
land. Its E. and W. coasts, particularly the former, are deeply indented with bays and gulfs, whilo the $\mathbb{S}$. shores are almost unbroken. The principal bays on the Asiatic side are Emba Bay, Mersa Bay, Dead Jay, Black Lake Bay, Mangishlak Gulf, Beklirlishal Bay, Kenderlinsk Gulf, Khara Bughaz (iulf, and Balkan Bay. On the opposite, or European side, occur the gulfs of Zizil Agateh and Kuma, with several less marked indentations. The only one on the S. coast is Asterabad Bay, if the inlet of Enzeli, which has only four feet water, be excluded.

The Caspian contains uumerous islands, but not many of any great extent. The largest are on the Asiatic side, the greatest number on the European, particularly about the mouths of the Volga, and along the coasts to the N.E. and S.W. of them, where they lie closely erowded together in countless numbers, most of them, however, being mere islets.

The waters of the Caspian are salt, but not nearly so mueh so as those of the ocean. It has no tides, and no outlets, its superfluous waters being earried off solely by evaporation. In the region of the Volga, ineluling the territory from that river, S.E. to the Emba, and S.W. to the I. bank of the Sulak, the whole seabord is composed of recent alluvium, deposited by the several streams. From S. of the Sulak to A psheron, the coast is of upper tertiary formation, broken into at some points by carboniferous strata. S. from Apsheron, and round the S. extremity of the sea, the coast is low and sandy-backed at some distance by lofty hills. The E. and S.E. coasts have generally a eretaceous subsoil, overspread by moving sand, and are generally flat; Cape Karagan, formed by mountains of the same name, being an exception.

Sturgeons and sterlets are caught in the Caspian in great quantities; and there are also salmon-trout, perch (Perca asper), Silurus glanis, two kinds of carp, and porpoises. Scals abound in the upper coasts, and tortoises between the months of the Volga and the Ural. The molluses are few, said to be only four-Cardium rusticum, Cardium triquetrum, Afya edentula, and Mytilus polymorphus. The chicf fishery for sturgeon is at and near Astrakhan; in and about the river Enba it comprehends 310 m . of coast, from the month of the Ural to the gulf called Mertvoi-konltouk. The island of Tehetchenze, near the gulf of Agrakhan, and not far from the eape of that name, contains a large establishment for smoking, drying, and salting fish. In the surrounding waters the fishing is continned all the year. It is not so in the N. region, where the first or caviar scason, as it is called, ocenrs between March and May, when the Volga, Ural, \&c., are getting cleared of ice. The sceond season oceurs in July, when the sturgeon descends the rivers; and the third, or open sea fishing, goes on from September to November. During the winter, the N . fishermen often venture on the iee many miles from land, in quest of sturgeon, silures, and seals. Jut, in general, it is reekoned unfair to kill seals before the 13th of April. Besides the foregoing, there are fisheries between Salian, Niphitouriusk, and Astrabad. Many thousand persons are employed in the Russian upper Caspian fisheries; and the annual amount of caviar or fenale roes ohtained may be taken at 800,000 lus., besides 20,000 lus. of isinglass, the produce of upwards of 700,000 sturgeons, of various kinds, large and small. The number of seals ammully taken is warly $100,000$.

The only ports at all worthy the name, on or near the Caspian, are Astraklıan, Bakou, Salian, and Astrabad. The navigation is at all times diffieult, and often perilous. Steampackets on it have recently been established. The Russian fleet in the Caspian consists of 13 vessels, of which four are brigs, and two are steamers.

The basin of the Caspian is most extensive on the N. and W., from which it reecives the Eral, the Volga, the Terek, the Kur, and numerous other streams of less note. By means of a canal eut near Tver in Russia, between the head streams of the Volga, and the rivers Tvertza and schlina, water eommunication is established between the Caspian and the Baltic. S. the basin of the sea is limited by the Elbura mountains, and E. the sandy wastes of Khiva send to it only short streams, and of no great volume; though on this side it evidently at one time received the Oxus or Amoo, now an affluent of the sea of Aral. Indeed, the Caspian and Lake Aral were, doubtless, at one period united. They are apparently on the same level; and, though the plateau of Ust-Urt (see Anal) might
at first sight appear to present an insuperable obstacle to the idea of a junction ever having existed, yet $S$. of that plateau, and in the course which the Oxus probably followed, is a low tract leading into the head of what at one time was the estuary of the Oxus, but now is a sandy waste, E. and S. of Kara-Bughaz gulf, which formed its termination. lloth lakes belong to the great depression of W. Asia-a depression at one time supposel to be much greater than it is believed to be now; though whether a rise in the land has taken plaee, it is difficult to determine. The exact amount of the depression has not yet been satisfactorily settled-the most trustworthy data we possess being at variance. The last two levellings between the Caspian and the Black Sea, both trigonometrical, were executel, the one in 1837, by Messrs. Fuss, Sabler, and Sawiteh, under the auspices of the Academie Imperiale de St. Petersburg; and the other in 1838-9, by M. Hommaire de Ilell. Aceording to the former measurement, the Caspian is $8 \mathrm{I} \cdot 4 \mathrm{ft}$. below the level of the Black Sca; lont, aceording to the latter, it is only 11.6 metres, about $38 \frac{1}{2} \mathrm{ft}$. Should the latter measurement be ultimately found to be correct, what has hitherto been supposed to be the depression of W. Asia, may turn out to be actually abore the level of the ocean. The sanding up of streams lessening the accession of water, and contracting the shores, with the great evaporation constantly going on, in addition to other causes in operation, are gradually redueing the size of this inland sea. It has been supposed to increase and deerease in size, at certain times; but this phenomena is now believed to be explained by the fact, that strong winds beating for any length of time upon the flat shore, sometimes drive the waters up over a great extent of land. M. Hommaire de Hell alleges that a rise of even 10 ft . would flood the steppes of the Kuma for a vast distance beyond the route between Astrakhan and the Terek, and submerge every post house and military station on the line. It may consequently be taken for granted that no such rise has taken place, at all events since the beginning of last century, when the first Russian settlements in these regions wero established, otherwise we should have had anthentic records of such a visitation.

The notices of early commeree upon or by way of the Caspian, are few and uncertain. Even for several centurics after the Christian era, its authentic trading records are nearly a blank. The ehief portion of the commeree between W. Europe and India was carried on partly by its waters, about the middle of the 13 th century, Astrakhan, on the upper Caspian, and Soldaia, nearly in the same latitude, on the Black Sea, forming the chief entrepôts till 1280, when the latter was supersedel, through the exertions of the Genoese, for their own establishment at Kaffa; which then beeane the transit station for the Asiatic-European trade, and so continued till 1453, when the Turks, having seized Constantinople, and barred the Bosphorus, the acenstomed trade was forced into other ehannels, and the Caspian deserted, except by the few vessels which carried on a small local trade between Museovy, Persia, and Central Asia.

About 1560, an English trading company endeavoured to open up connections, by way of the Caspian, with Persia and Tureomania, but with no good results. From that time till late in the 17th century, the amnals of navigation give few notices of this sea. At the latter period Peter the Great, partly in the hope of diverting the Indian trade into the direction of his S. dominions, eaused the coasts of the Caspian to be explored by Dutch navigators in his pay. His intention was, as one means to his end, to found trading stations on ground eeded by treaty or taken by force, on the Persian seabord. But this he delayed to do; and when he died, his project lay dormant, and the Russians made no eneroaehment beyond what l'eter had already effected, till the reign of Catherine II., whose conquests in its S. region were not secured till our own times.-(Hommaire de Hell, Steppes de la mer Casmienne; Zimmerman, Denkschrift über den untern Lauf des Oxus, dec.)

CASS, several places, U. States:-1, eo. Indiana; area, $415 \mathrm{sq} . \mathrm{m}$. The general face of the country is level, and abounds with springs of excellent water. Pop. $5480 .-2$, co. Georgia. Pop. 9390, of which 1195 are slaves.-3, co. Michigan; area, 528 sq. m. The surface gently undulating, and the soil of superior quality. Pop. $5710 .-4$, co. Illinois; area, 256 sq. m. Pop. 298I. -5 , A river, Michigan, au
affluent of the Sagina, whieh falls into Sagana Bay, on Lake Huron.- 6, A lake, formed by an expansion of the upper Mississippi, in the N.W. or IInron territory; lat. $47^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $95^{\circ}$ W., $130 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Lake Superior.

CASSABA, two tns. Asiatie Turkey:-1, A tn., pash. Anatolia, 30 m . N.E. Smyrna, on the caravan route from the interior of the country to that city ; lat. $38^{\circ} 31^{\prime} \mathrm{N}$. ; lon. $27^{\circ} 40^{\prime}$ E.; contains two handsome mosques and a bazaar; streets dirty and ill kept; has some cotton manufactures, and is celebrated for pears and melons.-2, A tn., pash. Karamania, sanjak of, and 52 m . S.S.E. Koniyel, at the base of the Allah Dagh mountains; lat. $37^{\circ} 12^{\prime} \mathrm{N}$.; lon. $33^{\circ} 9^{\prime} \mathrm{E}$. It was formerly a place of some importance, but has fallen into deeay.

CASSANGE, a territory of W. Afriea, N. Angola, near lat. $10^{\circ} \mathrm{S}$., and intersected by lon. $20^{\circ} \mathrm{E}$. It is inhabited by warlike nomades, who have oceasionally threatened the Portuguese settlements in their neighbourhood.

CASSANO, three tns. Naples:-1, A tn., prov. Calahria Citra, 32 m. N.N.E. Cosenza; on a plain. It is the seat of a bishoprie, and has a eathedral, four convents, a scminary, an hospital, and an old and almost inaccessible castle. The district produces cotton, liquoriee, grain, fruit, silk, and soda ; and the inbabitants manufaeture maccaroni, leather, and tablelinen. In the vicinity are hot sulphurous springs, and plaster and stone quarries. Pop. 6000.-2, A tu., prov. Principato Ultra, 8 m . S.W. St. Angelo de' Lombardi, on a hill, washed by the Calore. It has a handsome elureh, an hospital, two charitable institutions, and a paper manufactory. Pop. 4629. -3, A tn., prov. Bari, 12 m. N.E. Altamura; with a parish chureh, a eonvent, hospital, three eharitable institutions, and two manufaetories of copper utensils. Pop. 4713.

CASSA NO-d' Adda, a tn. Austrian Italy, gov. of, and 16 m . N.E. Milan ; pleasantly situated on a hiil, r. bank, Adda. It is very old, and built mostly of brieks. A bridge of 800 paces conneets it with the opposite bank of the river. There are here numerous silk-mills. Cassano is famous for the vietory gained here on August 16, 1705, by the French, under the Duke of Vendome, over the Imjerials under Prince Eugene; and for the defeat sustained on April 25, 1799, by the Freneh under Moreau, from the Austrians and Russians under Suwarow. Pop. 1125.-Two other places in Lombardy have the name of Cassano.

CASSAY, or Kathee, a prov. India, befond the Ganges, between lat. $23^{\circ} 30^{\prime}$ and $25^{\circ} 20^{\prime} \mathrm{N}$., and lon. $93^{\circ}$ and $95^{\circ} \mathrm{E}$., bounded N. by Assam, E. and S. Burmah, and W. Cachar. It contains an extensive valley, 30 m . long by 101 road, eovered with grass, jungle, and swamps; but the country generally is mountainous, having elevations of from 4000 to upwards of 8000 ft . Some parts of the lower distriets are fertile, yielding good erops of rice, tohaceo, indigo, cotton, sugar, opium, and mustard. It is celebrated, also, for its breed of horses. Numerous rivers, some of them of considerable size, interseet the province; the largest are the Barak, Impal Toorool, and Kyen-dwen, the last two affluems of the Irawadi. Cassay is an independent provinee, and is governed by a hereditary Rajah. The prineipal town is Muneepoor or Munipoor, which name is sometimes applied also to the entire province. It was formerly tributary to Burmah, but at the conelusion of the war between that state and the E. India Company Cassay obtained its freedom.

CASSEL [ane. Castellum Menapiorum], a tn. France, dep. Nord; on an isolated, conieal hill, in the middle of a rich and extensive plain, 16 m . S. Dunkirk, on the railway thence to Lille. The streets are clean, and provided with fountains; the houses well built of brick, and in general baving gardens attaehed. Lace, linen, hats, stockings, soap, and pottery, are mannfaetured liere. There are also several oil-mills, bleaehfields, breweries, and tanneries, and a considerable trade in ogrieultural produce. This town is of great antiquity, and is said to have been the eapital of a district in the time of Julius Cæsar. In 1071 it was surrounded by thick walls and bastions, of whieh there are few remains, except three gates,
two of them attributed to the Romans. The view from Mount Cassel is one of the most extensive in Europe. It extends over the plains of Flanders, and as far as the white cliffs of England, and takes in 32 towns and 100 villages. This hill was one of the prineipal signal stations of the great trigonometrical survey for measuring an are of the meridian. Pop. 2839.

CAssele or Kassel [anc. Castellum Cattorum], a tn. Germany, prov. Lower Hesse, eap. of Hesse Cassel, and of cirele of same name; beautifully situated on both banks of the Fulda, 91 m . N.N.E. Frankfort-on-the-Main. It is divided into the Altstalt or Old Town, the Upper Neustadt or Upper New Town, the Lower Neustadt or Lower New Town; with the Wilhelmshöhe and Frankfort suburb, 1. bank of the river, and Leipzig suburb, r. bank. The two portions of the town are conneeted by a stone bridge of three arehes, across the Fulda, 258 ft . in length. The old town lies low down elose to the river banks, and consists of narrow and dirty streets; while the new part, built upon an elevation formerly oecupied by a fortress, is airy and agreeable; tho streets spacious and well laid out, and the houses handsome. The Upper New Town eontains a number of squares, in tho principal of which, the Friedrich's Platz, the largest in any town in Germany, stands the Eleetor's palace, an indifferent strueture; and next to it, the museum, the handsomest building in the town, containing a library with 100,000 volumes, and many valuable MSS. Within the same edifiee are a collection of antiquities, many of them rare objects of art and vertr, including some interesting Roman remains found in IIess 3 Cassel ; coins. prints, and models, and a picture gallery, containing 1400 pietures, among whieh are some by Rubens, Rembrandt, Vandyke, Terburg, \&e. This square is lined on three sides by a double row of lime trees, and in the centre is a colossal marble statue of Frederick II. The other more noticeable public areas are-King's Platz, in the form of a ereseent, and remarkable for possessing a sixfold eeho; Charles's Platz, in whieh is a statue of the Landgrave Charles; and Willian's Square. In the Old town are the old townhall, the Government buildings, the Stadtau, appropriated to public

8T. MARTIN'S CHURCII AND GOVERNMENT-PLACE, CASSEL.
From Lange, Ansichten von Deutschland.
amusements; St. Martin's ehureh, with the catacombs beneath it, in which the remains of the Sovereigns of Hesse Cassel are deposited; the Lutheran, the Brethren's, and the garrison churehes; a synagogue, an orphan hospital and asylum, an arsenal, foundry for eannon, and a house of correction. In the Upper New Town there are, besides the buildings spoken of above, the mint, a cadet aeademy, lyeeum, a normal and civie sehool, a theatre, the New Town and I?. Catholie churehes, an hospital, and an infirmary. The Lower New Town contains an aneient fortress, now used as a state-prison; the Lower New Town chureh, a Protestant orphan asylum, infirmary, lying-in hospital, house of eorrection, and common prison. In the Leipzig suburb are an
hospital and infirmary ; in the Frankfort suburb a house of industry; and in the Wilhelmslöhe suburb a large hospital. Cassel has, altogether, eight churches-seven Lutheran, and one synagogne, with a Jewish theoretical and practical sehool. It has also academies for painting, seulpture, \&e., an observatory, and several associations for the promotion of trade, agriculture, and manufactures. Its trade is inconsiderable, but is improving. It has manufactures of cottons, silk, and woolleu fabrics, kid gloves, leather, hats, carpets, porcelain, musical instruments, dyes, playing cards, soap, gold and silver lace, earthenware, laequered wares, linen, damask, starch, hardware, \&e. Cassel is partly walled, and has 11 large and small gates. It has two fairs, and a wool-market, annually. There are many fine walks and public gardens in the vieinity; annongst the latter are the gardens of Wilhelmshöhe, in which is situated the Elector's sumner palace. Cassel is comnected by railway with Leipzig and Frankfort-on-the-Main. Pop. of tn. 32,516 ; of circle, 66,479.

CASSEN, or Kassan, a tn., E. Africa, territory Bertat, a mountainous and woody country lying immediately S. of Nubia, and W. of the S.W. portion of Abyssinia, l. bank, Tumat.

CASSINE, a tn. Sardinian States, prov. of, and 14 m . S.W. Alessandria, near 1. bank, Bormida. It has three churches and three convents. Pop. 3500 .

CAsisl NGTON, par. Eng. Oxford; 2990 ae. Pop. 381.
CAsSIQUlalki, or Cassiquiare, a deep, rapid river, S. America, Venezuela, forming the S. bifureation of the Orinoeo, by which that river has navigable communication with the Rio Negro. It leaves the Orinoco in lat. $3^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $66^{\circ} 20^{\prime}$ W., about 20 m . W. Esmerelda, and, after a S.W. course of 128 m ., falls into the Rio Negro near San Carlos, in lat. $2^{\circ} 5^{\prime}$ N.; lon. $67^{\circ} 40^{\prime} \mathrm{W}$. It is 100 yards broad where it leaves the Orinoco, and about 600 yards at its junction with the Rio Negro; flows 566 ft . per second, and, between Esmerelda and san Carlos, falls 320 ft . By means of this river, water communication is established for canoes over an immense tract of S. America, it being practicable to sail from the interior of Brazil to the Caraceas in Verezuela, through the Amazon, the Orinoco, and their affluents.

CASSIS, a seaport tn. France, dep. Bouches-du-Rhône, 9 m . S. E. Marseille, on the Mediterrancan; lat. $43^{\circ} 12^{\prime} 48^{\prime \prime} \mathrm{N}$.; lon. $5^{\circ} 32^{\prime}$ E. (r.) The houses are neat and elegant; in the square is a handsome fountain. The port, defended by a long mole, affords good shelter, but is of difficult access in bad weather. Left of the entrance is a fixed light, 92 ft . above sea-level, and visible at 7 m . distance. Several batteries proteet the harbour and roadstead, and there are building-yards for small vessels. The vicinity produces olives, figs, eapers, highly-esteented Museatel wine, and pomegranates, in which a good coasting trade is carried on. Lime and building stone are also exported. Coral is fished in the vicinity. Abbe Barthelemy, author of the Voyage d'Anacharsis, was born here. Pop. 1566.

CAs'TAGNA, a tn. Naples, provi. Abruzzo Ultra I., 15 m . N.W. Civitadi-Penne, on the Maone, with important fairs. Pop. 1255.

CASTAGNARO, a vil. Austrian Italy, gov. Venice, 6 m . S.E. Verona, r. bank, Adige, at the head of the canal of its name, which unites with the Canal Bianco. Pup. 1800.

CAST'ALLA, a tn. Spain, Valencia, prov. of, and 24 m . N.W. Alicante, at the base of a conical and isolated hill, surmounted by an ancient and decayed castle. It is divided into two portious, the old and new. The former occupies the upper part of the hill, contiguous to the eastle, and is composed of narrow, stecp, and inconvenient streets and lanes. The modern erections are situate at the foot of the slope, and consist of four squares, and clean, wide, and well-paved streets. The whole coutains two elhurches, several convents, a large and handsome townhall, a court-house, two schools, a prison, hospital, cemetery, and two publie fountains. Wine and oil are manufactured; trade inconsiderable. Pop. 3032.

Castambul, Castambool, or Kastamuni, a ti. Asiatic Turkey, pash. Anatolia, 100 m. N.N.E. Angora; lat. $41^{\circ} 2 \mathrm{I}^{\prime} \mathrm{N}$.; lon. $33^{\circ} 50^{\prime} \mathbf{E .}$. in a valley, on the W. bounded by hills, on a spur of which stands the ruins of an ancient castle. The houses are of two stories, in general ill built of wood; the streets are narrow and dirty, and a deep kemel, into which all the filth of the town is collected, rums through
its very centre. It has no public buildings deserving of notice, but has numerous mosques and baths, a Greek church, and tolerable new barracks. The chief manufaeture is printed cottons, for which there are said to be 32 printing houses, having from four to eight presses each ; also 22 dyeing-houses, of which six are for red, and 16 for blue, dyes. The chief trade is in wool, that of the neighbourhood being considered little inferior to the celebrated wool of Angora. 1'op. estimated by Ainsworth at 48,000.-(Lond. Geo. Jour.)

CASTANO, or Casteno, a vil. and com. Austrian Italy, prov. of, and 18 m . W.N.W. Milan, in a pleasant and fertile plain, between the Tieino and the Grand Canal. It contains a parish and two auxiliary churehes. Pop. 2069.

CASTEL, a fortified tn. Hesse-Darmstadt, r. bank, Rhine, opposite Mentz, with which it is connected by a bridge of boats; and a station on the Taunus Railway from Frankfort to Wiesbaden. Around it the vine is cultivated. Pop. 2500.

CAS'TEL-a-mare [castle by the sea]:- 1 , A seaport th. Naples, prov. of, on the gulf of, and 17 m . S.E. the eity of Naples; lat. $40^{\circ} 41^{\prime} 30^{\prime \prime}$ N. ; lon. $14^{\circ} 28^{\prime} 15^{\prime \prime}$ E. (k.) It is fortified, has a small mole, like a hook, running out N.E., is the seat of a bishopric, contains a royal patace, a cathedral, five churches, several convents, a military hospital, good barracks, and a tolerable dockyard; haz several manufactories of linen, silk, and cotton fabries, besides tanneries; has a N. exposure, and is much frequented during summer, chiefly on account of its hot baths. The environs are celebrated for their beauty and fertility, but in autumn the situation is damp, chill, and disagreeable. Castel-a-mare oceupies the site of the ancient Stubice, destroyed by Sylla during the eivil wars. It was overwhelmed, with Herculaneum and I'ompeii, by an eruption of Yesuvius, A.d. 79; and it was here that the elder Pliny met his death, by approaching too near to the burning mountain, when in a state of violent commotion. The modern town was afterwards built from the ruins of Stabix. Pop. 18,452.-2, A seaport th. Sicily, prov. of, and 20 m . E. Trapani, on the gulf of same name; lat. $38^{\circ} 1^{\prime} \mathrm{N} . ;$ lon. $12^{\circ}$ $53^{\prime}$ E. It lies low, in a fertile distriet, and is dirty. Wine, fruit, grain, manna, oil, flax, sumach, and anchovies are exported in considerable q lantities. Pop. 8034.-The gulp is about 15 m . E. to W., at its mouth, contracting, in a semicircular manner, on either side, to about 6 m .; it is about $14 \mathrm{~m} . \mathrm{N}$. to S. It has deep water and good anchorage near its shores, but is not safe in N. winds, to which it is mueh exposed.

Casticl-arquato, a tn. and com. Duchy Parma, and 19 m. S.E. Piacenza, 1. bank, Larda, here crossed by a brick bridge. It contains a fine Gothic chureh, a handsome townhall, an hospital, cavalry barracks, medical and other schools, a public promenade, adorned with a central fountain; and the ancient and vast castle from which the town derives its name. The environs are hilly, pieturesque, and abound with forests, vineyards, and olive plantations. Silk-worms are reared, and much silk manufactured here. Pop. 4393.

CAS'TEL-baldo, a vil. and com. Austrian Italy, gov. Venice, 28 m . S.W. P'adua, 1. bank, Adige. It contains a parish eluurch and three oratories. Pop. 1980.

CASTTEL-del-piano, a th. and com. Tuscany, eap. prov. of, and 28 m. N.E. Grosseto, W. side of Mount Amiala. It is well built, and possesses a large square, two churehes, and two fine fountains, and is the seat of a central criminal court. Pop. 2555.

CASTEL-dr-franci, a vil. and com. Naples, prov. Prineipata Ultra, 7 m . W. S. Angelo de' Lombardi, r. bank, Calore. Pop. 2105.

CAst TEL-di-sangro, a tn. and com. Naples, prov. Abruzzo Ultra II., 21 m . S.S.E. Sulmona, on the side of a hill, bathed by the Sangro. It contains three handsome churches, two convents, an hospital, and almshouse. Manufactures earpets, and has two ammal fairs. Pop. 3090.

CASTEL-fionentino, a th. and com. Tuscany, prov. of, and $18 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Florence, on a rising ground, near r. bank, Etsa, here crossed by a stoue bridge. It is well built, defended by a eastle, and lias two fine churches, one of which is collegiate. l'op. 2943.

CAS'JEL-FRANCO, several places, Italy, partieularly:1, A tn. P'apal States, deleg. Bologna, and 8 m . E. Modena. It is a frontier station and custom-house of the States, and is surposed to oceupy the site of the Forum Gallorum, famous
for the victory which Hirtius and Pansa gained over Mark Antony. In the neighbourhood is a fort, built, on a commanding position, by Pope Urban V1II., but now falling to ruin.-2, A tn. Austrian Italy, gov. Venice, prov. Treviso, in an extensive plain, watered by the Murone, $25 \mathrm{~m} . \mathrm{N} . W$. Venice. It is the seat of several public offices, contains three parish and two auxiliary churches, a handsome palace, poorhouse, \&c., and has some linen and woollen manufactures. Pop. 6500.-3, A vil, and com. Naples, prov. Capitanata, 12 m. W.N.W. Bovino. In the neighbourhood, flints and gypsum are quarried. CAS'IEL-gandolfo, a vil. Papal Statcz, 11 m . S.E. Rome, on a hill, near W. shore, Lake Albano. It is remarkable for the fine views which it commands; and contains the 1'ope's summer residence, which forms a conspicuous object from any part of the lake below. It stands on a volcanic peak, 1350 tt . above the Mediterrancan, and 450 ft . above the lake. Pop. 1000.

CAS'LEL-gorfredo, a tn . and com. Austrian Italy, gov. Venice, prov. of, and 19 m . N.W. Mantua. It is walled, contains three handsome churches, and has some silk-mills and manufactures. Pop. 3463.

CAs'TEL-gonberto, a vil. Austrian Italy, gov. Venice, prov. of, and 8 m . N. Vicenza, near the Brogliano. It contaius a parish church and three oratories, and has an annual fair. Pop. 2100.

CAS'LEL-grande, a tn. and com. Naples, prov. Basilicata, $15 \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{W}$. Melfi. It has several important fairs. l'op. 3363 .

CAs'TLL-quglielmo, à sinistra and $\grave{a}$ destra, two vils. Austrian Italy, gov. Venice, 12 m . W.S.W. Rovigo. They form a parish; and have a parish church, three oratories, and an old castle. P'op. 2500.

CAs'TEL-jaloux [anc. Castrum Gelosium], a tn. France, dep. Lot-et-Garonne, 1. bank, Avance, 28 m. W.N.W. Agen; a neat place, well built, and agreeably situate in one of the oases of the sandy desert of the Landes. Manufac-tures:-coarse cloth, paper, and glass; and has tanneries, blast furnaces, iron and copper works, and a saw-mill. 'Trade:-in grain, wine, wax, honey, tar, resin, large quantities of chestnuts, oak bark, cork, and lecches. There is a mineral spring here. The castle, built by the Seigneurs d'Albret, to which the town owes its name, is in ruins. Pop. 1643.

CAS'I'EL-Leone [formerly C'astel-Manfredi], a walled tn. Austrian Italy, gov. Milan, prov. of, and 12 m . N.W. by N. Cremona, near the Oglio. It is irregularly built, surrounded by old walls, and has a fine church. Pop. 5712.

CASTEL-Nuovo, or Novo, a tn. and com. Austria, Dalmatia, circle of, and 13 m. W.N.W. Cattaro. It stands near the entrance to the Gulf of Cattaro, and is surrounded by walls which have suffered much from repeated sieges and earthquakes. It contains two churches, a R. Catholic and a Greek; a lazaretto, and custom-house. The chief manufacture is in articles of brass. The country around is beautiful and fertile. The pop. of the tn. is small, but that of the com. is 7019 , of whom 6447 belong to the Greck church.

CANTEL Nuovo, numerous places, Italy, particularly: -1, A tn. and com. Naples, prov. Abruzzo Citra, 3 m . S.s.W. Lanciano. Pop. 4134.-2, A tn. and com. Naples, prov. Capitanata, 14 m . W.S. W. Sansevero. It stands on a rising ground, and contains three churches, an hospital, and almshouse. Pop. 3460.-3, Castelnuovo-d'Asti, a tn. Sardinian States, Picdmont, prov. of, and $15 \mathrm{~m} . \mathrm{N} . W$. Asti. Gypsum is quarried in the neighbourhood, and prepared for plaster. Pop. 2700. -4, Castelnuovo-di-Cera, a tn. Sardinian States, Piedmont, division of, and 22 m . E. Coni. Pop. 2500.-5, Castelnuoro-di-Magra, a tn. Sardinian States, Piedmont, prov. of, and 11 m . E. Spezzia, in a valley of its own name. Pop. 2626.-6, Castelnuoro-di-Sotto, a tn. Duchy Modena, on a canal of same name, 9 m. N.N.W. Reggio. Pop. 2000.

CAS'lEL-san-giovanni [anc. Castrum S. Joannis de Olulia], a tn. Italy, duchy Parma, 12 m . W. Piacenza on the Emilia; weil built, surrounded by ruinous walls, and defended by an aucient castle; has a handsome collegiate church, townhall, hospital, theatre; medical, veterinary, and several other seminaries; a makket-louse, and public promenade. Wine
and oil are produced, and cattle are reared in the ricinity; and a well-attended fair is held in August. Pop. 3000.

CASTEL-san-fietio, a tı. Pajal States, 14 m. S.E. Bologna, near l. bank, Silaro. It contains a fortress, built early in the 13th century. Pop. 3000.

CASTLL-sardo [formerly, Castel-Aragonese], a tn. and scaport, N. coast, isl. Sardinia, division of, and 20 m . N.E. Sassari. It stands on the summit of a stecp and almost isolated rock, is surrounded by old walls and bastions, and is meanly built ; has extremely steep streets, a cathedral, and a convent. The environs are fertile in corn and wine. I'op. 2042.

CASTEL-sarrasin [anc. Castrum Saraeenum], a tn. France, dep. Tarnet-Garonne, 12 m . W. Montauban, in a fertile plain, on the Azine, about 1 m . from r. bank, Caronne. It is neat, well built, and was formerly encompassed by walls and ditches, now converted into promenades. Portions of the rampart and the Gothic portal of the parish church are the only remains of the ancient edifices. It is the seat of a court of first resort, has a communal collcge, and manufactures of serges, linen, and hats, besides tanneries and dye-works. Trade-grain, oil, saffron, \&c. Pop. 3420.

CASTEL-temmini [anc. Camiciance Aqua], a tn. Sicily, prov. of, and 17 m . N.N.W. Girgenti, near r. bank, Pla tani. In the neighbourhood a large quantity of sulphur is annually obtained. Pop., including that of Fontana Fredda, 5590.

CASTEL-vetraxo, a tn. Sicily, prov. of, and 27 m . S.E. Trapani, on a rocky hill. It was originally well built, but has been falling to decay for years. It contains several churches and convents. The white wine produced in the neighbourhood is esteemed the best in sicily. Articles of coral and alabaster are manufactured here. Pop. 12,328.

CASTELBUONO, a tn. Sicily, prov. Palermo, 9 m . S.S.E. Cefalu. In the vicinity are mineral springs. Pop. 7000.

CASTELL-LLYCHWr, or LoUGHOR, a bor. and par. S. Wales, co. Glamorgan, the former pleasantly situate between the Loughor and the Llyw, $6 \frac{1}{2} \mathrm{~m}$. W. by N. Swansea. It has a neat church, a Methodist chapel, and a well-attended school. With Swansea, Aberavon, Kenvig, and Neath, it returns a member to the House of Commous. The parish abounds in excellent coal. Pop. 854.

CAS'TELLABATE', a vil. and com. Naples, prov. Principato (itra, 15 m . W. Vallo, on a hill S. of the Gulf of Salerno, not far from Point Licosa. It contains several churches and an almshouse, spins a good deal of cotton, and carries on an active fishery in the gulf. Pop. 2260.

CAS'TELLAMONTE, a tn. Sardinian States, prov. of, and $9 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Ivrea, on a hill, near l. bank, Molosna. It has a castle and a large market-place; mamfactures of carthenware crucibles; and trade in wine, cattle, butter, and clicese. Pop. 5200.

CASTELLANA, a tn. Naples, prov. of, and 25 m . S.E. Bari, with a church and three convents. Pop. 7176.

CAs'TELLANE [anc. Castellum Sollinensium], a tn. France, dep. Basses-Alpes, 23 m . S.E. Digne, r. bank, Verdon, here crossed by a bridge of a single arch. It is tolerably well built, but the strcets are narrow and dirty. The old fortifications (a wall, flanked with towers) are now in ruins. There are numerous saline springs in the vicinity. Coarse woollen cloth is made, wax bleached, and some trade done in dried fruits, particularly in estecmed prunes. Pop. 1454.

CAS'IELLANE'TA, a tn. Naples, prov.'Terra-di-Otranto, 18 m. N.W. Tarentum. It is the seat of a bishopric, and has a cathedral, five convents, several charitable institutions, and an hospital. Cotton is extensively grown in the vicinity. Pop. 5453.

CAs'reLLARO, a tn. and com. Austrian Italy, gov. Venice, prov. of, and 9 m . N.E. Mantua. It has a beautiful palace of the Duke of Mantua, and an annual fair in August. Pop. 2071.

CASTELLAZZO, a tn. Sardinian States, prov. of, and 4 m . S. Alessandria, between the Bormida and the Orba. It has four churches, five convents, and some trade in the products of the country around. Pop. 5000.

CASTELLET'TU-sopra-ticino, a tn. Sardinian States, prov. of, and 19 m . N. Novara, r. bank, Ticino. It contains a church and a convent. Pop. 3030.

CASTELLINA-Del-chinanti, a th. and com. Tuscany, prov. of, and 12 m . N. by W. Sienna, on a hill-top, W. of Mount Chianti ; tolerably well built; has walls, entered by two gates, is commanded by a castle, and has a handsome parish church. Pop. 824.

CASTELLO BARONIA, a tn. and com. Naples, prov. Principato Ultra, 9 m . S.S.E. Ariano. It contains a castle and two churches, and manufactures a few coarse woollens. In the neighbourhood are sulphurous and chalybeate springs. Pop. 1439.

CASTELLO-de-vide, a tn. Portugal, prov. Beira-Baixa, cap. dist. of same name, on a height, 9 m . N. Portalegre. It is surromnded by ancient walls, and defended by a strong castle, contains three churches, and has considerable manufactures of woollen cloth. A great number of swine are annually killed here. In the vicinity are no fewer than 300 springs. Pop. 5941.

CASTELLO-branco, a tn. Portugal, cap. prov. BeiraBaixa, and the see of a bishop, on a height, near l. bank, Laca or Vereza, 56 m . S.E. Coimbra. It is surrounded by walls, flanked with seven towers, and is defended by an old castle; lut the streets are steep, and the houses indifferently boilt. It contains the bishop's palace, which is surrounded by fine gardens; two churches, two monasteries outside the walls, two hospitals, and a richly-endowed poorhouse. Pop. 6760.

CAS'TELLON-de-la-plana, a prov. Spain, one of three into which the ancient kingdom of Valencia was subdivided in 1833 ; between lat. $39^{\circ} 38^{\prime}$ and $40^{\circ} 47^{\prime}$ N., and lon. $0^{\circ} 35^{\prime}$ E. and $1^{\circ} 25^{\prime}$ W. ; area, 2804 sq. m. ; bounded, N. by provs. Teruel and Tarragona, E. by the Mediterranean Sca, S. by Valencia, and W. by Teruel. On the N. and W. it is extremely rugged and mountainous, with a sharp, bracing climate, exposed to the boisterous N. and N.W. winds; while to the S. and E. it abounds with rich valleys and fertile plains, and enjoys a soft atmosphere, the oppressive summer heats attempered by refreshing sea breezes, and sheltered in winter from the piercing blast by the adjacent hills. The mountainranges are chiefly of sandstone, their more clevated summits capped with snow during the greater part of the year, the culminating point being Peñagolosa, 6000 ft . above sea-level; their lower slopes generally covered with pine, oak, beech, holly, and other hardy trees and shrubs. Iron, copper, cobalt, quicksilver, lead, vermilion, silver, and other metallic substances are found and mined in various localities; and several quarries of marble, granite, \&e., are wrought. Tlie plains and valleys are generally well cultivated for Spain, and produce grain, fruits, and vegetables, of all classes, of good quality, and in great abundance. They are watered by the rivers Mijares, Monlcon, Bergantes, Cenia, Cervol, and numerous smaller streams ; and, in some districts, irrigation is successfully practised. Nineral springs are numerous. The inhabitants till the ground, rear cattle, fish, manufaeture linen, woollen, hempen, and cotton fabrics, paper, soap, earthenware, hardware, esparto mats, work in iron and copper foundries, distil brandy, and express oil and wine to some extent. Education is much neglected; there are numerous schools in the towns, but the great proportion of the people are lamentably ignorant. They are generally robust and hardy in constitution, and temperate in their habits, but, though fond of amusement, sullen and vindictive in disposition. Pop. 247,741.

CASTELLON-de-la-plana [anc. Castalio], a city and port, Spain, cap. of above prov., 40 m . N.N.E. Valencia, in an extensive and fertile plain, irrigated by the Mijares, whose waters, through the medium of an ancient aqueduct, cut for a considerable distance through solid limestone rock, are conveyed 5 m . into the town, afiording a copious supply to the inhabitants, and dispensing life and verdure in the vicinity. This great work was probably the construction of James the Conqueror, King of Aragon, about 1240. The defences of the city were strengthened and increased, by the addition of batteries and a fosse, in 1837, but the works are now falling to decay for want of repair. The houses are in general well built and commodious, and the streets wide, straight, clean, and, though unpaved, many of the more important have good footpaths. It has nine squares, a town and courthouses, and parish church, wherein are some good paintings, monuments, statues, \&c.; two chapels of ease, Latin, normal, and primary schools, an hospital, poorhouse, theatre, barracks, orphan-asylum, bull-ring, two prisons, a cemetery,
several convents, and a spacious and handsome episcopal palace. Manufactures:-linen, woollen, and hempen fabries, especially sail-cloth, also ropes, paper, suap, vermicelli, glass, earthenware, bricks, tiles, fire-arms, brandy, wine, oil, \&c. Much attention is paid to the rearing of silk-worms. In-ports:-sugar, coffice, alcohol, cotton, hides, vinegar, and salt fish; annual value, about $£ 18,000$. Exports:-hemp, grain, frnits, and manufactured goods ; annual value under $£ 15,000$. The vessels frequenting the port are numerons, but small; the average anmual tonn. being 16,952 . Castellon was taken from the Saracens, in 1233, by James I. of Aragon, and subscquently given by him to the monastery of San Vincente of Valencia. Francisco Ribalta, the painter, and his son, Juan Ribalta, also an artist, were born here. I'op. 16,952.

CASTELLON-DE-AMrumas, a th. Spain, Catalonia, prov. of, and 20 m . N.E. Geros:a, on a small hill r. bank, Muga. The houses are small and inconvenient, and the streets narrow and mean. It contains, however, a magnificent chnreh, several convents, a townhall, college, prison, several schools, a theatre, hospital, and public promenade ornamented with an averue of trees and a fine fountain. Thie inlabitants are chiefly engaced in husbandry, cattle-rearing, and fishing. P'op. 2821.

CASTELLON-de jativa, or Villanueva-de-Castellon, a tn. Spain, prov. of, and 30 m . S. by W. Valencia, in a plain, r. bank, Albayda. The town is surrounded by a wall, and entered by four gates. The houses are, in general, capacions and well built, forming a principal street, several diverging lanes, and four small squares. It also has two churches, two chapels, a townhouse, prison, poorhouse, cemetery, and two primary schools. Manufactures:-oil, earthenware, tiles, and bricks; but the chicf employment is rearing silk-worms. Pop. 1999.

CAS'TELLONE.-1, A tn. and com. Naples, prov. Terra di Lavoro, 4 m . N. Gaeta, on the old Appian Way, and near the centre of the Gulf of Gaeta. It contains a church and two convents; and in the neighbourhood is a tomb, said to be erected to Cicero near the spot where he was slain. I'op. 3940.-2, A vil. and com. Naples, prov. T'erra di Lavoro, $25 \mathrm{~m} . \mathrm{N} . \mathrm{N} . W$. I'iedimonte, in a mountainous district, near the sources of the Volturno. Pop. 1466.

CASTELLUCCHIO, several places, Italy :- 1, A tn. Austrian Italy, gov. Venice, prov. of, and 7 m . W. Mantua, on the Vaso Osone. It contains a parish church, a chapel, and two mills. Pop. 2000.-2, A tn. and com. Naples [anc. Aqua Dorrana], prov. Sannio, 9 m . W.N.W. Larino. It contains a collegiate clurch, an hosjital, and two alms houses. Pop. 2757.-3, A tn. and com. Naples, prov. Terra di Lavoro, 6 m. S. W. Sora, pleasantly situate on a hill. Pop. 1229. -4, Castelluccio Inferiore, and Castelluccio Superiore, two vils. and com. Naples, prov. Basilicata, both in dist., and about 15 m . S.E. Lagonegro. P. of former, 2993 ; of latter, 2483.

CASTELMOliON, a in. France, dep. Lot-et Garome, r. bank, Lot, about 17 m . S.E. Marmande. It has a Calvinistic consistorial church, and some trade in flour. Pop. 1013.

CASTELNAU, several small tns. France. The most populous is Castelnau-de-Montratier, dep. Lot, 14 m . S.S.W. Cahors. Pop. 1111.

CASTELNAUDARY [anc. Castellum Arri or Sotomagus], a tn. France, dep. Aude, 21 m. W.N.W. Carcassone, in the form of an amphitheatre, on an eminence near the Canal do Midi. It is indifferently built, and the chnreh of St. Michael, and the general hospital, a well-endowed establishment, are the only noteworthy buildings. To the S. the canal forms a basin 1300 yards in circumference, surrounded by good quays, warthouses, and yards for building vessels cmployed on the canal. Above this basin is the public promenade. The munfactures consist of coarse cloth, earthenware, pottery, and bricks. There are also distillerics, tanneries, and corn-mills. Lime and gypsum are found in the environs. The grain and flour market is one of the largest in the S. of France, and some trade is carried on in timber, iron, copper, \&c. It has a tribnnal of commerce and of first resort, an exchange, agricultural and polytechnic societics, and a communal college.

Castelnaudary was formerly the capital of the county of same name, and strongly fortified. In 1237 the inquisitors visitcd it, and not only condemned the living to the flames, but exhumed the dcad, and made their remains figure in the
autos-da-fé. In 1355 , it was almost totally destroyed by the Priuce of Wales. In 1632, the famous comlat between the troops of Louis XIII. and those of Gaston of Orleans took place below its walls. The Duke de Montmorency, who commanded the latter, was wounded, taken prisoner, and shortly after executed at Toulousc. Pop. 8215.

CASTELORIZO, or KAstelomzo, an isl. and seaport tn. Turkey in Asia, pash. Anatolia; lat. $36^{\circ} 5^{\prime} \mathrm{N}$. ; lon. $29^{\circ} 14^{\prime}$ E.-The TSLAND, the largest and loftiest on the coast, is entirely barren, and ill supplicd with water. The town and harbour are on the N.E. side. The harbour, though small, is snug; and merchant vessels can moor within 100 yards of the town.-The Town, which consists of 500 or 600 houses scattered over the face of the rock, is governed by a Turkish Aga, but most of its inhabitants are Greeks. A little corn is collected here for exportation; and several small vessels are constantly employed in conveying fire-wood from this part of the country to Egypt. It is also a favourite place of resort for merchant vessels, both going to and returning from Syria and Cyprus. Pop. 3000.

CAstelrotto, or Castelrut, a vil. and com. Austria, Tyrol, prov. of, and 14 m. N.E. Botzen, on a mountain near l. bank, Eisach. The district is mountainous, and affords good herbage for the numerous flocks. Pop. 3322.

CASTELVETERE, several places Naples, particularly 1, Castelvetere, supposed anc. Caulon, a tn. and com., prov. Calabria Ultra I., $12 \mathrm{~m} . \mathrm{N} . \mathrm{E}$. Gerace. It contains five churches and a castle, but was jartly destroyed by the earthquake of 1783 . In the neighbourhood much wine is produced, and many silk-worms are reared. Pop. 5117.-2, Tn. and com., prov. Sannio, 17 m . S.E. Campobasso. It has a collegiate church and an hospital. Pop. 3294.

CASTENEDOLO, a vil. and com. Austrian Italy, gov. Milan, prov. of, and 6 m . S.E. Brescia. It occupies a height on the road between Brescia and Mantua, is well built, and contains a parish chureh, and several chapels and sanctuaries. The district around produces good crops of corn, has fine pastures, and mulberry plantations. Pop. 2999.

CASTIGLIONE, numerous places, Italy, particularly1, Vil. and com. Naples, prov. Calabria Citra, 5 m. N.N.E. Cosenza. Pop. 1200.-2, Tn. and com. Naples, prov. Calabria Ultra $11 ., 8 \mathrm{~m}$. W.N.W. Nicastro, near the Adriatic. Pop. 3300.-3, Two vils. and com. Naples, prov. Abruzzo Ultra I., botli in dist. Penne, from which the one, Castiglione della I'cscara, is \&. 13 m. , pop. 1815 ; and the other Casti-glione-Messer-Raimoudo, 6 m. N.N.W., pop. 2262 . In the neighbourhood of the former is the fine royal abbey San Clemente de Casauria.-4, Castiglione-Messer-Marino, a tn. and com. Naples, prov. Abruzzo Citra, 20 m . S.W. Vasto. It stands in the midst of mountains, and has five churches and a convent. Pop. $3485 .-5$, A vil. and com. Sicily, prov. of, and 30 m. N. Catania, and on the N.E. side of Mount Etna. Pop. 2847.-6, Custiglione del Stiriere, a small city, Austrian Italy, gov. Venice, prov. of, and $22 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Mantua, 17 m . S.E. Brescia. It is well built, surrounded by walls, defended by an ancient castle, and contains a large square adorned with a central fountain, three churches, and a townhall. A well-attended annual fair is held in June. The French obtained here a decisive victory over the Austrians on August 5, 1796, which gave to Marshal Agereau his title of Due de Castiglione. I'op. 5051.-7, A vil. Austrian Italy, gov. Milan, prov. Bergamo, 6 m . N.E. Clusone. Pop. 1582. -8 , A vil. Austrian Italy, gov. Milan, prov. Como, 4 m . N. Tradate. Pop. 1300.-9, A vil. Austrian Italy, prov. of, and 3 m . W. Sondrio, r. bank, Adda. I'op. 1154.

CASTIGLIONE-fiorentino [anc. Arretium fidens], a tm . and com. Tuscany, prov. of, and 9 m . S.S.E. Arezzo. It is tolerably well built, and has a large square, a handsome collegiate church, a chapel, municipal buildings, hospital, orphan asylum, and college. I'op. 4932.

CASTILBLANCO, a tn. Spain, Estremadura, prov. Badajos, 15 m . E.S.L. Logrosan, on an eminence, near r. bank, Guadiana. Its houses are indifierently built ; strects, though paved, irregular; and its townhall, prison, and storchouse, with other buildings, were burnt by the Carlists in 1837. It las, however, a parish church, chapel, cemetery, and two schools. The inhabitants are chiefly employed in domestic
weaving, husbandry, and in rearing cattle and pigs. Pop. 1700.—Several other small places in Spain bear the same name.

CASTILE (New), [Spanish, Castilla La Nueva], an ancient prov. Spain, corresponding to the old kingdom of Toledo, and occupying nearly the centre of the peninsula ; bounded, $\mathbf{N}$. by Old Castile, W. Estremadura, S. Andalusia and Mureia, and E. Valencia and Aragon; greatest length, E. to W. 240 m. ; avcrage breadth, about 155 m . ; area, $42,904 \mathrm{sq} . \mathrm{m}$. It is traversed from E. to W. by three lofty mountain chains, nearly parallel to each other-the mountains of Toledo and sierra Molina stretching almost across its centre, the sierra Guadarama forming its N ., and the sicrra Morena forming its S. frontier. Between these chains, which form the great water-sheds of the province, lie two extensive plains or plateaux, with a general inclination to the E.; that to the N. of the central chain belonging to the basin of the Tagus, by which, or its affluents, all its waters are received; and that to the S . belonging to the basin of Guadiana, except a small portion of the E., which is separated from this basin by a transverse ridge, and, sloping S.E., sends its waters to the Mediterranean. These plains, from being very poorly wooded, have in winter a bleak, and in summer often an arid appearance. They are chiefly devoted to the raising of grain, and must, in many districts, be of great fertility, since notwithstanding the miserable system of agriculture pursued, the produce more than equals the consumption. The other principal crops are hemp and saffron. Many of the lower slopes are clothed with vineyards, from which much wine of good quality is obtained. In the higher mountain valleys the pastures are excellent, and feed vast numbers of mules, cattle, sheep, goats, and swine. A mountain product of considerable importance is the esparto, of which a varicty of articles, and particularly the famous mats so named are made. The mountains are also rich in minerals, of which it may be sufficient here to mention the quicksilver mines of Almaden, which were long, and probably must still be regarded as the richest in the world. Manufactures, which at one period had attained a high degree of prosperity, are greatly decayed, and the whole province is miscrably deficient in regard to all the great branches of industry. The inhabitants have a grave, reflective cast of countenance, and have often distinguished themsclves by a peculiar aptitude for scientifie acquirement. They are, however, gencrally indolent in their habits, and live on from day to day as their fathers did before them, seldom attempting to better their condition, and at the same time indulging a self-complacency, which to a stranger borders very much on the ridiculous. It must be admitted, on the other hand, that unlike most people in the world, they are really better than they seem, and possess in a higher degree the valuable qualities of civility, generosity, and probity. 'This ancient province now forms the five provinces of Madrid, Ciudad-Real, Cuenca, Guadalajara, and Toledo. P. 1,490,799.

CASTlLE (Olv), [Spanish, Castella La Vieja], an ane. prov. Spain; bounded, N. by the Bay of Biseay, N.E. IBiseay and Navarre, E. Aragon, S. New Castile, and W. Leon; greatest length, N.E. to S.W., 210 m. ; breadîh, 170 m . ; area 26,768 $\mathrm{sq} . \mathrm{m}$. It is traversed by three mountain chains-the sicrra de Guadarama, which takes an E.N. L. direction, separating this province from tlat of New Castile, and on reacling the E. frontier links in with the sierra de Deza, which turns to the N. and separates Old Castile from Aragon; a central chain, apparently a continuation W. of the sierra de Deza; and the Cantabrian Mountains in the N., at no great distance from, and almost parallel with, the coast. Numerous minor ramifications penetrate between these chains and diversify the surface, but the greater part of this space consists of extensive, well-watered, and generally fertile plains. The largest of them, to the S. of the central chain, belongs to the basiu of the Douro, which, flowing aeross it E. to W., drains it either directly or by numerous affluents. Even a considerable part of the plains N. of the central elain sends its waters to the Douro. The remaining portion belongs to the basin of the Ebro. Besides these two large basins, a smaller one in the S.E. of the province belongs to the Tagus; and another, equally small, in the province of Santander, and to the N. of the Cantabrian Mountains, sends its waters directly to the sea. The far greater part of the arable land of this province is devoted to the culture of grain, particularly wheat, which is
raised in such abundance as to furnish a large surplus for the supply of other provinces, and entitles this one to be regarded as the principal granary of Spain. In addition to cereals, the principal crops are flax and madder. The vine thrives well, and much excellent wine might be produced, but the inhabitants, either blind to their interests, or too indolent to pursue them, pay little regard to this most luerative branch of rural cconony, and produce only a little wine of very indifferent quality. The pastures, both of the mountans and the plains, are excellent. The former are depastured in summer, and the latter in winter. In this way an ample supply of food is obtained throughout the year, and immense flocks of shecp are fed. The wool thus produced was long famous throughout Eurone, and though it is said to be rivalled by that of Saxony, and still more recently by that of our own Australia, the wool of this province still forms one of its principal sources of revenue. The minerals of Old Castile rcmain yet to be perfectly explored. There can scarcely be a doubt that they might be made of great value, but at present they are scarcely of any economical importance. Old Castile now forms the provinces of Santander, Burgos, Logroño, Soria, Segovia, and Avila. Pop. 1,427,477.

CAS'ILLLO, several tns. and vils. Slain; the most important are-1, Castillo-de-Loeubin, a tn. Andalusia, prov. of, and 25 m . S.W. Jaen, on the N. side of the sierra Alcamuña. Most of the streets are narrow, ill paved, and stecp. In the public square are the remains of an Arab fortress, called Villeta. There are a handsome parish churel, with a highly decorated Corinthian portal; five chayels, two schools, a townhouse, hospital, prison, store-house, cemetery, and some convents. Manufactures:-linen, woollen, and liempen fabrics; vinegar, wine, and oil. In the environs several quarrics of jasper, limestone, and millstone are wrought. An annual cattle fair is beld in September. Pop. 3971.-2, Cas-tillo-de-las-Guardas, a tn. Andalusia, prov. of, and 30 m . N.W. Seville, on an elevated site, commanded, execpt on the N., by lofticr hills. Nearly all the strects are paved, steep, and lined with tolerably well-built houses. Its townhall and prison are of recent construction; it also possesses two churches and two primary schools. The inhabitants, mostly engaged in weaving and husbandry, carry on a small trade in grain, wine, oil, honey, and coal. In the neighbouring hills are abandoned mines of copper, lead, and silver. Pop. 2287.3, Castillo-de-Garci-Muñoz, a tn. New Castile, prov. of, and 27 m. S.S.W. Cuenca, on a declivity overlooked by a ruinous castle belonging to the Marquis of Villena. It possesses a parish church, two convents, and does some little trade in cereals and oil. Pop. 1185.

CASTILLON [anc. Castillo], a tn. France, dep. Gironde, r. bank, Dordogne, 26 m . W. Bordeaux. Nails, cordage, barrels, bricks, tiles, cotton, and woollen yarn, are made here, and there is some trade in wool. In the environs are the remains of the Chateau de Montaigne, where the celebrated essayist of that name died, Sep. 13, 1592. In 1541 , the English, under Talbot, were defeated by the French before the walls of Castillon. Pop. 2700.-Castillon is the name of several other small towns and villages in France.

CASTINE, a seaport vil. U. States, Maine, E. side of Penobscot Bay, opposite Belfast, 75 m. E. Augusta. It has an excellent and commodious harbour, accessible to ships of the heaviest burthen at all seasons of the year ; considerable trade in timber, coasting, and the fisheries. It was in possession of the British during the war with America. Por. (1840), 1188.

CASTLE, numeroes pars. England:-1, Cambridge; 2613 ac. Pop. 854.-2, Castle (Carrock), Cumberland; 3640 ac. Top. $351 .-3$, Castle (Clureh), Stafford; 3460 ac. Pop. $371 .-25$, Castlerentry, Cork; 4754 ac. Pop. 3476.

CASTLE-ACRE, a vil. and par. England, eo. Norfolk, about 3 m . N. Swaffham. The village, which stands on a bold acelivity, las three main strects, unpaved and irregular, while the houses are almost entirely cottages of flint or brick. There is a fine parish church of the time of Edward IV., and four chapels belonging to Baptists, Wesleyan, and Irimitive Methodists. The population is entirely agricultural. Arca of par. 3210 ac. Pop. 1495.

CASTLE-BELLINGHAM, a small tn. Ireland, co. Louth, agreeably situate on the Glyde, $4 \frac{1}{2} \mathrm{~m}$. N. Dunleer. It has a handsome parish chureh, a sehool, a dispensary; and the inhabitants are engaged in limen weaving, and in an extensive brewery, which is here. Pop. 665.

CASTLE BlaAKENEY, or Kıllasolan, par. Irel., co. Galway; 11,482 ac. Pop. 4496.

CASTLE-BLANEY, a market tn. Ireland, co. Mona ghan, on a gentle eminence, about 10 m . N. Carrickmaeross. It consists of four principal streets, straight, clean, and well kept; and the houses, which are mostly of stone, are well built and slated; good supply of water. The residence of Lord Blayney adjoins the town. The market-house, townhall, couneil-house, and staticn of the Dundalk and Emsiskillen Railway, are the chief buildings. Here are an Episcopal church, with an elcgant spire, a R. Catholic chapel, a Methodist, two Preslytcrian meeting-honses, and three schools. Near the town are two extensive flax-mills, but the people are chicfly employed in agrieulture. Pop. 2134.

CAS'lLE BYTIIE, or Castle Bigil, par. Wales, Pembroke. Pop. 266.

CASTLE CAEREINION, par. Wales, Montgomery; 5984 ac. Pop. 805.

CASTLE-CARY, par. Eng. Somerset; 3640 ac. P. 1942.
CASTLE DOLCLAS [formerly, Carliuwark], a market tn. Scotland, co. Kirkeudbright, 18 m . S.W. Dumfries. It is mostly of recent erection, and is built on a regular plan, on a gentle declivity, terminating in a lake called Carlinwark Loch; houses, in general, handsome and substantial; streets wide and spacious, crossing each other at right angles. It was ereeted into a burgh of barony in 1792 ; and has a handsome modern townhouse, with a tower. It is the great mart for all the produce of the county; weckly market on Monday, at which great numbers of black cattle and slicep are sold, besides large quantities of all kinds of agricultural produce. Pop. (1841), 1847.

CAS'LE-FlNN, a small market tn. Ireland, co. Donega', about 5 m . W.S.W. Strabane. It lies on the Finm, which is navigable to the town. Pop. 567.

CASTLE-GLEGORY, a small wretelied-looking tn., co. Kerry, $\frac{1}{4} \mathrm{~m}$. from S. shore, Tralee Bay, 12 m . W. Trales. It has a k. Catholic chapel, a national, and a parochial school. The people are principally eniployed in agricultural labour, and in fisling at certain periods of the year, in neither of which occupations, lowever, can they boast of any skill. Yop. 504.

CAN'LE.MATTIN, par. Wales, Pembroke. Pop. 408.
CAS'TLE-MAR'I'YR, a post tn. Ireland, co. of, and 18 m . E. Cork on the Maine, here crossed by a bridge. It consists of one spacious street, of large, well-built, and whitewashed houses, which give the town a cheerful and agrecable
appearance. It has a clurch, dispensary, fever-hospital, and other charities. It returned two members to the Irish House of Commons till the Union. There are two fairs annually, and petty sessions every alternate Wednesday. Pop. 1397.

CASTLE POLLARD, a tn. Ireland, co. Westmeath, 12 m . N. by E. Mullingar, beautifully situate in a fertile valley, having, S.W., Lough Derveragh, and S.E., Lough Lane. It consists of several well-built, cleanly-kept, and handsome streets, having in the centre a square, in which is situate the market-house. It has a handsome church, $\mathbf{R}$. Catholic chapel, parochial school, savings'-bank, dispensary, and fever hospital ; and four annual fairs. Pop. (1841), 1310.

CASTLE-WELLAN, a market tn . Ireland, co. Down, agreeably situate $10 \frac{1}{2} \mathrm{~m} . \mathrm{S} . W$. Downpatrick: It is well built, and the houses, generally, are neat and comfortable. It has chapels for R. Catholics, Presbyterians, and Wesleyan Methodists, a free school, and infantry barracks. The linen manufacture, in all its branches of flax-dressing, spimning, and weaving is carried on. There are also extensive bleachfields in the neighbourhood. Pop. 806.

CASTLEBAR, a tn. Ireland, co. Mayo, N. extremity of lake of same name, 126 m. W. by N. Dublin. It consists of one principal street, nearly 1 m . in length, spacious and irregular, though tolerably well built, from which several smaller streets and lanes diverge, and has also a sort of square-a green area around which are many handsome houses. The parish church is an elegant structure in the later English style, with a lofty square embattled tower; the R. Catholic chapel is large and well proportioned; and there are a Wesleyan Methodist meeting-house, some schools, an infirmary, two dispensaries, and a barrack for artillery and infantry. The court-house and new county jail are both extensive and well arranged, the latter having a castellated front, and containing 140 cells. The assizes for the county are held here, and also the quarter sessions in January and October, besides petty sessions every Saturday. Linen, and linen yarn, are manufactured here to a considerable extent; as are also tobacco, snuff, soap, and candle. There are likewise a brewery and a tannery in the town; but the general trade is in grain and other agricultural produce. Castlebar was taken by a French force which landed in Killalla Bay, in 1798, but was evacuated shortly after, on the approach of Lord Cornwallis. Pop. (1841), 5137.

CASTLECARY, a hamlet, Scotland, co. of, and $9 \mathrm{~m} . \mathrm{S}$. by W. Stirling, and one of the stations on the Edinburgh and Glasgow Railway. Near it are the remains of a Roman fort, covering six acres of ground, and vaulted underneath.

CASTLECOMER, a tn. and par. Ireland, co. Kilkenny. The town lies on the Deen, 54 m . S.E. Dublin, and consists of one spacious main street, beautified by a row of trees on either side, and several smaller streets and lanes; is regularly built, and has a cleanly and respectable appearance. It has a commodious parish church; a R. Catholic chapel, and near it a convent, a small Wesleyan meeting-house, a courthouse, a dispensary, small infantry barracks, and various schools. The chief dependence of the place is on the collieries in the neighbourhood, which have been worked for more than a century, producing the peculiar kind of mineral known by the name of Kilkenny coal, which, containing no bitumen, burns without flame or smoke, and yields a strong heat. $\Lambda$ great proportion of the coal is conveyed to Dublin by the river Nore and Barrow, and by the Grand Canal. The town was attacked by the rebels in 1798, and great part of it destroyed by fire. Pop. (1841), 1765. Area of par. 21,592 ac. Pop. 13,535.

CASTLEFORD, a vil. and par. England, York, W. Riding. The viblage, 21 m. S.W. York, on the York and N. Midland Railway, is built on an acclivity, consists of two main streets, one of thein crooked and not well kept, and the houses, principally of brick, are but indifferently built; a great deficiency of water. Besides the parish church, a fine Gothic structure, there are two chapels belonging to the Wesleyan and Primitive Methodists, with a national and other schools. The male population are chiefly employed in glass-works and potteries. Area of par. 2040 ac . Pop. 1850.

CAS'ILEREAGH, a market tn. Ireland, co. of, and $15 \frac{1}{2}$ m . W.N.W. Roscommon, on the Suck, which runs through the centre of the town. The houses are all of limestone, rough cast, and many of them are well built. It has a courtVol. I.
house, school-house, Protestant church, and R. Catholic chapel, and three schools for males, females, and infants. There are no manufactures, but a large amount of general trade is carried on. The people, who are chiefly employed in agriculture, are moral and industrious. P. (1841) 1233.

CASTLETON, par. and vil. England, co. Derby. The village, 13 m . W. by S . Sheffield, is situate at the bottom of a rugged eminence, on which stands the ancient castle called Peak Castlc, crected by William Peveril, natural son of the Conqueror. The houses are chiefly of stone. It contains the parish church, a fine specimen of the early pointed style; a Wesleyan chapel, and a free grammar-school. The inhabitants are mostly employed in mining; but many derive a subsistence from the manufacture of ornamental articles from spar, and from strangers visiting the remarkable natural curiositics in the neigbowhood, the most extraordinary of which is the Peak Cavern, or Devil's Cave, consisting of a series of subterranean chambers, which can be explored only by torch light. The entrance to this cavern is in the face of a precipitous limestone rock, at the height of 50 ft . from the ground, and is 46 ft . high, by 120 wide. The whole depth of the excavation inwards, from the outward opening is 2300 ft . The Peveril of the Peak of Sir Walter Scott's novel of that name, was the supposed founder of the original castles at Castleton. Area of par., $10,000 \mathrm{ac}$. Pop. 1500.

CASTLETON, par. Eng. Dorset ; 30 ac. Pop. 113.
CASTLE'ION OF BRAEMAR, a vil. Scotland, co. of, and 50 m. W. by S. Aberdeen, a little above the confluence of the Clunie with the Dee. It has a chapel of ease connected with the Established church, a Free church, and a R. Catholic chapel. Pop. 245.

CASTLETOWN, a tn., cap. of Isle of Man, at its S. extremity, W. shore of bay of its name. It is intersected by a small stream, over which are a draw-bridge for foot passen gers, and a stone bridge for carriages. The castle of Rushen, which stands on the $r$. bank of the river, and was originally the principal fortress of the island, is a large quadrangular building, surrounded by a lofty wall and fosse, and defended by a glacis of stone. The keep, which is still entire, is the only prison in the island. The market-place consists of a spacious area, near the castle wall; and a market-house was erected in 1830. It has a handsome chapel, and places of worship for Primitive Methodists, Wesleyans, and R. Catholics. King William's college, founded in 1830, the buildings of which were very handsome, was consumed by fire in 1844. In the town and its vicinity are several breweries, tanneries, limekilns, and corn-mills. Pop. 2283.

CASTLETOWN, par. Scot. Roxburgbs, 18 m . by 12 m. Pop. 2135.

CASTLETOWN ROCHE, à tu. and par. Ireland, co, Cork. The Tawn, on the Awbeg, $7 \frac{1}{2} \mathrm{~m}$. W.N.W. Fermoy. consists of one principal street, mostly composed of miserable thatched cabins. It is well supplied with water; and has a handsome Episcopal church, with a tower and spire; a R. Catholic chapel, a national school, and one under the Churel Education Society, a dispensary, and two large flour-mills. The inhabitants are agriculturists, and very poor. The celebrated Edmund Burke was born in the neighbourhood. Area of par. 6485 ac. Pop. 3476 ; of tn. 1063.

CASTON, par. Eng. Norfolk; 1680 ac. Pop. 513.
CASTOR, a vil. and par. England, co. Northampton. The village, 4 m . W. Peterborough, on a branch of the London and North-western Railway, consists of one irregular, but well-kept, street, and some side ones, and is almost united to Ailsworth, another village, consisting of a single street. The houses in general are of a respectable description. The parish church is a handsome cruciform structure, with an elegant Norman tower, surmounted by a spire. There are, besides, two chapels of ease, and an Independent chapel, and a free school. Inhabitants chiefly agriculturists. Castor is the Durobrivae of Antoninus, and remains of many buildings, as baths and villas with tessellated pavements, have been found herc. Area of par. 7020 ac. Pop. 1313; of vil. 716. -(Local Correspondent.)

CASTRES [anc. Castrum Albiensium], a tn. France, dep. Tarn, 23 m. S.S.E. Albi, on the Agout, which divides it into two parts-Castres Proper, N. side, and Villegoudon, S. side the river, which is crossed by two stone bridges. The streets are narrow and winding. The public buildings are the Hotel
de Ville, formerly the Episcopal palace, which contains a public library with 7000 volumes, and has a garden laid out on the plan of the Tuilleries; three churches, one of them Protestant; two hospitals, a theatre, cavalry barracks, \&c. There are several fine promenades, and a handsome square. The manufactures of the town are in a thriving condition. They consist of fine cloths, coarse cloth for the troops, flannels, blankets, and other woollen goods, linen, glue, and black soap. There are, also, bleaching-grounds, dyeworks, tanneries, paper-mills, forges, and brass foundries. A considerable trade is carried on in the above articles, and in silk, cotton, liqueurs, and confectionary. Castres has a tribunal of first resort, and of commerce, an agricultural society, communal college, and two seminaries. The bishopric of which this was once the seat was suppressed at the revolution of 1793 . Rapin the listorian was a native of Castres. Pop. 13,590 .

Castricum, vil. Holland. See Kastricum.
CASTRIES (Bay of), a bay, China, Manchooria, Gulf of Tartary, between Manchooria and isl. Sagalin ; lat. $51^{\circ} 28^{\prime} \mathrm{N}$. ; lon. $141^{\circ}$ E. (r.)

CASTRIES (Port). Sce Carenage.
CASTRO [anc. Mytilene]. - 1, A seaport town, Asiatic Turkey, isl. Mytilene, off W. coast, cap. of the island; lat. $39^{\circ} 6^{\prime} \mathrm{N}$. ; lon. $26^{\circ} 35^{\prime}$ E. ; situate on a point of land which forms two small ports or harbours, and surrounded by a double wall, flanked with towers, and defended by a castle; streets narrow and dirty. Simall vessels are built here. The ruins of the ancient town of Mytilene are scattered over a considerable space of ground to the W. of the present town. Pop. upwards of $6000 .-2$, A seaport tn. Naples, prov. of, and $10 \mathrm{~m} . \mathrm{S} . W$. Otranto. It is the seat of a bishopric, and has a cathedral and an old castle. The distriet produces grain, wine, fruit, and cotton; and fish are plentiful on the coast. In the 16 th eentury the town was sacked by the Turks, who carried off the women and children as slaves, and since then, it has frequently suffered from visitations of the Corsairs from Barbary. The port admits only small vessels. Pop. 7780. $-3, \mathrm{~A} \mathrm{tn}$. and seaport, Chili, E. coast, isl. Chiloe, head of a fine bay of same name. Its port is good and it does some trade. It was founded in 1560 by Don-Lopez-Garcia, then Viceroy of Peru. Pop. 3500.

CASTRO, several places, Portugal :- 1, Castro Daire, a tn. and par., prov. Beira-Alta, 18 m. S.S.W. Lamego, with a church and an hospital. Pop. 2400.-2, Castro Laboreiro, a tn. and par., prov. Minbo, 32 m. N.E. Ponte-do-Lima; on an elevated plateau, in a mountainous distriet, near the frontiers of Spain. It contains an old ruined castle, and owing to its great height, and total want of shelter by trees, is considered the coldest place in Portugal. Pop. 1500.-3, Castro Mavim, a tn., prov. Algarve, in the S.E. comer of the kingdom; on the Guadiana, and near its embouchure, 15 m . N.E. Tavira, on the Spanish frontier. It was once fortified, but the forti fications are now in ruins. The inhabitants are employed ehiefly in fishing and smuggling. There are salt springs in the neighbourhood. Pop. 2260.-4, Castro Verde, a tn. and par., prov. Algarve, r. bauk, Corbes, 26 m . S.W. Beja. It contains a collegiate church, infirmary, and hospital. Pop. 2695.

CASTRO-Contrigo, a tn. Spain, prov. of, and $40 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. by W. Leon, r. bank, Eria, tolerably well built, and has a parish church, chapel, and two primary schools; inhabitants mostly engaged in weaving and agriculture. Pop. 1494.

CASTRO-del-Rro, a tn. Spain, Andalnsia, prov. of, and 16 m . S.E. by S. Cordova, on a declivity, r. Jank, Guadajoz. The more ancient part of the town is surrounded by a dilapidated wall, flanked with towers, and entered by one gate, which was defended by an Arab castle, now also ruinous. The modern portion is outside the walls and extends along the foot of the hill on its N. side. Most of the streets are wide and regular, lined with well built houses and liandsome public edifices. Its parish church is spacious, has three nave3 ard a lofty tower containing a clock and peal of six bells, the decorations of the interior are tastefnl, and have been renovated. Here are two colleges, several primary schools, some convents with churches attached, and an economic socicty. The remaining public buildings comprise six chapels, two hospitals, a capacious townhall, prison, storehouse, and cemetery. Manufactures:-linen, woollen, and hempen fabries, eartl:enware, tiles, bricks, lime, brandy, wine, oil, and vinegar.

Trade:-wheat, cattle, oil, honey, \&c. An annual fair in September. Pop. 9092.

CASTRO-Ghovanni [anc. Enna], a tn. Sicily, prov. Caltanisetta, 13 m. N.N.W. Piazza, near the centre of the island; on a high table-land, formed by the union of the three chains of mountains extending in different directions from this point. Its height above sca level is more than 4000 ft . The plateau on which it stands is still remarkable for fertility ; while in ancient times it was adorned with the groves and temples of Ceres, the presiding goddess of the locality, who is said to have been a native of Enna. Her most sacred temple was erected on the spot oceupied by the modern town, but all traces of it have disappeared. An old eastle still remains, probably built by the Nortlmen, who occupied Sicily in the Middle Ages. Castro-Giovanni is miserably poor, and appears to be going still further to decay. Sulphur is obtained in the district to the annual amount of $46,875 \mathrm{ewts}$ During the first servile war, Enna was the head quarters of the slaves who held out against the power of Rome for some years, and fought three successful battles with her armies; but were at last subdued, and the town was taken by the consul Rupilins. Pop. 12,000.

CASTRO-Novo, a tn. Sicily, prov. Palermo, 22 m. S.S.W. Termin. Marble is found in the environs. Pop. 5800

CASTRO-Nuovo, a tn. and com. Naples, prov. Basilicata, 22 m. E.N.E. Lagonegro. It has an annual fair. Pop. 2885

CASTRO-Pignano, a vil. and com. Naples, prov. Sannio, 5 m . N.W. Campobasso, near l. bank, Biferno. It contains four churches and a convent, and has a paper-mill. P. 2758.

CAsTRO-URDiales, a tn. and pert, Spain, prov. of, and 24 m. E. by S. Santander, in a plain, at the N.E. base of the sierra de Pando. The town is clefended by a wall on the land side, and by numerous batteries, and is commanded by an ancient and strong castle. The houses, particularly the modern portion of them, are well constructed, and the princi pal streets well paved and clean. In its principal square stands the town-hall, a spacious structure of hewn stone. The parish church is aneient ; and there are also a convent, chapel, nautical, mathematical, and several primary schools, and a short distance from the town is an hospital. There is a dock, and near it a handsome public fountain. Manufactures:linen fabrics, sails, ropes, leather, fishing-nets, tiles, bricks, \&c. A great portion of the inluabitants are occupied in fishing, and salting fish, and in the docks. The trade of the port is very limited, consisting chicfly of iron, wiue, brandy, saltfish, and hides. Pop. 3110.

CASTROJERIZ, a tn. Spain, Old Castile, prov. of, and 17 m . W. by S. Burgos, at the S . base of a hill, crowned by a castle built by Julius Cæsar. It has wide, clean, and paved strcets, which are supplied with footpaths; and the louses are generally well built. It has a capacious market square, containing the townhouse, prison, one of the churches, and an extensive portico, supported by pillars of hewn stone, and forming an agreeable promenade in wet weather. It has a fine collegiate and several other churehes, seven convents, a Latin, grammar, and some primary schools, seven hospitals, and a cemetery. Manufactures:-linen and woollen fabries, glass, eartbenware, bricks, stuceo, hats, wine, \&c. Trade:grain, fruits, honey, and eattle. Pop. 2420.

CASTROI')I, a tn. and port, Spain, Asturias, prov. of, and 58 m. W.N.W. Oviedo; on a declivity, at mouth of the Eo. The houses in general are indifferently built, and the streets, though elean, are irregular, and badly paved. The town possesses three squares, a parish church, and capacious townhouse, built on the site of an ancient palace, formerly belonging to the Bishop of Oviedo, and serving the combined purpose of guildhall, police-court, and prison. The other town cdifices are two chapels, a custom-house, and school. Weaving, fisling, and husbandry are the chief occupations. l'op. 1246.

CASTIROREALE, a tn . Sicily, prov. of, and 22 m . W.S.W. Messina, on the Castro. Good wine and oil are produced in the neighbourlood; and there is a chalybcate spring a short distance from the town. Pop. 3462.

CASTROV1LLARI, a tı. Naples, prov. Calabria Citra 34 m. N. Cosenza, l. bank, Coscilello. It is well built, par tially fortified, and has three churches, several convents, and an hospital. It has also a tolerable trade in wine, cotton, manna, silk, and fruit. Pop. 7100.

CASTROVIREINA, a prov. and vil. Peru, dep. Ayacucho; bounded, N. by Angeraez, E. by Cangallo, S. by Lucanas, and W. by Lima; length, 66 m ; breadth, 75 m . It is in general hilly and barren, with a cold climate; but some places produce eorn and potatoes. The warmer valleys produce fruits, and abundance of pasture for cattle and sheep.- The village is a very sinall place, situate on a mountain, where the cold is excessive. Pop. of prov. 14,000.

CASTUERA, a tn. Spain, Estremadura, prov, of, and 67 m . E. by S. Badajos, near r. bank, Guadaletra. Most of its streets are straight, clean, and well paved. It bas two squares, lined with substantial houses; the principal one contains the townhall, prisons, and spacious modern parish church. Here are also several chapels, three schools, and an extensive cemetery. The inhabitants are engaged in weaving, making earthenware, tiles, bricks, shoes, \&c. Trade is carried on in cattle, wool, wine, grain, and oil. Pop. 5578.

CA' KAYS, a group of islets, Great Bahama Bank, the largest about $70 \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{W}$. the nearest point of Great Bahama Island, and 10 m . from the Bemini Islands. It has a lighthouse, erected by the British Goverument, the base of which is 25 ft . above high water, with a tower 55 ft . in height. The light revolves once in every minute. The tower stands in lat. $25^{\circ} 34^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $79^{\circ} 18^{\prime} 24^{\prime \prime} \mathrm{W}$.

CA'TALDO (St.), a tn. Sicily, prov. of, and 5 m . W.S.W. Caltanisetta. The sulphur works in the environs produce annually about 37,500 ewt. Fop. 7879.

CATALINA (SANTA).-1, An isl., N. Pacific Ocean, off the coast of Upper California, from which it is separated by the channel of Santa Barbara, here about 18 m . wide. It is about 45 m . in circumference.-2, A small isl. Caribbean Sea, 93 m . E. the Mosquito coast, and a little N. Old Providence Island._-3, A small fort, Portugal, prov. Beira, $28 \frac{1}{2} \mathrm{~m}$. W.S.W. Coimbra; on the r. bank, and at the mouth of the Mondego.-4, $\Lambda$ harbour, E. coast, isl. Newfoundland, in N. Trinity Bay, and 11 m . S. Cape Bonavista; lat. $48^{\circ} 35^{\prime} \mathrm{N}$. ; lon. $53^{\circ} \mathrm{W} .-5$, A eape, W. coast, Central Ameriea, state of, and 70 m. S.S.W. Nicaragua; lat. $10^{\circ} 35^{\prime} \mathrm{N}$.

CATALONIA [spanish, Cataluña], a priseipality and old prov., Spain, forming the N.E. corner of the Peninsula, between lat. $40^{\circ} 30^{\prime}$ and $42^{\circ} 51^{\prime} \mathrm{N}$, and lon. $0^{\circ} 15^{\prime}$ and $3^{\circ} 21^{\prime}$ E.; bounded, N. by France, E. and S. by the Mediterranean, S. by Valeneia, and W. by Aragon; greatest length, 185 m . ; greatest breadth, $130 \mathrm{~m} \cdot$; but being of a triangular form, it diminishes S . ward to a breadth of about 22 or 23 m .; area, $12,111 \mathrm{sq} . \mathrm{m}$. It is extremely mountainous, the province being covered by numerous offsets of the Pyrenees, which separate it from France, and which generally have a S. direction; and it is traversed S.W. to N.E. by the Nierra de la Llena, which is separated by the Ebro on the S. from the mountains traversing the N . part of Valencia and the S . of Aragon, and which in the N. near Cardona unites with one of the offsets of the lyrenees, and thus forms a watershed through the eentre of the province. All the higher mountains of Catalonia are perpetnally covered with snow, and the lower hills with wood; the valleys are verdant, and generally watered by a rivulet. The principal rivers are the Ebro, the Llobregat, and the Ter, all of which fall into the Mediterranean. In the $N$. part of the province are a number of extinct volcanoes; and near the centre is a remarkable mass of rock-salt, called the Mountain of Cardona (see Barcelona). Marbles and minerals are found in the mountains, with jaspers and alabasters, the finest at Tortosa and Cervera. Iron abounds in the Pyrenees, which contain also eopper, zinc, and manganese. There are lead mines in varions districts, and coal is obtained at Ripoll and Tortosa. The coast, whieh stretehes from S.W. to N.E., and N. about 190 m ., is generally bold and rocky. The principal ports are Tarragona, Barcelona, Mataro, and liosas. Catalunia is said to be the best cultivated province of Spain; but, although its inhabitants are remarkable for their industry, and for the pains which they take to extract produce from the soil, the province does not supply one-third of its grain consumption, the deficieney, both in corn and eattle, being furnished chiefly by Aragon. Irrigation is carefully attended to, water being in many cases drawn from wells for that purpose. The soil is light, and the cereals produced are wheat, rye, maize, barley, oats, and millet. Hemp, flax, saffron, madder, woad, anise, and liquorice, are also grown. Fruits abound; oranges, lemons, citrons, figs, almonds,
apples, pears, cherries, quinces, medlars, apricots, peaches, walnuts, chestnuts, and filberts; the last, known by the name of Barcelona nuts, are exported in great quantities. The wines of Catalonia are strong and rough, and are largely used in adulterating those of Oporto. Some of them, however, are very good; those of Tarragona, when matured by age, excellent. Timber is plentiful in Catalonia, including the cork tree, which abounds in the forests, and the bark forms a principal artiele of export. The coasts swarm with fish, the takiug of which occupies a great number of persons, and produces excellent sailors, the Catalonians being reckoned the best seamen of the Mediterranean.

Catalonia manufactures silk and woollen goods to a considerable extent. The cotton manufacture commenced in 1769, but has progressed slowly, notwithstanding the efforts of a society which was formed in Barcelona in 1780 for its eneouragement. Linen, paper, hats, cordage, soap, glass, sheet-iron, and shoes are also manufactured in the province. The distillation of brandy is carried on to a great extent. Smuggling is universal: 'Everybody smuggles, especially the erstomhouse officers, commissioners, and preventive guards. The plea of protecting the infant manufactures of the country, by heavy duties, against foreign wares, is the official cloak under which prohibited goods are clandestinely introduced. The English import into Spain about a million and a half in value, and take at least double in wine, oil, fruit, and other Spanish produce.'-(Murray's Handbook of Spain.)

The people of Catalonia are of a different race from the rest of Spain, and the traces of their distinct origin are visible, not ouly in their language, but in their manners, their dress, and their superior aetivity and intelligence. In person, the Catalonian is strong and sinewy, patient under fatigue and privation, brave, daring, and obstinate; not very courteous or hospitable to strangers, and extremely rude in his manners. The lower orders are brutal. The men wear long loose cloth, or plush trowsers, of dark colours, a gay silken sash, a short jacket, which, in fine weather, they liang over their shoulders. In winter, they wear a sort of capote, which supplants the Spanish capa. A red or purple cap completes their costume. The women are described as being neither handsome nor aniable. Their ordinary dress is a tight boddice, with a handkerchief, or a serge manto on the head. They wear ear-rings so large and heavy as to require to be supported by threads hung over the ears. The entire aspect of Catalonia presents a striking contrast to the other provinces of Spain. Here all is activity, and the traces of a laborious and never-ceasing industry are visible everywhere. The houses and cottages liave a snug, comfortable appearance externally, a character which the interior fully maintains, being neat, clean, and well-furnished. Fences are more general, and better kept; and every one is busily employed in some profitable pursuit or other. Education, however, is miserably neglected, and the bulk of the people being without the means of instruction, are in a state of deplorable ignorance. Their better condition is thus owing entirely to their smperior energy of character, and in no degree to superior knowledge.

Catalonia was anciently under the dominion of the Romans, who were afterwards dispossessed by the Goths, and they again by the Moors. It was finally reconquered by the Spaniards, when it was divided into departments, and governed by deputed counts. The national liberties were secured by a code of Usages, and the people were represented by local parliaments. In 1040, the sovercignty loccame hereditary. In 1137, the province was united to Aragon, by the marriage of Ramon Berenguer IV., with Petronila, the heiress of the former. Turbulent, and impatient of restraint, the subsequent history of the Catalonians presents but a series of rebellions, which finally terminated in their sukjugation by Philip V., who, after the capture of Barcelona in 1714, suppressed their ancient cortes, and curtailed their liberties and privileges, having previously laid the country waste by fire and sword.

The principal towns are Barcelona, Tarragona, Gerona, Lerida, Reus, Manresa, Tortosa, \&c. Pop. 1,283,734.

CATAMANDOO, cap. Nepaul. See Khatamandoo.
CATAMARCA, a dep. or state, Republic of La Plata, of uncertain dimensions, but lying between the parallels of $25^{\circ}$ and $29^{\circ} \mathrm{S}$., and the meridians of $66^{\circ}$ and $69^{\circ} \mathrm{W}$. It is
bounded, W. by the Andes, which scparate it from the N . provinces of Chili; and on the other sides by the departments Cordova, Rioja, Nalta, and Tucuman. It is extremely fertile, producing abundance of corn and pasture, supplying the surrounding departments with cotton of excellent quality, and sending great quantities of red pepper to Buenos Ayres. Its capital, of same name, is in lat. $27^{\circ} 30^{\prime}$ S. ; lon. $68^{\circ} \mathrm{W}$. Pop. of dep. estimated at 35,000 ; of which number the tn. contains 4000.

CATANDUANES, an isl. Indian Archipclago, one of the Philippines, off S.E. coast Luzon; lat. (N.E. point) $14^{\circ} 13^{\prime} \mathrm{N} . ;$ lon. $124^{\circ} 10^{\prime}$ E.; about 44 m . long, and 20 broad. It is fertile, well cultivated, and watered by several rivers; the principal of which is called the Catadangan. The sands of the streams are auriferous. The inlabitants are industrions, make good sailors, and excel in boatbuilding, disposing of their boats to the people of the neighbouring islands. The women are of the same stature as the men, and envelope themselves in a long loose mantle when they go abroad, making on such occasions, also, a great display of jewellery.

CATANIA, a prov. Sicily, bounded, N. by prov. Messina, E. by the Mediterranean, S. by Syracuse, W. by Caltanisetta, and N.W. by Palermo; length, N. to S., about 45 m. ; breadth, 33 m . The province is partly intersected by spurs of the Neptunian range; but its principal mountain is Mount Etna, in its N.E. part. The S. part of the province is formed by the plains of Catania, esteemed the most fertile district in Sicily, and traversed N.W. to S.E. by the Giaretta or Simettus, the largest river in the province. Grain, wine, oil, fruit, hemp, and flax are produced; amber is found in large quantities on the banks of the Giaretta, and excellent marble is obtained from the hills; all of which, with soda, cheese, shumac, cantlarides, manna, and silk, form articles of commerce. The province is divided into the three districts of Catania, Calatagirone, and Nicosa, which are subdivided into 26 circondario, and again into 65 comune. Pop. about 300,000 .

CATANIA, a tn. E. coast isl. Sicily, cap. above prov., 17 m . S.S.E. the crater of Mount Etna, 31 m. N.N.W. Syracuse, on the gulf of its name ; lat. (Mole) $37^{\circ} 28^{\prime} 18^{\prime \prime} \mathrm{N}$. ; lon. $15^{\circ} 5^{\prime} 12^{\prime \prime}$ E. (R.) This ancient and celebrated city was almost totally destroyed by the earthquake of 1693 , and on three several occasions it suffered severely from volcanic eruptions; but it has been rebuilt in a style greatly superior to the generality of Italian cities. 'It is nobly sitnate on the roots of Etna, its despoiler and its benefactor. Overwhelmed as it has often been by torrents of liquid fire, it has risen, like the phœenix, more splendid from its ashes. The very substance which once ravaged its plains, has, by its own decomposition, covered them with soil fertile as the fabled garden
and a variety of toys; whilst a natural mole of lava defends the shipping from the fury of the tempest. The plan of the city is superb, and no one is permitted to deviate from it.'-(Hughes.) The two principal strects are long and broad, and intersected at right angles by the streets of the second class. The squares are spacions and regular, and, like the strects, paved with lava. One of them contains an antique statue of an elephant bearing an obelisk. The houses, in general, are well built, and most of the public edifices bave an air of grandcur observable in but a few Sicilian towns. The palace of the senate is esteemed a model of architecture. The cathedral is also a fine building. It was founded in 1094, by Count Roger, and rebuilt after being partially destroyed by the earthquake of 1693 . There are 49 clurches, 19 monasteries, and 11 convents; among which, the Benedictine monastery of St. Nicholas has long been celcbrated for its riches, and for the splendour of its various buildings. There are also several hospitals, a foundling hospital, a mont-de-pitté, a landsome theatre, scveral public libraries, and some interesting muscums. The university, founded by Alphonso of Aragon in 1445, is an extensive establishment, numerously attended, and enjoying great privileges. Catania is the seat of a bishopric, a court of appeal, a ligh court of justiciary, and a civil tribunal. The principal authorities of the province reside here. The inhabitants are said to be distinguished for their urbanity, and for the courtesy they manifest towards strangers. They were enlightened enough to introduce the culture of the potato, when a strong prejudice existed against it in the country, and they had the merit of introducing inoculation as early as 1742. The manufacture of silk forms the principal branch of industry carricd on in the town. Several thousand individuals are engaged, also, in manufacturing the amber found on the banks of the Giaretta. The snow of Mount Etna is another source of wealth, and is exported to a large extent. The climate is salubrious, and suitable for the culture of wheat, grapes, fruit, \&c. Grain, potatoes, olives, figs, almonds, silk, wine, oil, soda, manna, cantharides, lava, snow, and the manufactured prodncts of the town, among which are articles in coral, agate, and lava, are exported. Catania is supposed to have been founded by the Phœenicians. It was occupied by the Romans under the name of Cutana, and by them it was adorned with edifices of great magnificence, most of which, however, have been destroyed by earthquakes, and by the lava from Mount Etna. The ruins of the amphitheatre, which was more extensive than the Colosseum at Rome, or than any other edifice of the same kind now known to exist, are still to be seen, as also the remains of the theatre, baths, aqneducts, sepulchral chambers, hippodrome, and several temples. Besides being destroyed by the earthquake of 1693 , the town again suffered from a similar calamity in 1783 and 1818 ; and, so late as 1846, an earthquake rent many of its houses. Its propulation is said to have diminished upwards of 11,000 between the years 1832 and 1839. At the latter period it was estimated at 36,000 .-The gulf, commencing N. at La Trizza, extends S. to Santa Croce 17 m ., forms a semicircle, of which a line drawn between the points above named, would be the chord. The gulf forms a dentation on the coast about 10 m . deep.

CATANZARO [anc. Catacium], a tn. Naples, cap. prov. Calabria Ultra II., on a mountain, 5 m . from the Gulf of Squillace. It contains a citadel, 11 churches, a cathedral, several convents, a seminary, a royal academy of sciences, a lyceuin, three hospitals, and a wealthy mont depiété. Silk, velvet, cloth, and
of the IIesperides; and on all silles the material of destruction is turned to the purposes of ornament and utility. The streeta are paved with lava; houses, palaces, and churchea are built of lava; of lava they form ornamental chimney pieces, tables,
other tissucs ars manufactured. Some trade is done in
wheat, wine, oil, and agricultural produce. The inhabitants wheat, wine, oil, and agricultural produce. The inhabitants bear a high character for affability and industry; and the women are esteemed the handsomest in Calabria. The towv
is the seat of a bishopric, and of one of the four great civil courts of the kingdom, a high court of justiciary, and a district civil court. It suffered severely from the earthquake of 1783. Pop. 13,598.

CATAPULICHE, a river, S. America, rising on the E. side of the Chilian Andes, about lat. $39^{\circ} \mathbf{1 5}^{\prime} \mathrm{S}$. ; and, after a course of 58 m ., almost due S ., through the S.W. extremity of La Plata, falling into the Rio Negro about lat. $40^{\circ} 3^{\prime} \mathrm{S}$.

CATARROJA, a vil. Spain, prov. of, and 6 m . S. Valencia, r. bank, Torrente. Its houses are generally spacious, and commodiously arranged for an agricultural population. It has three squares, a good-looking townhouse, and several other special buildings, including a large storehouse, a church, and two schools. Pop., almost exclusively agricultural, 3580.

CATAWBA, Wateree, or Santee, a river, U. States, rising in N. Carolina, in the Blue Mountains, near Morganton, running E. and then S. into S. Carolina, where it is known for some distance as the Wateree, till, after the confluence of the Broad River, when it takes the name of Santee, runs E. by S., and, after a course of 270 m ., falls by two mouths into the sea, between Charleston and Georgetown.

CATBALOGAN, a tn. Plilippines, cap. of isl. and prov. Samar, W. coast; lat. $11^{\circ} 52^{\prime}$ N.; lon. $124^{\circ} 50^{\prime}$ E.; in a small bay which has about 5 fathoms water. It is regularly built, the houses generally of nipa palm, with a small number of stone. It has also a church and a townhouse. P. 6328.

Cateau (Le), or Cateau-Canbresis, a tn. France, dep. Nord, 15 m . E.S.E. Cambray, r. bank, Selle. It was formerly fortified, and had a feudal castle, but is now an industrious little manufacturing town, producing cotton and woollen yarn, merinoes, cambric, shawls, starch, black soap, and carthenware. It has also tanneries, several breweries, distilleries, a salt refinery, brass and iron foundries, and tanmills. A considerable trade is done in the above articles, and in the agricultural produce of the district. It has a communal college. The treaty between France and Spain, known in diplomatic history as the Treaty of Cateau-Cambresis, was signed here in 1565. Pop, 7571.

CATEL (The), or St.Mary de Castro, par., isl. Guernsey. Pop. 2038.

CATERHAM, par. Eng. Surrey; 2610 ac. Pop. 477.
CATERINA-Santa, a tn. and com. Sicily, prov. of, and 8 m. N.N.W. Caltanisetta, near r. bank, Salso. It is a fortified place of the fifth class, and has a manufactory of fine carthenware. Fine agates and jaspers are found in the neighbourhood. Pop. 5700.

CATERLI, a maritime tn. Asiatic Turkey, on the sea of Marmara, 175 m. N.N.E. Smyrna; lat. $40^{\circ} 38^{\prime}$ N. ; lon. $29^{\circ} 5^{\prime}$ E.

CATESBY, par. Eng. Notts; 1990 ac. Pop. 105.
CATFIELD, par. Eng. Norfolk; 2400 ac. Pop. 655.
CATHARINA (SANTA), a small maritime prov., isl., and bay, Brazil. The Province, in the S . of the empire, is bounded, N. by prov. São-Paulo, E. by the Atlantic, S. and W. by Rio-Grande-do-São-Pedro, from which it is separated by the mountain-ridge of Santa Catharina, the commencement of the Brazilian coast range, and including the isl. of same name, and several smaller ones on the coast; length, N. to S., 240 m. ; breadth, E. to W., 120 to 60 m .; area, $31,746 \mathrm{sq} . \mathrm{m}$. It is composed of a series of valleys, running W. to E., formed by spurs of the boundary mountain-range, and flowed through by numerous streams, of which Rio-São-Francisco, Aracary, Tapecu, Tijuca, Tubarão, \&c., may be named, all falling into the Atlantic. The soil, though in the lower lands zometimes sandy, is remarkably fertile; the climate mild, and the seasons regular. Sugar, rice, maudioca, millet, beans, onions of immense size, and garlic, are the chief cultivated products, considerable quantities of which are exported to Rio-deJaneiro. The indigo and cochineal plant grow spontaneously, and wheat and lint give good returns. The province is well wooded, producing excellent timber both for the joiner and cabinet-maker. The Indians claim the supremacy over some of the forests, which are likewise frequented by ounces, coatis, monkeys, pigs, and other animals. Birds are numerous, including several varieties of humming birds; and the lakes and rivers are frequented by innumerable geese and other water-fowl. Some of the rivers are boatable for a short distance from the sea; and many might be rendered much more serviceable than they now are for the purposes of inland
transit, were they freed from obstacles easily removable. The Legislative Assembly is composed of 20 members. Pop. 90,000 .-The isLand, 3 m . to 7 m . from the coast, is 37 m . N. to S., and about 10 m . E. to W.; lat. (S. end) $27^{\circ} 47^{\prime}$ S.; lon. $48^{\circ} 40^{\prime} \mathrm{W}$. It is fortified, and is of irregular figure, hilly, and has on its coasts numerous islets, some of which are also fortified. On its E. coast is no secure port, but between the island and the mainland is a commodious sheltered bay. Its soil is fertile; the higher grounds yielding coffee, wheat, millet, and European fruits; and the lower grounds yield rice. Ipecacuanha grows spontaneously, and bananas, oranges, melons, \&c., flourish; ard the garden fruits are esteemed the best in Brazil. But little attention is paid to cultivation ; commerce there is almost none; and the people are in a poor condition. Pop. 12,000.—The bay, formed between the island and the mainland, is separated into two divisions by projecting spits of land. It is sheltered from every wind except the N.E., and its depth varies from 3 ft . to 30 fathoms. Wood, water, and provisions, are to be obtained on it.

CATHCART, a par. and two vils. Scotland, co. Renfrew. The villages of Old and New Cathcart, adjoining each other, are nearly $3 \mathrm{~m} . \mathrm{S}$. Glasgow, near the river Cart, and have a pop., respectively, of 174 and 280.-The PARISH is 5 m . by 1 . Pop., vils. inclusive, 2349; (1851), 2920.

CATHEDINE, par. Wales, Brecon; 1567 ac. Pop. 175.
CATHERINE, or Catherines, several isls.:- 1 , A group of three small low islands, S. Pacific Ocean, Gillolo Passage; lat. $0^{\circ} 39^{\prime}$ S.; lon. $129^{\circ} 11^{\prime}$ E.-2, Catherines (St.), an isl., U. States, Gcorgia, off the mouth of the New. port River, between St. Catherine's Sound on the N., and Sapelo Sound on the S. It is 10 m . long and 5 broad.3, Several small islets off the extreme S. point of Boothia Felix ; lat. $69^{\circ} 20^{\prime} 37^{\prime \prime} \mathrm{N}$. ; lon. $94^{\circ} 31^{\prime} 55^{\prime \prime \prime} \mathrm{W}$.

CATHERINE (St.), two pars. England:-1, Gloucester; 200 ac . Pop. 1615.-2, Somerset; 750 ac. Pop. 159.

CATHERINGTON, par. Eng. Southampton, Hants; 3540 ac . Pop. 1003.

CATHERSTON-Lewston, par. Eng. Dorset; 90 ac. P. 36 . CATMORE, par. Eng. Berks; 680 ac. Pop. 96.
CATOCHE (Cape), a headland, Central America, form ing the N.E. extremity of the peninsula of Yucatan; lat. $21^{\circ} 36^{\prime}$ N.; lon. $87^{\circ} 6^{\prime}$ W. (k.) This is the first place on the American continent at which the Spaniards landed, and within 6 m . of which, according to the authority of Bernal Dias, they saw a large town, which they named Grand Cairo.

CATORCE, a tn. Mexican Confederation, state of, and 120 m . N. San-Luis-de-Potosi. In the neighbourhood are extensive silver mines, formerly the richest in Mexico.

CATRAL, a tn. Spain, Valencia, prov. of, and 23 m . S.W. by W. Alicante, in a large and fertile plain, slightly elevated on the E. It is regularly built, and has a church, townhouse, prison, two schools, a poorhouse, and cemetery Trade:-in wines, oil, grain, and hemp. Pop. 2268.

CATRIMANI, or Caritamini, a river, Brazil, prov. Para, rising in a mountain range which forms a continua tion of the sierra Carumani, about lat. $2^{\circ}$ N.; and after a S.E. course of about 100 m ., falling into the Rio Branco, near Carmo, in lat. $0^{\circ} 28^{\prime} \mathrm{N}$. ; lon. $62^{\circ} 8^{\prime} \mathrm{W}$. Its bed is much impeded by rocks and cataracts; and at about 60 m . from its mouth is a settlement of Panishana Indians.

CATRINE, a vil. Scotland, co. of, and 10 m . E. Ayr. It is regularly laid out, with a large square in the centre, and streets diverging from it to the E., S. and W., which again are crossed by others at right angles. The inhabitants are chiefly employed in cotton spinning, which is here extensively carried on. Pop. 2700.

CATSFIELD, par. Eng. Sussex ; 2430 ac. Pop. 589.
CATSKILL MOUNTAINS, a mountain range, U. States, New York, commencing near the Hudson, and bending N.W. in the form of a crescent towards the Mohawk. Round Top, the highest summit, is 3804 ft . above sea level. These mountains, which are precipitous on the E. and gently sloping towards the W., are inhabited by bears, wolves, and other wild animals.

CATSKILL, a tn. U. States, New York, 34 m . S. Albany, pleasantly built on both sides the creek near its junction with the Hudson. It contains the county buildings, five churches, 19 schools, two banks, grist and saw-mills, two paper-mills, one brewery, an extensive sash factory, several
docks, and various mechanic establislıments. It is a place of considerable trade, and exports large quantities of sole lcather, grain, flour, butter, brick, hay, timber, flax-seed, pot and pearl ashes, beef, tallow, hides, \&c. Pop. 2800.

CATTARO, a seaport tn. Austria, Dalmatia, S.E. extremity, gulf of same name, 38 m . S.E. Ragusa ; lat $42^{\circ} 25^{\prime} 24^{\prime \prime}$ N.; lon. $18^{\circ} 46^{\prime} 30^{\prime \prime}$ E. (R.) It lics at the foot of stcep limestone rocks, strongly fortified, and surmounted by a castle connected with the town by means of a zig-zag path. It is also surrounded with walls entered by three gates, and defended by towers. The bnildings are in the Venetian stylc, and the streets narrow, irregular, and dark. It is the seat of a R. Catholic bishop, and the cathedral is a well-built edifice of hewn stone. There is likewise a Greek chureh. Cattaro is the seat of courts of justice, and the residence of a military Governor. Its harbour is spacious but little frequented, the export trade being inconsiderable. Ontside the E. gate is the market, frequented by the Montenegrins, who cross the mountain ridge, bringing butter, eggs, cheese, potatoes, dried fish, smoked meat, sheep, oxen, pigs, vegetables, wax, honey; fallow, hides, wool, tortoise shells, fowls, Indian corn, ice, frnit, Turkish and Montenegrin tobacco, charcoal, \&c. The clinate is oppressively hot in summer, and excessively wet in winter. Cattaro stands on the site of the Roman Ascrivium. It was founded in the sixth century, and was formerly capital of a republic of same name. In 1563 , and in 1677 , it was nearly destroyed by earthquakes. Pop. 4000.-(Paton's Highlands and Islands of the Adriatic; Wilkinson's Dalmatia and Montenegro.) -The gulf is an extensive and peculiarly formed harbour in the Adriatic, and well defended both by nature and art. It is composed of three basins or lakes connected by narrow channels, under half a mile wide, while the outer entrance to the first basin is only about $1 \frac{1}{2} \mathrm{~m}$. wide, lessening to under a mile. The first basin, of irregular form, is about 3 m . long by about 2 m . broad; the second somewhat triangular in shape, is about 6 m . by 5 m . in its greatest extent; and the third abont 8 m . by 3 m . greatest dimensions, forms two smaller basins, from the most S . of which proceeds a long narrow arm, at the extreme end of which lies the town of Cattaro. The entrance to the gulf is somewhat difficult.

Cattegat. See Kattegat.
CATTERICK, a vil. and par. England, York, N. liding. The village, which stands on a plain near the Swale, consists of one street well kept; bouses mostly of brick, of a respectable appearance; ample supply of good water. It has a parish chnreh, an old Gothic structure; a Methodist chapel, an academy, and an endowed school. The people are almost wholly employed in agriculture. The Cattcrick Bridge Station of the York, Newcastle, and Berwick Railway is about 1 m . from the village. Area of par. 21,680 ac. Pop. 2965.-(Local Correspondent.)

CATTHORPE, par. Eng. Leicester; 520 ac. Pop. 167.
CATTISTOCK, par. Eng. Dorset; 2620 ac. Pop. 549.
CATTOLICA, a tn. Sicily, prov. of, and 14 m. N.W. Girgenti, near an affluent of the Platani. To the N. of the town both sulphur and rock salt are extensively worked. Pop. 7060.

CATTON, two pars. England:-1, Norfolk; 760 ac. Pop. 650.-2, York, E. Riding; 8150 ac. Pop. 1078.

CATWICK (Great), an isl. China Sea. 128 m. E. Cape St. James, off the coast of Cochin-China; lat. $10^{\circ} 6^{\prime} \mathrm{N}$. ; lon. $108^{\circ} 52^{\prime}$ E. (R.)

CATWICK, par. Eng. York, E. Riding; 1650 ac. P. 191.
CATWORTH (Great) par. Eng. Huntingdon; 2090 ac. Pop. 637.

CAUAMBE, or GAume, a river, Brazil, prov. Para, falling into the Rio Branco, from the W, at Sam Isabel; lat. $2^{\circ} 53^{\prime} \mathrm{N} . ;$ lon. $61^{\circ} 10^{\prime} \mathrm{W}$.

## CAUB. See Kaub.

CAUB, a tn. Nassau, bail. St. Goarshausen, r. bank, Rhine, 22 m . W. by N. Mentz, and at the foot of a stcep slate hill. It has a cburch, and its inhabitants live by cultivating the vine, traffic on the Rhine, and by trading and working the excellent slates of the vicinity. To the Pfalz castle, a stronghold on a rock in the river opposite the town, the ladies of the Electors Palatine of the Rhine used to go to be confined. A toll is still levicd at this castle for Nassau, a remnant of the exactions that were formerly made upon all the traffic on the river passing this castle. Pop. 1502.

CAUBUL. See Caboot.
CAUCA, an old dep. New Granada, bounded by the deps. Isthmus, Magdalena, and Cundinamarea, by the republic of Ecuador, and by the Caribbean Sca, and the Pacific. Area estimated at $68,300 \mathrm{sq}$. m. Pop. 193,000; divided into the four provinces of I'opayan, Choco, Buenaventura, and Pasto.

CAUCA, a river, New Granada, which rises in that part of the Andes called Paramo-de-Guanacas, waters the provinces of Popayan, Antioquia, and Cartagena, and after a course of about $600 \mathrm{~m} . \mathrm{S}$. to N . between the central and W. Cordillera of the Andes, falls into the Magdalena, between the small towns of Pinto and Tacaloa, in lat. $9^{\circ} 25^{\prime} \mathrm{N}$. Of its mumerous tributarics the Nechi which joins it on the right is the largest, and of the towns on its banks the most considerable arc Cali, Toro, and Antioquia. The valley of the Cauca is one of the richest, most fertile, and most populous districts in S . America. It consists of two plateaux of very different elevation and temperature. The soil is deep, the pastures rich, and the lands well cultivated. Cattle of a superior description are reared in great numbers; and the fields and farm-houses prosent an appearance of opulence and comfort. On all sides, the earth, tinged with red and yellow, indicates the presence of gold, many mines of which precious metal are found here, all situate in the upper part of the valley.

CAUCASUS, a gov. Russia, bounded, N. hy govs. Don Cossacks and Astrakhan, E. Caspian Sea, S. Circassia, and E. Cossacks of the Black Sca; greatest length, N.W. to S.E. about 380 m. ; greatest breadth, N . to S .170 m . It is traversed N. to. S. near its centre, by a low ramification of the Caucasus Mountains, but with this exception, the surface is flat, consisting generally of an alluvion, which towards the E. appears to be of very recent formation. It is not traversed by any river of importance (the Kuma, since the lower part of its course was lost in the sand, no longer deserves the name), but is watered on part of its N. frontier by the Maritsch, and on the S. by the Kuban and Terek. The climate is in general very mild, and there are some fertile tracks particularly in the neighbourhood of the Terck, but great part of the alluvial flats is covered with salt pools and marshes, which make the soil when they prevail, altogether unfit for cultivation. The injury is, in some measure, compensated by the large quantities of excellent salt which is obtained from them. Some of the steppes yicld tolerable pasture, on which numerous herds of cattle are reared. The chief products of the soil are corn, including maize, and wine. The mulberry thrives well, and considerable attention has recently been paid to the rearing of silk-worms. Bees also are carcfully attended to, and the loney and wax obtained from them, forms a considerable article of export. Owing to the neighbourhood of the warlike mountaineers of the Caucasus, a considerable army is always maintained within the government, and most of its towns are fortified. The cap. is Georgievsk. Pop. 526,400.

CAUCASUS, an extensive and lofty range of monntains, the centre chain of which stretches N.W. to S.E. for about 700 m . between the Black Sca and the Caspian, and there forms the boundary between Europe and Asia. From the central chain numerons branches are thrown off. One of them to the N. proceeds through the government of Caucasus into Astrakhan, and onward to the banks of the Volga, while the branches to the S . traverse the greater part of the government of Georgia, and in the S. of that government, link on with the mountains of Ararat. The highest point in the range is Mount Elburz, which stands near the middle of the central chain, and has an altitude of abont $18,000 \mathrm{ft}$. The next highest is Mount Kasbek, $16,000 \mathrm{ft}$., across which is the celebrated Eng Pass, which gives Rusasia her only carriage communication with her Trans-Caucasian domains. The N. side of the range is much more abrupt than the S . Great part of the mountains still remains to be geologically examined, but an admirable section is furnished by the Eng Pass, and has been fully described, particularly by Wagner, who not only travelled over it, but resided several months among the mountains of Kasbek, and ascended them to the limit of perpetual snow. According to him, stratified rocks appear at the bottom of the mountains, and rise to a considerable height on their sides. These rocks consist chiefly of thick beds of limestone, conglomerate, and clay slate. Higher up are seen immense crystalline masses composed of granite, sienite, serpentine, and gabronite. These masses, though higher in posi-
tion, are evidently lower in the geological scries than the stratified rocks, which in many places have been upheaved by them, and in consequence have a considerable dip. Highest of all is trachytic porphyry, which forms the great body of
rived from a variety of stocks, and speaking a variety of languages, they are all distinguished by one noble qualityan almost inextinguishable love of freedom, and in bodily constitution are at once so robustly and so elegantly framed, that what is known as the Caucasian race is universally acknowledged to be the finest physical type of man.-(Wagner's Kaukasus; Koch's Karte Von dem Kauliasischen Isthmus, \&ec.)

CAUCASUS (Indian). See Hindoo Coosh.

CAUDEBEC, a seapert tn. France, dep. Seine-Inferieure, 18 m. N.W. Rouen, r. bank, Seine, at the embouchure of the Caudebec. Though commodious, and favonrably situate between Rouen and Havre, the port is little frequented. The town has old walls and ruined fortifications, a parish church, built in the 15th century, remarkable for the elegance and delicacy of its architecture; and manufactures of sailcloth, starch, leather, and soap; cotton mills, bleacheries, and tanneries; with a considerable trade in ship biscuit, grain, fruit, poultry, \&c. Prior to the emigration of the Protestants, after the revocation
all the f,rincipal summits of the central range. That this trachyte is the most recent of all the rocks is proved by the fact, that in many places it is seen piercing them, and throwing them into the wildest confusion. Judging from the composition and general appearance of these great trachytic masses, Humboldt and otlier celebrated geologists are of opinion that the Caucasns, and all the loftiest summits of the great moun-tain-ranges of both hemispheres, were upheaved contemporaneously, and within a comparatively recent period. The limit of perpetual snow in the Caucasus is $11,000 \mathrm{ft}$., and hence, as some of the mountains rise from 5000 to nearly 7000 ft . above this, there is an extensive range for glaciers. It would seem, however, that the supply of moisture which the atmosphere affords, is far less than might have been anticipated. Scarcely a $\sin$ le lake of any extent is to be found in the Caucasus, and the scenery thus remains destitute of that which constitutes one of the most magnificent features in the Alps of Switzerland. In height and magnitude, Mont Blane must yield to many mountains of the Cancasus, but in all the other essentials of sublimity, it still remains unrivalled. Numerous cascades tumble down the N. steeps of the Cancasus, but none of them are remarkable either for volume or height, and the only rivers of any consequence which are fed by them are the Terek, Kuban, and Kur. The minerals of the Coucasus, so far as may be judged from the very imperfect examination of them which has been made, are not of great value. It was at one time supposed that gold abounded, but a worthless material of the same colour, called cat gold, appears to have been mistaken for it. The only mineral which has yet been ascertained to exist in such quantities as to make it capable of being worked to profit is lead. Vegetation is very vigorous. Magnificent forest trees clothe the liigher mountain slopes almost to an incredible height; lower down all the finer fruit trees of the climate are found growing in wild luxuriance; while lower still, where human labour can be made available, almost any degree of culture, however imperfect, is rewarded with an abundant crop. The ordinary ccreals grow 7000 ft . above sea level, while valuable shrubs, plants, and flowers, in almost endless variety, deck the valleys and lower plains. Animal is not less vigorous than vegetable life, and the forests abound with almost every species of game -among quadrupeds, wolves, boars, jackals, deer, goats, and hares - among birds, pheasants, and partridges. A large species of wild eattle, called aurochs, roam at large, and the hares of the Caueasus liave been famed from the remotest antiquity. The inhabitants include a great variety of tribes, the principal of which are the Tcherkesses or Cireassians, Georgians, Ossetes, Lesghians, and Abkases. Evidently de-
of the Edict of Nantes, Caudebec was famed for its manufacture of hats. Pop. 2332.

CAUDEROM, a pretty little vil. France, dep. Gironde, about 2 m . from Bordeaux, surrounded by numerons country scats, and much frequented on holidays by the inhabitants of Bordeaux. Pop. 1485.

CAUDETE, a tn. Spain, New Castile, prov. of, and 50 m . N.E. Albacete. It has three squares, a townhouse, prison, and several fountains, a parish church, Carmelite convent, and a hermitage, used as a chapel for the cemetry. Agriculture and distilling brandy are the main occupations. Pop. 5502.

CAUDRY, a vil. France, dep. Nord, 8 m . from Cambrai; with manufactures of tulle. Pop. 3310 .

CAUFIRISTAN. See Kafiristan.
CAULABAGH, or Kallabagh, a tn. Punjab, in tho Salt Range, 68 m . S.E. Peshawur ; lat. $33^{\circ} 12^{\prime} \mathrm{N}$. ; lon. $71^{\circ} 35^{\prime}$ E.; built on terraces cut out of the declivity of a hill close by the Indus, which is liere about 400 yds . wide, deep and rapid. In the vicinity are huge masses of rock salt, in which, and in alum, the inhabitants carry on an extensive trade with tho neighbouring provinces.

CAULION, par. Eng. Stafford; 1570 ac. Pop. 326.
CAUMONT, several vils. France :-1, dep. Calvados, $23 \mathrm{~ns} . \mathrm{S} . \mathrm{W}$. Caen; with some trade in poultry. Pop. 910 . -2, dep. Eure, 21 m . from Pont-Audemer, near l. bank, Seme; with stone quarries, wool-spinning, and trade in apples. Pop. 930.-3, dep. Lot-et-Garonne, 4 m . S. Marmande, on a height overlooking the Garonne, and formerly an important fortification. Pop. 1664.-4, dep. Vaucluse, 18 m . from Avignon, beautifully situate in a fertile district on the Durance, surrounded by walls, and commanded by a castle. The rearing of silk-worms, and some trade in olive-oil, and excellent dried fruits, are carried on. Pop. 3914.

CAUNDLE, four pars. Eng. Dorset:-1, Caundle (Bishop), 2050 ac. Pop. 365.-2, Caundle (Marsh), 440 ac. Pop. 77. -3, Caundle (Purse), 1610 ac . Pop. 183.-4, Caundle (Stourton), 2680 ac Pop. 394.
(AUNES (Les), a tn. France, dep. Aude, 13 m. N.E. Carcassonne, l. bank, Argent-Double. It has a fine church, formerly belonging to the Benedictine abbey, founded in 791, and suppressed at the Revolution of 1793. Cloth and brandy are made here, and in the vicinity are extensive marble quarrics. Pop. 2040.

CAUNTON, par. Eng. Nottingham; 3130. Pop. 539.
CAURA, a considerable river, Venezuelan Gnaiana, formed by the junction of the Yurani, Erevato, Mareguare, and their tributaries, which take their rise in the sierra Parima, near the centre of the territory. The Caura is formed
about lat. $6^{\circ} 35^{\prime} N$., from which it flows $N$., but with a very devious course, till it falls into the Orinoco, at lat. $7^{\circ} 40^{\prime} \mathrm{N}$.; lon. $66^{\circ} 15^{\prime} \mathrm{W}$. Its whole length is about 150 m .

CAUSSADE, a tu. France, dep. Tarn-et-Garonne, 13 m . N.E. Montauban. It is agreeably situate, and the suburbs by which the old town is surrounded are well built. Its only noteworthy buildings are the Hotel de Ville, and the parish church. Manufactures:-coarse linen, and woollen goods, sugar, and tanneries. Trade :-grain, saffron, spirits, prunes, cattle, wool, and agricultural produce. Pop. 2400.

CAUTEN, or Imperial, a river, Chili, Araucania, has its sources on the W. slopes of the Andes, in about lat. $38^{\circ} 44^{\prime} \mathrm{S} .$, from which it flows nearly due W., and falls into the S. Pacific Ocean at lat. $38^{\circ} 48^{\prime} \mathrm{S}$.; showing but a slight differeuce of parallel between its source and embouchure. Its whole course is about 180 m . It has six or eight large tributaries, some of them not much, if at all, inferior in size to itself. There is a town of the same name situated on its r. bank, and near where it is joined by the Paracahum, lat. $38^{\circ} 45^{\prime} \mathrm{S}$.

CAUTO, a river, Cuba, near the E. extremity of the island. It has its sources in the sierra de Cobre, near Cauta, about lat. $20^{\circ} 20^{\prime}$ N., from which it flows in a N. W. direction for about 45 m ., when it bends round to the S.W., and, lat. $20^{\circ}$ $30^{\prime} \mathrm{N}$. , falls into the bay of Buena Esperanza; total course 70 m .

CAUX (Pays de) [anc. Pagus Caletensis], a dist. France, formerly a dependency of prov. Normandy, cap. Caudebec. It comprehends the greater part of dep. Seine-Inferieure, comprising, in particular, arrond. Havre, almost the whole of arronds. Dieppe and Yvetot, and part of arrond. Neufchâtel.

CAVA, a small isl. Scotland, one of the Orkney group, co. Caithness ; lat. $58^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $3^{\circ} 8^{\prime} \mathrm{W}$. It is upwards of 3 m . in circumference, and produces good crops of oats and bere. Pop. 21.

CAVA, a tn. Naples, prov. Principato Citra, agreeably situate in the valley of Fenestra, 3 m . N.W. Salerno. It is the seat of a bishop, suffragan to the Pope, and contains a cathedral, three other churches, a convent, a house of refuge, an hospital, and a seminary. Silk, cotton, and linen are manufactured here, and in the numerous small villages that surround the town. The district is extremely unproductive, but the inhabitants have become wealthy by their industry and commerce. About 1 m . from Cava is the magnificent Benedictine convent of the Trinity, which formerly contained an excellent library, now transferred to Naples. This library, with its archives, was considered the richest in the kingdom. Pop. 13,095.

CAVADO, or CABADo, a river, Portugal, which rises in the sierra de Gerez, on the frontiers of Galicia, a little N. Montalegre, flows S.W., passes Barcellos, and falls into the sea at Esponende, after a course of 65 m ., of which about 6 m . are navigable.

CAVAGLIA, a tn. Sardinian States, Piedmont, division of, and 30 m. N.E. Turin. Pop. 2600.

CAVAILLON [anc. Cabellio], a tn. France, dep. Vancluse, 14 m. S.E. Avignon, r. bank, Durance, near the embouchure of the Coulon. It is agreeably situate, but ill built, with narrow, dirty streets. The only public building of note is the Hotel de Ville. The surrounding district is one vast garden, producing excellent fruit ; in particular, much esteemed melons and peaches. There are numerous silk, madder, and oil-mills ; also manufactures of vermicelli, and of brazen utensils. A considerable trade is carried on in silk, olive-oil, almonds, fruit, madder, \&c. A large silk market is held weekly. In the vicinity is a remarkable cavern, in which 4000 sheep are penned during summer. The Romans had an important colony here, and erected many edifices, of which almost the only remains are some tombs, and the fragment of a triumphal arch. Pop. 3914.

CAVALCANTE, a tn . Brazil, prov. of, and 305 m. N.E. Goyaz, near l. bank, Parannan, with three churches and a school. The gold mines in the vicinity, formerly rich, are now abandoned as exhansted, and the inhabitants are chiefly engaged in agriculture and cattle-rearing; the produce is sold in the maritime provinces. Cavaleante is a centre point for travellers and carriers between Mato-Grosso, Goyaz, and Minas-Geraes.

CAVALESE, a tn . and com. Tyrol, prov. of, and 22 m . N.E. Trent, r. bank, Avizzio ; well built, and has a fine parish clurch adomed with marble pillars. Pop. 2143.

CAVALHO, a small isl. W. coast, Afriea; lat. (N. end $11^{\circ} 1^{\prime} 30^{\prime \prime} \mathrm{N} . ;$ lon. $15^{\circ} 41^{\prime} 15^{\prime \prime} \mathrm{W}$. It is 1 m . long and $\frac{1}{2} \mathrm{~m}$. broad, of volcanic origin; produces in abundance a species of plum, supposed to be anti-scorbutic ; and its coasts swarm with a kind of fish, called cavalho, from which it probably derives its name.

CAVALIERE (CAPE), a broad headland, S. coast, Asiatic Turkey, on the Mediterranean; lat. $36^{\circ} 7^{\prime} 30^{\prime \prime} \mathrm{N}$.; lon. $33^{\circ} 43^{\prime} 42^{\prime \prime} \mathbf{E}$. (r.) It resembles an island, and exhibits cliff of white marble rising up perpendicularly from the sea to the height of 738 ft ., and connected to the main by a low narrow isthmus, which forms a small bay on each side.

CAVALLER-Maggiore, a in. Sardinian States, prov. of, and 10 m . N.E. Saluces, near 1. bank, Maira, It has two churches and four convents. Pop. 5200 .

CAVALLY, a tn., point, and river, W. Africa, Guinea Coast, E. of Cape Palmas. The town stands on the point of the same naine ; lat. $4^{\circ} 21^{\prime} 12^{\prime \prime} \mathrm{N} . ;$ lon. $7^{\circ} 35^{\prime} 35^{\prime \prime} \mathrm{W} . ;$ with three villages a little to the E.--The POINT, which may be distinguished from the adjacent sandy shore by its black rocky appearance, is encompassed by reefs, extending $\frac{1}{2} \mathrm{~m}$. to sea-ward.-The river, a little E. from the town, issues between two low sandy points with a bar before it, which is not always passable by boats.

CAVAN, an inland co. Ireland, prov. Ulster, having, $N$. Fermanagh, N. and E. Monaghan, S. Meath, Westmeath, and Longford, and W. Leitrim. Extreme length, 51 m .; extreme breadth, 28 m ., although throughout one half its length it does not exceed an average of 6 to 8 m . Area, $477,360 \mathrm{ac}$., of which 375,473 are arable, 71,918 uncultivated, and 7325 in plantations. The surface is broken, extremely irregular, and in the N. rises into mountainous elevations, while to the N.W. the prospect is bleak and dreary; the soil is generally light and poor, except along the courses of the streams. Coal, iron, copper, and lead appear to exist, and there are numerous mineral springs, of which that at Swanlinbar is the most celcbrated. The lakes are numerous but small, and some of them picturesque with well wooded margins. Agriculture is in a backward state in this county; draining and irrigation are wholly unknown, the fences are mere ridges of earth, and the ploughing slovenly and inefficient. The chief crops are oats, potatoes, and turnips, but in some districts flax also is grown in considerable quantities, while wheat has become, in many places a more common crop than formerly. The principal manufacture is that of linen, which forms the chief dependence of many of the inhabitants, almost every family carrying it on to a greater or less extent. Bleach-greens are consequently numerous, and although several have ceased opera tions, there are still a good many of these establishments actively employed. The number of national schools in Sept., 1848 , was 158 , attended by 16,211 children. Principal towns, Cavan, the capital, Cootehill, and Balturbet. The eounty is divided into eight baronies-Castlerahan, Clonker, Clanmahon, Loughtee, Lower and Upper Tullygarvey, Tullyhaw, and Tullyhunco, and contains 36 parishes. It sends two members to the House of Commons; constituency (1850), 684. Pop. (1851), 174,071.

CAVAN, a tn. Ireland, co. Cavan, 57 m . N. W. Dublin, in one of the richest parts of the county. In the principal street are some good houses, but, on the whole, the town has but an indifferent appearance, a large portion of it being composed of mean-looking buildings and mere cabins, though it is said to be improving. The parish chureh is a neat structure, with a slender spire. The other public buildings are a IR. Catholic chapel, a Presbyterian and a Methodist meetinghouse, an endowed school founded by Charles I., municipal and county offices, jail, union workhouse, a courthouse, an infirmary-a plain building; and a fever hospital. It has also several Sunday and parochial schools, supported by subscription. The trade is inconsiderable; it includes the manufacture of a little linen, and a retail business with the surrounding country. Oats and butter are the staple articles of sale. The assizes for the county, general sessions at Hilary and midsummer, and petty sessions every week, are held here. Pop. (1841), 3749.

CAVANAS, a port or harbour, Cuba, on the N.W. coast of that island, 38 m. S.W. Havanna ; lat. $23^{\circ} 5^{\prime} \mathrm{N}$. ; lon. $82^{\circ} 55^{\prime} \mathrm{W}$. It is a fine decp bay, having its entrance between two extensive reefs. Within there is room enough for several
hundred sail of ships. It is protected by a battery of five guns, with a martello tower of one gun in its centre, walled in at the back, with loop holes facing the harbour.

CAVARZERE-destro-e-sinistro, a vil. Austrian Italy, gov. of, and $25 \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{W}$. Venice, traversed by the Adige, which divides it into two parts. It contains a parish and three auxiliary churches, and has a considerable trade in cattle, corn, hay, wood, and silk. Pop. 7000.

CAVASO, a market tn. Austrian Italy, gov. Venice, prov. of, and 20 m . N.W. Treviso. It contains a parish church, and several chapels and oratories; and has manufactures of woollen and linen cloth, and hats, dye-works, and fullingmills. Pop. 2500.

CAVE, two tns. and two pars. England, E. Riding, York: -1, Cave (North), the town, situate on a plain, consists of two principal, regular, and well-kept streets; Houses in the modern style, and built of brick. Amply supplied with excellent water. It bas a parish church, and a Methodist and a Friends' meeting-house, and two schools. Area of par. 6360 ac. Pop. 1217.--2, Cave (South), the town, 2 m . from N. Cave, stands at the foot of a hill called 'Mount Airy;' and has a parish church, and an Independent and a Methodist meting-honse, and two schools. Good supply of excellent water. In the neighbourhood is Cave Castle, an old Gothic edifice. People chicfly agriculturists. Area of par. 7480 ac. Pop. 1852.- (Local Correspondent.)

CAVENDISII, par. Eng. Suffolk; 3450 ac . Pop. 1353. CAVENHAM, par. Eng. Suffolk; 2630 ac. Pop. 277.
CAVERS, par. Scot. Roxburgh, 24 m. by $8 . \quad$ Pop. 1709.
CAVERSFIELD, par. Eng. Bucks; 1200 ac. Pop. 178.
CAVERSHAM, par. Eng. Oxford; 5100 ac. Pop. 1642.
CAVERSWALL, par. Eng. Stafford; 5380 ac. Pop. 1505.
CAVERY, a river, Hindoostan, to the waters of which Mysore and the Carnatic owe much of their agricultural wealth. It rises from several head streams in Coorg and Mysore, near the coast of Malabar, and between lat. $11^{\circ} 37^{\prime}$ and $13^{\circ} 20^{\prime}$ N., flows E. through Mysore, Coimbatoor, and the Lower Carnatic, and after a winding E. course of about 450 m ., falls into the Bay of Bengal, by numerous mouths, in the province of Tanjore, the plains of which are fertilized by its S . branches. In N. Coimbatoor the Cavery forms an island, called Sivana Samudra, near to which are two magnificent cataracts. The cataract of Gargana Chuki occurs in the N. Channel, where the water falls over a perpendicular rock 200 ft . high; the S. cataract, called Birra Chuki, has a fall of 100 ft . in 10 or 12 streams. The Cavery is filled by the monsoon rains in May and July, but is not navigable excepting by small boats.

CAVERYPAUK, a tn. Mindoostan, Carnatic, 57 m. W.S.W. Marras; lat. $12^{\circ} 53^{\prime}$ N.; lon. $79^{\circ} 31^{\prime}$ E. It is meanly built, and the adjoining fort, at one time a place of some strength, is now in ruins. A victory was gained here by the British over the French and their allies, in 1754. Near the town is an immense watcr-tank, 8 m . long by 3 broad, which fertilizes a large tract of country, and is, perhaps, the finest work constructed in S. India for the purpose of irrigation. The tank is faced on the inside with large stones, and supported by a mound of earth 30 ft . high.

CAVI, a tn. Papal States, 28 m . E.S.E. Rome. It stands in a beautiful district, and is finely built on a tufa rock on the slopes of Mount Mentorella. Near it is a fine modern bridge of seven arches, built over a deep torrent, one of the tributaries of the Iacco. Cavi was built by the Colonna as e trly as the 11 th century, and is memorable for t ie peace signed here, in 1557 , between the Duke of Alba and the Caraffeschi. Pop. 2000.

CAVIANA, an isl. Trazil, prov. Para, in the mouth of the Amazon, N. the isl. of Marajo, on the equator. It is of irregular form, measures $50 \mathrm{~m} . \mathrm{N} . W$. to S.E., and about 20 m . broad. It is well wooded.

CAVITE, a tn. and prov. isl. Luzon, one of the Philippines. The town is situated at the extremity of a point of Ind which projects, in a N.E. direction, into the Bay of Manilla, E. coast ; lat. $14^{\circ} 29^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $120^{\circ} 56^{\prime}$ E. (r.); about $11 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Manilla. It is capital of the province, is well fortified, and is tle place of residence of the governor.

Vor, I.

It contains a church, barrack, convent, and hospital ; houses nearly all of stone. A manufactory of cigars, lately established, has added considerably to the commercial importance of the town. Cavité has a reputation for salubrity, and is much resorted to on this account by invalids from Manilla. Its docks and arsenals were at one time famous, but have been long going to decay.-The province is situated partly on the Bay of Manilla, which, with the province of Tondo, bounds it on the N., the Lac de Bay on the E., the province of Batangas on the S., and the sea on the W. It is advantageously situate, but is not very fertile, although much more could be made of it by a more industrious people than that by which it is inlabited, who are extremely indolent, and so viciously disposed, that it is said more criminals come from this pro vince than from any other in the island. The chief productions are rice, sugar, indigo, and coffee, some of the latter it is said equalling, if not surrassing, that of Mocha. A great variety of fruits likewise are grown, including mangoes, dates, bananas, water-melons, oranges, and lemons. There is also some traffic in cattle, sheep, and swine. Fish is another princiyal source of subsistence. Cavité is celebrated for its pastry and confections. Pop. of prov. 84,495.

CAVOR, or Cavour, a th. Sardinian States, Piedınont, div. Turin, prov. of, and 7 m . S.S.E. Pinerolo. It stands in a fertile plain at the foot of the Alps, contains a communal college ; and has manufactures of linen; tanneries, silk-mills, some trade in corn, and two annual fairs. It suffered mnel by an earthquake in 1808. Marble and slates are quarried in the neighbourlood, Pop. 6000.

CAWDOR, a par. Scotland, 4 m , square, chiefly in co. Nairn, but partly in co. Inverness, remarkable only for containing the remains of the castle in which, as tradition asserts, though on more than doubtful ground, King Duncan was murdered, an event immortalized by Shakespeare. The present castle, a fine specimen of ancient fortalice, was built in the 15 th century, rendering it impossible it could be the same in which the Scottish monarch was assassinated, that tragedy having taken place in the 11 th century, or about 400 years before. Macbeth's second title was Thane of Caudor. I. 1212.

CA WKWELL, par. Eng. Lincoln; 540 ac. Pop. 47.
CAWNPOOR, or Caunpore, a tn. and dist. Mindoostan, presid. Bengal, N.W. provs. The Town, r. bank, Ganges, which is here about a mile in breadth, is 115 m . N.W. Allahabad ; lat. $26^{\circ} 30^{\prime} \mathrm{N}$.; lon. $80^{\circ} 12^{\prime} \mathbf{E}$. It is of considerable extent, but is, on the whole, mean-looking and dirty, with exception of the chowk or principal street, which is composed of well-built brick houses, two or three storics high, with balconics in front. Ilardly any of its temples or mosques are worth noticing, with excoption of one small musjud, an

suoseut at ca wniork. - From an Orikidal lrawing by Gapt. R. Smith, tith hest
elegant little structure, ornamented with three egg-shaped domes, a large one in the centre, and a smaller on each side, and having a tall and graceful minaret at either end. Saddlery, harness, gloves, and jewellery are mannfactured here to some extent. Cawnpoor is one of the most important military stations in India. The cantonments extend along the r. bank of the Ganges for nearly 7 m. . comprising many liundred bungalows, the barracks for the troops, and the bazaars, the
whole presenting a very imposing appearance. Several of the bungalows are most picturesquely situate on the lofty banks of the river, which here rise to a height of 100 ft ; they are fitted up luxuriously, and have extensive gardens, in which tamarinds, mangoes, bananas, neemes, acacias, and fig-trees overshadow a rieh expanse of flowers, of the most brilliant colours and grateful perfume. The bungalows are mostly built of eneha or sun-baked bricks, and roofed with tiles or thateh; the latter, however, is preferred, on account of its keeping the aprartments much cooler, the tiles becoming so heated by the sun as to render the house inside like an oven. Within the cantonments are a landsome suit of assembly-rooms, supported by voluntary subseription; and a commodious and elegant theatre, a public drive, called the Course, a fashionable resort after sunset; a race-course, and several club-rooms. There are here, also, a Protestant church, a R. Catholic chapel, and schools for the children of the soldiers. Cawnpoor is well supplied with every description of goods, both European and native, which are to be had on very moderate terms. In May and June the thermometer ranges from $98^{\circ}$ to $104^{\circ}$; and in the winter months falls as low as $42^{\circ}$ at night, but in the day stands at $70^{\circ}$. During at least half the year, the roads through and about the cantonment are ankle-dcep in dust, which, when a N.W. wind blows, is whirled into the air in dense clouds, so thiek, that frequently an object cannot be seen half a dozen yards off; totally obscuring the sun, and penetrating into every room in the house, notwithstanding the precaution of instantly closing every door and window. About 2 m . N.E. stands the old town of Cawnpoor, where there is a long range of handsome glauts, adorned with a few tomples, and terminated by the palace of the Rajah, a striking and picturesque object, but now falling into ruin. The military foree quartered at Cawnpoor usually amounts to 8000 men, of various arms. $\qquad$ The district, composed of cessions to the British Government by the Nabob of Oude, is bounded, E. by the Ganges, and on the other sides by the districts of Etawah, Futtehpoor, and Bundelcund; area, 2650 sq . m. ; flat, but productive in wheat, barley, maize, rice, sugar-cane, cotton, grain, Indian millet, and indigo. Potatoes, pease, cauliflower, and many other vegetables grow in the gardens, but the former are insipid.

CAWOOD, a par. and vil. England, York, W. Riding. The village, situate on the Ouse, about $9 \frac{1}{2} \mathrm{~mm}$. S. York, is remarkable only for having been long the residence of the arehbishops of York, who had here a magnificent palace; and for having been the place of retirement of Cardinal Wolsey after his fall, and where he was arrested by the Earl of Northumberland on a eharge of high treason. Area of par. 2840 ae. Pop. 1108.

CAWSTON, par. Eng. Norfolk; 4430 ac. Pop. 1130.
CAWTHORNE, par. Eng. York, W. Riding; 3440 ac. Pop. 1437.

CAWTHORPE (Little), par. Eng. Lincoln; 780 ac. Pop. 197.

CAXA de Muertos [the eoffin, or dead-chest], a small isl. Caribbean Sea, off the S. coast, Porto Rico, about 6 m . from the shore; lat. $17^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $66^{\circ} 31^{\prime}$ W. (R.) It has a very conspicuous and remarkable appearance, much resembling a coffin; whence its name. The shore towards Porto Rico is flat and sandy; on the S. side it is high and stoney. There is no fresh water on it, nor trees of any kind, but for fuel. Fish and turtle abound here, the latter laying their eggs in the sandy bays.

CAXAMARCA, a tn. Peru, dep. Libertad, cap. prov. of same name, 80 m . N.E. Truxillo ; lat. $7^{\circ} 7^{\prime}$ S.; lon. $78^{\circ} 31^{\prime}$ W.; in a valley, E. face of the Andes, on a small river of its own name, a tributary of the Marañon. The streets are broad and straight; the houses, built of earth, are tiled and whitewashed; churches numerons, and being built of richlycut stone, and ornamented with cupolas and spires, have a very elegant appearance. Manufactures:-woollens, linens, cottons, sword-blades, daggers, and other artieles of steel, and of the precious metals. A considerable trade is earried on with places on the coast, to whieh Caxamarea furnishes its own manufaetures, and whenee in return it reeeives those of Europe. In the environs are some thermal springs and baths, nsed by the Ineas, and still mueh resorted to. Here are the ruins of the aneient palace of Atahnalpa, the last Emperor of leru, in the prison chapel of which he was assassinated by
the Spaniards. Pop. 7000.-The rrovince, area, 2165 sq. m., is traversed by the chain of the W. Cordillera, in which rise a great number of rivers, all affluents of the Marañon. The people are employed in agriculture, the rearing of cattle, the manufacture of coarse cloths, the working of mines, and washing for gold. Pop. 85,000 .

CAXAMARQUILLA, a tn. in N. Pcru, prov. Pataz, dep. of, and 100 m . F.N.E. Truxillo. Pop. 8000.

CAXA'TAMBO, a tn. Peru, in dep. Junin, cap. prov. of same name, 140 m . N.N.E. Lima; W. the foot of the Corlilleras, in a fertile valley, traversed by one of the arms of the Barranca. The spinning of woollen yarn, and trade, oceupy the inhabitants. Pop. 3000.-The rrovince, area, 1494 sq. m., is mountainous, has a rigorous elimate, and is one of the poorest and most barren in Peru. From the traces of ancient cultivation, the remains of aqueduets, and the vast ruins of towns and villages, it would appear that before the arrival of the Spaniards this country was in a very flourishing condition. The sides of the mountains still afford good pasture, and feed some oxen and sheep. Preparation of wool of superior quality, which is exported to Lima, and to the neighbouring provinces, is one of the chief oceupations. A considerable trade is also carried on in vitriol, sulphur, and salt. Pop. 25,000 .

CAXIAS, or Aideas Altos, a tn. of considerable extent, Brazil, prov. of, and 172 m . S.S.E. Maranhão, r. bank, Itapieura, navigable up to the town. It has two ehurehes, and is a depôt for the products of the provinee, and eonsequently has a considerable transit trade. Its iuhabitants are ehiefly engaged in agriculture and eattle-rearing.

CAXO, or Caso, an isl. Grecian Archipclago; lat. (S.W. point) $35^{\circ} 19^{\prime}$ N.; lon. $26^{\circ} 50^{\prime}$ E. (r.) ; 13 m . long, and 5 or 6 m . broad; surface uneven, and roeky. At its N. side is a little bay, where there is a village, consisting of about 100 houses, occupied by Greek fishermen. There is but one practieable landing-place on the island. The natives eultivate a little corn and grapes, making wine from the latter for their own consumption. Off the N. side of the island, and at the distance of 3 or 4 m . from it, there is a small islet, surrounded by others of less size, called Caxo or Caso Poulo.

CAXOEIRA. See Cachoeira.
CAXTON, par. Eng. Cambridge; 2,000 ac. Pop. 558.
CAYAMBE URCU, a lofty moutnain, Ecuador, in the Columbian Andes, directly under the terrestrial equator; lon. $78^{\circ} 10^{\prime}$ W.; 45 m . N.E. by E. Quito. It is of a beantiful conical form, and rises to a height of $19,535 \mathrm{ft}$. From its geographical position, and great elevation, it forms one of the most remarkable landmarks on the face of our globe; summit covered with perpetual snow.

CAYCOS, or Caicos, a group of isls., islets, and rocks, Caribbean Sea, between lat. $21^{\circ}$ and $22^{\circ} \mathrm{N}$.; lon. $71^{\circ} 20^{\prime}$ and $72^{\circ} 30^{\prime} \mathrm{W}$. The Grand Caycos, whieh is the largest, is about 30 m . long, by 3 or 4 m . wide, and has several good harbours.

CAYENNE, a seaport tn. and cap. French Guiana, on the N. W. part of isl. of same name ; lat. $4^{\circ} 56^{\prime} 5^{\prime \prime}$ N.; lon. $52^{\circ} 20^{\prime}$ W. (R.) It consists of an old and a new town; the former a miserable place, with steep and narrow streets; badly paved, and irregularly built, surrounded by walls, with high bastions and a ditch. But, in the new town, the streets are wide and clean, and the houses good. There are here, also, large warehouses for storing merehandise, and a landsome chureh. In the old town are the Government-house, and an aneient Jesuits' college. The harbour is shallow, but not oljectionable otherwise. It is protected by a fort and several batteries. The produce of the country is exported from Cayenne, ehiefly to France, and, in 1841, amounted to $£ 214,600$; imports in the same year, to $£ 197,400$. Pop. 5000.-D'Ilie island is separated from the continent of $S$. America by a narrow channel; on eaeh side runs a river; that to the N., near the mouth of which the town is situated, is called the river Cayenne; while that to the S . is called the Oya or Oyak. It is about 18 m . long, N . to S. , and between 10 and 12 m . broad. On the N.W. part of the island there are some hills and elevated grounds, but in the S. it is low and swampy, and in the rainy season mostly inundated. The plantations of Freneh Guiana are mostly on this island, at the mouth of the Cayenne. The chief productions are sugar, cotton, annotto, cloves, coffee, pepper, maize, \&c.

CEARA

CAYES, a tn. and port, isl. Hayti, S. coast. The former is in lat. $18^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $73^{\circ} 36^{\prime} \mathrm{W}$. The harbour is exposed to S. and S.E. gales, and, during a hurricane, there is little chance of escaping shipwreck. A considerable trade in sugar, indigo, cotton, and coffee, is carried on. Before the Revolution, it had a pop. of 12,000 , but being, in 1831 , partly destroyed by a hurricane, it now has only 3000 .

CAYEUX [anc. Cadocum], a tn. France, dep. Somme, 16 m. W.N.W. Abbeville, near the mouth of the Somme. It presents a singular aspect, the houses being built of straw and clay, and standing without order or regularity on the shore, almost swallowed by the dark and overhanging cliffs, without tree or shrub to relieve their rugged and gloomy appearance. The manufacture of hardware, fishing, and salting fish, employ the population- 2372 .

CAYLUS, a tn. France, dep Tarn-et-Garonne, 26 m. N.E. Montauban; agreeably situate on the Bonnette; with an old eastle on a rock in the middle of the town. It has a considerable trade in grain. Pop. 1437.

CAYMAN Islands, three isls., W. Indies, N.W. of Jamaica, to the Government of which they are appendages, and from which the nearest is 140 m . distant, and the largest, the Grand C'ayman, about 200 m . They are situate between lat. $19^{\circ} 10^{\prime}$ and $19^{\circ} 45^{\prime} \mathrm{N}$., and lon. $79^{\circ} 30^{\prime}$ and $81^{\circ} 35^{\prime} \mathrm{W}$. Grand Cayman, which is the only one inhabited, is about 20 m . long, and about 7 to 10 m . broad; and is covered with cocoa-nut trees. On the W. side is George Town, a large village; but the other parts are thinly peopled. The climate is healthy; there are no eattle or sheep; and water is scarce. The chief oceupation of the natives is in catching turtle for the markets of Jamaica and other islands.

CAYMITES, two small isls., W. Indies, off the W. coast, Hayti, called the Grand and the little Caymites; lat. (N.E. point, Grand Caymites) $18^{\circ} 39^{\circ} \mathrm{N}$.; lon. $73^{\circ} 40^{\prime} \mathrm{W}$. (n.) A bay, formed by the larger isl. and the main, affords safe and commodious aneliorage.

CAYMITO, or Cnovieks, a river, New Granada, prov. Isthmus, and falling into the Pacific about 10 m . W. Panama. It is formed by the junction of numerous small streanis, rising in different parts of the W. Cordillera. Near its mouth it is very deep; and as it is not impeded by a bar, the tide rushes in and out with great rapidity, rendering the anehorage for ship!ing very exposed and insecure.

CAYO VERDE, or Grfen Kay, an islet, Bahama, group; lat. $22^{\circ} \mathrm{N}$.; lon. $75^{\circ} 10^{\circ} \mathrm{W}$. It is of moderate height, and slopes towards the N.W.

CAYOR, or KAyor, a maritime state N.W. Africa, between the mouth of the Senegal and Cape Verd; bounded, N. by Wallo, E. by Burb-Joloff, S. by Baol, and W. by the Atlantic. It produces cotton, indigo, millet, gums, eattle, camels, horses, strong asses, swine, partridges, \&e. It has several streams running E. to W.; its eap. is Macaye, on the Condamel, in lat. $15^{\circ} 10^{\prime} \mathrm{N} . ;$ lon. $16^{\circ} 30^{\prime} \mathrm{W}$. The inhabitants are Joloffs and Mahometans. Pop. 150,000.

CAYRU, a tn. Brazil, prov. of, and 62 m. S.W. Balia ; en a river islet of its name, formed by the Tinharé and Tupiaçu, 11 m . from the sea. 11 s prineipal street is paved, and has some good houses. Cayru has a chureh, a Latin and a primary school, a Francisean convent, and it is the seat of a council for preserving the forests. Pop. 800.

CAYSTER, or Kuchuck-Mender [little Mender], a river, Asiatie Turkey, pash. Anatolia, rises in the Buz-dagh mountain, sanjak, Aidin; lat. $38^{\circ} 16^{\prime}$ N.; lon. $28^{\circ} 20^{\prime}$ E. From this point it flows in a general S.W. direction, and falls into the bay of Scala-nova, in the Grceian Arehipelago, lat. $37^{\circ} 53^{\prime} \mathrm{N}$. ; lon. $27^{\circ} 22^{\prime} \mathrm{E}$. It flows, during a part of its course, through a rich and fertile, but indifferently cultivated valley.

CAYTON, par. Eng. York, N. Riding, 2430 ac. Pop. 572.
CAZALLA-he-la-sierra, a tn. Spain, Andalusia, prov. of, and 36 m . N. by E. Seville, on a deelivity of the sierra Morena. Its streets are clean, paved, and well arranged; and it has two squares, in the prineipal of which are the ancient chureh, townhall, and publie storehouse. Cazalla bas also three chapels, four schools, a prison, two hospitals, several convents, and two extensive aqueducts, of briek. The inhabitants are engaged in tanning, weaving, distilling brandy, expressing oil and wine, and in tillage; but their chicf oceupation is smelting metals, easting cannon, and manufacturing iron utensils,
machinery, and agricultural and industrial implements. The mountains in the vicinity are elothed with timber, and contain mines of iron, copper, silver, sulphur, and antimony, and several quarries of beautiful variegated marble. The place is of high antiquity, and several Arabic and Roman remains still exist. Pop. 6552.-(Madoz.)

CAZEM1BE, a state, Africa. See Kazembe.
CAZEREs, a tn. France, dep. Haute Garonne, 32 m . S.W. Toulouse, 1. bank, Garonne. It is tolerably well built, and lias hat manufactories, tanneries, and dyeworks, with a trade in cattle. The Garonne begins here to be navigable. Pop. 2318.

CAZES-monnekard, a vil. France, dep. Tarn-et-Garonne, 21 m . from Moissac. Pop. 1125.

CAZORLA, a city, Spain, A ndalusia, prov. of, and 41 m. E. Jaen, N. slope of the sierra Cazorla. It is well built, in the form of an amphitheatre, and possesses numerous regular, though steep, strcets, and two spacious squares, one of which is adorned with a fine central fountain. The town and courthouses are large, and well construeted, and have a tower. The other public edifices are a parish church, chapel of ease, Latin, and several primary schools, an hospital, prison, theatre, storehouse, cemetery, and varions convents. In the environs, watered by the Vega, are many delightful gardens and public walks, planted with fruit-trees, and adorned with shrubs and flowers. Manufactures:-leather, soap, carthenware, bricks, tiles, wine, and oil. Trade :-fruits, grain, eattle, and colonial produce. Cazorla is a place of great antiquity, and was formerly far more important and populous than at present. It figured conspicuously in the Moorish contests of the 13 th eentury, was, after repeated attempts, taken, and partly burnt, by the French in 1811 ; and subsequently distinguished in the late Carlist contest in 1837. The city is defended by two castlcs, both in good preservation, and one of them erected by the Arabs. Pop. 7383.- (Madoz.)

CAZOULS-les-Beziens, an ane. in. France, dep. ITerault, 7 m . from Beziers, in a fertile distriet, abounding with wine, and having a brandy distillery, tamery, and the ruins of an old feudal fortalice. Pop. 1964.

CEA.-1, A small river, Spain, which rises in the N.E. of Leon, and first runs almost due S. till it passes Sahagun, when it gradually trends W., and falls into 1. bank, Esla, about 4 m. N.E. Benavente, after a course of about 60 m . It is a shallow stream, not navigalle, but mueh used for irrigation. It is liable to floodings, which have often done considerable damage.- $2, \mathrm{~A}$ vil. and par. Spain, prov. of, and 32 m. E.S.E. Leon, l. bank of above river. It contains an old eastle, a prison, two churches, and a well-endowed primary school. Pop. 1201.-3, A in. and par. Portugal, prov. Beira-Baixa, on the slope of the siena d'Estrella, about 50 m . E. Coimbra. It contains a chureh, hospital, and infirmary. Pop. 2072.

CEARA, or Villa-do-forte, a tn. Brazil. See Fortaleza.

CEARA, a prov. Brazil, N. coast, bounded, N. by the Atlantic, E. by 1 rov. Rio-Grande-do-Norte, S. by Pernambuco, and W. by Piauhi ; area, $66,387 \mathrm{sq} . \mathrm{m}$. The surface is very much diversified, though, upon the whole, it may be characterized as more flat than mountainous. It has a general slope N. towards the Atlantic, from which it gradually ascends in the form of an amphitheatre, till it reaches the mountains of Aracati, Canavieras, Ceara, Mandahn, Boritama, and IIibrapaba, which, linking on to each otlier, form a chain stretching E. to W., presenting summits so conspicuous, as to form important landnaaks to mariners on nearing the coast. The principal rivers following the direction of the general slope, flow almost due N., in courses which are nearly parallel to each other. The most important is the Jaguaribe, in the E.; next to it are the Ceara, Mandahu, and Camucin. The high lands are fertile; the lower valleys are sandy, sterile, and occasionally covered with lakes, which are strongly impregnated with alum and nitre. The amplitheatre which rises behind the coast is well wooded, particularly with palms of various kinds. The province generally abounds in medicinal plants, balsams, gums, and resins. In the interior are extensive forests, furnishing inexhaustible supplies of timber, and well supplied with all kinds of game. The minerals include gold, silver, iron, copper, lead, alum-stone, salt, saltpetre, and rock-crystal. The progress of the seasens is ex-
tremely irregular. The climate, however, is on the whole salubrious, the heat, which would otherwise be insupportable, particularly in the plains and valleys, being greatly tempered by a sea-breeze by day, and a land-breeze at night. When these breezes fail, the air becomes very tunhealthy; ant the province has been repeatedly scourged by pestilence. Ceara is divided into 25 town districts, which take the names of the different towns in the neighbourhood; but the political or administrative division is into ten conarcas, which appoint eight deputies to the general legislative assembly, and four senators and 28 deputies to the provincial assembly. Pop. 190,000.

CEBAZAT [anc. Saba*iacum], a tn. France, dep. Puy-de-Dôme, 4 m . N. ('ler-mont-Ferrand, on the rivulet Badat, in a rich fruit district. The inhabitants are engaged in tillage and eattle-rearing, and export fruits and vegetables to Paris. Two annual fairs are held in May and August. Pop. 2060.

CEBREROS, a tn. Spain, Old Castile, prov. of, and $30 \mathrm{~m} . \mathrm{S} . \mathrm{E}$. Avila, on a rising ground, 1. bank, Alberche, crossed in the vicinity by a handsome stone bridge of four arches. Its streets are, in general, wide, and paved; and the principal square is large, and lned with fine houses, possessing porticoes. The town also has three smaller squares, a capacious and magnificent church, several chapels, a prison, storehouse, cemetery, and three primary schools. On a hill to the N., stands an ancient watch-tower, now much dilapidated, and used as a telegraph. The inlabitants are engaged in weaving, tanning, expressing wine aud oil, and in husbandry. Pop. 2744.

CEBU, an isl, and tn. Philippines. See Zebu.
CECINA, a river and vil. Tuscany. The Riven rises about 28 m . S.W. Siena; flows N.W., and then S. W. through the marshes of Pisa and Volterra, and falls into the Mediterrancan, 21 m. S.S.W. Legliorn.——The village stands at the mouth of the river; las a copper foundry ; and near it is a grand ducal villa. Pop. 400.

CECLAVIN, a tn. Sipain, Estremadura, prov, of, and 29 m. N.W. Caceres, 10 m. N.E. Alcantara, on a small hill. The houses in general are well built; streets clean and well paved; and in a spacious square stands a tower, containing the town clock. It likewise lias a parish chureh, hospital, townlall, prison, storehouse, convent, and four primary schools. In the vicinity are sulphureous springs, much esteemed as baths. Linen and woollen fabrics, hardware, soap, waxcandles, earthenware, wine, and oil are manufactured; and some trade is carried on in cattle, grain, fruits, and winc. An annual fair is held in June. Pop. 4656.

CEDAR KAY', thrce small isls. U. States, Gulf of Mexico, W. coast, Florida, and W. side of Vacasansa Bay ; lat. $29^{\circ} 8^{\prime} \mathrm{N}$. ; lon. $82^{\circ} 57^{\prime} \mathrm{W}$.

CEDAR MOUNTAINS, a mountain range, S. Africa, Cape Colony, extending from lat. $31^{\circ} 57^{\prime}$ to $32^{\circ} 24^{\prime}$ S., and ncarly along the meridian of $19^{\circ} \mathrm{E}$. Theyare of primitive formation, and have a remarkably picturesque appearance, with peaks varying from 1600 to 5000 ft . above the level of the sea. In the higher parts an asli-coloured quartzose sandstone appears to predominate; while the sceondary range, at a height of 2000 ft ., contains many marine fossils. Fine cedar trees, of gigantic size, formerly covered these momtains, and still do so to a considerable extent; occupying ravines in the higher parts of the range, even at an elevation of 3000 ft . At a height of from 300 to 1000 ft . above the valley, are many Bosjesman caves, varying from 30 to 40 ft . in deptle, and containing numerous well-exceuted drawings in red ochre by that primitive people. In the valleys between the hills is an exceedingly fertile, dark-coloured, vegetable mould, on which corn, tobacco, and wine are raised; whilst the supply of water, more or less chalybeate, is constant and abundant.

CEFALU [anc. Cephaloedrs], a seaport tı. and dist. Sicily, prov. Palermo, at the foot of a rock, 39 m . E.S.E. Palermo; lat. $38^{\circ} 0^{\prime} \mathrm{N} . ;$ lon. $14^{\circ} 4^{\prime} \mathrm{E}$. It is surrounded by an ohd wall, and has a cathedral, with several churches. The port
is capable of receiving only a small number of vessels, and
the commerce is trifling; but the sea fisliery is prosecuted with activity. On a neighbouring hill, may be seen the ruius
 CEF.SLU.-Krom Gaily K night's Fechasinstical Archiketure of Italy.
of a castle built by the Saracens. The town is the seat of a bishopric. Pop. 8940.-The District of Cefalu is divided into six cantons.

CEFFNLLYS, or Kevenleece, par. Wales, Radnor, Pop. 379.

CEGAMA, a tn. Spain, Biscay, prov. Guipuzcoa, 14 m . S. by W. Tolosa, at the N. base of the Pyrenees; houses mostly well built, forming one principal street, with a central square; a large portion of them, however, are detached. The town possesses a church, six chapels, a townhouse, prison, Latin, music, and two primary schools, two cemeteries, and, in the environs, a sulphureous spring. Manufactures:-woollen stuffs, linen, ropes, pottery, machinery, nails, bolts, agricnltural implements, and cevery description of hardware. The Carlist general, Don Tomas Zumalaearregui, was brought by his son to Cegama in 1835, after having been wounded at the siege of Bilbao, and died here eight days afterwards. Ilis body was interred in the churel. Pop. 2123.

CEGLIE, a tn. Naples, prov. Terra di Otranto, 25 m . W. Brindisi, on a hill. It contains several churches. P. 1930.

CEHEGIN, a tn. Spain, prov. of, and 39 m . W.N.W. Murcia, 4 m . E. Caravaca, on a declivity facing the S . It has numerous spacious streets, and two squares, lined with substantial houses, and neat public buildings; comprising a parish church, three chapels, town and courthouses, a prison, hospital, theatre, cemetery, and scveral schools. Manufac tures:-paper, cloth, soap, potteryware, brandy, wine, and oil. Trade:-grain, wool, hemp, silk, wax, cotton, \&c. In the neighbourhood, various quarries of jasper and variegated marble are wrought. Pop. 10,354.-(Madoz.)

CLICER-de-Temre, and Celcen-de-Mer, two small isls. China Sca, off the S.E. coast of Cochin China. The first, called by the natives IIon Cau, is in lat. $11^{\circ} 13^{\prime} \mathrm{N}$. ; lon. $108^{\circ} 48^{\circ} \mathrm{E}$. It is rocky and barren, with exception of a little grass or green moss on the flat part. The second, Ceicer-deMer, is $41 \mathrm{~m} . \mathrm{S} . \mathrm{E}$. the former; lat. (centre) $10^{\circ} 32^{\prime} 30^{\prime \prime} \mathrm{N}$.; lon. $108^{\circ} 53^{\prime} \mathrm{E}$. It is 4 or 5 m . long, and about 1 broad; of casy access on the W., well-cultivated, and inhabited principally by fishermen, who pay annual tribute in salt fish and bird's-nests to the King of Cochin China.

CE1DIO, par. Wales, Carnarvon. Pop. (1841), 138.
CELANO, a tn. Naples, prov. Abruzzo Ultra II., N. side of Lake Celano or Fucino, 6 m . E.N.E. Avezzano. It has several churches, and a paper manufactory ; and two ammal fairs. Pop. 3868.

CELAYA, or Zelaya, a tn. Mexican Confederation, state Guanaxuto, 130 m . N.W. Mexico, and 6020 ft . above the level of the sea, on r. bank, Rio-Grande-de-Santiago, over which is here a handsome bridge. It has numerous churches, among which, the Carmelite church is an imposing structure of mixed architecture, with Corinthian and Ionic columns;
interior sombre and gloomy, but enriched with a great quantity of gold and silver ornaments. There is also a large collecturia or storehouse. Manufactures:-saddles, bridles, and other articles of leather. Grain of all kinds grows abundantly ; and horses and mules are bred in considerable numbers in the environs. Pop. 7000.

CELBRIDGE, a market tn. Ireland, co. Kildare, $3 \frac{3}{4} \mathrm{~m}$. N.E. Maynooth, pleasantly situate, I. bank, Liffey; houses in general well built; supply of water plentiful. The church is a handsome edifice, with a tower and spire. There is also a free school, a dispensary, and a fever hospital. Woollen cloth was formerly manufactured here to a considerable extent; and adjoining the town there is an extensive cotton factory ; petty sessions are held every Monday. Pop. 1289.

CELEBES [called, by the natives, Negri-Orang-Boogis, and also, Tanah-Boogis or Tanah-Mangkesser, contracted into Macassar], one of the larger isl. Indian Archipelago, between Borneo on the W., and the Moluceas on the E., extending from lat. $1^{\circ} 45^{\prime} \mathrm{N}$. to $5^{\circ} 52^{\prime} \mathrm{S} .$, and from lon. $118^{\circ} 45^{\prime}$ to $125^{\circ} 17^{\prime}$ E.; area, 71,791 sq. m. Celebes is properly the name of the E. part only, and Macassar of the W. From its singular shape it has been compared to a tarantula, or to two horse shoes joined at the fore parts. It mainly consists of four large peninsulas, stretching to the E. and S., and separated by three deep gulfs. Of these peninsulas, that of Menado on the N. sweeps N., then E., and, lastly, N.E., for 400 m. , with a breadth varying from 12 to 60 m .; that of Bulante, on the E., is 160 m . long, and from 30 to 95 m . broad; the S.E. peninsula has much the same length and breadth as the latter; and that of Macassar, on the S.W., forms a pretty regular paralcllogram, 200 m . long, and 65 m . broad. They are all formed by chains of mountains running from a common central territory, 150 m . long, and 105 m . broad. The gulf of Tomini or Gorontalo, on the N.E., is 240 m . long, and widens from 55 m . at its mouth, to 100 m . at its farther extremity, which is marked on the latest maps as 'very little known;' that of Tomaiki or Tolo, on the E., has, on the contrary, a wide mouth, and narrow upper end; and that of Macassar, or Boni, on the S., washes the E. oide of Macassar for 200 m ., and varies in breadth from 35 to 80 m . To these must be added, the bays of Menado, Amoorang, Kwandang, and Tontoli, on the N.; of Palos and ParreParre, on the W. ; of Balante, Talowa, Nipa-nipa, and Staring, on the E.; and many more or less considerable, in the gulf of Boni.

General Aspect.-Celebes is high and mountainous chicfly in the centre and the N., where there are several active volcanoes. The absence of extensive deltas, and the intervention of broad, grassy plains between the forests, distinguish it from the other larger islands of the Indian Archipelago. All that is most majestic and lovely in these, is thought to be concentrated in Celebes. It abounds in the most picturesque and varied scencry, and the most beantiful and magnificent tropical vegetation.

Climate. - Though cut by the equator, and wholly under the torrid zone, Celebes is thought remarkably healthy, the natives often enjoying a vigorous old age, and Europeans living longer than anywhere else in the $\mathbf{E}$. Its extreme heats are tempered by the sea-breezes, by monthly rains, and by the N. winds that prevail for part of the year. The E. monsoon lasts from May to November, and the W. during the remaining montls.

Geology.-The soil generally consists of a bed of vegetable mould from 10 to 20 ft . thick, on decomposing basalt. Gold is found in all the valleys of the N. peninsula, which is often convulsed by earthquakes; and abounds in sulphur. Copper of good quality occurs at various points, and in Macassar, tin, also, as pure as that of Banka. Diamonds are sometimes found almost at the surface of the ground, and precious stones are carried down in the sand of the torrents.

Mountains, Lakes, and Rivers.-Lampoo-Batang is reckoned the lighest mountain in Celebes, being above 7000 ft . high. Near Menado, Mount Klobat, and the summits called the Two Sisters, stand conspicuons. The largest lake is supposed to be one in the central part of the island, as yet unvisited by Europeans, and said, by the natives, to be surrounded with villages. That of Tondano, in the N. peninsula, is 2000 ft . above the level of the sea. But the most important of all is that of Tapara-Karaja, or Labaya, in the S.W. It commu-
nicates W. by navigable streams with the sea, and E. with the Gulf of Boni ; and is the original seat of an early native civilization, which has sent its ramifications over the whole archipelago. The largest river, the Chinrana, flows from that lake, and is navigable for European vessels for some distance, and by the native prahus as far as the lake. The Boli enters the sea at Boli, on the N. On the S. coast, there are many rivers navigable for some miles from the sea.

Zoology. - The island is entirely destitute of the large carnivorous animals, and pachyderms. None of the cat kind, from the tiger downwards, haunts its forests; nor has it the elephant, the rhinoceros, or the tapir. Deer and wild hogs abound, together with the Babyroussa, and herds of antilopes. Pouched animals, unknown in the Sunda islands, here first occur ; also a singular ruminating animal (Cervus depressicornis), the supi-hootan of the Malays, and the anooang of the natives. It holds both of the ox and the deer, and haunts the most solitary places of the S. of the island The monkeys are of various kinds, and both numerous and dangerous. The white monkey is particularly mischievous. The Farsius spectrum hides itself in the moist woods of the plains, but when pursued, leaps from bush to bush like a frog; and though most inoffensive, is held in superstitions awe by the natives, who attribute magical qualities to its large, round, prominent eyes. Here, too, are found the cameleon, and the flyingdragon, one of the saurian tribe, with wings attached to the base of its thighs, forming a sort of parachute, to facilitate its leaps from branch to branch. Morkeys, moles, rats, fieldmice, and scorpions, are kept down by the numerous snakes of the island, from the enormous tiger-python (Boa castanea), 30 ft . long, but not venomous, to the small but deadly cobra-da-capella, more dreaded than the crocodile. Among domesticated animals are found small but vigorous horses, buffaloes, goats, sheep resembling those of the Cape of Good Hope, and pigs. Many of the birds of Celebes differ totally froin those of the Sunda isles. Some seem to occur nowhere else; and others, though found in the Sundas, have peculiarities not found there. Green is here the prevailing hue of the parrot tribes, while bright red and scarlet predominate in the Moluccas. Beautifully-coloured pigeons, not yet scientifically described, abound in the woods. Celebes is the first island in the Archipelago in which that singular gallinaccous fowl, the Megapodius, is found (sce Australia, p. 260), as also a new kind of Maleo (Megacephalus). The scas swarm with fish, so that 300 different kinds are sometimes offered for sale at the Macassar market. The shores are frequented from time to time by the Dugon (Halicore dugon). The trepang fishery, and the catching of turtle, occupy thousands of the Orang-Badjo race.

Botany.-Naturalists have visited only four points of Celebes; but as almost every plant or animal taken by them was more or less new, a rich harvest may be expected from future researches. Dense woods clothe the mountain sides; and in these are found the oak, the teak, the cedar, the upasboth Antiaris toxicaria and Strychnos tieute-the one a tree, sometimes 100 ft . high, the other a climber, but both yielding powerful poisons; together with countless other trees, useful or precious, the clove and nutmeg trees, the sago, and other palms, which supply the natives with coverings for their houses, clothing, cordage, household vessels, oils, and intoxicatingdrink. To these may beadded the pepper-vine, the sweetsmelling sandal wood, and that which, when fresh cut, yields a red dye. The sacred waranguin sometimes presents, in a single tree, the appearance of a forest. The bamboo attains the height of 40 ft .; while its trunk, though hollow, is hard enough to serve for house supports and rafters; the natives use its tender shoots for stews or salad, or extract common vinegar from them. Add to these the mango, the banana, the silk cotton-tree (Bombax ceiba), the badeau, from which the famed Macassar oil is extracted; sumach or fustic-wood, ebony, the betel-nut tree, and ginger plant. Among plants requiring more careful cultivation, there are the coffee-trec, indigo, the cacao, sugar-cane, the manioc root, benzoin, and tobacco. Mountain rice, of which there are three varieties, is that chiefly cultivated, and also maize. In the gardens. cabbares, turnijs, and other European pot-herbs, are cultivated.

Inhabitants.-The oldest are doubtless the Alfoories of the interior, that being the name generally applied to the mountain tribes tlat have been driven inwards in many of the
islands by invaders of their coasts. Those of Celebes are of middle stature, fairer in eomplexion than the Malays, and milder and more intelligent than the Alfoories of other islands. They believe in the agency of evil spirits, and the Polynesian taboo prevails among them. But by far the finest race in Celebes, and indeed in the whole archipelago, are the Boogis, supposed to have come originally from Borneo. Like the Dyaks, they are a remarkably handsome race, physically resembling the Polynesians far more than the Malays; to which last, also, they are far superior in point of honesty, energy of character, and general conduct. The bare word of these modern Phœnicians is more to be trusted than the most solemn oaths of the natives of l3engal ; their commercial enterprise is unequalled, every soul, male or female, from the prince to the peasant, being more or less engaged in trade, and the most arduons voyages being undertaken by them in vessels ill adapted to brave the perils of the ocean. They are the chief, and almost the sole carriers of the archipelago; and annually visit even the N . coast of Australia with from 80 to 100 prahms, in order to collect cargoes of trepang. The Macassars are also a fine people, and supply the Dutch with their bravest and most faithful soldiers. The Celebians, generally, are fond of active exereise, particularly on horseback; and, as their country abounds in open grassy glades, they are much addieted to hunting the deer. They bring up their children in a sort of Spartan fashion, rubbing their limbs with oil and water to strengthen them, and sending them to their friends, at five years of age, to prevent their being spoiled by the endearments of home. After some years attendance at school, the boys are taught handicrafts, and the girls, who are edneated by their mothers, learn silk and cotton weaving. Among those in easy circumstances, some of the women learn to read and write-a very rare praetice in the East.

Languages.-The languages and literature of Celebes differ essentially from those of the countries to the W. The letters of its alphabet are, in form, as unlike the Javanese as the latter are unlike the Arabic or Roman. The three great languages of the island, not reckoning the dialects of the savage tribes, are those of the Boogis, the Maeassars, and of Mandhar. The ancient Boogis is the language of science and religion, and is thought, by some, to be the mother tongue of the three. The modern Boogis is the most eultivated and copions; the Maeassar is simpler, and its literature more scanty; both are distingnished for a soft and vocalie prowunciation. The Boogis have a considerable body of literature, consisting both of native tales, founded on national legends, and of translations of Malay and Javanese romances, and of works on law and religion from the Arabie.

Religion.-The Alfoories have their own vague superstitions. The more civilized inhabitants profess Mahometauism; but, previous to the introduction of that faith, the Hindoos had bronglit their religion to the island, and the natives say that there are fine IIindoo monuments in the interior that have not yet been visited by Europeans.

Government.-Several independent nations inhabit Celebes, and their governments are more regular than their otherwise low degree of civilization would lead one to infer. The chiefs are elective. Constitutional prineiples are said to exist in full force among them. Some chiefs reign by right of inheritance, but, with the coneurrence of inferior chiefs representing the general interests of the country. The most usual form of government is the federal and republican, combined with the monarehical and elective principle. The native princes so far reeognize the authority of the Dutch, who have had a footing in Celebes ever since they expelled the Portuguese in 1660, with the exception of the four years' occupation by the British. Much publie respect is paid to women, and they oecasionally reign as queens.

History. - The native annals reach back, with any certainty, to only about 400 years, and exhibit a history full of wild energy, unsettlement, and warfare. In 1512, when the Portuguese first visited the island, they fonnd but few Mahometans in it; and it was not until a century afterwards that Moslemism was generally adopted. The Macassars first conqnered the Boogis, and eompelled them to beeome followers of Mahornet ; afterwards the latter revolted, were aided by the Duteh, and subdued the Maeassars in imn. But even with the aid of their European allies, they failed in establishing a firm gov-
erninent; and the system of monopoly, now wisely abandoned, but long foreed by the Dutch on all the native chiefs, proved, in every way, destruetive to the progress of the population.

Population.-Variously estimated, but, by the latest con jectures, thought to be about 2,000,000.- (Van der Aa; Temminck; Raffles ; Crawford; Earl's Eastern Seas; Wilks's U. States Exploring Expedition, \&c.)

CELENZA, the name of two places, Naples :-1, A vil. and com., prov. Abruzzo Citra, dist. of, and 16 m . S.s.W. Vasto. Pop. 1853.-2, $\Lambda$ tn. and com., prov. Capitanata, dist. of, and 22 m . W.S.W. Sansevero It contains three convents, and has an annual fair. Pop. 3810.

CELLLAN, par. Wales, Cardigan. Pop. 475.
CELLE, a th. IIanover, at the confluence of the river Aue with the Aller, in the midst of a sandy plain, $23 \mathrm{~m} . \mathrm{N} . \mathrm{E}$. Hanover. It is well built and well paved, and contains seven churches, a gymnasinm, a library, a lying-in hospital, a medieal school, a workhouse, and a penitentiary. It has also a royal palace with a fine elrapel. In what is called the French garden, is an indifferent monument to Matilda, Queen of Denmark, sister of George III., who died here. The old parish chureh contains tbe burial vault of the houso of BrunswiekLiineburg. Its inhabitants are noted for their industry ; they manufacture excellent linen, flannel, hats, tobaceo, \&c., and carry on a considerable trade with Bremen and other places, by the Aller, which here becomes navigable. By rallway, it communicates with Hamburg, Hanover, and all parts of Germany. The royal family of England is descended from one of the dukes of Celle. Pop. 12,000.

CELLERFELD. See Zellemfeld.
CELLIO, a vil. Sardinian States, Piedmont, prov. Valesia, 55 m. S.E. Vallora. Pop. 2300.

CELORICO-DA-bEiks, a tn. Portugal, prov. Beira-Alta, in a fertile district, l. bank, Mondego, 11 m . W.N. W. Guarda. It is divided into three parishes, each of which has a chureh, one of them collegiate, and contains some ancient remains. Pop. 1831.

CEMBRA, a tn. and com. Austria, Tyrol, prov. of, and 9 m . N.E. by N. Trent, r. batk, Avisio. Pop. 1513.

CEMMES, a vil. and par. Wales, co. Montgomery, $6 \frac{1}{2} \mathrm{~m}$ N.E. Machynlleth. The viliage, romantically situate on the Dovey, contains a handsome church, elapels for Iudependents and Calvinistic Methodists; a day sehool, and Sunday schools belonging to each of these religious denominations, and several charities. There are three amual fairs. Pop. (1841), 935.

CENEDA, a tn. Austrian Italy, gov. Venice, prov. of, and $22 \mathrm{~m} . \mathrm{N}$. Treviso, on the Machio. It is defended by a citadel, is the seat of a bishopric, and of the district government, and has a cathedral and several other churehes. It has a theological seminary, and a gymnasium; five papermills, a bell foundry, some tanneries, and dyeing establishments, with manufactures of cotton and woollen eloths and felts. There are mineral springs in the vicinity. Pop. 4500.

CENIA (La) [anc. Sicana], a tn. Spain, Catalonia, prov. of, and 56 m . S.W. Tarragona, $12 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Tortosa, I. bank, Cenia. It is well built, and has a square, adorned with a eentral fountain; a parish church, townhall, prison, and two schools. Employments-paper, wine, and oil-making, and husbandry. Pop. 2043.

CENis (Mont), or Monte Cenisio, a mountain and pass, Cottian Alps, Sardinian States, between Piedmont and Savoy, and forming part of the watershed between the valleys of the Are and the Doire. The culminating point of the mountain is 2224 ft. above Lans-le-bourg, in the former valley, and 6773 ft . above the sea level. Its strata consist of alternate beds of schist, limestone, and gypsum. Basalt, serpentine, and, it is said, quartz, also oecur. Its prineipal snmmits, Ronehe, Roche Michel, and Roche Melon, are usnally surrounded by clonds, and covered with snow. Between the first two summits on the E., and little Mount Cenis on the W., is a plateau covered with meadows and pastures, and partly occupied by a lake, which contains excellent trouts, and discharges itself by a mountain torrent, whieh rushes down towards Susa, and forms a succession of fine caseades. The vegetation of the mountain is particularly rich in rarer Alpine plants, and is much resorted to by botanists. The pass has been practicable from the earliest times, but the road was very bad, and exposed to avalanehes. The present
a lmirable road, one of the safest and most frequented over the Alps, was finished in 1810 , at an expense of $£ 300,000$, uader the orders of Bonaparte.

CENON-la-bastide, a vil. Franee, dep. Gironde, 2 m . from Bordcaux. Pop. 2541.

CENTALLO, a tn . Sardinian States, prov. of, and 7 m . N.N.E. Coni, near r. bank, Grana. It has a eastle, the former residence of the Marquises of Susa. Pop. 5000 .

CENT(), a tn. Papal States, 13 m . N. Bologna, E. bank, canal of Cento, and near the river Reno. It is surrounded by a rampart and ditch, and contains several churehes, convents, and a cathedral. The celebrated painter, G. F. Barbieri, commonly called Guercino, who founded a school of art in 1616, was a native of this place. Pop. 4000.

CENTORBI [anc. Centuripa], a tn. Sieily, prov. of, and 17 m . W.N.W. Catania, on a rock. It has only one street, a chureh, and a convent; but numerons ruins exist in the vicinity, where also is found a stone that dissolves in water like soap. Pop. 4455.

CENTRAL AMERICA. See America, p. 124.
CEOS, isl. Greece. Sce Zea.
CEPIIALONIA, or Kephalonia, an isl. Mcditerranean, and one of the largest constituting the Ionian Republie, W. coast, Greeee, opposite the Gulf of Patras, between lat. $38^{\circ} 4^{\prime}$ and $38^{\circ} 29^{\prime} \mathrm{N} . ;$ and lon. $20^{\circ} 21^{\prime}$ and $20^{\circ} 49^{\prime} \mathrm{E}$. Greatest length, 32 m. ; breadth, varying from 5 to 12 m. ; area about $318 \mathrm{sq} . \mathrm{m}$. It is separated from Ithaca on the W., by a strait about 2 m . broad, and stretching the whole length of the latter island, whieh lies parallel to its N. extremity. Cephalonia is generally mountainous. A calcareous ridge traverses the island N.W. to S.E., the highest summit of which, called Orios Ainos, is about 5000 ft . above sea level. This lofty peak was anciently erowned by a temple of Jupiter, of which no trace remains, the mountain being now entirely eovered with wood. The only plain in the island of any extent, is in the S.W. near Argostoli ; it is about 6 m . in length, and is ehiefly planted with vines. There are other fertile spots throughout the island, but the soil is in general extremely thin. The coast line is very irregular and deeply market with indentations, the principal of which are the bays of Samos, Zola, and Argostoli; the last extends about 7 or 8 m . inland, has good anehorage, and is almost completely land-locked, having but a narrow opening of $1 \frac{1}{2}$ or 2 m . wide, with a range inside of nearly 10 m . of generally deep water. The elimate is mild, but subjeet to sudden changes of temperature, and to violent storms; earthquakes also are frequent. The prineipal produee of the island is eurrants, of which large quantities are exported annually. The other products are wheat, corn, olive oil, wine, cotton, flax, and salt, with various kinds of fruits, including oranges, lemons, figs, carobs, and melons. The manufactures of the island are inconsiderable, consisting of eottons, and of earpets of mixed wool and goat's-hair, with some potteries, and distilleries of liqueurs. The inhabitants are intelligent, industrions, and enterprising, but are eharged with being loquacious and verbose. Great numbers of them are brought up to the medical profession, and afterwards emigrate for practice to various parts of the continent, especially to Turkey, where there is hardly a town without a practitioner from Cephalonia.

The greater part of the population are of the Greek church, the others are of the Latin church, and have a R. Catholie bishop, and several convents of Franeiscans. There are 11 free schools on the island which are supported by the Government, and 78 private schools.

Cephalonia was known ancicntly, by various names; being called Samos by Homer in the Odyssey, and Tetrapolis by Thncydides. In 189, B.c., the island came under the Roman dominion, and so remained till after the division of the empire, when it beeame subject to the Byzantines till the 12 th century, falling afterwards, successively, to the Normans, Venetians, 'I'urks, and again to the Venctians, who retained possession of it till 1797, when it was taken by the French, who were, in
turn, driven out by the Russians in 1799. Cephalonia was then made part of the new State of the Seven Islands under the protection of Russia. By the peace of Tilsit in 1809, the French again obtained possession of it, but were soon after driven ont by the English, under whose protection it now remains. The island is divided into four districts, and sends seven members to the Legislative Assembly, and one to the Senate. The prineipal towns are Argostoli, and Lixuri; there are, besides, however, several large villages, amongst which are Kalata and Zola, both on the N.W. coast of the island. Pop. (1851), 69,054.

CEPPALONI, a vil. and com. Naples, prov. Principato Ultra, dist. Avellino, and 5 m . S. Benevento. It las an annual fair. Pop. 2818.

CEPRANO, a tn. Papal States, 11 m . S.E. Frosinone, on the frontiers of Naples, and near r. bank, Liri. Pop. 3000.

CERAM, called also Ceiram and Zeram, and Sirang by the natives, an isl. Indian Arehipelago, the seeond largest of ${ }^{\circ}$ the Moluceas, lies between Booroo on the W., and Papua on the E., and immediately N. Amboina. It stretehes from lat. $2^{\circ} 47^{\prime}$ to $3^{\circ} 50^{\prime} \mathrm{S}$. ; and lon. $127^{\circ} 51^{\prime}$ to $123^{\circ} 56^{\prime}$ E.; area, estimated at $10,500 \mathrm{sq} . \mathrm{m}$. As the object of the Duteh, until of late years, was not to increase the peculiar products of the Spiee Islands, but to sell small quantities at exorbitant profits, their agents in Ceram have been content to know no more of the island than was required for the extirpation of elove and nutmeg trees, and otherwise enforeing the monopoly preseribed by the Bongay eontract of 1676. Ceram, accordingly, is still very imperfeetly known. It is traversed from end to end by mountain ranges, rising from a table-land of considerable elevation, and sending down innumerable streams to the sea. The mountains vary from 6000 to 8000 ft . in lieight, and that called Noosalicli rises to 9750 ft . But little is known of their formation, nor is it eertain that there are any voleanoes among them. As the mountain-range inelines to the N.. the largest rivers flow S . The vegetation of Ceram is luxuriant and gigantic; the sago-palm, in particular, is more abundant here than in any other of the adjoining islands, to which, consequently, supplies of sago are exported. It grows 100 ft . high, and, instead of 400 lbs . as at Amboina, a single tree will sometimes yield 1200 lbs. of stareh. Clove and nutmeg-trees grow wild in the woods, which abound, likewise, in magnifieent forest-trees, but none have been found, as yet, adapted for shipbuilding. Near the E. cud, N. side, is the

Village of warou.-From Dument d'Urville, Voynce au Pule sud.
village of Waroo, on the bay of same name; about lat. $3^{\circ} 25^{\prime}$ S.; lon. $130^{\circ} 40^{\prime} \mathrm{E}$. The bay affords good anchorage and water, and other refreshments may be procured in it.

The coasts are peopled by a Malay race of bold and enterprising fisbermen and traffickers, who carry the produce of their fisheries, in large prahus, called kora.kora, with from 30 to 60 rowers each, to the Sunda islands and Singapore. The interior is peopled by the Alfoories or Halafoorahs, identical, apliarently, with those mountaincers of Celebes and the Philip-
pines. Though the past policy of Holland has retarded the cultivation of the land in Ceram, her Christian missions have not only made numerous converts along the coasts, but have extended a softening influence even among the idolaters of the interior. It is doubted whether the cutting off of hears, for the mere purpose of giving eclat to a marriage or other festivity, now exists in Ceram; and a Dutchman did there in 1846, what a Spaniard durst not venture to do in Luzon. A sub-resident, Mr. Sclerius, passed through their mountainretreats, and thongh he found human skulls used both as private and public ornaments, the atrocious custom of procuring them from living victims was apparently abandoned. After three days' travelling, Mr. S. reached the elevated and almost inaccessible table-lands of those barbarous aborigines, and, even amid such hideous tokens of old customs, found them a simple, honest, and peaceable people, living happily with each other, and in habitual respect for their own patriarchal government. The travellers were received withont the least apparent distrust at the native village, which consisted of spacious cabins placed at some distance from each other, at a cheerful and picturesque spot. The insides of the hats were clean and simple; the furniture consisted of a few coarse utensils, two muskets, of English manufacture, and three large sabres; five human skulls, suspended across the roof, left no doubt of the tribe being Alfoories. It numbered about 500 souls, of whom 100 could bear arms, and had about 70 muskets among them. The women engage in field-work; the men do so only when fresh ground has to be cleared. The chief article of culture is maize; and the surplus supply of that, and several other vegetable productions, is exchanged at the small towns along the shore for arms, powder and shot, articles of dress, and fermented drinks. The men, when not engaged in war, hunt the wild boar and deer, large serpents, \&c. The Alfoories of the S. of Ceram have an open expression, projecting features, large eyes, a well-proportioned nose, large but not prominent lips, and long frizzled hair. They are generally mild in dispositiou, serviceable, and faitlful ; and, being both brave and obedient, make good soldiers. The other inhabitants of Ceram are subject to several chiefs, who again are subjectthose of the W. part to the Dutch resident at Amboina, and those of the E. to the resident at Banda. A part of the centre of the island is nominally governed by a prince called the Sultan of Ceram, a personage whose piratical propensities have led, at last, to his deportation to Java. The local princes meet the Dutch residents once in two years, to have their disputes settled by a court composed of 24 rajahs, and at which the resident presides. Sir Edward Belcher happened to be at Amboina at the time of its meeting there, and was surprised to find that most of the rajahs hal adopted the European dress and manners.

The aborigines of Ceram are mostly idolaters, and the coast population, generally speaking, Mahometans; though, of 620 sonls in the village of Makarike, where Mr. Scherius landed, 438 were Christians, 11 only Mahometans, and 171 idolaters. But the Cliristians were suffering from neglect. Notwith" standing its superabundant fertility, Ceram is very thinly peopled. This is attributed to the frequent dissensions of the Malays among themselves, the attacks of the Alfoories from the land side and of pirates at sca, and the ravages of the small-pox. The present pop. is roughly estimated at 226,000 . -(Van der Aa; Temminck; Moniteur des Indes).

CERAM-LAUT ISLES, a cluster of small islands, Iudian Archipelago, lying off the E. end of island Ceram, from which they are separated by the island and strait of Keffing. The chief island is about 5 m . long, mountainous, and uninhabited; lat. $3^{\circ} 48^{\prime}$ S.; lon. $131^{\circ} 0^{\prime}$ E. (r.)

CERAMJ, a tn. Sicily, prov. Catania, 7 m. N.E. Nicosia. Silver, copper, salt, sulphnr, and slate are found in the district. Pop. 3667.

CERANO, a vil. Sardinian States, Piedmont, prov. of, and 8 m . E.S.E. Novara, on the Mora. It has silk-mills. P. 3600 .

CERANS-Foulletourte, a vil. France, dep. Sarthe, 13 m . from La Fleche. Pop. 1233.

CERCADO, a prov. Peru, laving Lima, the cap, of the country, about its centre on the coast. It is 39 m . long by 24 m . broad; is watered by the Rimac and Lurin. Although very little rain falls here even in winter, the territory is extremely fertile, and produces various fruits and plants in great abusdance. The climate is mild, but unhealthy; and
the country, though not subject to ligh winds, is frequently visited by earthquakes.

CERCIIIAKA, a tn. and com. Naples, prov. Calabria Citra, 9 m . E.N.E. Castrovillari. It contains two churehes and a foundling-hospital. Pop. 2080.

CERDAGNE, or Cerdaña [Latin, Cardania or Ceretania], an anc. dist. occupying both sides of the Pyrences, and partly in France, and partly in Spain. The French portion was a dependency of the former prov. Roussillon, and laal Mont Louis for its capital. It now forms part of lyrencesOrientales; the Spanish portion, of which Puy Cerda was the capital, is included in the modern provinces Barcelona, Gerona, and Lerida.

CERE, a small river, France, which rises in the Plomb de Cantal, dep. Cantal, and, after a circuitous W. course of about 60 m., joins l. bank, Dordogne, a little below Bretenoux, dep. Lot. No part of it is navigable.

CEIRE (ST.), a tn. France, dep. Lot, 17 m. N.N.W. Figeac, on an island formed by the Baue. N. of the town is a remarkable conical hill, the summit of which, about 600 ft . above the river, is surrounded by a rampart 8 ft . thick, entered by a single gate. There are also two isolated square towers on it-the principal of which is 134 ft . high, and 98 ft . on each face. The origin of this fortress is unknown. The town produces good liats, and has a considerable linen trade. Pop. 2918.

CEREA, a vil. and par. Austrian Italy, gov. Venice, prov. of, and 19 m. S.S.E. Verona, between the Tartano and Menago. It contaius a parish and two auxiliary churches, numerous oratories, and four mills. The Austrians defeated the French here in 1798. Pop. 2800.

CERES, par. Scot. Fife; 8 m . by 4 m . P. (1851), 2836
CERES, a vil. Sardinian States, Piedmont, prov. of, and 22 m. N.W. Turin, near the confluence of two branches of the Stura. Pop. 2000.

CERET, a tn. France, dep. Pyrences-Orientales, 15 m . S.S.W. Perpignan, r. bank, Tech, 4 m . from the Spanish frontier. The river is here crossed by a bridge of a single arch of 147 ft . span-the highest and widest structure of the kind in France. Ceret is surrounded by walls, flanked with towers, ontside of which is a promenade planted with trees. The streets are narrow, but the suburbs are agreeable. Corks, leather, and brazen utensils, are made here; and there is some trade in grain, oil, cork, \&c. In 1660, the plenipotentiaries of France and Spain met here to fix the boundaries of tho two kingdoms. Pop. 2868.

CERIANA, a vil. Sardinian States, prov. of, and 27 m . E.N.E. Nice. Pop. 2000.

CERIGNOLA, a tn. Naples, prov. Capitanata, 24 m . S.E. Foggia. It has a college, several convents, and an hospital. The inhabitants manufacture linen; and the district produces large quantities of almonds and cotton. In 1503, the Spaniards here defeated the French, when tho Duke de Nemours, who commanded the latter, was slain. Pop. 10,350.

CERIGO, or Kerigo [anc. Cythera], one of the Ionian Islands, S. of the Morea of Greece, about 12 m . from Cape Malea, or St. Angelo; S.E. the entry of the Gulf of Laconia, lat. (N. point) $36^{\circ} 23^{\prime} \mathrm{N}$. ; lon. $22^{\circ} 57^{\prime} 15^{\prime \prime} \mathrm{E}$. (R.) This island, between 50 and 60 m . in circnmference, is hilly, and its shores steep and dangerous, from currents and sudden gusts of wind; the safest anchorage is at San Nikolo, on the E. coast. The climatc is very mild and salubrious. The island has little wood on it, but some good pasturage, with a few fertile valleys, yielding small crops of grain, vines, olives, \&c. Some fine honey is produced, and part of it exporterl. On the island there is a convict station. Cerigo forms, with Cerigotto, one of the administrative provinces of the Ionian Islands. It contains two towns, including the capital, Capsale on the S. coast, and 29 villages. The people are of Greek origin, and are all of the Greek church. The island sends a representative to the Republican Assembly ; and, conjointly with Ithaca and Paxo, one senator. Cerigo was celebrated in ancient times for the worship of Venus; and ncar the fortress of San Nikolo are some ruins of the ancient city of Cythera and its temples. Cerigo was long subject to tho Lacedemonians; and belonged, in turn, to Macedon, Egypt, Rome, and Venice ; in later times, it lias shared the fortunes of the other Ionian Islands. Pop. (1851), 12,655.

# NEW WORKS AND NEW EDITIONS, PUBLISHED BY BLACKIE AND SON: GLaSGOW, EDINBURGH, AND LONDON.

In one Volume, Imperial 4to, elegantly hound in Morocco, or in 38 Parts, 2s. 6d. each. Metrical Psalms, Scottish Version, 2s. 6d.
This magnificent Edition of the Holy Scriptures-which combines, in one handsome, usable Volume, a large and readable type, numcrons Notes, and the most beantiful Scries of Scriptural Engravings in cxistence-has been honoured by the patronage of the Queen and Prince Albert, who have each ordered the Work-by various Iignitaries of the Church-and above Five Hundred Clergymen and Ministers. Above thirty copies of the Work have also been sent to various members of the Royal Household.
"A noble and beantiful edition of the Sacred Volume. No copy has ever been placed before us distinguished by so many excellencies."-Art Union.

## THE COMPREHENSIVE FAMILY BIBLE;

Containing the Old and New Testaments; with Copious Critical and Ixplanatory Notes, and Practical Reflections; also References, Readings, Chronological and other Tables. By David Davidson, LL.D. In about 35 Parts, $2 s$. each, with 72 Illastrations. Metrical Psalms, 2 s.
For beauty of form, text, and illustration, this Bible commends itself strongly to the Christian community ; and in its more important features of Comment, Reference, and Introductory matter, it constitutes a Commentary of high value to all classes of Biblical Studenta.
The Engraved Illustrations consist in part of Historical Subjects, from the Ancient and Modern Masters; but the larger portion comprise views of Mountains, Rivers, Lakes, and other uatural Scencry; together with Cities and Towns, existing or in ruins; Temples, Tombs, \&c. ; the whole having dircet refcreuce to Bible Iucidents and History, and more especially illustrating the Fulfilment of Prophecy.

## COOKE'S BROWN'S SELF-INTERPRETING BIBLE.

With an Introduction, copious Marginsl References, and Notes Explanatory and Practical. With sercral Thonsand additional Notes, explaining difficult Tests, and reconciling seeming contradictions. By the Rev. Hesry Cooke, D.D., LL.D., Belfast. Illustrated with numerous Engravinga. Complete in 44 Parts, royal 4to. 1s. each. With Barr's Index and Metrical Psalms, 2s. each additional.

## BROWN'S SELF-INTERPRETING BIBLE.

Gcnuine Edition, with Corrections and Additions, under the Superintendence of the Author's Family. With Two Thousand Critical and Explanatory Notes, numerous References and Readings; also, a Memoir of the Author, by lis Grandson, the late Rev. J. Brown Patterson, Minister of Falkirk; and a complete Index and Concise Dictiouary, by the Rev. John Barr, Glasgow. With Historical and Laudscape Illustrations, Family Register, \&c. Complete in 32 Parts, 1s. each.

## POCKET EDITIONS.

## THE ILLUSTRATED POCKET BIBLE;

Containing the Old and New Testaments, according to the Authorized Version. With nearly 9000 Critical and Explanatory Notes, and 80,000 References and Readings; also, Thirty-seven Illustrations, consistiug of Twenty-five exquisite Engravings, and a complete Scripture Atlas of Twelve Coloured Maps. In 24 Numbers, $6 d$. each.
"Altogether the best and chcapest portable edition of the Scriptures which we bave yet seen."-Allas.

## BOOK OF COMMON PRAYER;

Lllustrated and Annotated. With Twenty-nine Illustrations, chiefly from the Old Masters, including Eight Desions for the Offices, by Selous. The Rubrics printed in red. The Notes are compiled from the writings of Hooker, Barrow, Beveridge, Comber, Hall, Patrick, Burnet, Horne, Taylor, Secker, Veneer, Wheatley, \&c. An Historical Sketch of the Origin and Progress of the Liturgy, an Explazation of Ecclesiastical Chronology, and a Gencral Index to the Notes, are added. In 16 Numbers, $6 d$. each.
The inherent value and the beauty of these books recommend them to families as auitable and clegant presents to the younger members of the houschold. The Illustrations are perfect gems, separate inpressions of which, not many years ago, would have been considcred cheap at $2 s$. each; but if they are calculated at only $3 d$. each, they reduce the price of the text to $3 s$. for the Bible, and $1 s .9 d$. for the Common Praycr-a price lower than is paid for very inferior pucket editions of these books.

WORKS PUBLISHED BY BLACKIE AND SON, GLASGOW, EDINBURGH, AND LONDON.

| HAWEIS' EVANGELICAL EXPOSITOR; <br> Or, a Commentary on the Holy Bible, with an Introduction, Marginal References, and Rcadings, by the Rev. Illustrating the principal Scrip. ture scenes and sites of celebrated Cities, Towns, \&c. The whole complete in 33 Parts, 1 s ; ; or in double vols., 6s. each; and 1 at $4 s, 6 d$. Considering the llustrations, at once the best and the cheapest edition of Barnes' Notes.

Of this Edition, Mr. Barnes' writes thas:-
"I feel greatly obliged to you for the manner in which you have got up my Notes on tire New Testament; and hope you will receive ample compensation for the expense you have incurred in doing it. I feel particularly gratified with the plates; they are exceedingly beauliful, and, in my view, greally increase the value of the work."

## BARNES' NOTES ON THE OLD TESTAMENT.

Books of JOIB, ISAIAH, and DANIEL, with Additional Notes, Engravings on Steel, and above 150 Illustrations on Wood; most of them to be found in no other Edition. 19 Parts, $1 s$. each; or Job, 1 Vol, eloth, $6 s . ;$ Isaiah, 2 Vols., $7 s$ s; Daniel, 1 Vol., Cloth, 6s. 6 r.

These volumes have Prefaces, Notes, Appendices, and Illustrations to be found in no other Edition.
Dr. Hamliton, in the Lamp and the Lantern says-
"For the elucidation of the text [of the Bible] there is nothing better than the little volumes of Albert Barnes, as far as they have gone. As it contains Supplemental Notes of great value, our personal preference is for Blackie's Edition."

## BARNES' QUESTIONS ON THE NEW TESTAMENT.

For Bible Classes aud Sunday Schoola. One Vol., cloth, 3 s .6 d ; or in 6 Parts, 6 d . each. Part I. Matthew -Mark; Part II. Lukc—John; Part III. Acts; Part IV. Romans; Part V. 1 Corinthians; Part VI. Hebrews.

## STACKHOUSE'S HISTORY OF THE BIBLE,

From the beginning of the World to the Establishment of Christianity; and a Conncetion of Profane with Sacred History. Also, numerous Notes, explaining Difficult Texts, rectifying Mistranslations, and reconciling seeming Contradictions. To which are now added, an Introduction, copious Additional Notes from rccent Commentators, Crities, and Eastern Travellers, Dissertations, and Complete Indexes. Illustrated with 50 lighly-fiuished Engravings, including aome of the finest works of the Old and Modern Masters. In 34 l'arts, at ls. each.

## DEVOTIONAL AND PRACTICAL WORKS.

 FAMILY WORSHIP.A Series of Prayers, with Doctrinal and Practical Remarks on passages of Sacred Scripture, for every Morning and Evening throughout the Year; adapted to the Services of Domestic Worship. With Twenly-one highlyfinished Engravings. In 20 Parts, auper-royal 8vo, 1s. each; Cloth, 21s.

## THE CHRISTIAN'S DAILY COMPANION;

A Series of Meditatious and Short Practical Comments, on the most important Doctrines and Precepts of the Holy Scriptures, arranged for Daily Reading throughout the Year. With Twoenty-one highly-finished Engravings. In 20 Parts, 1s. each; Cloth, 21 s.

## TIIE WORKS OF JOHN BUNYAN,

Practical, Allegorical, and Miscellaneous; with Editorial Prefaces and Notes, and an Essay on Bunyan's Genius, Times, and Contemporaries. By George Offor, Editor of The Pilgrim's Progress for the Hanserd Knollys Society. First complete Edition; in 25 Parts, 2s. each. With numerous Illustrations.
Bunyan's Works form, as a whole, the most engaging, faithful, and invaluable Body of Divinity that has ever been published, and that in a beautiful simplieity of language which no one ean misunderstand. The whole Works of Bunyan are not, however, of easy access. They have never been all collected and published in any uniform series. The portions that have appeared from time to time have all been mutilated, altered, and deteriorated; and, until some very recent Editions of the Pilgrim, not a single book or treatise could be found in its original integrity and beauty, except amongst the stores of book-collectors.

SEPARATE ISSUES.
To mect the wants of those who already possess the Allegorical Works of Bunyan, the Publishers divide the zohole Works into two Separate Issucs.
I. TIIE EXPERIMENTAL, DOCTRINAL, AND PRACTICAL WORKS. With Illustrations. In 32 Parts, 1 s. each. 2 Vols., cloth, 34 s.
1I. THE ALLEGORICAL, FIGURATIVE, AND SYMBOLICAL WORKS. With numerous Illustrations. In 18 Parts, 1 s , each. 1 Volo, Cloth, 20 s .

## WILLISON'S PRACTICAL WORKS;

With an Essay on his Life and Times. By the Rev. W. M. Hetherington, LL.D. Edinbnrgh. 1 Vol. super-royal 8 vo , Cloth, 21 s .; or in 10 Parts, $2 s$. each.

## DWIGHT'S SYSTEM OF THEOLOGY;

Or, COMPLETE BODY of DIVINITY; in a Series of Scrmons. By Trmothy Dwrour, D.D. With an Essay on the Inspiration of the Holy Scriptures. 1 Vol. super-royal 8 vo , 21 s .; or in 20 Parts, 1 s . each.

## WATSON'S BODY OF PRACTICAL DIVINITY,

In a Series of Sermons on the Shorter Catechism of the Westminster Assembly. To which is appended, Select Sermons on Various Subjects, together with the Art of Divine Contentment, and Christ's Various Fulness. The whole revised and corrected, with numerous Notes from approved Authors. I vol. super-royal 8vo, Cloth, $16 s$.; or in 29 Numbers, $6 d$. each.
BAXTER'S SELECT PRACTICAL WORKS,
Including the whole of his Treatises on Conversion, The Divine Life, Dying Thoughts, and the Saints' Everlasting Rest. Carefully Revised, and preceded by a Memoir of the Author, and Yortrait. 1 Vol. super-royal $8 \mathrm{ro}, 26 \mathrm{~s}$. Cloth; or in 12 Parts, 2 s . each.
"Baxter's practical writings are a treasury of Christian wisdom."-Wilberforce.
BAXTER'S SAINTS' EVERLASTING REST;
The Divine Life; and Dying Thonghts; $a$ Call to the Unconverted; and Now or Never. Carefully revised, and preceded by a Memoir of the Author. 21 Nos., $6 d$. each; in Cloth, 11 s .6 d .
FLEETWOOD'S LIFE OF JESUS CHRIST;
With the Lives of the Apostles and Evangelists. By the Rev. Jorin Fleetwood, D.D. Also, The Lives of the most eminent Fathers and Martyrs, and the History of Primitive Christianity, by Wrluram Cave, D.D. With an Essay on the Evidences of Christianity, and numerous Notes not to be found in auy other Edition. To which ia subjoined, A Concise History of the Christian Chureh, by the Rev. Thomas Sims, M.A. Illustrated by Forty beautiful Engravings on Steel ; Imperial 8vo, Cloth extra, antique, $2 \breve{s} s_{0}$; or in 20 Parts, 1s. each.
HALL'S CONTEMPLATIONS ON THE HISTORICAL PAS. SaGES OF THE OLD AND NEW TESTAMENTS. By the Right Rev. Joseph Hall, D.D., suecessively Bishop of Exeter and Norwich. With an Essay on his Life and Writings, by Ralph Wardlaw, D.D., Glasgow. Illustrated Edition, complete in 15 Parts, 1s. each; in Cloth, 16 s.

## INDISPENSABLE BOOKS OF REFERENCE;

## THE IMPERIAL GAZETTEER;

a general dictionary of geography, Piesicat, Political, Statistical, nod Descriptive, ineluding Comprehensive Accounts of the Countrice, Cities, Principal Towns, Villages, Seas, Lakes, Rivers, Islands, Mountains, Yalleys, \&.c., in the World. Now Publishing in Parts, 2s. 6 d. cach.

It is the purpose of the Imperial Gazetteer to supply such a Work as the circumstances of the present age require. In its compilation, the most recent and authentic sources will be consulted, and particular attention will be paid to the Trade and Resources of the varions places described, and to the Social Condition, Manners, Customs, \&c., of the Iuhabitants. Grent care will also be bestowed on the Physical Gcography of Countries, in the varions departments of Gcology, Hydrography, Climatology, Botany, Zoology, \&ec., and on the laying down of geographical positions and relative distances.

As no written description of a locality can give so aecurate a conception of its features or position as a plan or pictorial representation, this Work will be Illustrated by above Seven IIundred Engravings on Wood, printed in the text. These Illustrations will comprise Views of Citics and Towns; of Remarkable Bnildings, Antiquities, Natural Scenery, Costumes, Plans of Ports and Harbours, and Small Maps of River Mouths, Islands, and Island Groups, \&ec, on an enlarged scale. Sce full Prospectus and Conditions in Part First.

Selections from the Recommendations given to this Work:-
"I am satisfied that it will prove an eminently useful aid to gcography, being compiled with accuracy and attention. It is also well printed, and beautifully illustratcd."-Captain W. II.SMYYI, R.N., K.S.F., D.C.L., F.S., \&C., President of the Royal Geographical Society of Iondon.
"I liave no hesitation in approving lighly of the plan on which it is to be conducted, and pronouncing it to be a more raluable contribution to our geograplical works of the present day than auy other of the same kind with which 1 am acquaiuted."-G.A. Walker Arnott, LL.D., F.L.S., F.R.S.E., \&c., Professor of Botany in the Uuiversily of Glasgoor.
"It appears to be carefully and correctly conpilea."-Captain CHAs. Dain WWater Bernune, R.N., C.B., F.R.G.S., of the Harbour Department Admirally.
"Excellent in every way."-C. Prazzi Sryrri, F.R.S.E., F.R.S.A., Astronomer Royal for Scotland, and Professor of Practical Astronomy in the University of Edinburgh.
"The Work appears to me well qualificd to supply the want that has long heen gencrally felt, of a Work adapted to the modern state of geographical information."-Lieut. II. Raper, R.N., F.R.G.S., F.R.A.S., Author of "The Practice of Nuvigation and Astronomy."
"I have examined your work, and compared it with others of similar pretensions. I have no hesitation in saying that I consider it incomparably supcrior to all others that $I$ am acquainted with. The maps and plans of towns and places are of great interest and usefulness."-LEonabd SchMiTz, LL.D., Ph.D., F.R.S.E., Rector of Ligh School, Edinburgh.

## THE IMPERIAL DICTIONARY,

ENGLISH, TECHNOLOGICAL, AND SCIENTIFIC; adapted to the Present State of Litcrature, Scicnce, and Art, on the Basis of Webster's English Dictionary; with the addition of many Thousand Words and Phrases from the other Standard Dictionaries and Encyclopedias, and from numerous other sonrees; comprising all Words punely English, and the principal and most generally used Technical and Scientific T'crms, together with their Etymologics, and their Pronunciation, according to the best authoritics. Illustrated by upwards of Two Thousand Engravings on Wood. In Parts, Imperial 8vo, 2s, 6d, each.

## THE POPULAR ENCYCLOPEDIA;

Or, CONVERSATIONS LEXICON; being a Gencral Dictionary of Arts, Sciences, Literature, Biography, History, Ethics, and Political Economy; with Dissertations on the Progress of Science, Literature, and the Fine Arts, by Thomas Thomson, M.D., F.R.S., \&e., Regius Professor of Chemistry, University of Glasgow; Sir Daniel K. ## CYCLOPEDIA OF AGRICULTURE,

Practical and Scientific; in which the Theory, the Art, and the Business of Farming, in all their departments, are thoroughly and practically treated. By upwards of Fifty of the most eminent Farmers, Land Agents, and Scientific Men of the day. Edited by John C. Morton, Editor of the "Agricultural Gazette." With above One Thousaud Illustrations on Wood and Stcel. Now Publishing in Parts, 2s. 6d. each, super-royal 8vo.
The object of this Work is to present to the Agricultural reader the whole of the truth immediately connected with his profession, so far as it is known to the men most familiar with the sciences it involves, the method it employs, and the risk it incurs.

Illustrations on wood and stecl, of Farm Buildings, Insects, Plants, cultivated and uncultivated, Agricultural Machines, Implements and Operations, \&c., will be given wherever it is presumed they can be uscful.

## Selections from the Recommendations given to this Work:-

"It is a Work of great merit, and will be very valuable to the practical farmer. Every farmer who can afford it ought to have a copy of the Work." -Thomas Baimer, Esq., Land Commissioner for the Duke of Richmond, Gordon Castle.
"Each article is scientifically ard practically treated, and nothing but careful research, combined with practical expericnce, could have produced such a valuable work."-Joun Bisset, Esq., Alanager for Lady Salloun, Kinchyle.
"The Work ia fully up to the present day, there being ample details of the latest discoveries."-Mr. Gzozger Iope, Farmer, Fenton Barns, Drem, Haddingtonshire.
"This admirable Cyclopedia."-Mark Lane Express.
"I have no hesitation whatever in expressing my high opinion of the 'Cyclopedia of Agriculture.' "-M. M. Mrisurer, Feq., Sowerby, Thirsk, Yorkshire.
uI do not rementer to
"I do not remember to have seen, in any work of the kind, such a combination of valuable science and practical expcrience." Samuzl Cuethax, Esq, Oakham, Rutlandshire.
"The beau-ideal of a "Cyclopedia of Agriculture."-Scoltish Agricullural Journal.

[^2]:    * From Dhatu-garba, the womb or receptacle of a re'ic. Dagobahs are monumental tumbs of the relics of Puddha; their characteristic form is bell-shaped, surmounted by a small spire; hud, in a small cell or hollow stone in the centre, they contain ornaments or emblems of Buddhist worship, such as pearls, precious stones, figures of Buddha, \&cc.-(Knighton's Hislory of Ceylon.)

[^3]:    * An opinion is entertained in Australia that unknown animals, of immense size, inhabit the large water-holes and marshes of the interior. This opinion is confirmed by native authority, always, however, to be doubted in such cases. In one iustance, a 'large animal,' with two white deciduona tnsks, and which made a tremendous noise, is said to have been seen, in 1844, by a settler in the river Bundarra, but it disappeared while he was alsent in quest of arms and assistance. Extraordinary noises are alleged also to have been heard procceding from some of the large and remote water-holes, whieh those who heard them believed to proceed from some linge animal. The frequent discovery, on the banks of some of the Australian rivers, of the fossil remains of gigantic animals, of a race thought to be now extinct, is supposed to give plausibility to the above belici.
